majority of the garbage dumps; but a few exceptional cases show that hog farms can be conducted as well as sanitary fills. Inquiries made on behalf of the YEAR BOOK show that at the close of 1940 garbage-reduction works, for the recovery of grease and fertilizing material, were being operated to treat the garbage of eight municipalities: Boston, Rochester, Syracuse, Philadelphia, Reading, Washington, Indianapolis, and the small town of Royal Oak, Mich. At Philadelphia only half and at Washington about a third of the garbage is treated by the reduction process. All these works are now owned and operated by the cities except Boston and Syracuse; Syracuse owns the works but has them operated by contract. At one time or another privately owned reduction works treated the garbage of New York, Buffalo, Pittsburgh, Baltimore, Cincinnati, Columbus, Detroit, Chicago, St. Louis, Kansas City, New Orleans, and a few smaller places. Most of these cities, with some that owned reduction works, have built incinerators. These have the advantage over reduction plants in that they destroy refuse as well as garbage. One reason for the abandonment of reduction works is the uncertainty of revenue from the by-products—grease and tankage—owing to fluctuations in price. Grease in particular is sometimes a drug on the market. Privately owned works received a bonus from the city. The revenue from any method of garbage and refuse disposal pays only a part of the yearly operation, maintenance, and capital charges, and the heavy cost of collection is extra.

Sanitary land-fills in Queens Borough, New York City, for the disposal of garbage and refuse were approved by a committee of leading sanitarians chosen by the Surgeon General of the U.S. Public Health Service on agreement for the dismissal of a local grand jury indictment of the fills as a nuisance. Extensive areas of land have been reclaimed for park and other purposes by these fills and large savings effected by shutting down incinerators. At the close of the year New York City was operating 11 sanitary fills in the boroughs outside of Manhattan. Eleven of the older and least efficient incinerators had been shut down, leaving 12 in use. (See *Engineering News-Record*, Mar. 28 and Dec. 5, 1940, for committee report with rules for sanitary fills in general, and for a description of New York's sanitary fills; for a description of new 750-ton incinerator, with heat utilization, see *Sewage Works Engineering*, Aug., 1940.)

Concern over the possibility that garbage disposal by feeding to hogs spreads trichinosis among both hogs and humans was noted in the YEAR BOOK for 1939. At Fontana Farms, 50 miles from Los Angeles, where a contractor has fed the garbage of that city to hogs for many years, studies of hog feeding were being made in 1940, the University of California and the State Board of Health co-operating with the contractor. The studies are said to show that although the chemical contents of raw and pasteurized garbage are practically the same, pasteurization destroys vitamins and decreases pork products by 15 per cent. The studies were prompted in part by the fact that a bill to prohibit feeding garbage to hogs has been before the legislature which, if passed, would prevent the renewal of the disposal contract on its expiration in 1941. That would not only deprive the city of the 50 cents a ton it is paid for 200,000 tons of garbage a year but also necessitates the adoption

of some other means of disposal, requiring not only capital outlay and charges but also operating and maintenance expenses. Indianapolis, for some years, has recovered grease and stock food from its garbage, the sale of which materially reduces the cost of disposal.

Additions have been made to the cities which treat garbage and sewage together to the extent of either grinding the garbage and adding it to the sewage sludge or solid residue for digestion or for incineration. Notable instances are Gary, Ind., and Rock Island, Ill. At Gary ground garbage is delivered to the sewage-sludge digestors, adding to the gas produced for utilization by the sewage alone. (See *Sewage Works Engineering*, Sept., 1940.) At Rock Island, garbage from one grinder goes to the sludge digestors and from another to an incinerator which burns both filtered sewage sludge and ground garbage. Dry refuse is burned in a third incinerator. Digester gas is stored in two spherical-shaped steel tanks for heat and power used by the combined plant. (See *Engineering News-Record*, Aug. 15, 1940.) At Tonawanda, N. Y., refuse and sewage treatment plants were put in use, the latter including settling and sludge digestion tanks and mechanical sludge-dewatering apparatus. Dayton, Ohio, has completed a garbage and refuse incinerator with equipment for drying sewage sludge for use as a fertilizer or for incineration.

M. N. BAKER.

**GARMENT INDUSTRY.** The men's and women's apparel industry, slow as it was to assume the garb of depression which had enveloped most other manufacturing enterprises in the early 1930's, has been equally dilatory in reacting from oppressive conditions, once these gained a foothold in the clothing trades. This phenomenon was clearly demonstrated during 1940, when prosperity smiled upon such heavy industries as building, steel, and automobiles, but continued to turn a stern countenance to the garment producing world.

A trend toward lower priced units, generally, and casual and sports items in particular, has characterized both men's and women's wear. Indicative of the growing importance of outdoor clothes is the showing made by separate coats for men. In the first ten months of 1940, separate coats cut exceeded the 1939 total by 27.7 per cent. In October, alone, the increase was 217 per cent. Slack suits, too, have enjoyed greatly widened popularity. In the women's wear trades, such articles as active and spectator sports dresses, blouses, skirts, jackets, beach-wear, and ski-wear have frequently returned handsome dividends to their makers.

Contrariwise, the major feminine apparel divisions—dresses and coats and suits—have had difficulty in "breaking even." Serious under-capitalization, reflected in intensive competition, is as true today as ever of the people of marked individualism and untiring ambition who comprise the bulk of these consumers' goods' entrepreneurs. The dress field, for example, is said to have a capital of \$400 per worker, as compared with \$2150 to \$6000 for most of the heavy manufacturing industries. While this would seem to be sufficient handicap, the industry, generally, has been further weighed down by reason of the fact that its very life-blood is Fashion (q.v.). Prolonged lulls in

each season's demand and an insistence on the part of retailers upon adhering to rigorous hand-to-mouth buying have served as stumbling blocks to many a manufacturer's success.

In an effort to combat sluggish deliveries to the stores—a concomitant of the laborious processes of production in the medium-to-better priced section of the women's wear trades—the higher quality sportswear houses, banded together as the Sportswear Guild, a division of the Fashion Originators' Guild of America, have led a movement for earlier seasonal openings. A policy of introducing costume suits in mid-June, fall lines in July, mid-season things in September, Southern resort collections in October, advance spring showings in mid-November, regular spring goods in January, and summer openings in March, is the Guild's answer to the geographically diverse needs of the country's retailers.

The past year has also been distinguished by the birth of a plan in the New York dress market to stave off the advancing decentralization of its \$350,000,000 business to such other centers as Chicago, Los Angeles, and St. Louis, not to mention smaller communities the length and breadth of the land.

A "streamlined" promotional program, soon to be inaugurated, has been conceived by the Dress Joint Board of the International Ladies' Garment Workers' Union. This entails the raising of a \$1,500,000 fund among manufacturers, the union, real estate men, bankers, fabric houses, and retailers to be expended in an advertising campaign to maintain and extend New York's leadership in the dress field, to foster a desire for better dress, and to increase total dress sales as a whole. A corollary modernized production project provides for the opening of a "school for management," establishment of fair trade practices between retailer and manufacturer, improvement of jobber-contractor relations, and institution of better planning and cost accounting systems by the producers. Another aspect of this determination to "save New York's industries" is the six-months' impartial study of men's and women's wear trade exodus, begun in November, by the Institute of Public Administration, employed jointly by the New York City Department of Commerce and the Committee of Fifteen.

The women's coat and suit trade's dollar volume has fallen slightly below that of 1939. The number of units sold to the retailers of the country decreased about 4 or 5 per cent below last year's figure. This is an estimate gathered from the sale of labels to manufacturers and jobbers in the United States by the National Coat and Suit Industry Recovery Board, whose members are responsible for 95 per cent of the country's total production of these garment types. In 1940, approximately 15,500,000 labels were sold, as against about 16,300,000 in 1939, and slightly over 15,400,000 in 1938. Just as in all other branches of the garment trades, coats and suits have ended the year with the market practically depleted of finished goods and piece goods, thereby imparting a salutary tone to the outlook.

The women's fur trade is an exception to the rule of adversity. For the first time in many years—some say since the First World War—this field is taking on the form and substance of a "sellers' market." Diminished stocks of fur coats, plus consistently stronger raw fur quotations, have been factors in the transition, perhaps the only one in

evidence in the numerous apparel producing classifications.

Millinery has pulled itself up by its own bootstraps, partly through an industrywide publicity campaign under the auspices of the Millinery Stabilization Commission of New York.

Sales of men's clothing for the year show an approximate gain of 5 per cent. Men's suits cut declined about 7 per cent. Overcoats cut revealed a gain of 4 per cent. Wholesale suit prices averaged about \$1.10 higher than in 1939 and about \$1.30 more than in 1938.

SAMUEL FEINBERG.

**GAS, Natural.** See GAS INDUSTRY; OHIO and MISSISSIPPI under *Mineral Production*.

**GAS INDUSTRY.** The gas utilities of the United States continued their record of progress and expansion during 1940. Manufactured and natural gas companies, supplying towns and cities with a population of more than 84,000,000, served a total of 17,980,300 customers, representing the largest number of consumers ever connected to the mains of the industry. This was an increase of 481,000 over the year 1939. Of these, 10,232,900 were served by the manufactured gas industry and the remaining 7,747,400 were served by the natural gas industry. Revenues of the entire industry, both manufactured and natural, aggregated \$873,358,000, a gain of 7.3 per cent over the preceding year of 1939. The natural gas companies grossed \$491,276,000, a gain of 9.4 per cent for the year, while revenues of the manufactured gas companies were \$382,082,000, as compared with \$365,150,000 in 1939, an increase of 4.6 per cent.

PRELIMINARY ESTIMATES ON THE  
GAS INDUSTRY FOR 1940  
*Statistical Department, American Gas Association*

Customers	1940	1939	Change %
Domestic (Incl. House Heating)	16,910,000	16,459,000	+ 2.7

Industrial & Commercial	287,588,000	267,143,000	+ 7.7
Total	\$873,358,000	\$814,009,000	+ 7.3

Sales of manufactured gas for domestic uses, such as cooking, refrigeration, house-heating, water heating, etc., amounted to 267,438,000 cubic feet, an increase of 7.3 per cent for the year. House-heating sales registered a gain of 25.1 per cent. The sales of natural gas for domestic uses registered a pronounced upturn, rising from 372,971,000,000 cubic feet in 1939 to 419,354,000,000 cubic feet in 1940, a gain of 12.4 per cent. Sales of natural gas for industrial purposes rose from 654,662,000,000 cubic feet in 1939 to 719,776,000,000 cubic feet in 1940, an increase of 9.9 per cent. Sales of manufactured gas for industrial and commercial purposes showed an upturn, rising from 111,078,000,000 cubic feet in 1939 to 119,624,000,000 cubic feet in 1940, an increase of 7.7 per cent.

Total .....	\$382,082,000	\$365,150,000	+ 4.6

Preliminary estimates indicate that the total production of natural gas in 1940, including amounts used in the manufacture of carbon black and for field purposes, reached a total of 2,600,000,000,000 cubic feet. Approximately 183 billion cubic feet of natural gas were used as fuel for generating electric power in 1940.

The outstanding engineering achievement of the year was the installation in Cleveland, Ohio, of a new plant which reduces natural gas to a liquid state at a temperature of 250° below zero and stores it in special containers from which it is later withdrawn in its original form and fed into distribution mains. Some of the advantages foreseen in this novel type of plant are a substantial saving in storage facilities, the ready availability of a gas supply in case of emergencies, and the ability to maintain uninterrupted service during severe peak demands. The new plant has incited great interest not alone within the gas industry, but in the engineering and chemical professions as well.

Gas companies continued to inaugurate more favorable rates for house heating through central plant burners and equipment. It is estimated that

the total number of gas central house-heating installations connected to the lines of all United States gas companies in 1940 amounted to 800,000. In addition there were approximately 1,800,000 dwellings heated by unit heaters, space heaters, floor furnaces, etc., giving a total of more than 2,600,000 homes in the United States that are heated by gas.

In recent years, the gas industry has supplemented the substantial amount of research conducted by gas appliance manufacturers by a vigorous and well-planned program of research and development through the American Gas Association. Even better and more efficient gas equipment will shortly be available which should serve to enhance the competitive position of gas.

The gas industry is taking a leading part in supplying the vast industrial heating needs of factories and mills that are producing the thousands of parts for equipment and machines necessary in the National Defense program. For hardening the small and intricate parts of machine guns to the final heat treatment of the largest guns, specially designed gas furnaces are speeding production at an ever increasing pace. In the navy yards, some of the largest industrial furnaces ever built are annealing fully assembled gun turrets with gas. Equipment which has been developed for peacetime uses during the last decade through co-operative research and engineering by the gas utilities and leading equipment manufacturers under the sponsorship of the American Gas Association is rapidly being put to work to speed production in war industries.

Industry and business used about 55 per cent more gas during 1940 than during the boom period of 1929. It is estimated that the normal use of industrial and commercial gas during 1941 will be at least 10 per cent greater than 1940 and supplementing this will be the great quantities of gas used for purely defense production in the United States and Canada.

New streamlined gas equipment for restaurants, hotels, clubs, and bakeries is being installed in increasing quantities and is contributing materially to the modernization of all kinds of eating places. Food preparation technique is changing rapidly and chefs are finding that the newly designed specialized gas equipment enable them to easily adopt the newer cooking methods. Formerly all restaurant foods were cooked on heavy duty ranges and in range ovens. While the range is still the main cooking appliance, it is being supplemented by such special gas appliances as deep fat fryers, thermostatically controlled grills, individual deck baking and roasting ovens, radiant ceramic broilers, various types of coffee makers, and a host of other special gas devices.

The attitude of American housewives toward gas fuel and the modern gas range has undergone a marked improvement over the last five years during which the industry has sponsored a national advertising program, a survey conducted near the close of the year reveals. During 1940, full-page advertisements on the modern gas range and on the four main household uses of gas fuel appeared in national magazines with a circulation of nearly 20,000,000. In addition, 16 magazines serving the trade and professional fields carried advertising promoting the industrial use of gas. Augmented by local newspaper advertising, the national campaign was an influential factor in increasing sales of gas and modern gas-using equipment.

The gas industry continued its activities to promote the use of gas for the "4 Big Jobs" in the homes of the nation. During 1939, gas utilities reported that of the new homes constructed in their territories, 91 per cent used gas for cooking, 77 per cent for water heating, 62 per cent for house-heating, and 12 per cent for refrigeration. Preliminary figures for the year 1940 indicate further increases in each of these uses.

An impressive record of gas service was made in the housing projects completed by various governmental departments and bureaus during 1940 and the industry is supplying gas for many services in numerous cantonments and defense housing projects throughout the nation.

Total sale of gas ranges during 1940 was 1,725,000 units—the highest record in the history of the industry, according to the Association of Gas Appliance and Equipment Manufacturers. The sale of "Certified Performance Gas Ranges," inaugurated in August, 1938, has continued to increase to the point where this type of range, tested and approved for unexcelled cooking performance, represents a substantial portion of total range sales. More than 500,000 automatic gas water heaters were sold during 1940.

**GENERAL EDUCATION BOARD, The.**

An institution incorporated by an act of Congress in 1903, with the stated object of promoting education within the United States of America, without distinction of race, sex, or creed. The total amount received by the Board in gifts and the accretion thereof, exclusive of income from investments, was \$179,756,000. The Board is empowered to expend the principal as well as the income from these funds. The present program is now restricted to the continuance of the existing program in the Southern States. Support of research and experimentation in relation to the problems presented in the field of general education, i.e. the secondary school through junior college level, and the program in child growth and development were brought to a close at the end of 1940. At the end of the year 1940 the Board's unappropriated assets amounted to \$13,937,414, of which the major portion was definitely earmarked for programs already undertaken.

During the year ended Dec. 31, 1940, appropriations approximating \$6,500,000 were made by the Board. They included: *General Education:* To Teachers College, Columbia University, \$67,200 for support of the program of science teaching of the Bureau of Educational Research in Science, and \$50,000 toward expenses incurred by the Congress on Education for Democracy; to the Educational Policies Commission of the National Education Association of the United States, \$65,000 for general support and \$10,000 for its program of education for civic responsibility; to the National Association of Secondary School Principals, the Department of Secondary Education of the National Education Association, \$24,750 for support of the study of occupational adjustment; to the University of California, Berkeley, \$61,700 for support of the study of adolescent development being conducted by the Institute of Child Welfare of the University of California; to the American Council on Education, \$40,000 toward sup-

port of the co-operative study in general education at the junior college level; and to Leland Stanford Junior University, California, \$40,000 for support of the program in social studies. *Southern Education:* To Bennett College, Greensboro, North Carolina, \$200,000 toward endowment; to Tuskegee Normal and Industrial Institute, Alabama, \$60,000 for enlargement of the plant and equipment of the School of Agriculture; to the University of North Carolina, Chapel Hill, \$60,000 to the department of chemistry for apparatus, equipment, and organic materials, and for a study of new sources of tanning materials; to Fisk University, Nashville, Tennessee, \$50,000 for current expenses, primarily for teaching and research; to the University of Virginia, Charlottesville, \$48,800 toward support of a bureau of industrial research; to the Virginia State Planning Board, Richmond, \$90,000 for support of a population study of the State of Virginia; to the Virginia Polytechnic Institute, Blacksburg, \$38,450 toward support of a research and planning project in agricultural economics with special reference to land use; to Louisiana State University and Agricultural and Mechanical College, Baton Rouge, \$25,000 toward support of visiting teachers and \$9,500 for courses in techniques of population research in the department of sociology; \$135,000 for State agents and assistants for rural schools for Negroes; to the University of Georgia, Athens, \$27,700 toward the program of development of the library, biological sciences, and administration; to Atlanta University, Atlanta, Georgia, \$25,000 toward current expenses of the School of Social Work; to Clark University, Atlanta, \$50,000 for the purchase of land for a new site; to the University of Kentucky \$27,210 for research in rural population changes in Kentucky; to Meharry Medical College, Nashville, Tennessee, \$3,700,000 toward endowment and \$160,000 toward current expenses of the Medical School and Hospital; to the Association of Colleges and Secondary Schools for Negroes, \$40,000 for support of the secondary school study.

The executive officers of the General Education Board during 1940 included: Ernest M. Hopkins, chairman of the board of trustees; Raymond B. Fosdick, president; William W. Brierley, secretary. Offices are at 49 West 49th Street, New York City.

**GENERAL LAND OFFICE.** Millions of acres of public land protected under national conservation policies are today valuable elements in the program for national defense as a result of activities of the General Land Office during the 1940 fiscal year.

More than 7,000,000 acres of the public domain were embraced in withdrawals and requests for withdrawals of tracts for bombing ranges and other defense uses. In many sections of the United States, township plats depicting public land surveys prepared by the General Land Office supply the only map data available for military purposes. Speeded up to meet defense demands, cadastral engineering activities during the year resulted in surveys embracing 5,693,105 acres.

Protection of the nation's food supply through the development of an adequate supply of potash, a vital agricultural fertilizer ingredient, also was among the important defense moves brought about during the year. As a result of the war, shipments of this material from Europe and elsewhere have practically ceased. To meet the emergency, more

than 6000 acres of land, comprising the greater part of the dry bed of Searles Lake in California, have been leased by the General Land Office. It is estimated that the supply available from this source, together with other potash produced in this country largely from land leased from the Government in California and New Mexico, should be sufficient to meet all domestic needs.

The General Land Office last year was listed among the few Federal agencies which returned to the Treasury more money than was expended in their operation. Total cash receipts amounted to \$7,057,942.16, which was more than three times the amount of expenditures for operations and marked the fourth consecutive year in which receipts were in excess of \$7,000,000.

The Branch of Planning, Use, and Protection made substantial progress on an inventory of the resources of the public domain, the mapping of public domain lands, range improvement services, and the assembly and analysis of information concerning the economic resources of Alaska. Management of the timber resources on approximately 2,500,000 acres of revested Oregon and California railroad grant lands was furthered through additional research, inventory, and classification, and through establishment of improved procedures for maintaining sustained yield cutting.

Approximately 250,000,000 acres of the 325,000,000 acres of public domain in Alaska administered by the General Land Office are in need of fire protection. During 1940, the skeleton Alaskan Fire Control Service, established earlier in the year, conducted a vigorous educational campaign for fire prevention, in which Federal agencies, civic organizations, and the general public rendered active co-operation, and a short course on forest conservation and protection was conducted in co-operation with the University of Alaska. Defense activities in progress and those in prospect will greatly increase the fire hazard, and serious losses will result unless the protection organization is materially strengthened.

Under the CCC program of the General Land Office, an incalculable amount of the nation's coal resources have been saved from destruction by controlling underground coal fires which have been consuming many of the large coal beds in public lands in the vicinity of Little Thunder Basin, Gillette, Wyoming.

Conservation of the grazing resources on the vacant and unreserved public lands was furthered by regulated grazing under section 15 of the Taylor Grazing Act. At the close of the fiscal year, grazing leases were outstanding on 7,411,986.77 acres, as against 5,830,743 acres outstanding at the close of the preceding year. Revenues from grazing leases during the fiscal year aggregated \$152,378, compared with \$137,365 during the preceding year.

The change from the system of issuing permits to prospect for oil and gas on the public domain to the system of issuing leases has been practically completed. The change was designed to aid in the conservation of the oil and gas resources, prevent speculation and secure more adequate returns to the United States from such resources.

Regulations were issued governing the utilization, primarily through lease, of small areas of the public domain outside certain national reservations for home-site, cabin, camp, health, recreational, or business-site purposes under the provisions of the five-acre tract act of June 1, 1938. The conserva-

tion of national resources and the welfare of the applicants and of the communities in which the lands applied for are situated will be given primary consideration in connection with all applications received.

The regulations relating to the public lands which were codified and printed as a part of Volume II, Title 43, of the Code of Federal Regulations have been reprinted as a separate volume, with an index and tables, and with a supplement which in effect brings the volume up to Apr. 17, 1940. A series of information bulletins relating to the work of the General Land Office is available upon request.

FRED W. JOHNSON.

**GENETICS.** See BOTANY; ZOOLOGY.

**GEOGRAPHY.** See EXPLORATION; POLAR RESEARCH.

**GEOLOGICAL SURVEY.** The work of the Geological Survey is highly technical and diversified. It consists of investigations in the fields of geology and hydraulic engineering, of topographic surveys, of land classification, and of supervision of mineral-leasing operations on Government-owned lands. During the fiscal year 1940 more than \$6,500,000 were made available for such work.

The Geological Survey's investigations of strategic minerals, begun in 1939, assume an important place in the national defense program. Deposits of manganese, chrome, mercury, tungsten, and nickel in a number of western States and deposits of tin and mica in North Carolina were examined or re-examined, and reports were submitted on 18 of the 20 projects before the close of the fiscal year. Studies were also made of tin, nickel, and chrome in Alaska. At the same time the regular program of geologic investigations continued without interruption. Important studies were conducted in the metal-mining districts of Colorado and Idaho, in the oil and gas region of Kansas, in the phosphate fields of Florida, and in a number of other geologically important areas.

Measurements of stream flow were made during the year at 4761 gaging stations throughout the continental United States and Hawaii. The resulting records will appear as parts of the regular series of water supply papers that show the behavior of streams in flood, in drought, and under normal conditions. Stimulated by the ever-increasing use of water from wells, numerous groundwater investigations were conducted in 1940. Periodic measurements of water levels or artesian pressures were made in about 5500 observation wells, and analyses were made of 2255 samples of both surface and underground waters to determine their suitability for industrial, agricultural, or domestic use.

In 46 States, the District of Columbia, and Puerto Rico more than 24,000 square miles were covered by topographic surveys or resurveys, the resulting quadrangle maps being scheduled for publication as parts of the topographic atlas of the United States. A detailed survey was also made of a part of Annette Island in southeastern Alaska for an airplane landing field. These three-dimensional maps are indispensable in the planning and execution of modern military operations as well as in the everyday, nonmilitary, peacetime pursuits of the Nation. In the production of some of them the Survey continued to use the stereophotogrammetric equipment by which mapping is accomplished through the use of aerial photographs.

As technical adviser to the land-administrative agencies of the Federal Government, the Geological Survey made more than 7500 reports upon the mineral resources, water power, or storage possibilities of public lands. At the same time technical supervision was given to 6500 properties containing oil and gas, more than 200 containing coal, and 100 containing other minerals. On Indian lands more than 4000 oil and gas leases were supervised, in addition to more than 200 properties containing coal, asbestos, lead, and zinc. Minerals produced during the year from public and Indian lands and naval petroleum reserves under the supervision of the Geological Survey had an estimated value of \$80,000,000 and revenue derived by the Government as a result of this production amounted to \$8,000,000.

The Survey issued a total of 667 publications during the year, these including 49 reports in the regular series and 102 new or revised topographic and other maps. It distributed during the same period 67,735 books and pamphlets and 808,764 maps.

W. C. MENDENHALL.

### GEOLOGY. Geology in National Defense.

During the World War of 1914-18 Germany was the first nation to make use of geologists as active consultants in the field, and from the very beginning German geologists were assigned to army staffs. The value of geological advice was soon appreciated by other combatants, and before the end of the war geologists were widely employed in the field by all armies. In 1940 geologists of the United States were beginning once more to think in terms of war-time usefulness and accepted as a matter of course their listing in the newly organized National Roster of Scientific and Specialized Personnel, from which selection of competent individuals for national defense purposes will be made. This increasing preoccupation with the geological aspects of national defense was indicated at the December, 1940, meetings of the important geological societies, where a considerable proportion of the papers was devoted to various aspects of the place of geology in preparing for and waging war.

In connection with the field operations of an army, the work of the geologists consists in nothing more than the application of the well-recognized methods of engineering geology to a rather specialized type of problem. Very often this employment is in the selection, where considerations of military effectiveness allow a choice, of the best possible locations for trenches, dugouts, tunnels, air-raid shelters, and underground fortifications. Other things being equal the best location for these structures is in well drained rock or soil, which is also easily excavable. It was often found, for example, during the last war that one dugout might be comparatively dry and comfortable, while another on the same line but at slightly greater or lesser depth was cold and wet. This difference was often due to the varying permeability of the material in which the dugouts were constructed, and a slight shift in the vertical location of the poorly drained dugout might have placed it in the more permeable formation, where it too would have been dry. Since the health and comfort of troops may depend upon the quality of their quarters, geologists who could point out such differences in rock behavior were very useful.

Geologists have also shown that the potential destructiveness of bombs and shells varies greatly in different types of soil. In clay soils, bombs pene-

trate deeply, make a relatively deep crater, and throw material vertically upward, so that the radius of the area of danger is small. In sandy soils, however, craters tend to be shallow and fragments to fly horizontally over an area of much greater radius. At the front geologists are also used in locating abundant and safe water supply for troops and in finding materials for road building and other military construction. Some aspects of this subject have been discussed by Douglas Johnson in *Battlefields of the World War* (American Geographical Society, New York, 1931), and a considerable bibliography upon it developed after 1918. It may be confidently stated that the new techniques of geophysics will further enlarge the field of geologists in future military operations, whenever the characteristics of earth materials must be taken into consideration.

With the tremendous enlargement of the U.S. Army now occurring, problems of officer training arise, and here again the geologist may contribute. It is essential that officers be able to understand, if not make, maps, for there is scarcely a military operation from the inception of a plan of campaign to its execution in the field that does not require an extended knowledge of maps. Because of his wide use of maps in the field, the geologist is better able than any other map-user to picture the details of topography, which can only be depicted in part on a map of usual scale and contour interval, but which may be of tremendous importance under battle conditions. The geologist is often able to read much between the contour lines, and a map to him is as good and even better than a model in showing topography. For example, knowing something of the origin of a flat plain shown on the map without a contour, the geologist knows pretty well whether it is likely to have elevations or depressions of one origin or another too small to be caught by the contour interval, but large enough to be of great tactical importance. Such knowledge can be of inestimable value to officers, and much of it can be quickly imparted to innumerable future officers by geologists and others especially selected for this service. It is interesting to note that it is already becoming difficult for colleges to obtain topographic models, because the entire output of some model-making firms is already required by the government for instructional purposes.

In the allied field of aerial photograph interpretation, which has been developed to a great extent by oil company geologists, it seems probable that men trained in this specialty will be called upon to interpret and to teach interpretation of aerial photographs for military purposes.

So far as national defense requirements demand the planning and construction of large engineering works such as the much-discussed St. Lawrence Canal, geologists will continue to be called into consultation to solve the multitude of varied problems dealing with the behavior of rocks and soils, which are met in every great engineering undertaking.

**Strategic Metals.** Of the 25 metals which are listed as essential for national defense by the Army and Navy Munitions Board, eight are regarded as strategic in the sense that they are required for waging of modern war, and at present are unobtainable within our boundaries in quantities sufficient for our own use. The strategic metals are tungsten, mercury, tin, chromium, aluminum, antimony, nickel, and manganese. A discussion of the uses, sources, substitutes, and possibilities of in-

creasing domestic production of these metals lies largely within the fascinating field designated mineral economics, although the problems are as much technologic as economic. They can only be touched upon here, and the reader who is interested should turn to the following annual volumes covering the world production and containing much in addition to bare statistics: *The Mineral Industry* (McGraw-Hill) and *The Minerals Yearbook* (U.S. Bureau of Mines). Broad discussions of the entire subject may be found in *Rough Strategic Mineral Supplies* and *Leith World Minerals and World Politics*, both published by McGraw-Hill.

In some instances, as seems likely for tungsten, domestic production sufficient to meet war-time requirements could probably be obtained by mere increase in price. In other cases, however, no increase in price, no matter how extraordinary, could much enlarge production. This is true of tin, for it is unfortunately probable that there is more tin in some of our large city dumps than in all our mines. An increase in the price of manganese would probably result in a considerable gain in domestic production, but it would probably never be sufficient for our needs. Our nickel comes from Canada, and, since overseas transportation is not involved and Canada is a friendly nation, does not constitute a problem.

For many years the U.S. Geological Survey (q.v.) has been engaged in studying the economic deposits of the United States, and within the past two years has been able to extend its investigations greatly so that many field parties have been engaged in examinations of all promising prospects, as well as in careful restudy of many abandoned and largely worked-out mines. The successful search for potash made in this country as a result of the inability to obtain this important fertilizer material from Germany during the World War was a triumph of economic geology and will serve to illustrate something of its methods. In 1916 potash was almost unobtainable and sold for as much as \$119 per ton; in 1939 we produced over six hundred thousand tons at an average price of about \$19. The great potash deposits of Stassfurt, Germany, occur in beds of Permian age deposited in an isolated and evaporating arm of the ocean. Although no potash occurred at the surface in western Texas and eastern New Mexico, it was recognized that the beds were of the same age and character as those of Stassfurt. Exploratory drilling located the potash beneath the surface, and it is now estimated that there is a reserve of over one hundred million tons in this district from which most of our potash now comes.

The occurrence of chromite may furnish another example of the methods of geology in the search for metals. Chromite, the mineral from which chromium is obtained, often occurs in association with the iron mineral, magnetite. Frequently it occurs in lenticular masses, which may be cut off at any level by erosion. Since magnetite, as its name suggests, is magnetic, it will deflect the compass needle, and a region where masses of chromite and magnetite, even though small, occur at the surface is a promising one for exploration for underground bands of chromite by magnetic methods. Once a mass is located and its general size and shape determined by dip needle surveys, exploratory drilling is undertaken to determine the proportion of chromite before any steps toward mining operation are taken.

By such and by far more complicated methods,

geologists hope to locate new deposits of the strategic minerals and to lessen the dependence of the United States upon foreign sources. But in some instances there is little that the geologist can do, for if the metal does not occur within the desired limits, it will do no good to seek it.

**Chinese Geomorphology.** Among the books appearing in 1940, one of unusual interest because of the circumstances attending its publication was *Geomorphology* by S. Ting. Published in Chungking, this is the first text on landforms to appear in Chinese. When it is considered that geomorphology is a science with so few practical applications that this text could have little immediate use in warring China, its appearance at this time seems a remarkable indication of a national will to carry on. It may be contrasted with the statement reliably attributed to a Japanese when asked why he no longer sent an American colleague copies of his published articles, "We are just beginning to realize that Japanese science is for Japanese."

**Shore and Beach Protection.** With the tremendous increase in the recreational use of beaches the problem of their preservation from wave attack has received widespread attention in almost all States bordering on the ocean or on the Great Lakes. The shores of some States such as New Jersey and Connecticut near large centers of population are almost entirely occupied for summer recreational use, and are sources of large income to the States and their citizens in the form of taxes and spending by vacationists. Active wave erosion immediately causes economic loss in the form of "taxes to the sea," which in the aggregate amounts to millions in depreciation of property value and cost of protective works. There is a national organization of engineers, scientists, and civic divisions interested in shore protection, which publishes an enlightening quarterly known as *Shore and Beach* and meets annually at various shorefront cities in the United States. The problems of shore defense against wave and tidal current attack are complex and require co-operation of engineer and geologist, although most studies of wave processes now being published are by engineers. Successful shore defense requires community effort, for one property owner working alone may cause damage all along a shore or be defeated in his efforts, because undefended shore on each side of him continues to be eroded until he is outflanked. For this reason the construction of any large protective works or of other edifices likely to change shore currents requires authorization by State or Federal bureaus. It is interesting to note that established beaches are not only protected against destruction, but in many instances, as in the case of the famous Coney Island beach, are greatly widened by artificial deposition.

**Contour Map Symbols.** Two recent additions to the standard symbols used by the U.S. Geological Survey on its contour maps have resulted in making many of these five-color maps, whereas for many years they were printed in three colors, brown, blue, and black, except in those maps where green was rather unsuccessfully used to denote forest areas. For a number of years too, important State and Federal highways have been shown in red with the highway route number printed in a red circle or shield; this has proved a useful practice, although unavoidably confusing when routes are altered. In the latest maps red is used in short diagonal dashes and in a stippled pattern of various widths superposed upon the accustomed black to

indicate political boundaries. Although this may make the maps more useful to those to whom the contour lines have no meaning, the red pattern unfortunately makes the topography more obscure to geological users. In addition to the new use of red, a light gray tint is now used in a helpful way to denote the closely built-up parts of cities, where individual buildings shown in black would completely conceal the topography. In these built-up city areas public structures only are now shown in black, and the result is a much more legible map to the reader of contours, as can be seen in the new Weehawken, N.J., Quadrangle, where the topography of the Palisades can now be seen in the area of Jersey City, which under the old system would be entirely black. On these new maps, however, it must not be assumed that all the gray-tinted districts are solidly covered with buildings.

**Studies of Living Glaciers.** Research on living glaciers in the past few years has made rapid headway in three directions. The first of these, in which Ahlmann of Sweden has made notable contributions, is in the quantitative study of the amount of snow falling on the upper parts of a glacier, the thickness of névé thus added to the ice mass annually, and the volume of ice that is lost by melting and evaporation from different parts of the glacier each year. Such studies require that the investigator live with the glacier for a prolonged period; they have not yet been made of American glaciers, although there are many on the continent that would repay the student for the time spent upon them. The second line of research has involved microscopic study of glacier ice in a refrigerated laboratory where its behavior under differential pressure could be observed. The details of ice flowage have been revealed and recorded on motion-picture film, so that the reorientation of the ice crystals during flowage is clearly seen. This work was first undertaken in 1938 by an English group under Seligman, which set up their laboratory in a room hewn into the practically stationary ice above the bergschrund of the Great Aletsch Glacier in Switzerland. In this country Demorest has carried on similar studies with ice of Mount Rainier glaciers and has felt justified in concluding that under sufficient pressure ice acts as a viscous fluid.

The third field of research deals with variations in the size of existing glaciers in response to climatic fluctuations; it has recently brought out evidence that the present cirque glaciers of the western United States are not diminished remnants of their Ice Age predecessors but represent a new generation of ice bodies of late Post-Pleistocene age, at most 4000 years old. In addition Matthes believes that the larger glaciers of the Northwest, Canada, and Alaska, did not melt entirely away but diminished greatly in size; since then they are believed to have expanded to the limits from which they are even now receding. If these interpretations are substantiated, it will not be improper to speak of a minor ice age more recent than the last great glaciation.

It has not been possible to determine whether any correlation between glacier-maxima of short duration in Europe and North America exists, but it seems quite certain that in both continents the maxima of the 17th, 18th, and 19th centuries were the greatest ice extensions since the end of the Ice Age. The present rapid decline of glaciers does not necessarily mark the end of this last great period of ice advance, for it may be only one of many

temporary recessions that have occurred, and it is known that the Alpine glaciers are now much larger than they were during the Middle Ages and still cover the sites of villages overwhelmed as late as 1643-44. In the Sierra Nevada and Cascade Mountains the glaciers continue to lose greatly both in thickness and in length; in one glacier a decrease in thickness of 32 feet occurred in six years, in another the ice front retreated 345 feet in one year. A number of small glaciers have disappeared completely, one within the lifetime of the man for whom it was named. In addition to their great scientific interest, these studies are of some economic significance to the hydrologist, inasmuch as melt-water from glaciers is often an important source of water supply maintaining flow in streams which would otherwise dry up during the summer.

Many of these studies have been furthered by the International Commission on Snow and Glaciers, a group of scientists whose co-operation one with another must nearly come to a standstill during these years of war.

See GEOLOGICAL SURVEY.

HENRY S. SHARP.

**GEORGIA.** Area, 59,265 square miles, including 540 square miles of water. Population, Apr. 1, 1940 (census), 3,123,723 (1,073,808 urban and 2,049,915 rural); 1930, 2,908,506. Atlanta, the capital, had (1940) 302,288; Savannah, 95,996; Augusta, 65,919; Macon, 57,865; Columbus, 53,280.

**Agriculture.** Georgia harvested, in 1940, 10,673,000 acres of the principal crops. Cotton, while it supplied hardly over one-third of apparent value of the return on cultivation of the soil, remained the chief cash-yielding crop. Largely counteracting the diminution of the yearly planted acreage during the years of the New Deal, improvement of the yield of cotton to the acre held production fairly close to the average for 1929-38. Cotton in Georgia yielded 251 lb. to the acre (1940), as against an average, for the stated years, of 218. On 1,946,000 acres (stated years' average, 2,595,000), cotton made 1,020,000 bales (average, as above, 1,175,000); in estimated value to the growers, \$48,450,000. Corn, on 4,259,000 acres, grew 46,849,000 bu. (estimated value, \$31,857,000); peanuts, on 663,000 acres, 553,605,000 lb. (\$17,151,000); tobacco, 72,100 acres, 76,420,000 lb. (\$12,328,000); sweet potatoes, 99,000 acres, 6,930,000 bu. (\$6,237,000); tame hay, 1,141,000 acres, 648,000 tons (\$7,582,000); oats, 443,000 acres, 8,638,000 bu. (\$4,405,000). Peaches, the main orchard crop, made 4,154,000 bu. (\$5,192,000).

**Mineral Production.** The value of native minerals produced in Georgia in 1938 (as stated in 1940 by the U.S. Bureau of Mines) totaled \$11,598,421. Stone furnished over three-tenths of this; raw clay, somewhat less; clay products (exclusive of pottery), one sixth. Quarries' sales of stone rose to 1,988,530 short tons for 1939, from 1,465,680 for 1938; in value, to \$4,838,623, from \$3,581,319. Dimensional stone for building, monuments, etc., formed the greater part of these values: in 1939 granite contributed \$1,166,207; marble, \$1,464,960. Kaolin (used chiefly as a filler for paper and making china) made up 95 per cent of the producers' sales of clay; the total of kaolin rose to 512,214 short tons (1939) from 412,632 (1938), and in value to \$4,135,727, from \$3,314,918. The production of fullers' earth (its statistics separate from those of clay) was also important: producers' sales (inclusive of a minor part attributed to Florida)

amounted to \$1,035,066 for 1939. Products made from clay (exclusive of pottery and refractories) amounted to \$1,980,943 for 1938.

**Manufacturing.** Yearly production of manufactured goods in Georgia totaled \$677,402,657 for 1939; \$708,652,241 for 1937. Other totals for 1939 (each with that for 1937 subjoined): 3150 (2875) manufacturing establishments employed 157,970 (159,496) persons for wages of \$108,078,264 (\$110,501,344), paid for materials, etc., and contract work \$394,076,490 (\$439,145,132), and added to material, by process of manufacture, a value of \$283,326,167 (\$269,507,109).

**History.** Governor Rivers's failure in 1939 to move the Legislature to raise the taxes in order to support his system of help for schools and other liberal measures was followed in 1940 by other setbacks to his administration. W. L. Miller, the former close friend whom Rivers had removed late in 1939 from the chairmanship of the Highway Commission, fought this extension of the executive authority in the courts and obtained State Circuit Court orders to keep him in his position. Rivers countered by declaring martial law, thus seeking to suspend the operation of the orders. Courts pronounced jail sentences on officers of the National Guard who, under Rivers's orders, prevented the operation of court mandates; Rivers issued pardons to the officers. Miller carried his trouble to the Federal courts on the ground of the Federal duty to support the lawful State authorities; Judge Deaver granted him a Federal injunction against the Governor; the Governor ignored it on the plea of States' rights and was arrested for contempt (March 15) but released on his own recognizance. Rivers appealed to the Federal Circuit Court at New Orleans when thus threatened with Federal imprisonment for contempt. Meanwhile proceedings in the State's courts had been carried up to its Supreme Court. It decided (April 10) that Miller was the lawful incumbent, nullifying Rivers's order of removal. Rivers, defeated at every point, gave up the legal contest. He had accomplished the immediate object of Miller's removal, the diversion of moneys from the highway fund to meet the State's current contributions in aid of public schools. Late in October Rivers borrowed \$3,500,000 from a banking house in New York, wherewith to continue the State's payments toward the salaries of teachers in the public schools. The loan was to come due on Feb. 28, 1941, soon after Rivers's successor and inveterate opponent, Talmadge, took office; Rivers declared that ad valorem and income taxes "when paid next spring" would amply meet the maturity. On October 26 the State's Auditor submitted to Rivers an audit purporting to show that the Highway Department's balances indicated a deficit of \$13,843,408 on June 30; and the U.S. Bureau of Public Roads promptly gave notice that the State would receive no more of the Federal road money until the Highway Department should get into shape to meet its part of the shared cost of road work.

The State's audit came as a sequel to a legislative inquiry into the Highway Department. In May an economy committee of the House, questioning Hiram Wesley Evans, National head of the Ku Klux Klan and member of the Governor's military staff, learned of Evans's receiving income for co-operating with five companies engaged in bidding for highway contracts. The Federal District Attorney at Atlanta took up the matter and started investigating highway dealings before a grand ju-

ry. The Ku Klux Klan itself came into notice on account of the flogging to death of an alleged wife-beater of East Point early in March, for which nine members of the Klan were tried, and the flogging of an organizing agent of the C.I.O. in the same area, for which the principal offender was sentenced to imprisonment and fine, April 25. An order of Imperial Grand Wizard Colscott (April 17) required members of the association to cease wearing the mask that had formed part of their costume.

Rivers, who had weakened himself by resorting to the high-handed methods that he had condemned in his predecessor, Talmadge, and by defying sentiment against further taxation, sought a more popular course in May by ordering all aliens to be registered and forbidding them to engage in licensed occupations, unless applicants for citizenship.

**Elections.** At the State primaries (September 10) the Democratic nomination for Governor, assuring election in November, went to former Governor Talmadge; the supporters of Rivers failed to retain any of the major elective offices.

At the general election (November 5) the State's vote for President went to Roosevelt (Dem.) 265,194 votes, and against Willkie (Rep.), who got 46,362 votes, by about 6 to 1. Talmadge for Governor and the State's other Democratic nominees were duly elected.

**Officers.** Georgia's chief officers, serving in 1940, were: Governor, E. D. Rivers (Dem.); Secretary of State, John B. Wilson; Attorney General, Ellis Arnall; Treasurer, George B. Hamilton; Comptroller, William B. Harrison (died) and Downing Musgrove (successor); Superintendent of Schools, M. D. Collins.

**GEORGIAN SOVIET SOCIALIST REPUBLIC.** See UNION OF SOVIET SOCIALIST REPUBLICS under *Area and Population*.

**GERMAN-AMERICAN BUND.** See DIES COMMITTEE; FASCISM.

**GERMAN LITERATURE.** The year 1940 finds German literature in a chaotic condition. It is very difficult, almost impossible, to make a reliable and complete report. Magazines and books from Nazi Germany are hardly obtainable, even scientific publications do not reach the libraries and have not for months. The literature within Germany's walls has now totally become the instrument of the propaganda machine. In later years it will be a very interesting task to compare the literary situation during the first world war with that of the second world war. At that time an unusual literary activity, an abundance of intellectual intensity, that broke through in spite of the strict censorship regulations, today a sinister silence. The literary "Fuehrer" of the Third Reich, Hanns Johst, describes a trip through conquered Poland in a propaganda paper *Ruf des Reiches—Echo des Volkes* (*Call of the Reich—Echo of the people*). Martin Luserke publishes a short story from the Irish legendary circle *Bran wadet durch das Meer* (*Bran wades through the ocean*). E. M. Mungenast in *Der Zauberer Musot* (*The sorcerer Musot*) writes the story of a soldier from Lothringia, who, after the war of 70/71 has fullest understanding for the new German regime. Agnes Miegel, a second-class writer of former times publishes a new volume of poems *Ostland* (*Eastern country*) in which she writes about the fate of East Prussia from the first world war to the present. The publishing house of S. Fischer brings out a two-vol-

ume collection of carefully "purged" essays, covering two centuries under the title *Deutscher Geist* (*German spirit*). Wilhelm Schellberg and Friedrich Fuchs publish a very noteworthy collection of unknown letters of Clemens Brentano under the title *Das unsterbliche Leben* (*Immortal Life*). In *Oelkrieg* (*Oil war*) Anton Zischka announces the end of the imperialistic battles for the oil fields of the world. By a gasoline developed from coal, Germany, he sets forth, has broken the world power of oil. Out of the abundance of absolute propaganda literature, anti-Semitic literature, and inferior novels, the novel of the talented Ernst Juenger *Auf den Marmorklippen* (*On the marble cliffs*) stands out, a work that contains genuine contemporary critical notes. Otherwise the rank and file of the new publications shows no name of any literary value. And a new poetic production has been denied the Third Reich up to the present. The separation of German literature in two enemy camps, the literature of the exile and that of the Nazi, has become more apparent as the war progresses. It is interesting in this connection, that German publishers demand of American publishers of German textbooks for use in colleges, that they will refrain from publishing manuscripts of non-aryan or expatriated aryan German writers. In one case it has been found that the American publisher agreed to this demand.

The German writers in exile have spent the year 1940 in saving their own lives or in helping to save the lives of their comrades. Hitler's advance has placed the avowed and hated enemies of the Third Reich in an extraordinarily difficult position. A rescue movement, that was inaugurated by the "Emergency Rescue Committee" with a large scale assistance of American authorities, has saved many important writers from definite destruction. A large number of these are now in America, among them Hermann Kesten whose historical novel with a Spanish background *I the King* has appeared in the course of the year in an American edition; Heinrich Mann, Thomas Mann's brother, who is at work on a diary of his French experiences; Leonhard Frank; Alfred Polgar; Leopold Schwarzschild, the former publisher of the *Neues Tagebuch* (*New Diary*) formerly published in Paris; Golo Mann, a son of Thomas Mann, who last published *Mass und Wert* a Swiss magazine, now abandoned; Adrienne Thomas; Franz Werfel, whose novel *The embezzled heaven* recently appeared here as the "Book of the Month"; Gustav Regler, now living in Mexico, whose novel on the Spanish war (*Longmanns*) was a well-deserved success; Konrad Heiden, who has won acclaim as the author of two biographical works on Hitler; Leo Lania; Lion Feuchtwanger; Julius Bab; Fritz von Unruh; E. J. Gumbel. A number of these authors have received contracts in Hollywood, but the transplanting into new surroundings, presents a difficult, material, and intellectual problem. Several are still expected, the whereabouts of others is unknown. A number of the writers have become the victims of events. Walter Benjamin, a philosopher of singular stamp and Walter Hasenclever, one of the most successful playwrights of the war generation, committed suicide on the French-Spanish border. Rudolf Olden, the author of a brilliant Hitler analysis, lost his life on the way from England, when the ship on which he was crossing was torpedoed.

The printing of German books in exile had ceased almost entirely as a result of the occupation of the neutral countries of Europe. The important

publishing concerns, who were active in Holland, such as "Querido" and "Allert de Lange," naturally had to give up every activity. Of "Querido" it is said that the firm will move its seat to Batavia, if the head of the concern succeeds in getting out of England. The only German publishing house still in existence outside of Nazi Germany is the Berman-Fischer Publishing House in Stockholm, which has, however, reduced its output to a minimum. At any rate said publishing house published a translation of Sholem Asch's *Nazarene* and a new short novel by Thomas Mann *Die vertauschten Köpfe* (*The exchanged heads*) a half fairy-tale-like love story of greatest charm, with India as its locale.

It is remarkable how large a place is accorded translations of American books within the scope of the limited German literature, which actually still only has a public in Switzerland. We find such titles from the pens of Willa Cather, Dale Carnegie, Paul de Kruif, Norah Lofts, Daphne du Maurier, Christopher Morley, John Steinbeck, Thomas Wolfe, Richard Wright.

A pamphlet appeared by Karl Barth, the Swiss theologian, who was banished from Bonn; this pamphlet is entitled *Gottesbund und Staat* (*God's alliance and state*).

Georg Kaiser, possibly the most significant living German playwright published in Switzerland two new dramas *Rosamunde Floris* and *Der Soldat Tanaka*.

Bernhard Baumgartner, a Swiss author, must be mentioned as the creator of a very noteworthy and thorough Mozart-Biography. Heinrich Strobel wrote a *Debussy* Otto Strasser, at one time a collaborator of Hitler and today one of his most decided opponents, in his book *Hitler und Ich* (*Hitler and I*) has made some sensational disclosures, especially about the background of the German-Russian alliance. The book has become known by a translation in America.

Among the arrivals in the course of the year to these shores is Carl Zuckmayer, one of the strongest poetic talents of the German theater. His biographical presentation *Second Wind* appeared recently at Doubleday, Doran. Stefan Zweig, the Austrian writer, seems to have settled permanently in Brazil. He published a collection of historical essays. Emil Ludwig moved from Switzerland to California. During the course of this year there appeared by his pen in German *Ueber das Glueck und die Liebe* (*On happiness and love*), a collection of articles. He is preparing a *German History* and a biography of Trotsky. Bruno Frank, also a resident of California, is at work on a play with a historical background, the action of which takes place during the Boxer uprising.

The Viennese author Hermann Broch, whose great novel *The sleepwalker* has gained much attention, has received a Guggenheim-fellowship. He is at present at work on a new Vergil-novel.

The only German literary work that appeared in the United States in 1940 is a new edition of Thomas Mann's *Lotte in Weimar*, which publication the publisher Berman-Fischer, now in New York, made possible with the assistance of Harcourt, Brace. Interesting plans are in progress for a sort of "Museum of European Literature," a foundation, that intends to publish new editions of classical and contemporary works of German, Italian, French, Dutch, Czech, and Polish authors in the original languages.

A number of German authors published books in

original American editions. Erika Mann published *The Lights Go Down*, a collection of short stories, each based upon documentary proof and that describe the fate of a German small town and its citizens under the Nazi regime. She has also collaborated in the book *Zero Hour*, prefaced by Stephen Vincent Benét, which is a political appeal to American youth. The novel of Franz Hoellering, *The Defenders*, dealing with the Austrian labor movement, had a great literary success. A work by the Bavarian author Oscar Maria Graf, entitled *My Mother*, a touching and simple portrayal of the life of the author's mother, has attracted great attention. From the pen of the Viennese author Raoul Auernheimer there is a fascinating biography of Metternich. Heinz Pol described the collapse of French democracy, from the point of view of an eye-witness. Theodor Reik, for many years the collaborator of Sigmund Freud, wrote a volume, which contains personal memoirs of Freud and a collection of psychoanalytical essays. The psychiatrist Kurt Goldstein, who now occupies a chair at Tufts College in Boston, published in the Yale Press the interesting attempt at a social pathological biology. A volume of articles has been published out of the estate of the sociologist Emil Lederer, formerly of Heidelberg and last connected with the New School for Social Research. A stirring report of facts on the murder of her son, the lawyer Hans Litten, by the Nazis, was written by his mother, Irmgard Litten, under the title *Beyond Tears*.

A typical example for the odyssey of the German emigration is the "Institute for Social Research," that formerly was a part of the University at Frankfurt-on-Main. In 1933 it transferred its seat to Geneva. In 1934 it was joined to Columbia University as "Institute of Social Research." The official organ of the institute *Zeitschrift fuer Sozialforschung* was published up to 1940 by a Paris publisher in several languages. After the collapse of France the publication is now being continued under the title of *Studies in Philosophy and Science* in New York.

Finally the new magazine *Decision*, published by Klaus Mann, deserves mention. This is a first attempt to bring about a synthesis between the European literary emigration and American literature. To quote the editor himself, the magazine "is designed to become instrumental in intensifying the relations between the American and European spirit." In the first number the German authors were represented by Franz Werfel, Stefan Zweig, and Bruno Walter, the musical conductor.

The incongruity of this summary demonstrates best the illness from which German Literature was suffering in 1940. Dependent upon very powerful historical events, which will decide the fate of the German language and its cultural world significance, it looks forward to an unknown future.

MARTIN GUMPERT.

**GERMANY.** A former Federal republic of Europe, transformed into a centralized, totalitarian state by the National Socialist revolution commencing in 1933. Capital, Berlin.

**Area and Population.** The area and population of Germany proper and its component States at the census of May 17, 1939, with comparative figures for the census of 1933, are shown in the first table in the next column.

The second table shows the area and population of territories formally incorporated into the

Total		42,257	12,007,627

\* Estimate \* 1939 \* 1936

According to the foregoing tables, the area of Germany proper on Dec. 31, 1940, was about 266,718 square miles. The total population was approximately 91,584,385.

Living births in Germany in 1939 numbered 1,633,078, including Austria, the Sudetenland, Memel, and Danzig, as compared with 1,506,340 in 1938. Deaths totaled 1,009,290 as against 950,144 in 1938. The birth rate for Germany, including the Saar but excluding Austria and subsequent annexations, was 20.3 per 1000; death rate, 12.3 per 1000.

Populations of the chief cities at the May 17, 1939, census were: Berlin, 4,332,242; Vienna, 1,918,462; Hamburg, 1,682,220; Munich, 828,325; Cologne, 768,426; Leipzig, 701,606; Essen, 659,871; Dresden, 625,174; Breslau, 615,006; Frankfurt-on-Main, 546,649; Düsseldorf, 539,905; Dortmund, 537,000; Hanover, 472,527; Stuttgart, 459,538; Duisburg-Hamborn, 431,256; Nurnberg, 430,851; Wuppertal, 398,099; Königsberg, 368,433; Bremen, 342,113; Chemnitz, 334,563; Magdeburg, 334,358; Gelsenkirchen, 313,003; Bochum, 303,288; Mannheim, 283,801; Kiel, 272,311; Stettin, 268,915; Halle-on-Saale, 220,364; Kassel, 217,085; Graz, 210,175; Brunswick, 201,306. According to the census, the Jewish population was 330,892 in Germany, including Austria and the Sudetenland. This did not include half-Jews, of whom there were 72,733.

**Education and Religion.** Primary education

is compulsory and there is little illiteracy. Excluding Austria and the Sudetenland, there were 50,592 elementary schools and 7,503,195 pupils in 1939, as compared with 51,118 schools and 7,596,000 students in 1938. In Austria there were 4721 schools and 657,000 pupils; in the Sudetenland, 2957 schools and 274,000 pupils. Other school enrollment (in 1937-38) was: Intermediate, 272,365; "gymnasien" and "realschulen," 370,985; universities and advanced schools, 69,981 (universities, 45,989; advanced technical schools, 9554; others, 14,438). There are three new special colleges for the education of political leaders. According to the 1933 census, Protestants comprised 62.7 per cent of the total population; Roman Catholics 32.5 per cent; other Christians 0.1 per cent; Jews 0.7 per cent; adherents of other sects 4 per cent.

**Agriculture.** The Reich (including Austria and the Sudetenland) had 55,302,000 acres of arable land in 1939; 27,601,000 in meadows and pastures; 2,470,000 in trees, shrubs, and orchards; and 42,032,000 acres of forests. The gross value of agricultural production in the harvest year 1938-39 was 14,050,000,000 marks, representing an increase of 7 per cent over 1937-38. Milk accounted for 23.5 per cent of the total. The potato crop for 1940 was estimated at 58,900,000 tons for Greater Germany, including Austria and the Sudetenland but excluding territory subsequently annexed by the Reich. The sugar-beet crop was said to total 18,400,000 tons. Yields of chief cereals in 1939 were (in metric tons): Wheat, 5,613,500; barley, 4,261,800; rye, 9,454,800; oats, 6,867,700; and corn, 379,600 (1938). Meat production in 1938 totaled 3,676,800 metric tons, of which hogs accounted for 2,305,600 metric tons. The livestock census in December, 1939, showed 29,100,000 swine; 23,900,000 cattle. In the old Reich in 1938 there were 19,900,000 cattle, 23,600,000 hogs, 4,800,000 sheep, 2,500,000 goats, and 97,900,000 poultry.

**Mining and Manufacturing.** The net value of industrial production in some of the larger categories was divided as follows in 1938: Shipbuilding, 273,500,000 marks; metal, 559,500,000 marks; leatherware, 106,300,000 marks; motor vehicles, 636,500,000 marks. The 1938 output of minerals and metals in metric tons was: Coal, 186,179,000; lignite, 232,000,000; iron ore, 3,100,000; lead, 185,200; copper (smelter), 66,000 (1939); pig iron, 18,595,000; steel, 23,208,000; aluminum (smelter), 3000 (1939); cadmium, 432; zinc, 212,300 (1939); crude petroleum, 647,000 (1939). Rayon production was 66,500 metric tons; wood pulp, 2,544,000. Pig-iron production in Germany and German Poland during 1939 was estimated provisionally at 22,850,000 tons; steel, 30,950,000 tons; aluminum, 185,000 tons. Output of electric energy totaled 5,500,000,000 kilowatt-hours in 1938. Manufacture of synthetic rubber was accelerated in 1940 and a second factory, under construction during the year at Huls, was expected to exceed the capacity of the original plant at Schkopau.

**Foreign Trade.** Imports for consumption in 1938 were valued at 5,449,000,000 marks (5,468,000,000 in 1937) and exports of German products at 5,256,000,000 marks (5,911,000,000 in 1937). For the first seven months of 1939, merchandise imports totaled 3,194,000,000 marks; exports, 3,314,000,000 marks. No trade statistics have been made public by the German Government since Aug. 1, 1939. For distribution of trade among countries, see 1939 YEAR BOOK, p. 315. Also see TRADE, FOREIGN.

**Finance.** Revenue from all Reich taxes for the fiscal year ended Mar. 31, 1940, totaled 23,575,100,000 marks as compared with 17,712,000,000 for the preceding year, according to an official report of the Ministry of Finance. The increase over the 1938-39 year was consequently 5,863,000,000 marks, as compared with an increase of 3,750,000,000 for the 1937-38 year. The 1939 figure encompassed a contribution of 300,000,000 marks from Austria for the first quarter of the year; while the 1940 year includes the full annual allotment from Austria and the Sudetenland. Governmental expenditures have not been published since 1933. Including the wartime contribution of German communes and other miscellaneous items, the Reich's revenues from all sources except borrowings were estimated to total 30 billion reichsmarks for the year ending Mar. 31, 1941. Estimated expenditures were 29,288,000,000 reichsmarks in 1938-39, 44,963,000,000 in 1939-40, and about 64,000,000,000 in 1940-41.

The disclosed public debt on June 30, 1940, was computed at 60,144,800,000 marks against 35,500,200,000 on Sept. 30, 1939, one month after the European War began. The 1940 figure represented pre-1924 obligations of 3,076,000,000 marks; foreign debts of 1,236,800,000; domestic long-term and medium-term debts, 29,268,000,000; domestic short-term obligations, 22,780,200,000; tax certificates, 3,783,700,000. Note circulation of the Reichsbank on Dec. 31, 1940, totaled 14,033,000,000 marks, compared with 11,798,000,000 on Dec. 31, 1939. The nominal average exchange rate of the reichsmark was \$0.4016 in 1938, \$0.4006 in 1939, \$0.4002 in 1940. See *History*.

**Transportation.** Railway mileage under German control totaled 86,000 after the occupation of German Poland. At the beginning of 1939 mileage was 38,107. Exclusive of that in occupied France, the total railway mileage under German control on Dec. 31, 1940, was 109,904. The figure includes Bohemia-Moravia, German Poland, Danzig, Memel, Denmark, Norway, Luxemburg, the Netherlands, and Belgium. Highways (1940) covered 263,267 miles. Extension of the express highway system in 1939 consumed 921,000,000 marks and brought the length of these super roadways to more than 2000 miles. Because of the British blockade, German mail to and from North, South, and Central America was routed without exception via Siberia and Japan, according to official reports dated Dec. 2, 1940. Under construction in 1940 was a 100-mile canal linking Pinsk on the Pripiet River with Brest-Litovsk on the Bug, thus linking the Black and Baltic Seas via Russia and Germany. The Lufthansa system resumed air connections on Oct. 14, 1939, between Berlin and Copenhagen, Stockholm, Rome, and Budapest. The Berlin-Danzig-Königsberg route was extended to Moscow on Jan. 20, 1940. Berlin-Prague-Vienna were linked on Jan. 15, 1940. A week-day airmail service between Berlin and Barcelona via Stuttgart was inaugurated on Aug. 7, 1940. Total length of German air services in operation on Oct. 22, 1940, was officially reported at 7457 route miles, with daily flights averaging 18,642 miles.

**Government.** Under the Enabling Act of Mar. 24, 1933, giving the cabinet unrestricted powers to legislate by decree, dictatorial powers were assumed by Adolf Hitler in his dual capacity as Chancellor (appointed Jan. 30, 1933) and head of the National Socialist (Nazi) party, the only legal political organization. Upon the death of President von Hindenburg, Aug. 2, 1934, Hitler assumed the

functions of both Chancellor and President under the title of Leader (Fuehrer) and Chancellor (Reichskanzler). On Oct. 16, 1934, it was officially announced that Hitler would occupy both offices for life. Rights of the former Federal States were abolished by the decree of Feb. 1, 1934. Between 1933 and 1940, the Nazi party progressively brought under its control not only the government and the army but virtually all departments of political, cultural, social, and economic life (see preceding YEAR BOOKS). The Reichstag of 855 members (1940) was elected Apr. 10 and Dec. 4, 1938, from nominees selected by the Nazi party. It is a purely advisory body, meeting infrequently at the call of the Fuehrer.

The cabinet was composed as follows at the end of 1940: Fuehrer, Chancellor, and Minister of Defense, Adolf Hitler; Interior, Dr. Wilhelm Frick; Foreign Affairs, Joachim von Ribbentrop (appointed Feb. 4, 1938); Finance, Count Ludwig Schwerin von Krosigk; Food and Agriculture, Dr. Walther Darré; Economic Affairs, Dr. Walther Funk (Jan. 15, 1938); Labor, Franz Seldte; Posts, Dr. Wilhelm Ohnesorge (Feb. 2, 1937); Transport, Dr. Julius Heinrich Dorpmueller (Feb. 2, 1937); Aviation, and Commissioner for the Four-Year Plan, Field Marshal Hermann Goering; Justice, Dr. Franz Guertner; Science, Education, and Public Instruction, Dr. Bernhard Rust (Apr. 30, 1934); Church Affairs, Hanns Kerrl (July 19, 1935); National Enlightenment and Propaganda, Dr. Joseph Goebbels; Munitions, Dr. Fritz Todt (Mar. 20, 1940).

An Inner Council of Defense formed Aug. 30, 1939, consisted of Field Marshal Goering (Chairman), Rudolf Hess, deputy leader of the Nazi party; Cabinet Ministers Frick and Funk; Dr. Hans Heinrich Lammers, Minister without Port-

folio and Chief of the Reich Chancery; and Gen. Wilhelm Keitel, chief of the general staff. The Council was authorized to issue decrees and ordinances without Hitler's signature in his absence.

### HISTORY

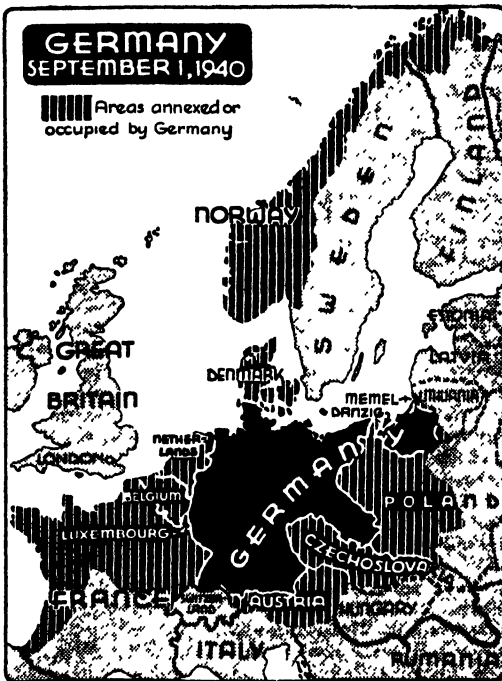

**Germany Astride Europe.** Combining his dynamic diplomacy with some of the most sensational military victories in recorded history (see EUROPEAN WAR) Adolf Hitler brought virtually the entire European continent under the sway of Nazi Germany during 1940. Denmark, Norway, the Netherlands, Belgium, Luxemburg, and France were added to the list of Nazi military conquests. Alsace-Lorraine and the Belgian districts of Eupen, Malmédy, and Moresnet were reincorporated in the Reich, thus liquidating the last vestiges of the Versailles Treaty. Luxemburg was likewise absorbed.

Italy entered the war as Hitler's ally and fell increasingly under German control. Japan adhered to the Rome-Berlin Axis, and the three Fascist powers staked an exclusive claim to control of Europe and Eastern Asia. Hungary, Slovakia, and the remnants of Rumania were brought into the Axis camp without open war by combined promises and threats. Extreme pressure was brought upon Bulgaria and Yugoslavia to do likewise. Sweden, Finland, and Switzerland were cut off from virtually all communication with the anti-Nazi world and confronted with the alternatives of military conquest or peaceful acceptance of Hitler's "new order" in Europe. Spain, bound to the Reich by close political and ideological ties, awaited only a favorable opportunity to throw its military weight on the German side.

By the end of 1940 about 167,000,000 Europeans were included within Great Germany or the ter-

ritories under its direct military control. Another 90,000,000 persons in Italy, unoccupied France, Hungary, Slovakia, and Rumania were under various degrees of indirect Nazi domination. All of the conquered and vassal territories, together with Sweden, Finland, and Switzerland, were in process of reorganization as a single great economic unit under German direction, with Berlin as its clearinghouse and the reichsmark as its currency. Only Britain and its Balkan allies on the one hand and the Soviet Union on the other remained as obstacles to the consolidation of German domination over Europe. British influence, moreover, had been expelled from all parts of the Continent except Gibraltar, Greece, and Turkey, and the British Isles themselves were being badly battered and slowly strangled by the German air and sea warfare.

**Threats to Nazi Hegemony.** There was a reverse side to this glittering picture of German invincibility. The British Navy retained complete control of the seas and the blockade initiated in 1939 reduced Europe's overseas commerce to a mere trickle. The Royal Air Force, having repulsed Germany's "all-out" air attack during the autumn of 1940, systematically bombed factories and communications throughout areas under Axis control. This contributed to the acute shortage of food, fuel, and other essential war materials resulting from the naval blockade. Italy, shaken by a series of British victories in Africa and the Mediterranean and by the ignominious failure of Mussolini's Greek campaign, was forced to depend more and more upon the Reich for economic supplies and for military assistance and moral support.

The task of holding the conquered countries in subjection became more and more difficult as their sufferings increased and as hope for a British victory revived. The United States at the end of 1940 was steadily increasing its aid to Britain and her allies. Moreover the uneasy partnership concluded by Hitler and Stalin on the eve of the European War (see YEAR BOOK, 1939, pp. 316-317) grew more strained as the Nazi steamroller pressed into the Soviet sphere of influence in the Balkans. While preparing for a final assault upon Britain, Hitler was thus obliged to spread his armed forces over a large part of Europe and in particular to keep many divisions on guard along the eastern frontiers of the German "living room" in Central and Southeastern Europe.

**The Military Stalemate.** The stalemate in the European War that followed the conclusion of Germany's Polish campaign in September, 1939, continued through the first quarter of 1940. The "peace offensive" launched by Hitler, with Russian support, in the autumn of 1939 had revealed no basis of agreement with the Allied Governments although its propaganda value was exploited to the full. The visit of President Roosevelt's special emissary, Under-Secretary of State Sumner Welles, to the belligerent capitals in February and March revived peace talk. But the German terms presented to Welles led him to report on his return to Washington that there was no immediate prospect of a settlement. According to the Berlin correspondent of the Netherlands newspaper *Telegraaf*, Hitler's conditions were: (1) Allied recognition of Germany's permanent control over Bohemia-Moravia and Poland, and of its politico-economic hegemony in Central Europe, (2) an end to British "intrigue" in Scandinavia, (3) surrender of Britain's "pirate nests" at Gibraltar, Malta, and

Singapore, and (4) restoration of Germany's pre-World War colonies.

Lest Welles' trip should arouse undue peace hopes in Germany, Hitler in a radio broadcast of February 24 affirmed his faith in Germany's victory and his determination to wage war until the "plutocratic terror" from abroad was ended. This unleashed a Nazi press campaign calling for the complete destruction of British sea power to safeguard Germany's "living space."

**War Economy Strengthened.** Except for the activities of German submarines and a few surface raiders, Germany prosecuted the war exclusively on the economic, diplomatic, and ideological fronts from January to April 9, 1940. While the Allies contented themselves with efforts to tighten the blockade, Hitler and his aides worked to strengthen the Reich's war economy against the blockade. The labor, wealth, and resources of conquered Poland and Czecho-Slovakia were mobilized for German war industries. At the same time German diplomacy, effectively backed by the Nazi barter system, threats of invasion and well-organized "fifth column" activities, succeeded in increasing German trade and political influence in Hungary and the Balkans at the expense of Anglo-French interests.

Field Marshal Goering in January expanded his powers as Commissioner for the Four-Year Plan by assuming complete control over all German war industries and government departments concerned with the war economy. A new trade accord made with the Soviet Union on February 13 promised to supply the Reich with much-needed oil, fodder, manganese, and other war materials. By negotiations with Moscow and with Rome, marked by the Hitler-Mussolini conference at Brennero on March 18, Berlin sought to enlist Russia and Italy in a Nazi-dominated political and economic bloc powerful enough to dictate a settlement of the European conflict. Meanwhile by threatening military intervention in Norway and Sweden, Hitler prevented the Allies from seizing the opportunity presented by the Russo-Finnish War to establish a new military front in Scandinavia and cut off the Reich's vital iron ore supplies, mined in Sweden (see EUROPEAN WAR; FINLAND under *History*).

**The War of Nerves.** Throughout this period Hitler and his aides made careful military and diplomatic preparations for the renewal of the armed struggle on the Western Front. German diplomacy was successful in preventing the small neutral nations of Western and Northwestern Europe from either casting in their lot openly with the Allies or taking the precautionary steps toward military collaboration that might have saved Norway, the Netherlands, and Belgium. The neutral peoples and likewise the French and British were subjected to a "war of nerves" in which German propaganda alternately lulled them into complacent inaction and frightened them with threats of a terrible total war. Increasingly during 1940 German propaganda appropriated the revolutionary slogans and appeals of world communism to stir up class divisions, civil strife, and moral confusion among enemy and neutral peoples (see FASCISM).

In this propaganda campaign and in the closely related program of sabotage and subversion conducted by their agents and sympathizers in democratic countries, the Germans received invaluable aid from the orthodox Communist parties (see

COMMUNISM). In France, particularly, Hitler reaped large dividends in 1940 from the deal he made with Stalin in August, 1939.

**Invasion of Scandinavia.** Expertly co-ordinated, Hitler's new military and non-military techniques proved their effectiveness in warfare when the Germans on April 9 ended the military stalemate by the sudden occupation of Denmark. Simultaneously a paralyzing blow was struck at the nerve centers of Norway. An Allied expedition that was sent to Norway to bolster the kingdom's resistance was soon driven out.

The invasion of Scandinavia, made under the pretext of forestalling a similar move by the Allies, was apparently precipitated by the growing menace of the Allied blockade, which caused much hardship in Germany during the exceptionally severe winter of 1939-40. This bold venture brought Hitler important military and economic advantages that, temporarily at least, outweighed the accompanying losses. The Allied menace to Germany's northern flank was removed. Norwegian bases gave the Germans great advantages in prosecuting their naval and air war upon Britain and its overseas communications. Important supplies of food, minerals, and raw materials, a large proportion of which had gone to Great Britain, were diverted to the Reich. Replacement of these supplies from overseas placed an increased strain upon British shipping. Sweden and Finland were cut off from contact with the democratic world and by economic pressure and propaganda gradually forced into the German orbit. Germany and Nazi-dominated Europe became the only outlet for Swedish iron ore, pulp, etc., and the Reich was the only power now in a position to aid Finland and Sweden against Soviet ambitions in northern Europe. On July 9, Dr. Alfred Rosenberg, Nazi party philosopher, announced that the Germanic peoples of Norway, Denmark, Sweden, and Germany were to be united in a future "community of fate."

As against these advantages, Germany's attack on Denmark and Norway incurred the moral indignation of a large part of the world. It aroused bitter hatred in the occupied countries, expressed passively in Denmark but with increasing violence in Norway. The Norwegian Government, taking refuge in London, placed the large Norse merchant marine at the disposal of the British and organized a naval and air force to join in the struggle for recovery of Norwegian independence. The severance of the overseas trade of Denmark and Norway made them a growing economic liability to the Reich after their accumulated food and raw-material supplies were exhausted.

**The Balkan Diversion.** The German assault on Denmark and Norway coincided with a new effort to bring the Balkan countries completely within the Reich's "new order." Large numbers of German "tourists" appeared in Hungary, Rumania, Yugoslavia, and Bulgaria. "Fifth column" activities were intensified and diplomatic pressure was applied to secure police rights on the Danube and co-operative governments in the Balkan capitals. The Balkan countries, however, were not yet in a position to be intimidated, and showed growing reluctance to meet German demands for more foodstuffs and raw materials. Led by Yugoslavia, the Balkan countries took effective measures against Nazi "fifth column" activities. For the time being Anglo-French economic and financial power remained too formidable to permit a blood-

less Nazi victory in Southeastern Europe. On April 18 German military missions arrived in Italy in a new effort to enlist Mussolini's more active co-operation in the war, but neither threats nor persuasion moved Il Duce from his policy of "non-belligerency."

**Effects of Victory in West.** Italy's caution and the resistance offered to German penetration by the Danubian and Balkan States underwent a marked change as a result of the smashing German military victories of May and June in the Low Countries and France. There the tactics followed in Norway brought even more sensational success. The Netherlands, Belgium, and Luxembourg were invaded without warning on the ground that their governments had schemed with the Allies to permit an Allied invasion of the Ruhr. The Netherlands was overrun in four days. The Belgian army capitulated on May 28. The British Expeditionary Force was driven across the English Channel with the loss of all its equipment, and France's great army was battered into helplessness by the middle of June.

In his Order of the Day to the soldiers of the Western Front issued simultaneously with the opening of the offensive, Hitler declared that "the fight beginning today decides the fate of the German nation for the next 1000 years." With the collapse of France, the complete success of his great gamble appeared certain. The early capitulation of Great Britain was expected everywhere except in Britain. The Nazi leaders, confidently announcing that they would be in London before August 25, ordered a 10-day victory celebration in the Reich and immediately began the absorption of the newly conquered areas into the German "living space."

Possession of the Low Countries and of the entire French Atlantic coast gave the Germans air and naval bases for a close-range attack upon Britain and its overseas trade. It gave them the rich iron-ore mines of Lorraine and large supplies of food, war materials, and goods of all kinds captured or requisitioned in the newly occupied areas. Even from unoccupied France, trainloads of foodstuffs were taken to relieve the shortage in the Reich. More than 1,400,000 prisoners of war and hundreds of thousands of civilians from the conquered territories were sent to Germany to work in factories and fields and to replace the manpower conscripted into the German armed forces.

The strangling effects of the British blockade were thus shifted in part during the summer and winter of 1940 from the Germans to the alien peoples under their rule. At the same time part of the financial burden of supporting the Nazi military machine was transferred to the subjugated countries. The pessimism and criticism of the Nazi dictatorship in evidence in the Reich during the winter and early spring of 1940 was temporarily dissipated. In the words of an anti-Nazi German, the German people became "prisoners of Hitler's great military triumphs." He received a tremendous ovation in Berlin upon his return from the Western conquest.

The effect of these victories upon the neutral countries of continental Europe was even more striking. Italy was the first to jump aboard the German band wagon, entering the war on June 10. This forced the British to divert a larger part of their fleet and other defense forces to the Mediterranean and the Near East, leaving the British

Isles more exposed to German invasion. On June 14 the Nationalist Government of Spain abandoned neutrality in favor of a "non-belligerency" favorable to Germany, and occupied Tangier (q.v.) within artillery range of the British stronghold at Gibraltar. Turkey, although bound by alliance with Britain and France to enter the struggle on their side if Italy attacked them, continued its "non-belligerency" and on June 13 concluded a new trade pact with the Reich. Anglo-French influence collapsed throughout the Balkans. When Hitler and Mussolini met at Munich on June 18 in an atmosphere of jubilation, it appeared as though the destiny of Europe henceforth rested in their hands.

**Soviet-German Tension.** It was not long before the bright future confronting the Axis powers became shadowed. Alarmed by the Allied debacle that freed large German forces for possible service against the Soviet Union, Moscow strengthened its defenses by seizing Estonia, Latvia, and Lithuania during June 15-17. On June 26 a Soviet ultimatum was served on Rumania, which resulted in the cession of Bessarabia and Northern Bukovina. This led King Carol to place his kingdom under Hitler's protection on July 1. The Fuehrer guaranteed Rumania against further Soviet aggression. He sent German troops to protect the Soviet-Rumanian frontier, thus warning Russia that he was determined to exclude Soviet influence from the Balkans. During August and September he attached Hungary and Bulgaria to the Axis cause by forcing Rumania to cede a large part of Transylvania to Hungary and Southern Dobruja to Bulgaria. The ensuing political breakdown in Rumania enabled the Reich to occupy the remnants of the kingdom with its armed forces and to establish a completely subservient government at Bucharest.

The struggle between Soviet and German influence in the Balkans was then centered in Bulgaria and Yugoslavia, where the masses were traditionally sympathetic to Russia but where the governments gradually yielded to German pressure. By the end of 1940 Bulgaria appeared firmly if unofficially within the Axis camp, with Yugoslavia fated to follow soon. Whether the Soviet Union would peacefully accept German domination of the Balkan peninsula and eventually of the Straits was one of the most important and uncertain issues in European politics at the end of 1940.

**The War Against Britain.** Meanwhile the projected German invasion of Great Britain had been frustrated by the success of the Royal Air Force in repulsing the great German air attacks of August and September. Facing a second winter of war and increased American aid to Britain, Hitler was obliged to revise his plans and strategy. On August 17 he proclaimed a "total blockade" of the British Isles. During the remaining months of the year his air force and navy undertook to soften up Britain by continual attacks upon its cities, factories, and shipping. Japan was induced to join the Rome-Berlin Axis on September 27 on terms calculated to prevent the entrance of either the United States or Russia into the conflict on Britain's side.

In September Italy was prodded into opening offensives in Africa, with the primary objective of closing the Suez Canal. Simultaneous German diplomatic activities in the Balkans were designed to open a path for German armies across Turkey to the oilfields of Iraq, to Palestine, and the east-

ern approaches to the Suez Canal. To secure Soviet acquiescence, the Germans were variously reported to have offered Moscow Iran and part of India, or control of the Dardanelles and a portion of Turkey. Hitler's proposals were laid before the Soviet Premier and Foreign Commissar, Vyacheslav Molotov, during his visit to Berlin in mid-November, but up to the end of 1940 the Soviet Government had given no definite indication of its course.

During the latter part of October Hitler made an intensive effort to carry the war to the British in the Western Mediterranean by bringing France and Spain into the conflict on the side of the Axis. This would have opened the way for an attack upon Gibraltar and utilization of French naval and air bases in North Africa and Syria for an effort to drive the British fleet out of the Mediterranean. Hitler's conferences with General Franco at the Spanish-French border on October 23 and with Marshal Pétain on October 24 failed to convince them. Despite the reported offer of Gibraltar and French Morocco, Franco declined to enter the war or permit German troops to attack Gibraltar at that time, while Pétain insisted that French collaboration with Germany must be restricted to economic matters. See FRANCE and SPAIN under *History*.

**Year-End Setbacks to Axis.** The failure of these diplomatic efforts was attributable primarily to the rising doubt as to Germany's ability to defeat Britain, even with Italy's assistance. This doubt was greatly increased by the successive reverses suffered by Italian arms in the Mediterranean, in Greece, and in North Africa during November and December (see EUROPEAN WAR). Mussolini's abortive attempt to invade Greece at the end of October was apparently made without the previous knowledge of Hitler. Il Duce wanted to forestall the Fuehrer and reserve at least part of the Balkans for Italy. Nevertheless the Italian failure there and the subsequent defeat of Marshal Graziani's army at Sidi Barrani in Egypt was a severe blow to Axis prestige and to Hitler's plans for driving the British out of the Mediterranean. In December the Germans found it necessary to send military and air reinforcements to the Italian fronts as well as to increase their economic support of Italy's faltering economy.

Persistent British air raids on the cities of Western Germany, the recurrence of the food stringency, and the non-fulfillment of Hitler's promise of an early victory over the British meanwhile had revived pessimism and unrest in Germany. Hope of a British victory was restored throughout the conquered countries, accompanied by stronger resistance to the German program in Europe. Nevertheless Hitler on November 8 announced his "unalterable decision to continue the struggle to a clear decision." In a speech on the eve of the 17th anniversary of his abortive Munich beer-hall "putsch," he declared that no combination of powers could equal the resources and armed might of Germany and her allies and that he would reject any compromise.

In another speech to German workers on December 10, the Fuehrer declared that Germany was engaged in a struggle between "two worlds," one of which must crack up. He described it as a war between the "haves" and "have-nots," between the "plutocratic democracies" enriched by three centuries of robbery and crowded Germany and Italy, whose only riches were labor and skill

"Our capacity for work is our gold, our capital, and with it we will defeat the entire world," the Berlin office of the Associated Press quoted him as saying. He promised the "broad masses" of the German people that the Nazi world "of co-operative labor" would bring wide economic and educational benefits once the enemy was crushed.

**Relations with United States.** One of the major objectives of German diplomatic and propaganda activities during the year was to keep the United States out of the conflict and to limit its aid to the Allies. A series of White Books issued by the German Foreign Office were designed to strengthen anti-war and isolationist sentiment in America. On March 29 a White Book was published containing documents alleged to have been found in the archives of the Polish Foreign Office in Warsaw and purporting to contain accounts of conversations held between Polish and United States diplomatic representatives. These accounts represented the American ambassadors in Paris and London as "warmongers" who had encouraged Polish resistance to German demands and egged Britain and France into war with the Reich. The White Book was dismissed as propaganda by the individuals named. Secretary of State Hull stated that his department did not place the slightest credence in the allegations.

After his victory over France, Hitler in mid-June gave an interview to an American newspaper correspondent denying that the Reich had any territorial aspirations in the Western Hemisphere. President Roosevelt in reply pointed to the Fuehrer's long list of broken pledges, and took steps to prevent Germany from using the American colonies of conquered European countries as springboards for aggression in the New World (see *PAN AMERICANISM*; *UNITED STATES*).

Ensuing months witnessed an intensification of the German-American struggle for political and economic advantages throughout Latin America. The German press warned all of the American republics that they must come to terms with Hitler's "new Europe" or face the economic and other consequences. It declared that the huge U.S. gold reserve would be useless in the German-organized European economy and that free trade must give way to the German barter system. For a description of German methods and activities in Latin America, see each Latin American country under *History*; also *FASCISM*.

According to the Madrid correspondent of the *New York Times*, Hitler's effort in October to line up France and Spain with the Axis in a European bloc was designed in part to influence the American presidential election. Such a bloc, it was felt, would help to convince the United States that the Roosevelt policy of aid to Britain was destined to involve America in a disastrous war. Until after President Roosevelt's re-election, German official spokesmen and the press took the position that American aid to Britain could not affect the outcome of the war. But on December 21, the day following President Roosevelt's appointment of a four-man board to expedite production of defense materials for Britain and the United States, a German Foreign Office spokesman expressed sharp objection to Washington's policies. He warned that seizure of Axis ships in American harbors for British use would be regarded as a warlike act, and accused the United States of a policy of "pinpricks, injury, insult, challenge, and moral aggression" in the face of German "re-

straint" verging on "self-effacement." The situation, he declared, was approaching "insupportability."

**Internal Affairs.** Judging from the available evidence, the German war economy, in process of organization since 1933, bore the strain imposed upon it during 1940 without undue difficulty. Despite continued boom conditions in war industries, wholesale prices rose only 3.7 per cent during the first year of the conflict. The employment of more than 2,000,000 war prisoners and foreign civilians in agriculture, mines, and factories enabled the Reich to maintain production at a comparatively high level. On October 18 Hitler decreed a second Four-Year Plan, reappointing Marshal Goering "to continue the work and adapt it especially to the demands of war."

However the ration system and the shortage of consumers goods caused a gradual decline in living standards. The wholesale requisitioning of foodstuffs from conquered territories during the summer of 1940 did not materially relieve the serious shortage of meat, fats, fresh vegetables, and fruits. A deficient diet left many Germans hungry a good deal of the time, and the prospect that the food situation would get worse was not conducive to the maintenance of national morale. Some increase in malingering was reported among German workers during the autumn of 1940.

During the second half of 1940 wartime expenditures were averaging about 68,000,000,000 reichsmarks annually, excluding the occupation costs imposed upon Norway, Denmark, the Netherlands, Belgium, and France. The occupation costs levied on France alone averaged 7,200,000,000 reichsmarks annually. Germany's wartime expenditures for 1940-41 (see *Finance* above) were nearly 70 per cent of the estimated current national income. Roughly one-third of all expenditures were met from taxation and the remainder from borrowing and levies on the occupied countries. The total public debt, as contrasted with the disclosed debt (see *Finance*), was variously estimated at between 100 and 150 billion reichsmarks in November, 1940. During the second half of 1940 the disclosed debt rose by 19,000,000,000 reichsmarks to 79,000,000,000. Inflation was kept latent by rigid controls over every branch of the national economy; the interest rate on State loans was even lowered during 1940.

Reports of political unrest within Germany grew more frequent toward the end of the year. A secret anti-Nazi radio station within the Reich resumed the broadcasting of attacks upon the dictatorship in October. There were frequent reports of executions and disciplinary measures. Possibly to offset mounting dissatisfaction, Chancellor Hitler on November 18 announced a scheme for the construction of some 6,000,000 homes by mass production methods in the 10 years following conclusion of the war.

Nazi controls over the State and nation were tightened up all along the line. In April the political set-up in Austria was changed (see *AUSTRIA*) and it was officially revealed that the new organization would serve as a model for the entire Third Reich. In October the army inaugurated a new system for the instruction of boys seeking careers as non-commissioned officers, opening preparatory schools to those between 13½ and 15½ years of age. A decree of October 23 authorized the employment of police force in making youths report for duty with the Hitler Youth Organization.

**Church-State Conflict.** Although the Catholic Field Bishop of the German Army on October 4 issued a pastoral letter expressing conviction that Germany was "waging a just war," there was continued friction between the Nazi State and the Catholic Church. In January a pastoral letter issued by Adolf Cardinal Bertram of Breslau indirectly denounced the action of the Nazi leaders Himmler and Hess in urging the Elite Guard to beget children in or out of wedlock.

The Vatican City radio station on September 15 charged the Hitler regime with explicit violation of the 1933 concordat in forcibly closing all Catholic colleges in the Reich and converting Catholic elementary schools into institutions for educating all youth in the principles of Nazism. It was reported at the same time that because of the war the Vatican had forbidden publication of the pastoral letter drawn up by the German bishops at their annual conference which was held at Fulda in August.

Other denunciations of German National Socialism as hostile to the Church and anti-Christian were broadcast from the Vatican on November 19 and December 19. The latter statement declared that "Catholic life and teaching have truly been extinguished in Germany." The Vatican organ *Osservatore Romano* on October 12 accused the German Government of "killing" Catholicism in Poland.

Continuation of the struggle between the State and the Protestant Confessional Synod was indicated in the announcement from Berlin on December 23 that Dr. Heinrich Grueber had been arrested by the Gestapo and taken to the Sachsenhausen-Oranienburg concentration camp, where the Rev. Martin Niemöller had been confined since 1937. Dr. Grueber had been active in assisting Christianized Jews and other victims of racial and religious persecution to leave Germany. New restrictions were placed on Jews in Germany by regulations issued August 2.

**GERMICIDAL LAMPS.** See ELECTRICAL ILLUMINATION.

**GIBRALTAR.** A British crown colony and fortified naval base at the western entrance to the Mediterranean. It is a peninsula and includes a long mountain commonly called the "Rock" which has an extreme height of 1396 feet. Area, 1½ square miles; total civilian population (Jan. 1, 1939), 20,339, including 17,331 fixed residents.

Gibraltar is a free port. Its staple trade is the supply of fuel, provisions, and water to shipping, and the transit of cargoes to Spain and Morocco. During 1938 a total of 4752 vessels aggregating 13,772,321 tons entered the port.

**Government. Finance (1938):** Revenue, £207,628; expenditure, £199,725; public debt, nil. A governor assisted by an executive council administers the government under Letters Patent of Sept. 12, 1922. The legislative power is vested in the governor who, in addition, is the general officer commanding the garrison. Governor, Lieut. Gen. Sir Clive Liddell (assumed office during September, 1939).

**History.** Following Italy's entrance into the European War and the surrender of France, Gibraltar played an increasingly important role in the conflict. The day Italy entered the struggle five Italian merchant ships in Gibraltar Bay were captured by the British and one was scuttled by its crew. Thereafter the fortress was subjected to intermittent long-distance Italian air raids. In July and again in September French planes from nearby French Morocco bombed Gibraltar in retaliation for British attacks upon the French fleet at Oran and the port of Dakar, French West Africa.

About 14,500 inhabitants, mostly women, children, and aged persons, were evacuated from Gibraltar to French Morocco during the first part of 1940. After the French capitulation they were transferred to Madeira, Jamaica, and the United Kingdom. The British garrison was strongly reinforced during the latter half of the year and the fortifications greatly strengthened. In anticipation of an attack from Spain, a canal was constructed across the isthmus which joins the Rock to the mainland.

**GILBERT AND ELLICE ISLANDS.** See BRITISH EMPIRE.

**GLACIERS, Living.** See GEOLOGY.

**GLANDS, Study of.** See BIOLOGICAL CHEMISTRY.

**GLASS.** A new all-time high in production was established in 1940 by glass manufacturers, according to *The Glass Industry*, and the total manufactured value of all glass products for the year reached \$368,000,000. This is 15 per cent greater than in 1939, and 4 per cent above the previous record set in 1937.

Plate glass production amounted to 164,371,570 sq. ft., representing a 16 per cent increase over 1939, but lacking 17 per cent of equaling the 198,069,000 sq. ft. record of 1936. Window glass totaled 13,678,927 boxes, a figure that exceeds 1939 by 35 per cent. While this figure is the highest for any year since window glass figures have been publicly available, it is known that the years of the building boom actually were larger. Glass container production exceeded all previous years, including the former record high set in 1937, with 54,264,509 gross. This figure was 6 per cent greater than 1939. Stocks on hand at the close of 1940 were 9,988,210 gross, a figure that is regarded as large but by no means alarming. Miscellaneous glass products also soared to new levels, with a value of \$127,000,000. Important items included in this category are machine-made tumblers (43,600,762 dozens), machine-made table and kitchen ware (33,592,796 dozens), and illuminating ware (\$22,250,000).

Approximately 75,300 persons were employed on an average by the industry, *The Glass Industry* es-

timates, and the \$104,000,000 payroll was the largest ever paid to the industry's workmen.

Foreign trade directly reflected the war influence, and in a manner logically to be expected. Exports for the year were valued at \$14,750,000, the highest since 1920, and 41 per cent above 1939. All types of ware shared in the increase, showing the following increases over 1939: window glass 928 per cent; illuminating ware 55 per cent; plate glass 38 per cent; containers 32 per cent; and tableware 35 per cent. Canada and Latin America continue as leading outlets. In the same manner, imports dropped heavily, the total value being only \$2,312,000. This is 55 per cent below last year and the smallest since 1919. Plate glass was the only item to show an increase.

#### 1940 UNITED STATES FOREIGN TRADE IN GLASS

Kind of Glass	Exports	Imports
Plate . . . . .	\$ 1,527,000	\$ 119,000
Window . . . . .	720,000	359,000
Containers . . . . .	4,558,000	142,000
Tableware . . . . .	2,448,000	415,000
Illuminating Ware . . . . .	732,000	72,000
All other . . . . .	4,765,000	1,205,000
Total . . . . .	\$14,750,000	\$2,312,000

In sharp contrast to 1939, there were no outstanding new products of glass developed during 1940. The industry did continue to make technological advancements in the art of production, however, and this was particularly true of containers. Noteworthy among the container achievements was the extension of the new light-weight type of bottle to many new markets.

A number of factors in the industry have been attacked by the United States Government, notably the glass container, plate, and optical industries. Monopolistic practices as well as restraint of trade have been alleged. Only one of several suits have been settled however. Of vital importance to the future of the glass container industry is the government's insistence upon the dissolution of the Hartford-Empire Co. This concern holds most of the patents on glass container manufacture, and performs an engineering service for its licensees. See SCULPTURE.

JOHN T. OGDEN.

GOA. See PORTUGAL under *Colonial Empire*.

GOLD. World production of gold in 1940 exceeded in volume and value any previous annual output. The principal details, and comparison with 1939, are given in the accompanying table of world gold production, according to *Engineering and Mining Journal*. In the United States, California continued to hold first rank among the producers. The Philippines were second and Alaska (q.v.) third. Transvaal gold production was higher than in any other geographical unit, reaching a new peak of over 14,000,000 ounces, valued at \$491,000,000. The largest monthly production on record, 1,211,277 ounces, was made in October.

Throughout 1940 the United States continued to buy all gold offered, at \$35 per ounce. This was tremendously important in creating dollar exchange for the British Empire in the purchase of war supplies and munitions. All told the United States purchased four billion dollars of gold, equal to the entire domestic gold stock before revaluation of the dollar in 1934. The value of the gold in the Treasury at the close of the year was \$21,-

994,548,000 compared with \$17,697,000,000 on Dec. 31, 1939.

Considerable speculation was voiced during the year on the future of gold as a monetary metal, particularly in the event of Nazi domination of World trade. Economists were of the opinion that a victorious Germany would be in a position to use gold in international trade only so long as any of the metal remained in her Treasury, and that thereafter she might supply international business on another basis. In that event the stock of gold in the U.S. Treasury might easily become almost worthless. This contingency was, however, considered rather remote. See BANKS AND BANKING; FINANCIAL REVIEW; INTERNATIONAL BANKING.

H. C. PARMELEE.

GOLD COAST. A British colony in West Africa, consisting of the Gold Coast colony (23,937 sq. mi.), Ashanti (24,379 sq. mi.), Northern Territories (30,486 sq. mi.), and Togoland (13,041 sq. mi.). Total area, 91,843 square miles; total population (1938), 3,786,659, excluding 4463 non-Africans. Chief towns: Accra (capital), 72,977 inhabitants; Kumasi, 43,413; Sekondi, 21,614; Cape Coast, 19,412; Tamale, 18,591.

Production and Trade. Chief products: Cacao, kola nuts, palm kernels, copra, rubber, maize, yams, timber, gold, manganese, and diamonds. Gold production during 1939 totaled 820,000 fine oz. In the world production of diamonds and manganese ore, the Gold Coast ranks second and third respectively. Trade (1939): Imports of merchandise, £6,948,000; exports of merchandise and bullion, £12,660,000.

Government. Finance (1938-39): Revenue, £5,185,595; expenditure, £4,871,370; public debt (Mar. 31, 1939), £11,435,000. The deficit for the year 1939-40 amounted to £226,000. Budget (1940-41): Revenue, £3,965,000; expenditure, £3,620,000. A governor, assisted by executive and administrative councils, administers the Gold Coast colony. Ashanti, Northern Territories, and (British) Togoland are administered by the governor of the Gold Coast, and their statistics for trade, etc., are included in the general total for the Gold Coast. Governor and Commander-in-Chief, Sir Arnold W. Hodson (term extended for one year from October, 1940).

History. It was announced on Feb. 22, 1940, that the British government had purchased the whole British West African cacao crop for 1939-40 in order to protect the farmers from loss

caused by the war's dislocation of various markets. The new government technical school at Takoradi and a £250,000 rehousing scheme were completed in 1940. Takoradi was a port of call in the air journey between Great Britain and the Anglo-Egyptian Sudan. The government of the Gold Coast made a gift of £100,000 and a loan of £500,000 (free of interest for the duration of the war) to the fund for the purchase of war aircraft for Great Britain. It was reported in September that battalions of the native Gold Coast Regiment had arrived in Kenya for the campaign against Italian forces in Italian East Africa (q.v.).

**GOLF.** The elimination on a technicality of a strong contender for the national open championship was one of the biggest headlines in the 1940 history of golf. That and a record low score by Craig Wood provided about all the nervous excitement a fan would care to experience in one particular season.

The major event of the year was the national open championship, played over the Canterbury course in Cleveland. Lawson Little, former king of the amateurs, was the legally accredited winner of this classic, but not until he had disposed of Gene Sarazen in a play-off. The play-off was necessitated by a tie of 287 between Little and Sarazen, and there would have been a triple tie with Ed Oliver of Hornell, N.Y., in the running if Oliver had not been disqualified for beginning his final round before his official starting time. As it was, he finished out the round for an unofficial but genuine score of 287.

Thunder clouds hung over Canterbury that fateful day and there was a question whether the title match would be played to a conclusion. Fear of that eventuality impelled one threesome to cut short its luncheon period, rush to the first tee and drive off. Oliver's party followed the example and had made only their tee shots when they were disqualified by the United States Golf Association.

The victim of one of the toughest breaks ever accorded to man in golf, Oliver accepted the verdict without protest and went home. The following day Little and Sarazen played off over 18 holes and Little won with a score of 70, or two under par, to 73.

Extraordinary doings occurred also in the national amateur championship, which was captured by Dick Chapman of the Winged-Foot Golf Club of Mamaroneck, N.Y., over his home links. Chapman began by winning the qualifying medal and then defeated W. B. McCullough Jr. of Philadelphia, 11 up and 9 to play, in the 36-hole final, the most one-sided score in the final since 1895. In the quarter-finals of this tournament, the titleholder, Marvin (Bud) Ward faded out, defeated, 4 and 3, by Ray Billows of Poughkeepsie, whom Ward had vanquished the year before. Chapman in this round outplayed John Burke, the Metropolitan titleholder, 5 and 4; Wilford Wehrle defeated George Dawson of Chicago, 6 and 5, and McCullough wrested victory from the former champion, Johnny Fischer, 5 and 4.

Billows took the long end, 5 and 3, to McCul-

lough after being 4 down at the end of the first 18 holes. Chapman rubbed out Wehrle, 3 and 2, in a surprising match. Requiring 42 for the first nine holes of the 36-hole semi-final round, Chapman found himself 5 down. Then he came back in 34 while Wehrle was using 40. The result was that Chapman was 1 up at the end of the round.

Although McCullough got off to a fine start in the final, Chapman overtook him and was 3 up at the end of the morning round. In the afternoon McCullough's game went completely berserk. He lost eight of the next nine holes. His best showing was at the fifth, where he got a half.

The national P.G.A. title was annexed by Byron Nelson, the hero of the 1938 open championship. The national women's tournament was held in California and Miss Betty Jameson successfully defended her championship of this division. In the final she defeated Miss Jane Cothran of Greenville, S.C., by 6 and 5.

**GOUGH ISLAND.** See BRITISH EMPIRE.

**GREAT BRITAIN.** Official designation for the political union embracing England, Scotland, and Wales. Capital, London. Sovereign in 1940, George VI, who succeeded to the throne upon the abdication of Edward VIII on Dec. 10, 1936, and was proclaimed King on Dec. 12, 1936. Great Britain, together with Northern Ireland, the Isle of Man, and the Channel Islands, forms the United Kingdom of Great Britain and Northern Ireland. For statistical purposes, the Isle of Man, the Channel Islands, and in some cases Northern Ireland, are included under Great Britain. See BRITISH EMPIRE; IRELAND, NORTHERN.

**Area and Population.** The area of Great Britain, the census population of Apr. 27, 1931, and the estimated population on Jan. 1, 1939, are shown by political divisions in the accompanying table.

GREAT BRITAIN. AREA AND POPULATION

Divisions	Area in sq. miles	Population	
		1931	1939
England .....	50,874	37,794,003	41,300,000
Wales .....	7,466	2,158,374	
Scotland .....	30,405	4,842,980	5,002,000
Isle of Man .....	221	49,308	145,000
Channel Islands .....	75	93,205	
Total ..	89,041	44,937,444	46,447,000*

\* Including Monmouthshire. <sup>b</sup> Including Northern Ireland the total population (1939) is 47,737,000

Live births in 1939 were provisionally numbered 620,257 (15.5 per 1000); deaths, 499,192 (12.1 per 1000); marriages, 437,406. Corresponding numbers for 1938 were 621,627 (15.1); 478,927 (11.6); and 360,339 (8.7) respectively. Estimated populations of the chief cities in 1937 (except when otherwise indicated) were: Greater London, 8,655,000; County of London, 4,141,000 (1936); Glasgow, Scotland, 1,126,000 (1938); Birmingham, 1,029,700; Liverpool, 836,300; Manchester, 736,500; Sheffield, 518,200; Leeds, 491,880; Edinburgh, Scotland, 468,500 (1938); Belfast, Northern Ireland, 438,112; Hull, 319,400; Bradford, 289,510; Newcastle-on-Tyne, 290,400; Stoke-on-Trent, 272,800; Nottingham, 278,800; Leicester, 262,900; Portsmouth,

256,200; Croydon, 242,300; Cardiff, Wales, 224,850; Plymouth, 210,460; Salford, 201,800.

**Education and Religion.** For the school year 1937-38, there were in England and Wales 21,678 elementary schools with an average attendance of 4,526,701; in Scotland, 2898 primary schools, with an average attendance of 567,220. For secondary education, there were in England and Wales 1393 grant-aided schools with 466,245 pupils; in Scotland, 252 secondary schools with 151,988 students. Attendance at industrial and commercial schools in England and Wales was: Full time, 49,057; part time, 1,157,179. The 11 universities in England had 37,284 students in 1939-40; the four Scottish universities, 9413; and the University of Wales, 2485 students.

The Church of England (q.v.), with an Episcopal form of government, and the Church of Scotland (Presbyterian) are the "established religions" in England and Scotland, respectively. Recent statistics of "full members" of leading denominations in England and Wales were: Anglican, 2,294,000; Methodist, 1,250,589; Congregational, 494,199; Baptist, 392,535; Calvinistic Methodist, 261,287. The number of Roman Catholics was estimated at 2,361,504 in 1937. The Church of Scotland had 2536 congregations and 1,286,509 full members on Dec. 31, 1938; the Roman Catholic Church in Scotland, 614,021 adherents.

**Agriculture.** In 1939 arable land totaled 11,923,000 acres, including the Isle of Man; permanent pasture, 17,355,000 acres; orchards and small fruit, 312,149 acres. The value of agricultural production in England and Wales in 1937-38 was £223,500,000 (livestock and products, £154,400,000; farm crops, £35,300,000; fruit, vegetables, and miscellaneous crops, £33,800,000). Yields of chief crops in 1939 in the United Kingdom were (in metric tons): Wheat, 1,680,000; barley, 903,300; oats, 1,760,800; potatoes, 5,197,100 (1938); beet sugar, 494,100; hops, 13,100 (1938). Livestock statistics for 1939 in Great Britain (exclusive of the Isle of Man and the Channel Islands) were: Cattle, 8,118,788; sheep, 25,992,793; swine, 3,767,365; horses, 987,415; poultry (including Northern Ireland), 69,119,000. The wool clip as in the grease was about 108,700,000 lb. in 1938.

**Mining and Manufacturing.** Because of the war, figures on industry are incomplete. Mineral and metallurgical production of the United Kingdom in 1938 (except where otherwise indicated) was (in metric tons): Coal, 231,875,000; iron ore, 3,615,000; pig iron and ferro-alloys, 6,871,000; steel ingots and castings, 10,561,000; copper, 7200; aluminum (smelter production), 25,500 (1939); tungsten ore, 154; lead ore, 30,200; zinc (smelter production), including some secondary metal, 50,400 (1939). The production of alcoholic spirits was 58,011,000 U.S. gal.; beer, 1,066,775,000 gal. Vessels (of 100 or more tons) launched in 1938 aggregated 1,030,000 gross tons. A total of 447,561 motor vehicles were manufactured in 1938 (342,390 passenger cars and 105,171 trucks and buses). Rayon manufacture was 54,450 metric tons in 1939.

**Fisheries.** During 1938 the fisheries of England and Wales landed 776,635 tons of non-shell fish valued at £12,233,209 and those of Scotland 269,028 tons valued at £3,826,671. Great Britain's shell-fish catch was valued at £488,490.

**Foreign Trade.** Recent trends in British foreign trade are shown in the table at the top of the next column.

BRITISH FOREIGN TRADE \*  
[In thousands of pounds sterling]

Calendar year	Imports <sup>b</sup>	Exports British products <sup>a</sup>	Re-exports (imported merchandise) <sup>a</sup>	Total exports <sup>a</sup>	Excess of imports
1929	1,220,765	729,349	109,702	839,051	381,714
1932	701,670	365,024	51,021	416,045	285,625
1937	1,027,824	521,391	75,134	596,525	431,299
1938	920,438	470,883	61,608	532,491	387,946
1939	885,944	438,806	45,925	484,731	401,213
1940	1,099,900	413,100	26,200	439,300	660,600

\* Not including bullion and specie movements <sup>b</sup> Cif value Fob value

Food, drink, and tobacco accounted for £399,460,000 of Great Britain's purchases in 1939, other leading imports being. Non-ferrous ores, scrap, and manufactures, £56,590,000; scrap iron and iron and steel manufactures, £27,315,000; oils and fats and derivatives, £77,865,000; machinery, £24,531,000; wood and timber, £37,064,000; cotton and wool, £74,854,000. The chief exports were: Cotton and wool manufactures, £124,825,000; machinery, £47,340,000; vehicles, including ships and aircraft, £39,086,000; coal and other mining products, £38,259,000; iron and steel manufactures, £32,844,000. For distribution of trade see 1939 YEAR BOOK, p. 328.

**Finance.** Budget operations for the fiscal years ending March 31 are shown in the accompanying table.

UNITED KINGDOM BUDGET OPERATIONS

Years ending March 31	Receipts	Expenditures	Balance
1937-38	£872,580,000	£908,661,000	- £36,081,000
1938-39	927,285,000	1,061,049,000	- 140,764,000
1939-40	1,049,189,000	1,816,000,000	- 767,684,000
1940-41*	1,360,191,000	3,466,790,000	- 2,106,599,000

\* Estimates

Of the 1940-41 expenditures, £2,800,000,000 were earmarked for defense; £419,790 for the civil services; and £247,000 for national debt and other consolidated fund services. Rises in income, customs, and excise taxes were principally responsible for the increased revenue. The growth of the total national debt is indicated in the following table:

PUBLIC DEBT OF THE UNITED KINGDOM

Date	Funded £	Floating £
Aug. 1, 1914	638,000,000	16,000,000
Dec. 31, 1919	6,683,000,000*	1,350,000,000
Mar. 31, 1938	7,184,000,000*	842,000,000
Mar. 31, 1939	7,243,000,000	920,000,000
Mar. 31, 1940	7,453,000,000*	1,489,000,000
Sept. 30, 1940	7,969,000,000*	2,137,000,000

\* Including external debt of £1,357,000,000 in 1919 and £1,032,000,000 since then, chiefly owed to the United States

The average free exchange value of the pound sterling was \$4.8894 in 1938, \$4.4354 in 1939, \$3.83 in 1940.

**Shipping.** The size of Great Britain's merchant marine fluctuated during 1940. Sinkings by German naval craft were partially offset by construction of new ships and the acquisition of the fleets of countries overrun by the Nazis, such as Norway, Holland, Belgium, and Denmark. Semi-official advices in London on November 1 estimated the total shipping available to the British on that date at 21,000,000 tons. The British merchant marine on June 30, 1939, aggregated 21,001,925 gross tons. It consisted of 7203 vessels of 17,781,000

gross tons on June 30, 1938. The national income from shipping in 1939 was estimated at £100,000,-000 (£90,000,000 in 1938).

**Railways, etc.** There were 20,162 miles of railway line open in Great Britain on Jan. 1, 1939 (51,000 miles of track). Net revenue for the year was £28,984,000. Roads and highways in the United Kingdom totaled 180,527 miles in 1940. The total length of British home and overseas civil air routes was 30,624 miles in August, 1939. Some were suspended for the duration of the war. Twice-a-week service between London and Lisbon, Portugal, was inaugurated on June 4, 1940. By the end of the year, more than 400 passengers had used the route. Civil aircraft flew a total of 5,000,000 miles and carried nearly 30,000,000 airmail letters during 1940.

**Government.** The United Kingdom of Great Britain and Northern Ireland is a limited monarchy, with an unwritten constitution, under which final legislative, judicial, and administrative authority is vested in a Parliament of two houses, acting through a cabinet drawn from its members. The House of Commons consists of 615 members, elected by universal male and female suffrage on the basis of one member for every 70,000 of population. The House of Lords in 1940 had 788 members, including 24 minors not seated, who are variously selected—by heredity, appointment, by virtue of office, and by election.

The elections of November, 1935, gave the National Government 431 out of the 615 seats in the House of Commons. The standing of the government parties at the end of 1940, modified slightly by by-elections, was as follows (names of leaders in parentheses): Conservatives (Winston Churchill), 374; Labor (Clement R. Attlee), 164; Liberal National party (Viscount Simon), 32; Liberals (Sir Archibald Sinclair), 18; Independents, 11; National Labor party (Malcolm MacDonald), 7; Nationals, 5; total, 611. The Opposition consisted of 3 Independent Laborites (leader, James Maxton) and 1 Communist. See YEAR BOOK, 1939, p. 328, for the members of Prime Minister Neville Chamberlain's war government formed Sept. 3, 1939. For changes during 1940, see *History* below.

#### HISTORY

The year 1940 opened with Anglo-French armies holding the Germans in check behind the Maginot Line and with the bulk of the British people confidently awaiting the strangulation of the Reich's military ambitions by the naval blockade. Meanwhile the complacent Chamberlain Government continued, as in 1939, to prosecute the war under the slogan of "business as usual."

The year ended with Britain fighting a desperate last-ditch struggle for survival and with her great empire in imminent peril of dismemberment and dissolution. Adolf Hitler's tremendous military machine had crushed France, driven the B.E.F. back across the English Channel, appropriated the military and economic resources of virtually the entire European Continent, and spread ruin among the cities, the industries, and the commerce of the British Isles. Italy had taken up arms on the German side. Japan and various lesser powers had allied themselves with the Reich in the hope of sharing in the rich spoils of the British and French empires.

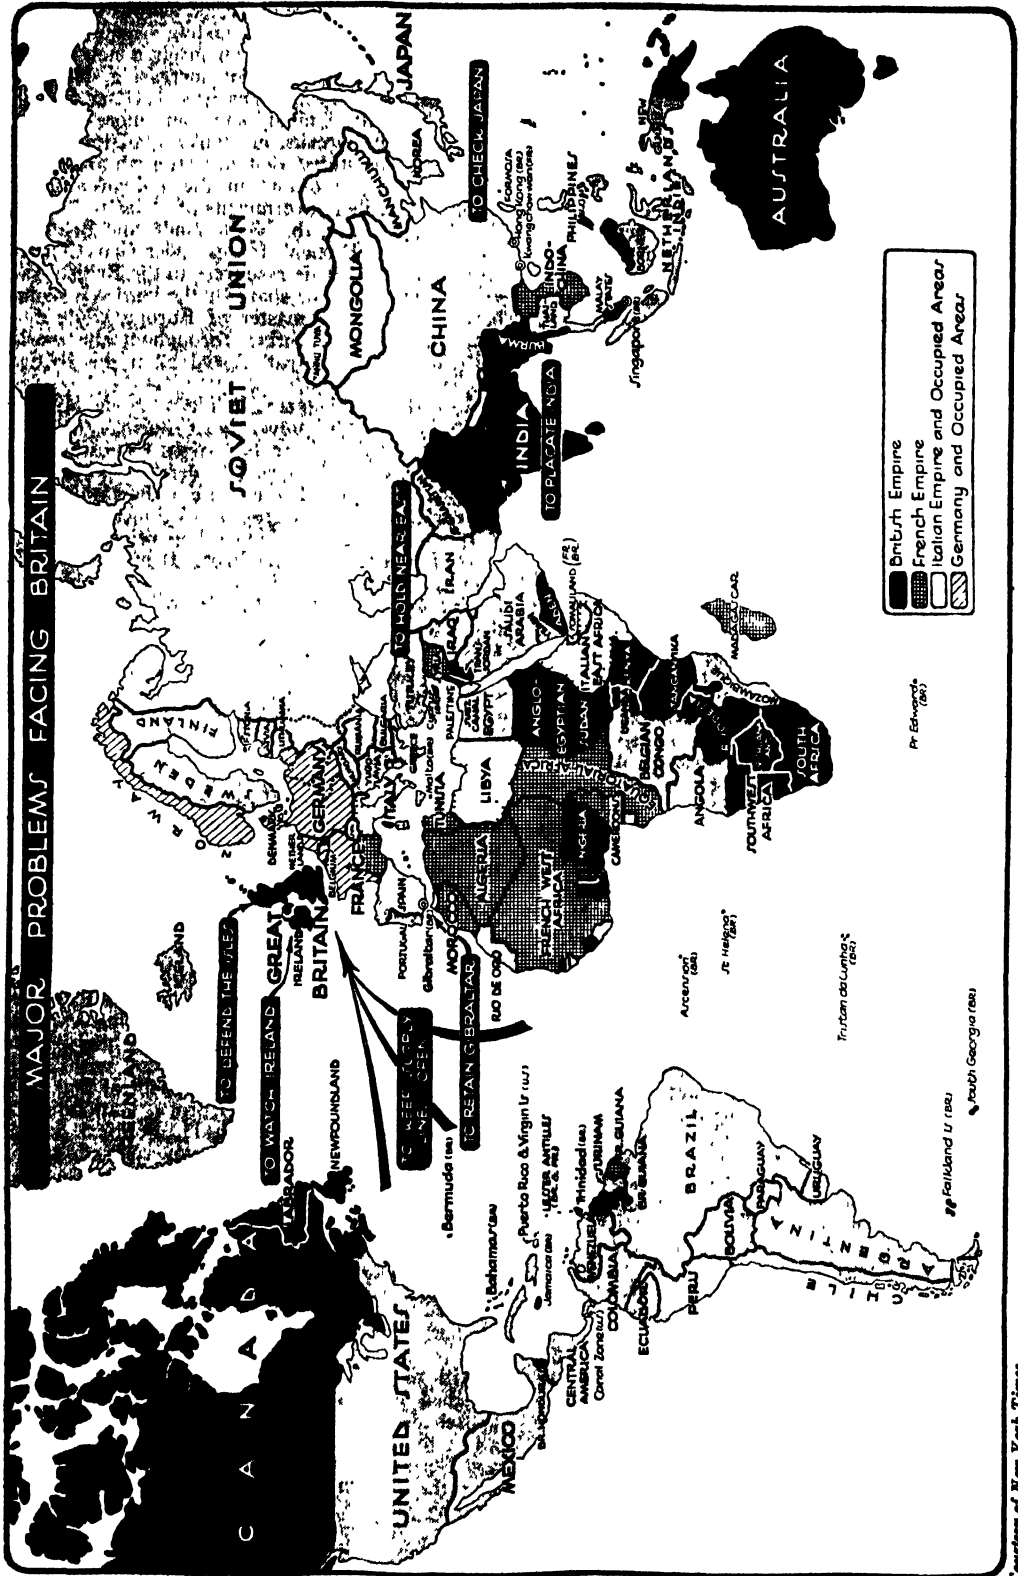

Britain and her Dominions, rejecting all thought of capitulation, were fighting a tenacious uphill struggle. Neville Chamberlain was dead. His poli-

cies and methods were discarded months before he died with German bombs sounding a requiem. The British people had found an inspired new leader in Winston Churchill. An increasing flow of planes, arms, and munitions was reaching British forces from the United States and more aid was promised. The Greeks, in repulsing an Italian invasion, had bolstered Britain's strength and given her a military foothold in the Balkans and in Crete. The exiled governments of Poland, Czechoslovakia, Norway, the Netherlands, and Belgium, and the "Free French" forces under Gen. Charles de Gaulle added their resources to the British war effort. But the major share of the burden of combating the military master of Europe, while mobilizing opposition forces throughout the world for his eventual defeat, rested upon the British people.

**Prelude to Disaster.** While rebuffing Hitler's peace feelers, the government during the first quarter of 1940 stubbornly resisted Opposition demands for more drive and leadership in the conduct of the war. There were exhortations for economy and sacrifice from key cabinet Ministers. But Prime Minister Chamberlain rejected Opposition proposals for mobilizing British economic resources under a single director with wide powers. Likewise he deprecated David Lloyd George's demand for a more intensive food-growing program to relieve the strain on British shipping. War Minister Leslie Hore-Belisha was forced to resign on January 5 for reasons that remained obscure. Chamberlain's appointment of Oliver Stanley as Hore-Belisha's successor was widely criticized as adding nothing to the cabinet's stature or vigor. Yet a poll of public opinion taken toward the end of January showed 52 per cent of British voters as favoring Chamberlain's continuance in office, while 30 per cent wanted Winston Churchill at the head of the government.

A few positive steps were taken during this period. The Admiralty assumed complete charge of the operation, repair, and enlargement of the merchant marine on February 1. As First Lord of the Admiralty, Winston Churchill on January 20 appealed to the small neutral countries of Europe to support the Allied cause, but his warning that neutrality was a trap menacing their independence and security was rejected with some warmth by the press in all of the neutral States of western and northwestern Europe. Rationing of meat was introduced March 11. Political debate centered on such issues as the government's guarantee of a minimum return of 3.3 per cent on the capital of the railways (maximum, 4.7 per cent); the government subsidy of about £1,000,000 a week for checking the rise of retail food prices, which were already 19 points above the prewar level; the financing of the war; restoration of compulsory education; and the return to the great cities of mothers and children evacuated to the country the preceding September.

**Aid to Finland.** The government meanwhile watched the course of the Russo-Finnish war with apprehension, fearing a Finnish defeat might lay all of the Scandinavian peninsula open to Russian and German armies. London announced January 1 that the French and British Governments were sending planes, anti-tank and anti-aircraft guns, gasoline, and ammunition to Finland. On February 14 the House of Commons repealed the law barring British subjects from volunteering for service in the Finnish and other foreign armies. But

both the government and the Opposition were reluctant to run the risk of forcing Russia into closer alliance with Germany by intervening officially on the side of the Finns. Thus the opportunity to outflank Germany by sending an Allied army into Finland was allowed to pass. The Allied Supreme War Council made preparations—later shown to be quite inadequate—for sending such a force, but the enterprise was dropped when Norway and Sweden refused permission for the transport of these troops across their territories. See EUROPEAN WAR; FINLAND, NORWAY, and SWEDEN under *History*.

**Blockade Tightened.** The Allies during this period had been steadily tightening their pressure on the neutral countries of Europe in an effort to make the blockade more effective. A series of war trade agreements were concluded with Norway, Sweden, Iceland, Belgium, the Netherlands, Denmark, Spain, Greece, and Turkey, all of which curtailed exports of fats and other domestic products of these countries to Germany. On February 15, in response to retaliatory German measures against neutral shipping submitting to the British blockade, the London Government offered to convoy all neutral ships passing through contraband control stations. Norway was pressed to restrict the passage of German ships through its territorial waters in evasion of the blockade. On February 17 the British destroyer *Cossack* entered Norwegian waters to seize the German prison ship *Altmark*, from which 300 British war prisoners were rescued. See NORWAY under *History*.

At the end of March the Allied Supreme Council undertook a further tightening of the blockade and wider application of Anglo-French economic power against the Reich. The British Ministry of Economic Warfare undertook the purchase of all surplus crops, oil, minerals, and other exportable products from the Balkan countries in order to leave as little as possible for shipment to Germany. Rumania, which under heavy German pressure had resisted Allied demands, was brought into line in February when the Allies suspended licenses for the export of raw materials to Rumania and cut off shipments of rubber and other imports reaching Rumania via the Mediterranean. The British Government also threatened to withdraw its guarantee of Rumania's independence and territorial integrity. Italy, which in mid-February refused to conclude a deal exchanging Italian airplane engines and other armaments for British coal, was penalized in March. The British seized a number of Italian colliers carrying German coal to Italy through the English Channel, and this traffic was diverted to the heavily taxed German and Italian railways.

The Allies also sought to cut to a minimum German imports of Swedish iron ore. The British-Swedish trade agreement provided for the shipment of a large share of Sweden's output to Britain via the Norwegian port of Narvik. On April 7 British vessels sowed mines at three points in Norwegian territorial waters, primarily to stop German freighters from carrying iron ore from Narvik to the Reich under the protection of Norwegian neutrality (see NORWAY under *History*). British agents, arrested in Sweden, were charged with plotting to blow up railway bridges in order to prevent ore shipments from the Kiruna iron mines to Germany by way of the Swedish Baltic ports. Russia remained the major leak in the Allied blockade. Nevertheless at the beginning of April,

the blockade was estimated to be about 90 per cent effective in cutting Germany off from overseas sources of supply.

**Cabinet Reshuffled.** Further intensification of Allied efforts on the economic and military fronts was presaged by the replacement of Premier Daladier by Reynaud in France and the subsequent reorganization of the Chamberlain Government (April 3). Winston Churchill, while remaining as First Lord of the Admiralty, received added powers in formulating war policies. Lord Chatfield was dropped as Minister for Coordination of Defense, reducing the war cabinet from nine members to eight. Sir Kingsley Wood, Minister for Air, and Sir Samuel Hoare, Lord Privy Seal, exchanged posts. Sir John Simon, Chancellor of the Exchequer, assumed general direction of economic strategy. Lord Woolton replaced William S. Morrison as Minister of Food, Robert S. Hudson became Minister of Shipping, and a number of other minor changes were made. The reorganization aroused little enthusiasm, the public feeling being that much more new blood was needed in the government.

**Setback in Norway.** The tightening of the blockade apparently was a major factor behind the sudden German attack upon Denmark and Norway on April 9. This bold move, which brought the British navy into immediate action, failed to disturb British complacency. The Prime Minister on the same date told the House of Commons that "this rash and cruel act of aggression will redound to Germany's disadvantage and contribute to her ultimate defeat." Winston Churchill on April 12 reported that "we are greatly advantaged by what occurred (in Norway) providing we act with unceasing and increasing vigor to turn to the utmost profit the strategic blunder into which our mortal enemy has been provoked." British forces were landed in the Faroe Islands and Iceland to forestall German occupation of these strategic points.

A hastily assembled and poorly organized Allied expeditionary force was sent to Norway in response to an appeal from the Norwegian Government. The reverses suffered by these troops and the abandonment of all southern Norway to the Germans in May unloosed a storm of criticism. When Parliament reconvened on May 2, the Prime Minister defended the small scope of the military measures taken in Norway by stating that Hitler was prepared to invade the Low Countries and that the government was not going "to be trapped into such dispersal of our forces as would leave us dangerously weak at a vital center." The British press and many Conservatives refused to accept the explanations of Chamberlain and his chief Ministers. On May 8 the government escaped defeat by a margin of only 81 votes on a motion to adjourn, as contrasted with a majority of 222 that the government received in support of its foreign policy following the Munich Conference in September, 1938. The demand for new leadership was echoed in most of the Dominions.

**Churchill Forms Cabinet.** Chamberlain sought to strengthen his ministry by bringing Labor party representatives into a national government. The Labor leaders, however, bluntly informed him they would not serve under him. The Prime Minister's long control of British public affairs was already doomed when the Germans on May 10 launched their invasion of the Low Countries. That same evening Chamberlain presented the resignation of his government to the King, who called upon

Churchill to form a new ministry. (Foreign Secretary Halifax was said to have been favored by the retiring Prime Minister for the post.)

The War Cabinet, sworn in on May 12, was reduced from eight to five members, and four of the five were freed of departmental responsibilities in order that they might concentrate upon the broader problems of the war. Besides Prime Minister Churchill, who also assumed charge of the Ministry of Defense, the War Cabinet included Mr. Chamberlain as Lord President of the Council; Viscount Halifax, who continued on as Foreign Secretary; Maj. Clement R. Attlee, leader of the Labor party, who became Lord Privy Seal; and Arthur Greenwood, deputy leader of the Labor party, named Minister without Portfolio. On May 18 the Prime Minister designated Attlee as deputy leader of the government in the House of Commons.

It was May 16 before the list of other Ministers, Under-secretaries, and occupants of junior posts was completed. The final list showed 46 Conservatives, 15 Laborites, 5 Liberal Nationals, 3 Liberals, and 2 National Laborites. All of the principal parties, controlling 611 of the 615 seats in the House of Commons, were thus included in the government coalition (see SOCIALISM for the Labor party's attitude). There remained in Opposition only three Independent Laborites, led by James Maxton, and one Communist.

The Ministers not included in the War Cabinet, with their party affiliations (C = Conservative), were: Chancellor of the Exchequer, Sir Kingsley Wood (C); War, Anthony Eden (C); Air, Sir Archibald Sinclair, leader of the Liberal party; Admiralty, A. V. Alexander (Labor); Lord Chancellor, Viscount Simon, leader of the Liberal National party; Aircraft Production, Lord Beaverbrook (C); Home Secretary and Minister of Home Security, Sir John Anderson (C); Dominions, Viscount Caldecote (C); India and Burma, L. S. Amery (C); Colonies, Lord Lloyd (C); Chancellor of the Duchy of Lancaster, Lord Hankey (C); Scotland, Ernest Brown (Liberal National); Trade, Sir Andrew Duncan (Liberal National); Education, Herwald Ramsbotham (C); Health, Malcolm MacDonald (National Labor); Labor and National Service, Ernest Bevin (Labor); Supply, Herbert Morrison (Labor); Agriculture and Fisheries, Robert Hudson (C); Transport, Sir John Reith (C); Food, Lord Woolton (C); Information, Alfred Duff Cooper (C); Economic Warfare, Hugh Dalton (Labor); Shipping, Ronald Hibbert Cross (C); First Commissioner of Works, Lord Tryon (C); Postmaster General, W. S. Morrison (C); Attorney General, Sir Donald B. Somervell (C); Lord Advocate, T. M. Cooper (C); Solicitor General, Sir William Jowitt (Labor); Financial Secretary to the Treasury, Capt. H. Crookshank (C); Pensions, Sir Walter Womersley (C); Paymaster-General, Viscount Cranborne (C).

**The New Leadership.** While Churchill was organizing his government, the Germans overran the Netherlands. By the end of May they had crushed Belgium and driven the defeated B.E.F. out of Dunkirk, with the loss of all of its mechanized equipment. Then in June followed even greater disasters—the defeat of France, the entry of Italy into the war, and Marshal Pétain's capitulation to Hitler notwithstanding strenuous British efforts to keep France in the war (see FRANCE under History). Not since the Napoleonic wars

had Britain been so isolated and in such imminent danger of invasion. The early collapse of British resistance was taken for granted in virtually all of the world capitals except London.

In this great emergency, Winston Churchill quickly established his position as one of the greatest war leaders in Britain's long history. Under the stimulus of his purposeful action, dogged determination and stirring oratory, the empire shook off its lethargy and threw its energies and resources into the struggle with a reckless bravery that won admiration even in Berlin.

"I have nothing to offer," Churchill told the House of Commons on May 13, "but blood, toil, tears, and sweat." He said his policy was "to wage war by land, sea, and air . . . with all our might" and that the government's aim was "victory at all costs—victory in spite of all terrors—victory however long and hard the road may be, for without victory there is no survival." The House, which had met secretly to avoid a possible Nazi bombing raid, approved the new government, 380 to 0.

In a radio address on May 19 the Prime Minister warned his people that soon the "hideous apparatus of aggression . . . will be turned upon us." He called for ever-increasing quantities of arms and munitions and declared that the interests of property and hours of labor must alike be sacrificed in the national defense. King George's Empire Day broadcast on May 24 carried a similar warning. "The issue is now plain," he said. "It is the issue of life or death for us all. Defeat will not mean some brief eclipse from which we shall emerge with strength renewed—it will mean destruction of our world as we have known it and the descent of darkness upon its ruins."

Announcing the surrender of the Belgian army by King Leopold, Churchill concluded his short speech in the House of Commons on May 28 as follows:

I have only to add that nothing which can happen in this battle can in any way relieve us of our duty to defend the world cause to which we have bound ourselves, nor can it destroy our confidence in our power to make our way—as on former occasions in our history—through disaster and grief to ultimate defeat of our enemy.

On June 4, describing to the hushed House of Commons the disaster that had overtaken the British Expeditionary Force in Belgium and France and the evacuation from Dunkirk, the Prime Minister likened Hitler to Napoleon waiting with his fleet of flatbottomed boats at Boulogne for a favorable wind that never blew. He continued defiantly:

We shall go on to the end. We shall fight in France, we shall fight on the seas and oceans; we shall fight with growing confidence of strength in the air; we shall fight on beaches; we shall fight on landing grounds, we shall fight in fields, streets and hills. We shall never surrender and even if—which I do not for a moment believe—this island or a large part of it is subjugated and starving, then our empire beyond the seas, armed and guarded by the British Fleet, will carry on the struggle until in God's good time the New World, with all its power and might, steps forth to the liberation and rescue of the Old.

Following Marshal Pétain's capitulation to the Germans, Churchill told the House of Commons that Britain would fight on "if necessary for years, if necessary alone." He declared the empire's forces and resources offered "good and reasonable hope of final victory," but that if they failed "the whole world, including the United States and all that we have known and cared for," would sink into the abyss of another dark age. German occupation of the Channel Islands on June 30 and

THE BRITISH KING, QUEEN, AND PRIME MINISTER CHURCHILL

at the close of the year were that the number fed in the Corn Belt would be 11 per cent higher than a year earlier, and that the total number of cattle on feed during the 1940-41 season would be somewhat above the 1939-40 level with increased feeding operations in several of the western States. Late reports from the Range States showed generally good supplies of winter grass and forage with cattle going into the winter in the best condition in several years. Market prices for slaughter cattle showed a marked upward trend throughout 1940. Prices received by farmers for beef cattle in mid-December were the highest for that season since 1929 and 10 per cent higher than a year earlier.

The 1940 lamb crop of about 32,700,000 head was the largest on record and 3 per cent larger than that of 1939, with Texas accounting for the major part of the increase. Total Federal inspected slaughter of sheep and lambs in 1940 was 17,351,157 head, less than 1 per cent above that of 1939. Movements of feeder lambs into the Corn Belt from July through November were of record proportions with evidence that the total numbers of lambs fed during the 1940-41 season would be 6 per cent larger than a year earlier. Feeding operations outside the Corn Belt were about 3 per cent higher. Prices of slaughter lambs in 1940 were generally above the 1939 level with mid-December prices on the farm averaging \$7.88 per 100 lb. or 50 cents higher than a year earlier. Improvement in the domestic demand for meat during the last half of the year gave less support to lamb prices than to prices of other livestock. December stocks of frozen lamb and mutton exceeded 5 million pounds, about 4 per cent above the preceding 5 year average.

Meat consumption in the United States during 1939 totaled 17.2 billion pounds, equivalent to 131 lb. per capita, while that of 1940 was nearly 17 per cent above this previous record high. Commensurate with this increase in consumption, the meat-packing industry paid about \$100,000,000 more for livestock in 1940 than in 1939.

marked stimulus to horse and mule production in this country.

**International Conditions.** Fragmentary information from Europe permits only a general appraisal of the livestock and meat situation there during 1940. In 27 European Countries, exclusive of the Soviet Union, at the beginning of the present war, total numbers of hogs, cattle, and sheep reached 82,300,000; 110,768,000, and 128,751,000 respectively, increases of 3, 7, and 8 per cent over 1931-35 averages. During the World War (1914-1918) numbers of hogs, cattle, and sheep, respectively, declined approximately 8, 2, and 2 per cent during the first year of the conflict and 29.3, 7.5, and 13.1 per cent for the entire period which suggests the possible effect of the present war on European livestock populations. Data on livestock numbers during 1940 were not generally available but known shortage of feed supplies pointed to heavier-than-normal slaughter in most areas.

Except in Belgium and France, pork supplies in Continental Europe at the end of 1940 appeared to be above normal. Rationing of meat at that time was fairly common in most of the countries. Both Germany and Italy were obtaining substantial quantities of live hogs, pork, and lard from countries in the Danube Basin under 1940 agreements. All meat and livestock exports of Denmark and neighboring countries, much of which formerly went to Great Britain, were going to Germany. In September, 1940, the Italian Government placed the buying and selling of beef cattle for civilian consumption under government control and indicated that hogs would be handled similarly. All meats were strictly rationed.

With imports from Continental Europe cut off, the United Kingdom was rationing bacon and hams at about one-half normal consumption, consistent with domestic supplies plus imports of Empire products. Domestic production of hogs along with poultry was sharply curtailed as the volume of imported feedstuffs declined. Production of cattle and sheep was less affected because of fairly abundant forage supplies. Since January, 1940, all livestock

The downward trend in numbers of horses and mules on farms and the low price of work stock in relation to that of all farm products persisted, while the number of tractors on farms continued to increase. Horses and mules on farms in 1920, 1930, and 1940 numbered approximately 26, 19, and 15 millions respectively. There was little evidence that European War conditions would provide any

marketed in the United Kingdom must be sold to the Government at fixed prices, consistent with farm costs. A British-Canadian agreement of January, 1940, providing for the export to Great Britain of 4,480,000 lb. of Canadian bacon and ham weekly was replaced by a new agreement of November, 1940, which provided for British purchases of not less than 8,185,000 lb. weekly. The stimulus

July 1 emphasized the gravity of the situation.

**Counter-Invasion Measures.** The Prime Minister's eloquent oratory and blunt warnings of the dangers confronting the British people were matched by the vigor and effectiveness with which government and people prepared to repulse the expected German invasion. These measures took three main forms—the mobilization of human and material resources for greater war production, the suppression of subversive elements, and military precautions. For the military measures, see EUROPEAN WAR under *The Battle of Britain*.

To speed the re-equipment of the British defense forces, Parliament on May 22 passed the Emergency Powers Defense Act after less than three hours debate. Far more drastic than the emergency legislation of the World War, this Act authorized the government to (1) control all persons and property, (2) conscript labor and regulate conditions of employment, (3) control banks and the financial system, and (4) impose an excess profits tax of 100 per cent. The objective was the re-organizing and nationalizing of war industries and the mobilization and redistribution of labor power. The Act was cheerfully accepted and supported by virtually all classes of the population and all branches of industry and labor. It led to a notable increase of the nation's war efforts.

**Increase of War Production.** An Order-in-Council of May 25, issued under the Emergency Powers Defense Act, authorized the Ministry of Supply to designate as "controlled undertakings" all enterprises of actual or potential value in producing arms and munitions. These undertakings became completely subject to government control. Government officials prescribed the articles to be produced, hours of work, the amount and kind of labor employed, and the prices of the products.

Responsibility for recruiting labor and prescribing wages and conditions of work was placed upon Minister of Labor Bevin. He established a national Labor Supply Board, functioning through Labor Supply Committees in each important local area. Inspectors of Labor Supply were appointed to insure the most advantageous employment of skilled workers. Facilities for training labor for jobs in war production were greatly expanded. By a decree of June 5, Minister Bevin outlawed strikes and lockouts, substituting compulsory arbitration of all labor disputes. Employment of coal miners and farm workers in other industries was prohibited. War industries were placed on a seven-day week basis. Drastic restrictions were placed upon production of many non-military articles in common use in order to free more workers for war industries.

On June 8 exemptions under the military conscription act were revised to permit skilled industrial and other workers to choose between service in the armed forces and in war industries. On June 22, Minister of Supply Morrison instituted the compulsory collection of ordinary waste materials usable in war production. The wages of agricultural workers were raised and they were forbidden to leave their occupation. The sugar, butter, and bacon rations were cut on May 27. Aircraft production was completely reorganized under the direction of Lord Beaverbrook. As a result of these and related measures, the number of registered unemployed declined by December 9 to 715,279, the lowest figure since 1921. Substantial increases in the output of planes, tanks, artillery, and other heavy weapons were reported before the end of

June, and this increase was understood to have continued during the rest of the year despite interruptions from German air raids.

**"Fifth Column" Curbed.** Meanwhile the government took energetic measures to nip in the bud the activities of spies, saboteurs and other subversive elements. Profiting from the experience of Norway, Belgium, and the Netherlands, the police on May 12 began the internment of enemy aliens. Restricted areas were established covering all the east coast and the major southeast ports, from which enemy aliens were excluded and other male aliens were obliged to report daily in person to the police. Guards were posted at all strategically important points. Possession of firearms by aliens was forbidden (May 20) and all stocks of gunsmith's shops in certain areas were seized.

Parliament on May 23 authorized the death penalty for serious cases of espionage and sabotage and severe penalties for anti-war propaganda. The police on the same day raided the headquarters of the British Union of Fascists and arrested Sir Oswald Mosley, leader of the Fascist movement, and many of his adherents. Others imprisoned included Capt. Archibald H. M. Ramsay, a Conservative member of Parliament. A clerk employed in the American Embassy in London was arrested and later convicted on espionage charges. A curfew law required all aliens to be in their "ordinary places of residence" from 10 30 p.m. to 6 a.m., effective June 3. A number of German spies, posing as refugees and equipped with radio sending sets, were captured and three of them were executed late in the year. On December 17 a British housewife in the German espionage service was sentenced to death.

The Irish Republican Army had been charged with responsibility for further bomb outrages in London in February in which 28 persons were injured (see IRELAND under *History*). Consequently suspected members of this organization felt the heavy hand of the police during the drive against subversive elements. On June 8 drastic passport regulations were established covering all passage between Great Britain and Ireland. The drive against British Fascists and pro-Nazis was marked by the arrest of Admiral Sir Barry Domville and his wife on July 8 and the dropping of the Duke of Buccleuch, rich Scottish landowner, from his post as Lord Steward of the Royal Household on May 10. The Home Secretary on July 11 banned meetings of the British Union of Fascists and forbade contributions to the movement.

By August the police and government officials expressed confidence that all except a few unimportant members of the Nazi-organized "fifth column" in Britain had been jailed or otherwise rendered harmless. Thereafter the authorities, under pressure of criticisms voiced in the House of Commons, gradually released those enemy aliens whose anti-Axis sentiments were established. At the end of September, 1381 suspected "fifth columnists" were being detained and 248 had been released. Toward the end of the year demands were voiced in Parliament for either the trial or release of Sir Oswald Mosley and several hundred of his Fascist adherents, who were being held without facing a court of law.

**Democratic Rights Maintained.** This disregard of the usual civil rights and liberties was restricted to individuals suspected of direct connivance with the enemy. Parliament, the press, and private individuals remained free to criticize the

government. The activities of Lord Swinton's secret parliamentary committee, appointed to co-ordinate the work of various agencies engaged in the drive against spies and "fifth columnists," led to a bitter squabble in the House on August 15 when Prime Minister Churchill refused to answer questions from Liberal and Labor members about the committee's work. The defense regulations issued by the Home Secretary and the censorship over military information exercised by the Minister of Information also came in for repeated criticism in Parliament and the press. On July 24 Prime Minister Churchill agreed to an immediate review of jail sentences and fines imposed for careless gossip and public expression of defeatist sentiments. He said the government welcomed free discussion of the war provided official secrets, troop positions, and future operations were not revealed.

**"Stop the War" Movement.** The anti-war agitation by Communists and pacifists continued throughout the year, with only minor restrictions. During the early spring they appeared to be making considerable headway among labor and left-wing groups, but as Britain's peril increased the influence of the "stop the war" movement waned. A move in Parliament to outlaw the Communist party gained relatively little support. Leaders of the Labor party and of the Trades Union Congress fought the Communist propaganda. Sir Walter Citrine and other Trades Union Congress leaders were awarded libel damages of £1400 on May 6 against Edward Richard Pountney, owner of *The Daily Worker*, organ of the British Communist party. On May 11 the Minister of Information prohibited the sending abroad of *The Daily Worker* and of Mosley's Fascist publication *Action*.

Communist activities in December led the government to warn Moscow to stop its alleged efforts to sabotage Britain's war efforts. Scotland Yard on December 16 reported discovery of a Communist plot to spread discontent among British workers. About the same time the People's Convention, an organization of Communists and other extreme left-wingers, called a conference for Jan. 11-12, 1941, in Manchester to further its program of "a people's peace" and friendship with Russia. The government ignored demands in Parliament that the conference be banned.

The ineffectiveness of Communist and pacifist anti-war propaganda was demonstrated by the overwhelming majorities by which their candidates were rejected by working class constituencies in several by-elections during the year. On December 5 the House of Commons rejected 341 to 4 a motion by the Independent Labor party leader, John McGovern, condemning the government's failure to open the door to peace talks with Hitler.

**Other Defense Measures.** In addition to turning Britain into an armed fortress and crushing subversive activities, the government took various other steps in preparation for the German assault. On June 2 some 50,000 school children, evacuated from large cities to East Coast areas in 1939, were again transferred—this time to rural districts in the Midlands and Wales. Beginning June 13, 120,000 children were moved from London to areas less exposed to German bombing raids. On June 19 the government announced that some 20,000 children would be sent to the Dominions and the United States for the duration of the war. Parents of about 200,000 children sought to send them to homes offered overseas, but the government halted

the exodus on October 2 following the sinking by a German submarine of the *City of Benares* in which 79 of an escorted party of 90 child evacuees lost their lives. Up to that time, only 2650 children had been sent overseas.

Elaborate precautions were taken to decentralize production and defense so that a German blow at London would not paralyze the country. Britain was divided into 13 regions, each in charge of a commissioner authorized to assume dictatorial powers in the event of invasion. Stores of food and other vital supplies were distributed throughout the kingdom for emergency use. Every community was organized to meet the military shock and economic dislocation of attack.

**Diplomatic Moves.** In addition to these measures for home defense, Prime Minister Churchill late in May moved to restrict the advance of German influence in Europe by sending Ambassadors to Russia and Spain and an economic expert to Italy. Sir Stafford Cripps, Left-wing leader in the Labor party, went to Moscow and Sir Samuel Hoare, long one of the so-called "appeasers" in the Chamberlain Government, was sent to Madrid to try to prevent Spain's entrance into the war on the side of the Reich. Sir Wilfred Greene met with complete failure in his effort to keep Italy neutral by ironing out Italo-British differences over the blockade.

**Britain under Assault.** During the great German air attack that began with raids upon Channel shipping and ports in July and August and developed into "all-out" assaults upon London and other great cities commencing September 7, the Churchill Government and the British people generally displayed unshakable morale and a growing determination to carry on the war to victory (see EUROPEAN WAR under *The Battle of Britain* for a full account). Parliament continued to meet as usual. The expansion of armament and munitions industries was speeded up. The training and strengthening of the armed forces continued at top speed. And in the face of the continuous threat of a German attempt to cross the Channel, considerable forces with new airplanes, tanks, etc., were dispatched by sea to reinforce Britain's army in Egypt. British naval forces in the Mediterranean were also heavily reinforced.

Meanwhile Prime Minister Churchill continued to stiffen and inspire his countrymen by regular statements in Parliament on the course of the conflict. On September 12 he reported that the German effort to secure daylight mastery of the air over England, which he described as "the crux of the whole war," had so far failed conspicuously and "has cost them very dear." Referring to the bombing of London and other British cities, he said:

He (Hitler) has lighted a fire which will burn with a steady and consuming flame until the last vestiges of Nazi tyranny have been burned out of Europe and until the Old World and the New can join hands to rebuild the temples of man's freedom and man's honor upon foundations which will not soon or easily be overthrown.

On October 8 the Prime Minister described the decline in air raid casualties resulting from improved shelters and other precautionary steps. He announced that a bill for nation-wide compulsory insurance against enemy damage to property would be introduced in Parliament (it was introduced on December 11), and called for additional steps to "organize our lives and the lives of our cities based on dwelling under fire." He closed with a warning

that "it is only by supreme and superb exertions, unwearied and indomitable, that we shall save our souls alive." In line with this speech, unemployment assistance pay was increased in November; heavy penalties were imposed to curb an outbreak of looting of bomb-damaged premises; thousands of women and children were evacuated from the battered cities at government expense; and successful measures were taken to safeguard the health of the population.

By the end of October the R.A.F. had demonstrated its ability to fend off the German daylight air attacks. A poll taken by the British Institute of Public Opinion toward the end of that month showed that 80 per cent of those questioned believed it impossible for the Germans to win the war by air attacks alone. Night air raids continued to inflict great material damage, as was demonstrated by the destruction of Coventry on the night of November 15 and by the fire bomb raid on the ancient City district of London on the night of December 29, which started a conflagration comparable to the Great Fire of 1666 and wiped out countless historic landmarks including the famous Guildhall.

However Churchill, in his report to the House of Commons on November 5, stated that "more serious than the air-raiding has been the recent recrudescence of U-boat sinkings in the Atlantic approaches to our island. The fact that we cannot use the South and West Coast of Ireland to refuel our flotillas and aircraft and thus protect trade by which Ireland, as well as Great Britain lives, . . . is a most heavy and grievous burden and one which should never have been placed upon our shoulders, broad though they may be." This growing danger to British shipping (see EUROPEAN WAR under *The Battle of Britain*) led to unsuccessful negotiations with the Dublin Government for the use of the bases that Britain had returned to Irish control in 1938 (see IRELAND under *History*). To offset sinkings, the British Government during the last quarter of 1940 placed large orders for ships in the United States and greatly expanded construction in its own yards.

The growing shortage of merchant vessels forced the Food Minister in December to announce smaller meat and other food rations for 1941 although he said there were sufficient stocks of all essential food commodities to prevent resort to "no rations." On December 10 the government flatly rejected the proposal of ex-President Herbert Hoover that food from America be passed through the British blockade to sustain the civil populations in German-occupied countries. The government contended that such shipments would enable Germany to appropriate more foodstuffs from the occupied countries for conversion into essential war materials. However it offered to permit shipments of American medical supplies to the occupied countries and to unoccupied France.

Thus by the end of the year, the air and sea struggle between Britain and Germany had developed into a war of attrition, with neither side in imminent danger of collapse. This stalemate was in danger of being broken at any time by a German attempt to land troops in Britain. Meanwhile in November and December the British position on other fronts had improved substantially as a result of Greek and British victories in Greece, Albania, the Mediterranean, and Africa (see EUROPEAN WAR).

**Rising Cost of War.** When Sir John Simon,

as Chancellor of the Exchequer, presented his estimates for the 1940-41 budget to Parliament on April 23, they were attacked by both Parliament and the press as inadequate for the vigorous prosecution of the war. His estimate for expenditures was £2,667,000,000. On July 9 the new Chancellor of the Exchequer, Sir Kingsley Wood, obtained an additional £1,000,000,000 from Parliament, without a dissenting vote, to meet rising war costs. On July 22 he presented a new emergency budget calling for the expenditure of £3,467,000,000, or 60 per cent of the estimated peacetime income of the nation. The cost of the war rose steadily from an estimated £7,500,000 daily early in July to nearly twice that figure by the end of the year. Of the 1940-41 expenditures, it was estimated that heavily increased taxes would bring in only about £1,500,000,000. Government loans accounted for another £1,140,000,000, the Treasury realized £500,000,000 from the sale of gold securities called in from private citizens; and another £300,000,000 was estimated to have been secured through inflation of the currency. See *Finance* above.

**Political Developments.** Throughout this period of staggering financial drain, of heavy civilian casualties and huge material losses, the political stock of Prime Minister Churchill and his government steadily mounted. A poll of public opinion taken in August showed that 88 per cent of the voters approved of Churchill's leadership and 7 per cent disapproved. In mid-November a similar test indicated that 89 per cent approved and 6 per cent disapproved, with the remaining 5 per cent undecided.

The rising popularity of the Churchill Government was accompanied by mounting criticism of the preceding administration. Chamberlain and his close associates were bitterly attacked in a secret session of Parliament on June 20 for their inept handling of foreign affairs and for failing to awaken the British people to their peril and responsibilities. Some Labor leaders and other critics of Chamberlain's Government demanded his resignation from Churchill's War Cabinet, charging that he was still an appeaser at heart and that his presence in the government impaired the national war effort. Mr. Chamberlain denied that he desired peace with Germany in a world radio broadcast on June 30 and Foreign Secretary Halifax, who came in for an equal share of criticism, did likewise on June 22. Halifax declared that an unbridgeable chasm separated the philosophies of life of Nazi Germany and democratic Britain and that the war must continue "until freedom for ourselves and others is secured."

These assurances did not halt the agitation for the resignation of the "men of Munich" but Churchill firmly resisted it in the interests of national unity until Chamberlain, weakened by an operation, decided to retire early in October. On August 2 Churchill brought Lord Beaverbrook, Minister of Aircraft Production, into his War Cabinet. On October 3, announcing Chamberlain's resignation, the Prime Minister reshuffled his Ministry. Sir John Anderson replaced Chamberlain as Lord President of the Council and was succeeded as Home Secretary and Minister of Home Security by Herbert Morrison. Anderson, Morrison, Minister of Labor Ernest Bevin, and Sir Kingsley Wood, Chancellor of the Exchequer, were brought into the War Cabinet, increasing the membership to eight. Sir Andrew Duncan succeeded Morrison as Minister of Supply and Capt. Oliver Lyttelton

succeeded Sir Andrew as President of the Board of Trade. Lieut. Col. J. T. C. Moore-Brabazon replaced Sir John Reith as Minister of Transport and Sir John became Minister of Works and Public Buildings.

The day after this shake-up in the government, Chamberlain resigned as leader of the Conservative party. Churchill was elected to the vacant post without opposition on October 9. Exactly a month later Neville Chamberlain (see *NECROLOGY*) passed away at Heckfield House in rural Hampshire. With leaders of all the Allied nations in attendance, his ashes were buried in Westminster Abbey on November 14.

The elevation of Minister of Labor Bevin to the War Cabinet attracted further attention to this energetic labor leader, whose success in mobilizing the British working classes behind Churchill's war effort had won wide commendation. He was frequently mentioned as a likely successor to Churchill if and when the latter retired as Prime Minister. Within the War Cabinet, Bevin made himself a leading exponent of the Labor party's demand for the further democratization and socialization of the country as a reward for labor's contribution to the nation's war effort. On October 9 he told a Trade Union Congress meeting in London that any reconstruction of the postwar world "must be through harnessing of the rising masses of labor to whom the future really belongs." In a call to British workers to increase the production of war materials, he declared on October 26 that victory would bring a revolutionary and a "just order in Europe that will not tolerate masses of unemployed or poverty or privilege."

The more conservative elements in the government and in the country at large were not enthusiastic about labor's demand for a socialized Britain. It was partly to avoid dissension among the widely different elements within the government and among Britain's Allies that Prime Minister Churchill on October 15 rejected demands from all sides of the House of Commons for a more explicit statement of the government's war aims. He said that when Britain's capacity to survive was more generally recognized throughout the world, "then we will be in a good position to take a further view of what we will do with the victory when it is won."

On November 21 Parliament's second wartime session was opened with traditional pomp and ceremony. The Prime Minister reminded the members that Britain still had "a long road to travel" and that "deeds and not words" were expected. Further pressure from Laborites failed to extract from him a more detailed statement of war aims. However in inaugurating the session he proclaimed "our resolve to keep vital and active, even in the midst of our struggle for life, even under the fire of the enemy, those parliamentary institutions which have served us so well, which the wisdom and civic virtues of our forbears shaped and founded, and which have proved themselves to be the most flexible instruments for securing, amid unceasing change and progress, that while they throw open the portals of the future, they carry forward also the traditions and glories of the past."

Further changes in the government were made December 23, coincident with the announcement of the appointment of Lord Halifax to succeed the late Lord Lothian (see *NECROLOGY*) as Ambassador to the United States. Anthony Eden succeeded Lord Halifax as Foreign Secretary and member of the War Cabinet—thus regaining the

post he resigned on Feb. 20, 1938, in protest against Chamberlain's appeasement policies. Capt. David Margesson, formerly Chief Government Whip in the House of Commons, replaced Eden as Minister of War.

**Empire Relations.** Previous to the Anglo-French disasters in Norway and the Low Countries, the British Dominions had proceeded with preparations for the economic and military support of the Mother Country in a long war of attrition. But their efforts were short of potentialities due largely to the failure of the Chamberlain Government to explain the urgency of the military situation or to place sufficiently large orders to encourage maximum expansion of the Empire's war industries.

The collapse of the Anglo-French armies in the Low Countries and France, Italy's entrance into the war, and later Japan's adherence to the Axis, awakened the Dominions to a realization of their danger and shocked them into a far more effective war effort. Without any suggestion of capitulation, except from small Communist and pacifist minorities, the people of Australia, Canada, and New Zealand rallied immediately to meet the emergency. Prime Minister Smuts' South African Government did likewise, in spite of continued obstruction by a large minority, composed mainly of Afrikaners, which demanded immediate withdrawal from the war.

The leaders of the All-India National Congress declined to take violent advantage of Britain's desperate mid-year plight, although refusing to delay their demand for immediate independence. However the native Princes and many other influential elements in India loyally supported the British cause with both military and financial contributions. The industries that gave India seventh place among the world's industrial producers were geared into the British war effort and proved an invaluable source of supply to the British armies in Africa and the Near East. In October units of the British Empire throughout the Middle and Far East sent representatives to a conference at New Delhi, India, where plans were laid for coordinating their productive facilities and increasing the flow of war supplies to the various war fronts. Meanwhile the Commonwealth Air Training Plan was speeded up; the first graduates of the Canadian advanced training schools arrived in Britain late in November.

The colonies without exception joined in contributing native volunteers and materials to the Empire's war effort, as well as gifts for the relief of bomb-shattered cities in Britain. Even the British West Indies, where a sick economy and bad social conditions had given rise to political agitation and disturbances, offered staunch support of Britain in its time of peril. Notwithstanding the war, the British Government proceeded to carry into effect the recommendations of the Moyne Commission, calling among other things for a £500,000 annual expenditure over a 10-year period for economic rehabilitation of the West Indian and other colonies. See *BRITISH WEST INDIES* under *History* for details.

British Malaya, with its great economic nerve center and naval base at Singapore, became of crucial importance in the Empire's struggle for survival when Japan joined the Axis and bared its designs upon Southeastern Asia and all of Malaya. The Singapore garrison and air force was heavily reinforced, and on November 13 it was announced

that Air Chief Marshal Sir Robert Brooke-Popham had been appointed to the newly created post of Commander in Chief in the Far East, with headquarters at Singapore. See *BRITISH EMPIRE* and the separate article on each Dominion and colony, under *History*.

**Relations with United States.** Despite the rapid expansion of Empire war industries, the slow undermining of Britain's productive power by German air raids and sea warfare made it increasingly clear by the end of 1940 that only the industrial power of the United States could furnish war equipment and supplies on the scale needed by Britain to meet Germany on an even basis. The repeal of the arms embargo provisions of the U.S. Neutrality Act on Nov. 4, 1939, enabled Britain and France to place large war orders in America. However deliveries to Britain were far short of those required to meet the emergency created by the collapse of France.

The re-equipment of the British forces in preparation for the expected German invasion was greatly facilitated by the U.S. Government in June. Through private American intermediaries, it transferred to the British Government some 600,000 rifles, 80,000 machine guns, 800 75-mm field guns, and a large quantity of ammunition—all taken from surplus World War stocks stored by the U.S. Army.

On September 2 a deal was concluded for the transfer to Britain of 50 over-age American destroyers in return for leases on naval and air bases in Newfoundland, Bermuda, the Bahamas, Jamaica, Antigua, St. Lucia, Trinidad, and British Guiana (see each colony under *History*). The colonial legislative and governmental authorities were consulted previous to conclusion of the agreement, and they received assurances that no change of sovereignty was contemplated. The leases were to run for 99 years. The delivery of the American vessels more than replaced 30 British destroyers lost in action up to that date. Coming soon after the establishment of the Canadian-American Joint Defense Board, the destroyer-for-bases agreement was hailed by Prime Minister Churchill as an indication of still closer Anglo-American collaboration in the future. It was followed by conversations among the British, Australian, New Zealand, and United States governments looking toward the co-ordination of their Pacific defenses.

Washington authorities also authorized the sale to Britain by private American interests of 132 merchant ships (from Sept. 1, 1939, to Dec. 23, 1940), and allocated to Britain a growing proportion of American facilities for the manufacture of airplanes, machine tools, and other vitally necessary defense articles. After his re-election in November, President Roosevelt announced a "rule-of-thumb" arrangement whereby Britain would be permitted to buy about 50 per cent of the fighting planes turned out by American factories.

Upon his return to the United States from a visit to London, Lord Lothian, the British Ambassador, announced on November 23 that British funds available for the purchase of war materials in America were nearing exhaustion and that American financial aid would be needed in 1941 if the purchases were to continue. It was estimated that the British Purchasing Commission in the United States up to that time had let contracts for more than \$4,000,000,000 worth of arms, munitions, and other materials. Shortly afterward Sir Frederick Phillips, British Under-Secretary of the

Treasury, was sent to the United States to present a detailed explanation of Britain's financial needs in the United States and the resources available for meeting them.

On December 18 it was announced in Washington that the British Government had been advised to proceed with approximately \$3,000,000,000 worth of new war orders without worrying too much about payment. On the preceding day, President Roosevelt advanced his proposal for lending or leasing war materials to Britain and other countries resisting aggression. The continuance of British armament purchases in the United States was thus dependent at the year's end upon the acceptance of the proposal by Congress. This situation represented a marked evolution in U.S. policy since the beginning of 1940, when Washington was engaged in controversy with London over restrictions imposed by the British blockade upon American commerce in the Mediterranean area. See also *CURAÇAO* under *History*; *UNITED STATES* under *Foreign Affairs*.

**Trade Drive in Latin America.** The undeclared Anglo-American alliance in effect at the end of 1940 appeared unaffected by a concerted British effort to establish new markets in Latin America for those lost through German conquest on the European Continent. A large British economic mission, headed by Lord Willingdon, was touring South America at the year's end. Both British and U.S. commerce with Latin American countries reaped advantages from the elimination of German trade through the British blockade. See *ARGENTINA*, *BRAZIL*, etc., under *History*.

**Anglo-Russian Negotiations.** Relations between the Allied powers and the Soviet Union appeared to be near the breaking point early in 1940 as a result of the German-Soviet pact and Allied assistance to the Finns. A *New York Times* dispatch from London on March 24 stated that the Allies were prepared to fight Russia rather than permit German-Soviet control of Rumania. On April 5 the British Government warned Norway and Sweden that any further Soviet aggression upon Finland would prejudice the Allied war effort and might have to be met by military action.

Nevertheless the Anglo-Soviet trade talks, interrupted by the Russo-Finnish war, were resumed early in April. They were again interrupted on May 23 when Moscow refused to discuss British demands for restriction of Soviet trade with Germany. Sir Stafford Cripps resumed the negotiations when he arrived in Moscow as Britain's new Ambassador in June. In addition to the issue of German-Soviet collaboration, controversies had developed over the Soviet claim to some \$4,000,000 of gold and securities owned in the Baltic States and frozen in London when the Soviet Union annexed those territories. Britain advanced a counter-claim against Moscow for some £5,500,000 of British investments in the Baltic States.

The Russians also demanded the release of 30 Estonian, Latvian, and Lithuanian vessels held in British ports after Russia's absorption of those three States. On October 16, 10 of these ships were requisitioned by the British Government. On October 29 Britain protested as unneutral Russia's decision to join with Germany, Italy, and Rumania in negotiations for a new Danube Commission. The protest was bluntly rejected by Moscow. The British Government on October 22 was reported to have offered Russia the following inducements for a "more benevolent attitude": A guarantee against

any British association in an attack upon the Soviet Union, a pledge to permit Soviet participation in any peace settlement at the end of the war, and *de facto* British recognition of the annexation of the Baltic States by Moscow.

To this offer the Soviet Government made no reply other than to send Premier Molotov to Berlin. The Anglo-Soviet negotiations thus remained deadlocked at the end of the year. However the growing tension between Germany and the Soviet Union in the Balkans aroused hope in London that the British effort to insure Soviet neutrality and possibly bring Russia into the war on the Allied side might meet with more success in 1941.

**Balkan Situation.** After the debacle in the Low Countries and France, Britain lost ground to Germany economically and diplomatically in all of the Balkan States (q.v.) except Greece and Turkey. Greece was driven into armed conflict on Britain's side by the Italian invasion of October 28. In response to a Greek appeal, the British fulfilled their guarantee of Apr. 13, 1939 (see YEAR BOOK, 1939, p. 329) and provided naval and air support for the Greek armies. In return, Greek ports were placed at the disposal of the British fleet. The strategically situated island of Crete was converted into a British air base. And the British Government obtained control, through the Greek Shipping Committee in London, of most of the Greek merchant marine—a fleet of some 550 ships. Turkey maintained its 1939 alliance with Britain, although when Italy declared war the Turks, apparently with British consent, did not fulfill their obligation to aid their ally.

**The Clash with Italy.** During the first part of the year, the British did their best to keep Italy neutral while at the same time seeking by trade negotiations and by the gradual tightening of controls over Italian overseas trade to reduce the flow of war materials reaching Germany through Italian ports. After Germany's success in Norway, the attitude of the Italian Government became so threatening that on April 30 British merchant ships were ordered to keep out of the Mediterranean. On May 16, when the German drive in the Low Countries was only six days old, Prime Minister Churchill sent a personal appeal to Mussolini to "stop a river of blood from flowing between the British and Italian peoples" by staying out of the conflict. Il Duce replied on May 18, reminding Churchill of British sanctions against Italy in 1935-36 during the Ethiopian War and asserting that "the same sense of honor and of respect for engagements assumed in the Italian-German treaty (of alliance) guides Italian policy today and tomorrow in the face of any event whatsoever."

When Italy declared war, the British blockade was clamped down at Gibraltar and Suez and the British navy drove Italian shipping from all except the central waters of the Mediterranean. In August or September Churchill's War Cabinet authorized the diversion of ships and troops for a major offensive against Italy and its African possessions. This daring decision bore fruit later in the year in the shattering blows struck by air, land, and sea (see EUROPEAN WAR). While Italian morale was badly shaken by successive defeats, Churchill on December 23 broadcast an appeal to the Italian people to overthrow Mussolini and conclude peace before their African empire was torn "to shreds and tatters" and Mussolini was forced "to call in Attila over the Brenner Pass . . ."

**Britain's Dilemma in Spain.** As in the case

of Italy, the Allies during the first stage of the war sought to keep Spain neutral by permitting it access to overseas sources of supply. Despite the danger of strengthening a potential enemy, an Anglo-Spanish treaty was signed March 18 under which Spain obtained much-needed supplies of wheat, rice, coal, machinery, and other products. In return Britain obtained Spanish minerals for her war industries.

Upon the collapse of France, the Franco Government abandoned its neutrality for a "non-belligerency" favorable to the Axis. It occupied Tangier (q.v.), started a press campaign for the return of Gibraltar, and gave every indication of entering actively into the conflict as soon as an Axis victory over Britain appeared imminent. To prevent this the Churchill Government late in July took the dangerous step of extending the blockade to Spain and Portugal. At the same time, shipments of oil and other vital war supplies reaching Germany through Spain and occupied France were cut off. The ensuing critical food shortage in Spain was a major factor in General Franco's rejection of the proposals advanced by Hitler in October for a German attack upon Gibraltar through Spain (see GERMANY under *History*).

After repeated protests at the blockade, the Franco Government late in August agreed to accept the British regulations in return for permission to import limited amounts of gasoline and other essential commodities. Guarantees were given that none of the imported materials would be turned over to Germany. The blockade was further relaxed in December, after a month of negotiation. On December 2 a payments accord was signed in Madrid giving Spain the right to use frozen credits totaling several hundred thousand pounds for purchases in the United Kingdom and other parts of the sterling area. On December 3 the British agreed to permit the importation into Spain of a million tons of wheat, and to issue additional navicerts as soon as the Franco Government obtained American credits for purchases of other supplies. In this and other ways the British had Washington's co-operation in applying economic pressure to keep Spain neutral. Britain consented on December 8 to permit the importation into Spain of 6000 tons of manganese ore and a large quantity of jute from India. Up to the end of 1940, this policy had sufficed to keep Spain on the fence and protect Gibraltar, but the German-British struggle in Spain was by no means ended. See SPAIN under *History*.

**Policy Toward Japan.** In the Far East Britain pursued a somewhat similar policy of economic pressure, concessions, and military threats in an effort to keep Japan neutral and to limit its expansion into Malaya and Southeastern Asia. There again it enjoyed the collaboration of the United States and of the Dutch authorities in the Netherlands Indies. For a full account, see BRITISH MALAYA, CHINA, JAPAN, NETHERLANDS INDIES, and THAILAND, under *History*.

**Other Events.** Other events of the year included the appointment of the Duke of Windsor as Governor of the Bahama Islands on July 9, and the merging of all non-Anglican Protestants in the United Kingdom in a central organization known as the Free Church Federal Council on September 15.

**GREECE.** A Balkan kingdom Capital, Athens. Greece has an area of 50,270 square miles (mainland, 41,652; islands, 6818), and a population estimated at 7,108,000 in 1939. The 1928 census showed 6,204,684 inhabitants (urban, 2,058,510). Living births in 1939 numbered approximately 168,200 (23.5 per 1000); deaths, about 92,800 (13.0 per 1000); marriages in 1937 totaled 45,833 (6.6 per 1000). Estimated populations of the chief cities in 1939 were: Athens, 392,781; Piraeus, 198,771; Salonika (Thessaloniki), 236,524; Patras, 61,278; Kavalla, 49,980; Canea, 26,608; Corfu (Kerkyra), 32,221.

**Religion and Education.** School attendance in 1936-37 was: Elementary, 967,588, secondary, 90,709; university, 10,561. Illiteracy is high. The 1929 census returns showed 5,961,529 members of the Greek Orthodox Church, 126,017 Moslems, 72,791 Jews, 35,182 Roman Catholics, and 9003 Protestants.

**Production.** Approximately 54 per cent of the working population are supported by agriculture and fishing, 16 per cent by industry, and 8 per cent by commerce. There were 6,087,000 acres of cultivable land in 1938. Yields of some of the chief crops in 1940 were estimated as follows (in metric tons unless otherwise specified): Wheat, 800,000; barley, 205,000; oats, 134,000; rye, 53,000; cotton, 52,000; currants, 114,000 tons; raisins, 30,000 tons; olive oil, 105,000 tons; figs (exportable crop), 22,000 tons; tobacco, 40,000 tons. Other production (in 1939) in metric tons was: Potatoes, 163,300; corn, 261,500; wine, 5,000,000 hectoliters.

Factory production in 1938 (excluding wine, olive oil, and wheat products) was valued at 13,552,000,000 drachmas. In 1939, 318 metric tons of rayon were produced; silk production in 1938 totaled 250 metric tons. Mineral output (in metric tons) in 1938 except as otherwise indicated was: Iron ore, 165,000; pyrites, 120,000; bauxite, 179,900; sulphuric acid, 43,000; chrome ore, 19,900 (1937); zinc, 10,900 (1937); lead (smelter), 9200 (1937); lignite, 131,000 (1937); nickel, 1000 (1937).

**Foreign Trade.** During the first eight months of 1940, imports were valued at 9,267,162,000 drachmas as compared with 9,091,989,000 in the same period of 1939; exports were 6,895,528,000 drachmas, as against 4,890,189,000 in the first eight months of 1939. Total imports in 1939 were valued at 12,275,000,000 drachmas (14,761,000,000 in 1938); total exports aggregated 9,200,000,000 drachmas (10,149,000,000 in 1938). For distribution of trade see *YEAR BOOK*, 1939, p. 333. Also see *TRADE, FOREIGN*.

**Finance.** Budget estimates for the fiscal year ending Mar. 31, 1941, provided for expenditures of 15,514,000,000 drachmas (15,940,000,000 in 1939-40) and revenues of 14,851,000,000 drachmas (14,999,000,000 in 1939-40). In the latter part of the year, budget estimates were revised to cover the

cost of the war with Italy. Military appropriations constituted more than 25 per cent of the total estimated expenditures in the original 1940-41 budget. The total public debt on Jan. 31, 1940, was 52,874,700,000 drachmas, of which 37,373,000,000 drachmas represented obligations to foreign countries. The average exchange rate of the drachma was \$0.0091 in 1937, \$0.0090 in 1938, and \$0.0082 in 1939.

**Transportation.** The length of railway lines in operation on Mar. 31, 1939, was 1864 miles. During the year ending Mar. 31, 1939, railways carried 31,434,700 passengers and 2,452,261 metric tons of freight. Gross revenues were 926,428,000 drachmas. During the year the Athens-Piraeus-Peloponnesus Railway, the second most important line in Greece, was taken over in receivership by the Greek Government. Highways extended 8440 miles in 1940. The Greek merchant marine on June 30, 1939, consisted of 607 vessels (of 100 tons or over) with a gross tonnage of 1,780,666. Also see *History* below.

**Government.** Premier John Metaxas ruled as dictator of Greece from Aug. 4, 1936, through 1940. (He died Jan. 29, 1941.) The government remained, none the less, a monarchy in form, under King George II, who had been restored to the throne, Nov. 25, 1935, in accordance with a plebiscite, to rule under the monarchic constitution of 1911. King George himself gave Metaxas as dictator a color of legitimacy by issuing the decrees of 1936, which suspended constitutional guarantees, dissolved the Parliament, abolished political parties, and imposed subjection on the press. All legislation is effected by royal decree.

**History.** The main concern of Greece in 1940 was to surmount the perils that the European War brought to the national existence and the livelihood of the population. The onset of the Axis powers shifted largely to southeastern Europe after the middle of the year; the shift indeed had been prepared in 1939, by Italy's seizure of Albania, which put an Italian army on the Greek northwestern border. The collapse of armed resistance to Germany in the western part of the European Continent gave Germany and Italy the opportunity to advance through the Balkans, after June, without risk of adequate military opposition from stricken adversaries. Italy accordingly invaded Greece on October 28 with forces supposedly almost double those that Greece could put into the field, and equipped with such modern fighting tools as the Greeks could not at all rival. For the course of the Italo-Greek campaign, see *EUROPEAN WAR*, under *Italo-Greek War*. The campaign of 1940 had the astonishing outcome of disaster for the Italian forces, which lost a great part of Albania and failed throughout to withstand the Greek advance. The Greek forces, despite phenomenal success, stood at the end of the year in the uncomfortable position of having yet to deal with German troops if these should come to the Italians' aid in 1941.

In the first half of 1940 the country's situation, in the disordered state of Europe, seemed comparatively secure. A guarantee of British protection against invasion still provided a deterrent against invasion, and Italy had not yet joined Germany against the British and French. The Balkan entente still functioned: the representatives of its members—Greece, Rumania, Turkey, and Yugoslavia—met early in February and adopted harmonious if vague resolutions to "remain in close contact" and continue a "resolute pacific policy."

They undertook to meet again in 1941. Their tenuous accord benefited Greece, so long as the four might hope for vigorous British and French support if Greece were attacked. The Greek provision for the defense of the Thracian border gained greatly by the completion on May 5 of a new railroad line from Salonika to the Bulgarian line.

The Franco-British disaster of May and June forced the Greek Government to seek the good will of Germany. On June 28 was announced the conclusion of a Greco-German commercial treaty letting the Reich receive ore, for which Greece in turn was to get German coal; and providing also for German access to other Greek products. Again, in August, the Greek Government, by revoking the extra pay that it had allowed to seamen, hindered the passage of cargoes to Great Britain and thus apparently wooed German benevolence.

The entry of Italy as an active participant in the European War, on the German side, led after a considerable interval to a declaration by Premier Metaxas, August 4, of the government's determination to remain neutral, but to make "every sacrifice" for the country's defense if attacked. About a week later the Italian Government began applying overt pressure on Greece with the apparent intent of awing the latter into yielding parts of Greek territory between the Albanian border and the Aegean coast. Italian journals, controlled by the government, demanded the "revision" of the Albanian frontier, and it was reported in Athens that a demand had been made of Greece, and rejected, that she formally renounce British guarantees of her independence and territorial integrity. There followed rapidly a demand that Greece account to Italy for the killing of an Albanian irredentist, Daut Hoggia, who had sought the inclusion in Albania of Greek areas having inhabitants of Albanian stock. The Greek mine-laying naval cruiser *Helle* was torpedoed and sunk, August 15, in the Greek harbor of Tenos; naval experts declared, August 20, that a fragment of the torpedo was marked as made in Turin.

Metaxas held firm against the application of Italian pressure in August. There followed several weeks of suspense, marked by a fruitless appeal for Hitler's diplomatic aid in restraining Italy. After the German partisans had mastered Rumania, the Italian Government, having abandoned hope of effecting its purpose by pressure, prepared to invade Greece. It issued an ultimatum on October 28, which the Greek government rejected on the same day, and war followed. The immediate occasion of the ultimatum was an Italian complaint that a Greek band had fired on an Albanian patrol, killing two, in Albanian territory.

One of the effects of the quarrel with Italy was the reconciliation of the Metaxas regime with some at least of the Venizelist or other antagonistic leaders that it had kept under restraint or in exile. The number of the forgiven included John Pheokotis, George Cafandaris, Alexander Milonas, and Panayotis Canellopoulos.

Greece, in undertaking to resist Italy, had hope of substantial aid from other governments. Turkey remained aloof in 1940, despite an understanding with Greece for common defensive measures. Great Britain supplied technical troops, military aviation, naval activity against the Italians, and a diversion in Libya that helped to disconcert Italian military policy. The United States gave Greece assurance, December 7, that military material would be forthcoming.

The reigning dynasty of Greece was strengthened in some respects, but weakened in others, by the birth, June 2, of a son to Prince Paul, brother of King George. The King was childless, and Prince Paul had at the time no male offspring. His fathering a son gave the throne the prospect of a successor in the next generation. But Prince Paul stood in favor with the Axis powers and out of favor, consequently, with the Metaxas regime.

**GREENLAND.** A large island off northeastern Canada. Denmark's only colonial possession, it has an area of 736,518 square miles, of which 705,234 square miles comprises the central plateau, averaging about 10,000 feet high and capped by ice 1000 feet or more thick. The ice-free coastal area comprises about 31,284 square miles. Estimated population in 1940, 18,200 including about 17,800 Eskimos and 400 Danes. The area under direct Danish administration includes 46,740 square miles and is divided into three inspectorates as follows: South Greenland on the southwest coast (pop., about 7000; capital, Godthaab); North Greenland on the west coast (pop., 9000, capital, Godhavn); and East Greenland on the east coast (pop. 1000). The chief settlements are Julianehaab (2500 inhabitants), Godthaab (1300), Godhavn, Angmagssalik, and Marmorilik.

Cryolite, mined at Ivigtut, accounts for nine-tenths of Greenland's total income of about \$800,000 annually. Marble is mined at Marmorilik in North Greenland. Other products are graphite, codfish, halibut, Arctic salmon, fox and bear pelts, eider down, seal blubber, and some sheep. Commerce is a monopoly of the Danish Government and its representatives in Greenland. Exports to Denmark in 1938 totaled 5,939,000 Danish crowns, imports from Denmark, 3,064,000 crowns. Revenue in 1938-39 was 4,810,000 crowns, expenditure, 5,573,000. The administration is vested in a director (appointed by the King) in Copenhagen, who was aided by governors and local assemblies in Greenland.

**History.** The establishment of a military protectorate over Denmark by Germany on Apr. 9, 1940, brought the status and future of Greenland into question. Communications between Greenland and Denmark were severed, and with them the island's normal trade. As "protector" of Denmark, the Reich acquired at least a technical claim to control Greenland. This situation led to consultations in Washington beginning April 10 between United States government officials, the Danish Minister, and the diplomatic representatives of Great Britain and Canada.

On April 10 President Roosevelt and the Danish Minister agreed that Greenland was part of the American Continent and therefore covered by the Monroe Doctrine. Its freedom from German control was declared to be of vital concern to the United States. The U.S. Government on May 1 announced that a consulate would be established at Godthaab and on May 10 James K. Penfield and George L. West, Jr., the newly designated

consul and vice consul, sailed for Greenland to keep the State Department informed as to developments there. The Canadian Government likewise sent a consul to Greenland. At President Roosevelt's request, an official of the American Red Cross also went to Greenland to investigate the food situation. He returned in mid-July and reported that the settlements had supplies on hand to meet their needs for months to come.

A Greenland trade delegation headed by Eske Brun, Governor of North Greenland, arrived in the United States on a U.S. Coast Guard cutter July 9 and in subsequent negotiations in Washington and New York established new trade channels with the United States to replace those severed by the German seizure of Denmark. On September 21 Governor Brun announced that arrangements had been made for obtaining \$1,000,000 worth of supplies in the United States in return for Greenland products. The U.S. Government extended further aid by suspending tonnage duties on "vessels of Greenland and the produce, manufactures, or merchandise imported in the said vessels into the United States from Greenland or from any other foreign country," effective Oct. 9, 1940.

The British Broadcasting Corporation on November 1 quoted a report from Stockholm that a German ship carrying an expedition of 50 armed men was intercepted and captured by the Norwegian vessel *Fridtjof Nansen* off Greenland while en route to seize an existing meteorological station in Greenland or to establish a new one for the purpose of supplying the German air force with advance weather reports.

Consult Th. Stauning (Prime Minister of Denmark), "Greenland," *The American-Scandinavian Review*, Summer, 1940, pp. 135-40, P. E. Mosely, "Iceland and Greenland: An American Problem," *Foreign Affairs*, July, 1940, pp. 742-46.

See CANADA and DENMARK under *History*.

**GRENADA.** See WINDWARD ISLANDS.

**GROUP MEDICAL CARE.** See CO-OPERATIVE MOVEMENT; MEDICINE AND SURGERY

**GADELOUPE.** A French West Indian colony comprising two main islands—Guadeloupe proper (Basse-Terre) and Grande-Terre, and the dependent islands of Les Saintes, Désirade, St. Barthélemy, St. Martin (northern part), and Marie Galante. Total area, 688 square miles; population (1938 estimate), 310,000. Chief towns: Basse-Terre, the capital (13,638 inhabitants), and Pointe-à-Pitre (43,551). Chief products: Sugar, coffee, rum, cacao, logwood, and manioc. Trade (1938): Imports, 250,583,000 francs; exports, 296,472,000 francs. Budget (1939): Revenue and expenditure balanced at 83,608,979 francs. Public debt (Dec. 31, 1938), 12,110,210 francs (franc averaged \$0.0288 for 1938; \$0.0251 for 1939). There were 754 miles of roads in 1938. The government was administered by a governor, assisted by an elected council.

**History.** Guadeloupe remained loyal to the Pétain Government following the capitulation of France to the Axis powers in June, 1940, although many of the islanders were said to sympathize with Gen. Charles de Gaulle's "Free French" movement. In a move to strengthen its position in Guadeloupe, the Vichy Government appointed Constant Sorin as governor on December 13. The appointment coincided with the return to Vichy of Jules Carde, a French colonial official, who had been sent by Marshal Pétain to investigate the

situation in France's West Indian colonies. The economic situation of the island became critical as a result of the virtual cessation of overseas trade.

See FRANCE under *History*.

**GUAM.** An insular possession of the United States; the largest and most populous island of the Marianas group, in mid-Pacific. It lies about 5100 miles from San Francisco, 3300 from Honolulu, 1350 from Yokohama, and 1500 from Manila. Area, 225 square miles; estimated population (July 1, 1940), 23,067, which included 21,502 native-born, 787 foreign-born, and 778 members of the naval establishment. The 1940 census population was 22,290 (18,509 in 1930). Capital, Agaña (pop., about 12,000).

The native population is mainly of Chamorro stock. The languages in use are English, Spanish, and Chamorro. Public instruction through high school grades is available to all children who make satisfactory progress. Commencing with the seventh grade, attendance is limited by competitive examination. The number of enrolled pupils in the public schools averaged 4694 for the year 1939-40. Most of the pupils were in native schools, taught by native teachers. An American school, for children of non-natives, was maintained. Copra, coconut oil, alligator pears, and kapok are exported. Products grown for the domestic market are cacao, coffee, rice, sugar, corn, sweet potatoes, and fruits. Exports for the year ending June 30, 1940, amounted to \$102,575, and were mainly of copra. Imports totaled \$642,936.

Guam is a United States naval station; its Governor, who is also the commandant of the station, is a naval officer commissioned by the President. Governor, Capt. G. J. McMillin, U.S. Navy. An elective native Congress consisting of a House of Council (16 members) and a House of Assembly (27 members) has only an advisory voice in the government. Planes of Pan American Airways operating between Alameda, Calif., Manila, and Hong Kong stop regularly at Guam. A cable station on the island relays messages between San Francisco and the Philippines, China, and Japan.

**History.** Capt. G. J. McMillin replaced Capt. J. T. Alexander as Governor in April, 1940. Work proceeded during the year on non-military improvements to the naval station authorized in the Naval Public Works Act of June 2, 1939. For the second successive year, the House of Representatives at Washington on February 16 eliminated from the Naval Appropriation Bill a \$1,000,000 item for the military strengthening of the naval station. The House took the position that such improvements might lead to war with Japan. On January 15 a Japanese fishing vessel was wrecked on the southeast coast of the island in the restricted area established by the United States naval authorities. The island was ravaged on November 3 by the worst typhoon since 1900, which rendered three-fourths of the inhabitants homeless, damaged the Pan American Airways hotel and naval and other establishments, and destroyed virtually all of the crops.

**GUATEMALA.** A republic in Central America. Capital, Guatemala City.

**Area and Population.** Area, 42,364 square miles; population, 3,284,269 at census of Apr. 7, 1940. Some 65 per cent of the population are Indians and the bulk of the remainder are mestizos. The small ruling class is largely of European origin. Populations of the chief cities with their suburbs in 1938 were: Guatemala City, 164,771; Que-

zaltenango, 30,125; Cobán, 26,774; Zacapa, 18,094.

**Defense.** Military service is compulsory. The active army on Nov. 1, 1939, comprised about 6000; there were 27,660 trained reserves and about 100 in the air force. Defense appropriations, 1,900,000 quetzales in 1940-41. A U.S. military mission was engaged in 1939.

**Education and Religion.** About 80 per cent of all adults are illiterate. Eight new public and 20 private schools were opened during 1939-40; total enrollment for that year was 147,909 pupils in 2513 schools (including 4436 in 48 secondary schools and 694 in the University of Guatemala). Roman Catholicism is professed by the great majority.

**Production.** Coffee and bananas account for about 90 per cent of all exports. The chief crops in 1938-39 were (in metric tons, except as noted): Coffee, 116,943; bananas, 14,353,752 stems (8,208,517 stems exported in calendar year 1940); corn, 702,063; beans, 98,057; wheat, 28,474; sugar, raw and refined, 99,895; rice, 17,887. The 1939-40 chicle crop was estimated at 1,300,000 lb. Livestock, gold, hardwood are other products. Main industries: Coffee cleaning, flour milling, sugar refining, and the making of shoes, soap, and pottery.

**Foreign Trade.** Imports in 1940 were officially valued at \$12,666,970 (\$15,295,749 in 1939); exports, \$13,761,755 (\$16,985,309 in 1939). The United States supplied 54.5 per cent of the 1939 imports (44.7 in 1938); Germany, 27 (35.1). Of the 1939 exports, the United States took 70.7 per cent (69.4 in 1938); Germany, 11.5 (14.1). See TRADE, FOREIGN.

**Finance.** Budget estimates for year ended June 30, 1940, 10,555,000 quetzales. In 1938-39 there was a deficit of 1,245,043 quetzales on expenditures of 14,014,654 quetzales. The public debt was reduced during 1939 by 4,298,691 quetzales to a total of 4,924,996 quetzales and 1,520,432 pounds sterling. Regular interest, but not sinking fund, payments were made on the sterling debt. The quetzal exchanged at \$1 (U.S.) in 1938 and 1939.

**Transportation.** On Dec. 31, 1939, there were 3684 miles of highway open to traffic, 646 miles under construction, and 302 miles projected. Railway lines extended 737 miles. Domestic airlines (TACA) carried 5039 passengers and 4,550,937 lb. of freight and mail in 1939, international passenger traffic on Pan American Airways increased 21 per cent to 6799. A new telephone system was being installed in Guatemala City in 1940. Chief ports: Puerto Barrios and Livingston on the Caribbean and San José and Champerico on the Pacific.

**Government.** The Constitution of Jan. 1, 1928, as amended, provides for a President elected for 6 years and ineligible for re-election, a single-chambered National Assembly of 74 members elected by popular vote for 4 years, and an appointive Council of State of 7 members which supervises public contracts and concessions. President in 1940, Gen. Jorge Ubico, who assumed office Feb. 14, 1931, and had his term extended by a hand-picked Constituent Assembly on July 10, 1935, to Mar. 15, 1943.

**History.** A revolutionary conspiracy to overthrow the government was nipped in the bud just before Christmas of 1940. On December 28, 13 of the conspirators were executed by firing squads on charges of sedition and attempted rebellion. According to the government, the ringleader of the plot was Julio Castillo Marin, head of the Conservative Unionist party which overthrew Dicta-

tor Estrada Cabrera in 1920. He was put to death along with Reserve Colonel Pedro Montenegro Morales, José Pelaez, six army sergeants, two corporals, and a private. The government announced on December 30 that the country was quiet and that it had received a statement of support from the army.

Some economic hardship was caused during the year by low world coffee prices, the virtual exclusion of Guatemalan coffee from European markets, a sharp drop in chicle production, and the rising cost of living. These adverse factors were offset in part by higher production from the new Pacific-coast banana plantations, increased trade with the United States, and a large expansion of the tourist trade. The government's program of highway construction and other public works was continued.

In his annual message to the National Assembly on Mar. 1, 1940, President Ubico announced that demarcation of the boundary with El Salvador had been completed. He also reviewed Guatemala's controversy with Great Britain over the Guatemala-British Honduras boundary question (see YEAR BOOK, 1939, p. 337). In June, 1939, he said, Washington informed both Britain and Guatemala of its desire to have the boundary issue settled. At the end of January, 1940, the British Government proposed arbitration of the issue of its responsibility under the compensatory clause of the boundary convention of 1859. Guatemala, on the other hand, demanded arbitration of the whole issue of sovereignty and the consequent indemnity. After the Havana Conference in July had expressed its wish for a "just, peaceful, and rapid solution" of the controversy, the two governments were reported to have accepted President Roosevelt as arbitrator.

This action was in line with Guatemala's growing co-operation with the United States and increasing public antipathy to Nazi Germany. The Guatemalan Government in June refused admission to Arthur Dietrich, press attaché of the German legation in Mexico, when he was expelled from Mexico for propagandist activities. President Ubico was reported to have agreed with the other Central American governments on a policy of co-operation with the United States in hemispheric defense. Like its neighboring republics, Guatemala was undeterred from this course by a warning against "unneutral action" received from the German Minister to Central America preceding the Havana Conference in July. A large number of U.S. military planes from the Canal Zone participated in the celebration of Soldier Day in Guatemala City on June 30.

See PAN AMERICANISM.

**GUGGENHEIM FOUNDATION.** See BENEFACTIONS.

**GUIANA.** See BRITISH GUIANA, FRENCH GUIANA, SURINAM.

**GUINEA, PORTUGUESE.** See PORTUGAL under *Colonial Empire*.

**GYMNASTICS.** The biceps and calves of George Wheeler, 25-year-old school teacher of East Washington, Pa., continued to command extraordinary attention among America's muscle fans in 1940. For the fourth successive year, he captured the national all-around gymnastics title in the A.A.U. championship tournament at Chicago. Representing the First United Presbyterian Community House of Pittsburgh, Wheeler was supreme in four individual contests: long horse, side horse,

parallel bars, and calisthenics. The University of Illinois was awarded the team crown after previously taking the Big Ten and N.C.A.A. laurels. The Eastern Intercollegiate Gymnastic League's team championship was won by Navy.

**GYPSY MOTH.** See ENTOMOLOGY, ECONOMIC.

**HADHRAMAUT.** See ARABIA under *Aden Protectorate*.

**HAITI.** A West Indian republic, occupying the western third of the island of Haiti or Hispaniola. Capital, Port-au-Prince.

**Area and Population.** Area, 10,204 square miles; population, estimated on Dec. 31, 1939, at 3,000,000 (1,631,000 at 1918 census). With the exception of some 3000 white foreigners (467 United States citizens on Jan. 1, 1940) and a few thousand mulattoes, the inhabitants are all Negroes. Estimated populations of the chief cities in 1936: Port-au-Prince, 105,000 (125,000 in 1940); Cap-Haitien, 15,000; Aux Cayes, 15,000; Gonaives, 10,000; Saint Marc, 10,000; Jacmel, 10,000. French is the language of government and the educated class. The peasants, comprising more than 80 per cent of the population, speak a dialect known as Creole French.

**Religion and Education.** Most of the inhabitants profess the Roman Catholic faith. About 85 per cent of the people are illiterate. There are about 1060 primary schools, with 87,000 pupils; 21 secondary schools, with 6000 pupils; 68 farm and vocational schools, with 12,200 pupils; 2 normal schools; and colleges of medicine, law, applied science, and agriculture.

**Defense.** The armed constabulary, organized by United States officers during the American military intervention (1915-34) and since 1934 under Haitian command, comprises about 2500 officers and men. A United States military mission was contracted for by the Haitian Government in 1938 to reorganize the military school and act as technical advisers to the general staff of the Garde d'Haiti (constabulary).

**Production.** Agriculture supports the mass of the population. The country's prosperity is largely dependent upon export crops, chiefly coffee. For the fiscal year ended Sept. 30, 1940, the principal exports were: Coffee, 16,187,765 kilos (kilo equals 2.2 lb) valued at 10,243,491 gourdes (gourde equals \$0.20); raw sugar, 29,856,208 kilos valued at 4,725,427 gourdes; sisal, 7,871,118 kilos valued at 3,366,685 gourdes; bananas, 2,268,387 bunches valued at 3,148,294 gourdes; raw cotton, 3,105,003 kilos valued at 3,048,302 gourdes; cacao, 1,219,756 kilos valued at 488,718 gourdes. Manufacturing is confined to sugar refining, rum distilling and the preparation of tobacco products, canned fruit, and vegetable lard. The 1939-40 coffee crop was estimated at 22,600,000 kilos.

**Foreign Trade.** Imports during the 1939-40 fiscal year totaled 39,701,000 gourdes (40,904,000 in 1938-39); exports, 26,995,000 gourdes (36,338,000 in 1938-39). The value of the 1939-40 exports was the lowest recorded since 1916. The United States furnished 73 per cent of the 1939-40 imports (63 in 1938-39); British Commonwealth, 12 (14); France, 4 (5). Of the exports, the United States took 52 per cent in 1939-40 (35 in 1938-39); British Commonwealth, 30 (20); Belgium, 9 (10); France, 4 (21). See TRADE, FOREIGN.

**Finance.** For the fiscal year 1939-40, government receipts totaled 26,873,000 gourdes (31,146,000 in 1938-39) and expenditures from revenues were 28,478,000 gourdes (29,585,000 in 1938-39).

In addition there were expenditures from the United States public works credit during 1939-40 of 8,855,000 gourdes, bringing the total loan expenditure under this account to 17,494,000 gourdes. Unobligated Treasury reserves on Sept. 30, 1940, were 356,000 gourdes (2,095,000 on Sept. 30, 1939). The gross public debt on Sept. 30, 1940, was 60,872,000 gourdes (52,137,000 on Sept. 30, 1939).

**Transportation.** Haiti in 1940 had 158 miles of railways, about 1426 miles of roads, and a connection at Port-au-Prince with the Pan American Airways Caribbean network. During the 1938-39 fiscal year 657 steam and motor vessels of 1,595,770 net registered tons called at Haitian ports, including 28 tourist ships. See HISTORY.

**Government.** The Constitution of June 17, 1935, as amended Aug. 8, 1939, vested executive powers in a President elected for five years by a two-thirds vote of the National Assembly. The National Assembly consists of 37 Deputies, elected for four years by the vote of literate property owners, and 21 Senators, 11 elected by the Chamber of Deputies and 11 appointed by the President for six-year terms. Presidents completing their terms since 1930 become life members of the National Assembly. President in 1940, Sténio Vincent, who was elected by the National Assembly Nov. 18, 1930, and whose term of office was extended for five years from May 15, 1936, by a special clause in the 1935 Constitution. All members of the cabinet and National Assembly were personal followers of President Vincent and no organized opposition was permitted.

**History.** Haiti's economic situation went from bad to worse during 1940, mainly as a result of the cutting off of additional coffee markets in France and Scandinavia by the European War. Exports for the 1939-40 fiscal year declined to less than half the average annual value for the preceding 23 years. Imports declined only slightly from the 1938-39 level due to continuance of the public works program with the \$5,000,000 credit obtained in 1938 from the Export-Import Bank of Washington. Budget receipts fell to the lowest level since 1921-22, and although the government reduced salaries of its employees on July 1, 1940, and took other economy measures, there was a substantial operating deficit. Moreover the government was faced with the necessity of reducing or eliminating the export tax on coffee to enable the 1940-41 crop to compete in the world market. A substantial reduction in imports of staple food products indicated a decline in mass purchasing power.

These economic difficulties stimulated the unrest prevalent in Haiti for a number of years and increased the possibility of a revolutionary outbreak in connection with the December, 1940, elections for a new Chamber of Deputies and the Presidential election scheduled for the following April. The political situation in Haiti remained obscure due to the strict censorship. However it was plainly indicated by the end of 1940 that President Vincent had decided to continue in office for another term despite his promise to retire and a constitutional bar to re-election. The Congressional elections originally scheduled for January, 1941, were held in mid-December and Deputies pledged to Vincent's re-election were chosen with the aid of strong government pressure. According to anti-Vincent sources, supporters of other aspirants for the Presidency who attempted to run for Congress

and for Mayor of Port-au-Prince were arrested and beaten up by the Garde d'Haiti. Dr. Price Mars, a leading liberal, and Col. Démosthènes P. Calixte, former chief of the Garde d'Haiti who was in exile in the Dominican Republic, were mentioned as the principal Presidential aspirants.

An agreement regulating the passage of immigrants and seasonal laborers across the Haitian-Dominican frontier entered into effect early in 1940. It helped to reduce friction between the two governments over this issue. Because of Haiti's financial difficulties, the United States on Sept. 27, 1940, signed a supplementary executive agreement prolonging for an additional year (to Sept. 30, 1941) the modifications in the 1933 financial convention arranged July 8, 1939 (see YEAR BOOK, 1939).

Consult Ludwell Lee, *Haiti and the United States, 1714-1939* (Duke Univ. Press, Durham, N.C., 1940).

**HAMBURG.** See GERMANY under *Area and Population*.

**HANDBALL.** Joe Platak of Chicago added to his reputation as the game's greatest star in many years by annexing for the sixth successive time the national four-wall handball championship at the A.A.U. tournament in Chicago in April, 1940. He vanquished Jack Clements of San Francisco, 21-15, 21-3, in the final. The national doubles championship changed hands as Joe Goldsmith and Joe Gordon of Long Beach, Calif., defeated Frank (Lefty) Coyle and Ed Linz of the New York A. C. The latter team won the honors in 1938 and 1939.

In the national one-wall singles meet at Manhattan Beach in the summer, Morton Alexander of the Trinity Club, Brooklyn, triumphed over one of his clubmates, Victor Herschkowitz in the final by 21-4, 21-5.

Teamed with Marvin Hecht, Alexander also won the national one-wall doubles title.

**HATAY, Republic of.** See SYRIA AND LEBANON.

**HATCH ACT.** See under POLITICAL ACTIVITIES.

**HATCHERIES.** See FISH AND WILDLIFE SERVICE.

**HAWAII, Territory of.** A territory of the United States, comprising the Hawaiian Islands, in the Pacific Ocean, about 2800 miles west-southwest of San Francisco. Capital, Honolulu.

**Area and Population.** The islands that form the Territory have a combined area of 6407 square miles. Their population of Apr. 1, 1940 (U.S. census), numbered 423,330; 1930, 368,336. Approximate population of June 30, 1940, by areas: city of Honolulu, 180,986; rural part of Oahu, 79,899; city of Hilo, 16,641; rural Hawaii (island), 65,922; Kalawao, 465; Kauai, 35,956; Maui, 7809. The diverse origin of the inhabitants gave a somewhat unusual aspect to their character as a group: by estimate of the Territorial Board of Health, for June 30, 1940, the population, by origins, numbered 156,489 Japanese, 65,291 wholly or partly of Hawaiian aboriginal stock, 115,836 Caucasian, 52,148 Filipino, 28,809 Chinese, 6761 Korean, and 960 other. There were by these estimates, as compared with the U.S. Census of 1930, 17,218 more Japanese; 14,431 more Hawaiian or part-Hawaiian; 35,463 more Caucasian; 1630 more Chinese; 300 more Korean; 180 more unclassified of other ori-

gins; and 10,904 fewer Filipinos. Of the whole population (estimate for June 30, 1940), 81.79 per cent were U.S. citizens; by groups, the percentages were 77.9 for the Japanese; 100 for Hawaiian and part Hawaiian; 97.85 for the Caucasian; 33.86 for the Filipino; 86.89 for the Chinese; 67.37 for the Korean; and 91.46 for the others. A great part of the non-American Caucasians were Portuguese by origin.

**Education.** The enrollments of pupils in the public schools totaled 91,821 for June, 1940; this comprised 53,378 in elementary grades (from 1 through 6) and 38,443 in upper grades (7 through 12). The elementary enrollments had decreased by 4901 since 1933, but the enrollments in the upper grades had risen. For the year 1939-40 the public schools cost \$6,996,947 in current expense and \$335,825 in capital outlay. The University of Hawaii had (year 1939-40) 1947 undergraduate students and 478 graduate students, not to count other groups, particularly the heavy attendance in the summer session.

**Employment and Production.** The gainful industries of the Territory are predominantly agriculture and the processing of agricultural products. The main exports, cane sugar and the products of the pineapple, accounted for more than \$50,000,000 each, in the Hawaiian exports of 1939. The two covered well over nine-tenths of yearly exports. In the case of the pineapple as well as that of the cane, agriculture and manufacture were closely associated, in the hands of large companies or associations. Thus, of the \$9,099,832 paid to farmers in the Territory during the fiscal year 1940 under the provisions of the Agricultural Adjustment Act, \$8,975,614 went to a group of 2068 growers of sugar cane. Workers on sugar plantations numbered 44,810 in 1938. The pineapple industry, though somewhat less in yearly value of product than the sugar industry, was estimated by the Pineapple Producers Co-operative Association to have employed 78,000 persons in 1939, or nearly one-fifth of the population. The Hawaii Experiment Station was reported in 1940 to have found a practicable way of treating the papaya fruit so that it would stand exportation, and there appeared some prospect that the small yearly exports of the papaya might in their turn expand. Manufacturing, proper, employed 16,842 wage earners in 1939 and put out \$133,655,947 in products.

For the calendar year 1940 the estimated shipments of canned fruit or juice of the pineapple rose to \$54,000,000. The sales of cane sugar apparently fell to 916,500 short tons, as against 940,060 tons for 1939 and allowable exports of 938,037 tons to the Union under the quota system.

**Finance.** The general fund of the Territorial government reported, for the fiscal year ending with June 30, 1940, receipts of \$16,158,301; payments of \$15,617,014; and cash available at the close of the year, \$2,956,295. The Territory (June 30, 1940) owed \$38,321,000 of funded debt, not to count floating debt; it held sinking funds of \$10,302,550.

**Oversea Trade.** In the calendar year 1939 Hawaii imported merchandise to the value of \$109,296,478 and exported \$115,095,809. The United States sent all the imports and took all the exports, save for about 7 per cent of imports and 1¾ per cent of exports, the shares representing trade from and to foreign countries (including the Philippine Islands). Products of the pineapple accounted for \$50,822,532 of the exports to the United States and

\$824,540 of those to other countries. The listed exports of sugar, \$55,217,960 in value, all went to the United States. No other export attained \$1,000,000 in value for 1939; but exports of molasses, canned fish, and (chiefly to foreign countries) coffee were substantial.

In the calendar year 1940 Hawaii's imports from the United States amounted to \$127,439,539; exports of Hawaiian products to the United States totaled \$96,924,908. Data for 1940 did not cover Hawaiian trade with the other countries. Despite shipments of \$5,165,942, additional, from Hawaii, under the head of U.S. products returned, the totals for 1940 left Hawaii an apparent debtor in trade with the United States for some \$25,000,000 of imports in excess of exports. In view of unusual military and naval outlay in the Territory, involving many kinds of shipments from the United States, the heavy adverse balance of trade did not necessarily represent an upset in the usual balance of actual commerce. Among the chief subtotals of the imports above, \$18,109,684 of vegetable foodstuffs, \$19,880,238 of machinery and vehicles, \$18,589,368 of other iron and steel manufactures, and \$12,312,290 of products of petroleum, furnished the greater part of the total imports of U.S. goods.

**Transportation.** Steam railroads, on the islands of Oahu, Hawaii, and Maui, aggregated 322.64 miles of track in 1940. Motor vehicles registered in 1940 numbered 71,058—this made one to every six inhabitants. The Inter-Island Steam Navigation Co. transports passengers and freight among the chief islands by sea. Inter-Island Airways covers similar routes by air. The mileage of vehicular roads was stated in 1940 as 2040. Ship-lines connect Honolulu with North and South America, Australia, and the Orient. Pan American Airways touch at Honolulu in passage between the United States and the Far East, the same system started in 1940 a service between San Francisco and New Zealand via Hawaii.

**Government.** The Governor of the Territory (in 1940 Joseph B. Poindexter) holds office by appointment of the President of the United States, for a term of four years. The registered voters of the Territory elect quadrennially 15 Senators and biennially 30 Representatives, constituting the Legislature; it passes appropriations and other acts within the Territorial authority. The popular vote elects to each U.S. Congress a Delegate, with a voice, but no vote, in the House of Representatives; Samuel W. King was re-elected Delegate in 1940.

**History.** The entente formed by Japan with Germany and Italy, as read in connection with the current foreign policy of the United States, served to prompt the vigorous prosecution of measures to put the Hawaiian Islands in a more thorough readiness for their own defense and for the support of U.S. naval power in the Pacific Ocean. The bulk of the warships of the fleet at sea were assigned in May, after spring maneuvers, for an indefinite period to the neighborhood of the Islands. In August the *New York Times* reported the presence at Pearl Harbor (naval base near Honolulu) of some 10 U.S. battleships, 2 aircraft carriers, 15 cruisers, corresponding numbers of other craft, and a naval air force to match. The Army's forces for the land defenses of Honolulu and Pearl Harbor were augmented, as by an anti-aircraft regiment of the Californian National Guard. The development of the Hickam airfield at Pearl Harbor, begun in 1935 and destined to

cost \$25,000,000, was carried on actively. Much was done to supply other islands with minor airfields for possible military need; but the policy of concentrating fortifications solely about Honolulu and Pearl Harbor, on Oahu, remained in force.

The numerous inhabitants of Japanese extraction inspired by their general behavior a confidence in their loyalty to the United States. They still, however, contributed but a very small part of the Hawaiian National Guard—40 among 1741 enlisted men. Accepted as commonly loyal, the Japanese could not easily prove in any given case that fidelity to the ancestral bond had been cast off. Some of the local activities ascribed to the Japanese Government caused uneasiness. Four Japanese navigating small vessels were seized and charged in May with trespassing on forbidden waters in Pearl Harbor. In December the *Honolulu Advertiser* criticized the practice of the Japanese consulate in taking a census every five years of the Japanese in the Hawaiian Islands.

**NLRB in the Islands.** The U.S. House of Representatives' committee investigating the NLRB brought to public notice, May 3, a report made confidentially to the Board by its investigator, E. J. Eagen, in 1937. Sweeping charges in this report, as summarized in the press, represented the five leading sugar companies of the Territory as exercising a sort of universal control over industries, sales of land, banks, transportation, agencies for goods sold to the population, telephones, police, Legislature, Executive, judiciary, bar, university, churches, election machinery, and the head of the National Guard; a halfway qualification was made as to the journals. The report was supposed to have helped the Board to reach decisions adverse to employers in the Islands.

**Demand for Statehood.** The Hawaiian agitation for elevating the Territory into Statehood gained new vigor in 1940. It took the definite form of a popular vote, cast at the general election on November 5, on the question whether the individual voter favored or opposed the proposal that Hawaii be made a State of the Union. The unofficial count of this vote, as reported on November 14, showed 46,174 in favor and 22,428 opposed, among some 90,000 registered voters.

**HAY.** The hay crop in 1940 was estimated by the U.S. Department of Agriculture at 95,156,000 tons which included 86,312,000 tons of tame hay and 8,844,000 of wild hay, about 11.8 per cent more than the 85,124,000 tons harvested in 1939 and compared with the 1929-38 average of 78,948,000 tons. The 72,488,000 acres harvested averaged 1.31 tons per acre and the 69,953,000 acres harvested in 1939, 1.22 tons per acre, compared with the 10-year average, 67,827,000 acres and 1.16 tons per acre. The farm carry-over of 11,000,000 tons from the previous year plus the 1940 crop provided a total supply 18,000,000 tons larger than the 10-year average and 5,000,000 tons more than the 101,000,000 ton supply for the 1939-40 season. States leading in production of tame hay were: Wisconsin 7,416,000 tons, Iowa 6,512,000, New York 5,554,000, Minnesota 4,702,000, California 4,657,000, Illinois 4,515,000, and Ohio 4,241,000 tons; and of wild hay Minnesota 1,453,000 tons, North Dakota 1,242,000, Nebraska 998,000, and South Dakota 891,000 tons.

The important kinds of tame hay and states with the highest production in each class included alfalfa 30,578,000 tons from 14,048,000 acres, California 3,393,000 tons; clover and timothy 29,287,-

000 tons from 22,387,000 acres, New York 4,161,000 tons; lespedeza 3,700,000 tons from 3,778,000 acres, Missouri 875,000 tons; soybeans 6,312,000 tons from 4,883,000 acres, Iowa 1,146,000 tons; sweetclover 808,000 tons from 678,000 acres, North Dakota 184,000 tons; cowpeas 1,567,000 tons from 2,068,000 acres, Texas 511,000 tons; peanuts 1,003,000 tons from 1,920,000 acres, Georgia 252,000 tons; small grains cut green for hay 4,260,000 tons from 3,981,000 acres, California 977,000 tons; sweet sorghum (sorgo) for forage and hay 13,816,000 tons from 8,042,000 acres, Kansas 3,984,000 tons; and other hay crops 8,536,000 tons from 7,849,000 acres, Minnesota 638,000 tons.

Seed of important kinds of hay included alfalfa seed 1,453,000 bu., red clover 1,994,400 bu., alsike clover 422,300 bu., sweetclover 900,700 bu., timothy 1,312,900 bu., and lespedeza 159,120,000 lb. The combined production of seed on the large area of 4,524,000 acres was practically the same as in 1939 but much above the 1929-38 average. The season average price per ton received by farmers for all hay was \$7.46 (December 1 price) and the estimated value of production was \$710,291,000 in 1940 compared to \$7.57 and \$644,760,000 in 1939.

**HEATING AND VENTILATING.** The year 1940 was the most successful one since 1929 in the physical volume of heating equipment manufactured and installed. This is indicated by *Heating and Ventilating's* "Index of Heating Business Activity" which averaged 95 in 1940 (1929 = 100), whereas in 1939 the index stood at 79.5. Most notable in heating equipment sales were those products identified with automatic house-heating, such as oil burners, domestic stokers, and gas house-heating equipment. Sales of oil burners were up 25 per cent over 1939, domestic stoker sales were up 33 per cent from the preceding year, while gas house-heating equipment sales, as indicated by incomplete statistics, were approximately at 1939 levels. (See also **GAS INDUSTRY**.)

Oil burner installations totaled 250,000 for the year, while stoker sales approximated 137,000 units. Although the combined volume of 1940 heating business, physically, was 19 per cent over 1939 this was not the case with the dollar volume of business, for prices during the year were still considerably below 1929 levels. There were in use on Dec 31, 1940, about 3,649,000 automatic central-heating plants fired with oil, gas, or stokers.

Sales of the air-conditioning type warm-air furnace equipped with fan and filter, which account for 40 per cent of total furnace sales, showed an increase of 18 per cent over 1939, while sales of gravity furnaces increased 39 per cent.

Technically, 1940 heating developments included the adoption of a uniform boiler-rating code by cast-iron boiler manufacturers; launching of a co-operative research program by the bituminous coal interests, to include a study of complete automatic residential heating with soft coal; a further increase in interest in radiant heating; an apparently growing trend toward the use of direct-fired

warm-air units for heating factory buildings; the continuation of the trend toward the use of hot-water heating in institutional and apartment buildings and houses; the sponsoring of a standard chimney code for buildings by the American Standards Association; studies of domestic hot-water supply consumption at Massachusetts Institute of Technology; initiation of a program to study, over a long period, radiator heating in a specially built house at the University of Illinois, a program sponsored by the Institute of Boiler & Radiator Manufacturers; and a rapid growth of electric heating in the Pacific Northwest due to the dropping of electric rates at midyear.

Outstanding applications of heating included the direct-fired warm-air system in the hangars of New York's airport, La Guardia Field; four blocks of two-family row houses on Long Island, each block served by an individual central-heating plant with steam sold to tenants and owners by the real estate operating company; an elaborate electric heating installation for General Electric's office building on the West Coast; use of a separate central-heating plant for the bathrooms in a large Los Angeles apartment building with the object of providing adequate heat in the bathrooms during all hours, but with the main central-heating plant in operation primarily during the daytime; use of an unusual method of heating the Glenside Housing Project in Reading, Pa., by means of which steam, generated in a central boiler plant, is piped to individual buildings or flats in which hot water is heated by the steam and piped to the individual dwelling units where the air is heated by the water with unit heaters and distributed to the individual rooms by means of ducts, thus combining steam, hot water, and warm-air heat in one installation, the combined use of radiant heating and summer air conditioning in the New Bankers Life Building in Des Moines; and the electric heating of Boston's new Concertorium.

**Air Conditioning.** Preliminary figures indicate that 1940 summer air-conditioning installations were divided, in numbers, as follows: Commercial, 74.2 per cent; theaters, 1.8 per cent; industrial, 4.9 per cent; institutional, 0.2 per cent, and residential, 18.9 per cent. In horsepower capacity, these building types accounted for 77.2 per cent, 14.4 per cent, 7.1 per cent, 0.2 per cent, and 1.1 per cent, respectively. Consequently, as in prior years, the important market for air conditioning has been the commercial field where air conditioning has been installed to return dividends in the way of additional sales or improved customer or client relations. This trend continued in 1940, excepting that there was a fair increase in industrial installations, due to the increasing realization of the desirability of completely controlling temperatures and humidity, and even odors, in manufacturing plants.

Outstanding in technical developments in air conditioning was further progress in dehumidifying by use of the absorption method; evidence produced by the medical profession that the effect of temperature and humidity on the human body is of greater significance than was before supposed; the emphasis being placed on fluorescent lighting, which is a cooler source of light than the Mazda bulb and consequently reduces the load on the air-conditioning system, and the equipping of a hospital in Massachusetts with ultraviolet-ray lamps to sterilize the air surrounding the nursery.

At the close of the year the reverse-cycle refrigeration method was applied to a room air-conditioning unit. By means of this method a refrigerating machine can be used for both heating and cooling. The unit has a capacity of about one room for cooling but its heating capacity is limited to spring and fall months in the North.

Among important applications of the year in air conditioning was that of an ice-cooled group of apartments in Westchester County, New York; a very large dehumidifying installation in the plant of the safety-glass laminating department of the Ford Motor Company; an installation designed with particular reference to acoustics in the Kleinhans Music Hall in Buffalo; use of a photo-electric cell to detect smoke in air-conditioning ducts, installed in a system in Kern's Department Store in Detroit, and which shuts off the fans if smoke is present, and a number of installations of cooling or dehumidifying in plants engaged in manufacturing goods for defense where accurate control of temperature or humidity is important, such as the inspection room of the Kollsman Instrument plant, rooms of the Heald Machine Company, and others.

**Ventilation.** During the year ventilation expanded on one front but met reverses on another. The ventilation of industrial plants, involving dust and fume removal, showed further increases during 1940, due to increasing awareness on the part of industrial engineers of the danger of dust and fumes to the workmen's health and in many cases even to the manufacturing process. On the other hand, mandatory ventilation in New York State's public schools was eliminated in accordance with a bill signed April 13. The new bill provides for "adequate ventilation" but eliminates the specific quantities of outside air which must be introduced.

The desirability of camouflaging and of blackouts of industrial plants in connection with defense brought ventilation into the foreground, due to the design of a number of windowless buildings which require either large amounts of ventilation or summer cooling to carry away the body and process heat.

Outstanding among the ventilating applications of the year were the ventilation of the seven tunnels of the Pennsylvania Turnpike between Harrisburg and Pittsburgh, of the Midtown Tunnel between Queens and Manhattan in New York, and the elaborate ventilation of the Ford Motor Company's Tool and Die Shop where all of the exhaust piping is concealed beneath the floor.

**HISPANIC SOCIETY OF AMERICA, The (Spanish Museum and Library).** Founded in 1904. An educational institution, containing objects of artistic, historic, and literary interest, its

purposes are to advance the knowledge of the Spanish and Portuguese languages, literature, and history and to encourage the study of the countries wherein Spanish and Portuguese are or have been spoken languages. In furtherance of these aims, paintings and other art objects together with manuscripts, maps, and a library of about 40,000 books were placed in charge of the Society. These varied collections have been gradually increased so that, for example, the library now forms one of the most notable Hispanic libraries in America. A number of temporary exhibitions have been held of the works of noted Hispanic artists. The Society has issued more than 600 imprints relating to Spanish art, history, and literature. In this group are the Huntington reprints of early books, monographs, catalogues on the collections, a Handbook of the museum and library collections (1938), and several works published in co-operation with other institutions. Membership in the Society is honorary and is limited chiefly to Hispanists of distinction. President, Archer M. Huntington. Headquarters: Broadway, between 155th and 156th Streets, New York City.

**HISTORY.** For books on history published during the year see the articles on literature. For events, see the sections on *History* under each country.

**HLOND REPORT.** See POLAND under *German Policy*.

**HOCKEY.** The New York Rangers won the Stanley Cup and the hockey championship of the world by beating the Toronto Maple Leafs in the final play-off session conducted by the National Hockey League in April, 1940. The feat marked the first occasion since 1933 that the world title was brought to New York City.

Before they vanquished the Leafs, the Rangers had to weather a violent round of games against the Boston Bruins, winners of the championship of the National League by virtue of their prime final position in the regular loop race. Fighting every foot of the way, the Bruins forced the series into six games before yielding to the superior playing of their adversaries.

In addition to capturing the Stanley Cup, the New York aggregation attained a distinction that will long continue in the memory of hockey fans. Coached by Frank Boucher and managed by Lester Patrick, the Rangers participated in 19 consecutive league encounters without experiencing defeat. They therewith surpassed the previous non-losing streak of 18 games accredited to the Montreal Canadiens in 1929-30. Nevertheless, the Rangers did no better than finish second in the standing, being constantly humiliated by the Boston Bruins, who incidentally were the defending world champions and winners of the 1939 Stanley Cup.

As in 1939, the National League operated with seven teams. Finishing third behind the Rangers were the Leafs. Next in order were the Chicago Black Hawks, Detroit Red Wings, and New York Americans, with the Canadiens in the cellar.

The Leafs had to master two elimination rounds before coming to blows with the Rangers. This they accomplished by humbling Chicago and Detroit in two straight games each. Before facing Toronto, Detroit had to triumph over the New York Americans in a two-out-of-three series.

The Allan Cup, signifying the amateur championship of Canada, was captured by the Blue Devils of Kirkland Lake, Ont. They vanquished the Calgary Stampeters in three straight games in

the final round. The University of Minnesota won the United States A.A.U. laurels.

The Baltimore Orioles finished first in the Eastern Hockey League, although the New York Rovers, pace-setters for the greater part of the season, captured the Hershey Cup and the Boardwalk Trophy. The Holzbaugh-Ford team of Detroit defeated the Orioles in a post-season clash for the unofficial amateur championship of the United States.

The Providence Reds won the championship of the International American League, and St. Paul took the chief honors in the American Association.

Yale was the winner of the Quadrangular League, the losers being Harvard, Dartmouth, and Princeton. The University of Toronto captured the International Intercollegiate League championship and the Canadian intercollegiate crown.

In the New York Amateur Hockey Association, the St. Nicholas Club was unquestionably the best.

**Field Hockey.** The Women's National Field Hockey Association organized a tournament in November, 1940, at Williamsburg, Va., to select two all-America teams. A dozen aggregations, chosen in six regional competitions, engaged in the tournament, and when the exercise was over, nine of the winning women were found to hail from Philadelphia and environs.

Eight young women who occupied positions on the United States first or reserve team a year ago were selected again, this time all making the regular team. They were the Misses Betty Shellenberger, center forward; Margaret Cornwall, left wing; Barbara Strobhar, right inner; Anne Parry, right wing; Betty Flersham, center half; Louise Orr, right half; Patricia Kenworthy, left back, and Helen Park, goal. With the exception of the Misses Cornwall and Park, all are from the Philadelphia area. Miss Cornwall is from University City, Mo., Miss Park from Greenwich, Conn. Others selected for the first team were Miss Anne McConaghy, left inner; Miss Barbara Strebeigh, left half; Miss Henrietta Tomlinson, right back.

**HONAN.** See CHINA under *Area and Population*.

**HONDURAS.** A Central American republic. Capital, Tegucigalpa.

**Area and Population.** Area, 46,332 square miles. Population, estimated at 1,038,061 on June 30, 1940 (854,154 in 1930). The people are mainly of mixed Spanish and Indian blood, except for a considerable Negro element in the north coast banana region and some 35,000 aborigines. Populations of the chief cities (with suburban areas) in 1935 were. Tegucigalpa, 42,903; Comayaguela, 15,095; San Pedro Sula, 32,721; Tela, 14,460. United States citizens resident in Honduras Jan. 1, 1940, numbered 1074.

**Defense.** Every male citizen is liable to six months compulsory military service at the age of 21 and to service in the reserves from 23 to 40. As of Nov. 1, 1940, the army comprised 2325 ac-

tive soldiers and about 2600 trained reserves. Defense budget for 1939-40, 2,082,000 lempiras.

**Education and Religion.** According to the 1935 census, about 67 per cent of the inhabitants over seven years old were illiterate. Of 102,651 children of school age in 1937-38, 47,764 were receiving instruction. Secondary, normal, and commercial schools had 2239 students and the National University at Tegucigalpa 298. Roman Catholicism is the prevailing religious faith.

**Production.** Agriculture, stock raising, and mining are the chief occupations. Bananas accounted for 63.3 per cent of all exports in 1938-39, although the sigatoka (leafspot) disease reduced banana shipments from 29,083,000 stems valued at \$22,981,000 in 1929-30 to 12,537,487 stems worth \$6,244,746 in 1938-39. Gold and silver accounted for 25 per cent of the 1938-39 export total. Coconuts, coffee, leaf tobacco, corn, beans, and sugar are other crops. The forests yield mahogany and other hardwoods.

**Foreign Trade.** For the year ended June 30, 1939, imports totaled \$9,703,327; exports, \$9,867,156. Besides bananas, the chief exports were silver, \$1,675,729, gold, \$777,574. The United States supplied 65.3 per cent of the imports (Germany, 11.1 per cent) and took 90.7 per cent of the exports. See TRADE, FOREIGN.

**Finance.** A deficit of 1,222,000 lempiras on expenditures of 12,306,000 lempiras in 1938-39 brought the cumulative deficit for the period 1935-39 to 7,267,000 lempiras. The 1939-40 budget estimates balanced at 11,026,000 lempiras (10,848,000 in 1940-41). Public debt on June 30, 1939, 18,507,255 lempiras (internal, 12,983,380, external, 5,523,875) against 20,733,035 on June 30, 1938. The lempira exchanged at \$0.50 in 1938 and 1939.

**Transportation.** Railway mileage in 1940, 816; highways, about 511 (see ROADS AND STREETS). The TACA airways network links Tegucigalpa with all parts of Honduras and the chief towns of Nicaragua, Guatemala, and El Salvador. Tegucigalpa is a stopping point on the Pan American Airways international system.

**Government.** President in 1940, Gen. Tiburcio Carías Andino (Nationalist), who was elected Oct. 30, 1932, for a four-year term. By constitutional amendment, his term was extended in 1936 for a further six years and in December, 1939, until January, 1949. The Constitution of Apr. 15, 1936, extended the terms of the President, Vice-President, and members of Congress from four to six years; it stipulated that the Constituent Assembly of 59 members (all Nationalists) should automatically become the regular National Congress with the members holding office until Dec. 4, 1942.

**History.** The opposition to President Carías Andino's dictatorship remained quiescent during 1940, except for an abortive attempt to assassinate him in October, and to all appearances the republic experienced an unusual degree of peace. The President united with the other Central American republics in supporting the United States and the policy of inter-American defense against German political pressure. On July 12 Gen. Carías Andino publicly urged Pan American solidarity against European aggression. On July 19, the Honduran Foreign Office, acknowledging receipt of a note from the German Minister to Central America, said that his "warning" against endorsing measures unfavorable to Germany at the Havana Conference would be ignored. On August 3 the compulsory military service term for youths of 21 was

increased from three to six months, and the reserve, or militia, units were ordered to undergo special training every Sunday.

The boundary dispute with Nicaragua that broke out in 1937 (see 1937 YEAR BOOK, pp. 319-320) remained unsolved by the Mediation Commission. The agreement of Dec. 10, 1937, for a peaceful and lawful solution of the dispute expired early in 1940 but relations between the two republics remained friendly. An experimental rubber plantation was under development by United States and Honduran experts on the Atlantic coast in 1940. It was reported that about 200,000 trees were being planted.

See PAN AMERICANISM.

**HONDURAS, British.** See **BRITISH HONDURAS**.

**HONG KONG.** A British crown colony consisting of the island of Hong Kong (32 sq. mi.), Old Kowloon (3 sq. mi.), and the New Territories (356 sq. mi.) leased from China (June 8, 1898) for 99 years. Total area, 391 square miles; total population (1939 estimate), 1,750,000 including a large number of refugees from the Sino-Japanese war. Based on the foregoing figures the birth and death rates per 1000 were 26.7 and 27.6 respectively. Approximately 98 per cent of the people are Chinese. Education (1938): 1249 schools and 104,134 students enrolled, 488 students (full time) in the University of Hong Kong.

**Production and Trade.** About 20 per cent of the land is under cultivation—the chief crops being sugar cane, rice, and vegetables. The fishing industry has been sharply curtailed as a result of the sinking by the Japanese of 764 Chinese fishing junks registered in Hong Kong. Mining is carried on in a limited way. The building and repair of ships is the most important industry. Other manufactures include cement, flashlights, rubber shoes, matches, gas respirators, and war implements. Trade (1939): Imports, HK\$594,240,000, exports, HK\$533,400,000 (HK\$ averaged \$0.2745 for 1939). Shipping entered and cleared during 1939 totaled 30,897,948 tons. Hong Kong is a fortified naval base for the British Navy and is a free port for commerce. During January, 1940, the port began operating as a contraband control base for shipping.

**Finance.** For the year 1939 actual revenue totaled HK\$41,478,052; actual expenditure, HK\$37,949,116. On Dec. 31, 1939, the public debt amounted to HK\$16,038,000. The ordinary budget for the 15-months period ending Mar. 31, 1941, totaled HK\$49,706,787. In addition there was a war budget of HK\$6,000,000 and a supplementary budget of HK\$845,536.

**Government.** The colony is governed under Letters Patent of Feb. 14, 1917, and Royal Instructions of the same and following dates, by a governor who is aided by an executive council of 9 members. There is a legislative council of 17 members, presided over by the governor. Governor, Sir Geoffrey Northcote (appointed June 24, 1937).

**History.** The threat of a Japanese attack upon Hong Kong following the Allied setbacks in the Low Countries and France in May-June, 1940, was intensified late in June when 10,000 Japanese troops occupied the entire border zone on the mainland and cut the colony's communications with the interior of China. The Hong Kong authorities took the precaution of blowing up bridges across the Schumchun River, barricading the

beaches, inaugurating emergency measures for the control of saboteurs and fifth columnists, and ordering the evacuation to Australia (via Manila) of all women (except those enrolled in defense organizations) and children. Some 4000 Europeans were evacuated during the following weeks, while military reinforcements arrived to strengthen the garrison. In October the British commander reportedly had at his disposal 6000 regulars and 3000 volunteers. Defense works, on which \$40,000,000 (United States currency) had been spent in the preceding three years, were also strengthened. Later the excavation of huge tunnels in cliffs to shelter the civilian population from air raids was begun.

The cutting off of former supplies of vegetables and fish by the Japanese made conditions among the thousands of Chinese refugees in the colony more difficult. There was widespread malnutrition and danger of epidemics, leading the authorities to curtail further immigration.

On July 18 Prime Minister Churchill announced in London, in connection with the closing of the Burma Road to war supplies for China, that the export of gasoline, trucks and railway material from Hong Kong to the Chinese Nationalists would also be ended. The export of arms and munitions from Hong Kong was prohibited in January, 1939. The Burma Road was reopened in October but the British restrictions on shipments from Hong Kong remained in effect. Meanwhile trade with Japan continued without interruption.

**HOP CULTURE.** Despite the Florida freeze in late January, 1940, which extended to the southernmost tip of the state and killed practically all vegetable and flower crops and ruined much of the citrus fruit, production of horticultural commodities in the country as a whole was more than adequate. The loss due to the European war of export markets for fresh fruits continued to be a major problem, particularly in areas such as the Pacific Northwest, which sell ordinarily a considerable amount of fruit in foreign markets. A near hurricane, crossing Nova Scotia's important apple belt on the night of September 16-17, stripped about one half the crop from the trees and damaged the trees severely. Although some of the fallen fruit was salvaged, the loss was estimated at nearly one million dollars.

Ornamental horticulture suffered a severe blow as a result of the conquest of the Netherlands, Belgium, and France, countries which ordinarily supply large quantities of flowering bulbs to the United States. Tulip bulbs were particularly lacking and, as a result, plantings of this important winter forcing and spring flower were drastically reduced in the fall of 1940. Smaller bulbs, such as the snowdrop and crocus, were practically eliminated from the autumn trade.

**World Production.** Canada's apple crop was estimated as something over thirteen million bu., a decline of approximately 21 per cent from that of 1940. The eastern provinces of Nova Scotia and Ontario were particularly low. Fruit production

in continental Europe was apparently small, due to the unusually heavy crop of 1939 and also to severe winter damage over much of the area. The war prevented the accumulation of accurate data from many of the countries. The Great Britain apple and pear crops were small, but the plum crop was large and the government-organized "Fruit Preservation Scheme" assisted home owners in saving a large proportion of the crop.

In South America, Argentina reported a great reduction in exports of pears and apples, due largely to the European war. The United States received a large percentage of Argentine exports. In New Zealand and Australia, countries which normally export a large proportion of their fruit to the United Kingdom, the government subsidized the commercial growers by purchasing the exportable fruit at a nominal price. The Canadian government also stepped in to aid its growers who had lost their outlets abroad temporarily. Canada increased its output of canned apple juice, processing some 1,800,000 gallons, more than one million above the 1939 mark. Exports of fruit from Cuba to the United States were, with the exception of pineapples, notably larger in the 1940 season than in 1939.

**Domestic Production.** The following table, compiled from data released by the U.S. Department of Agriculture, shows a well balanced production of horticultural crops in 1940. Somewhat lower production of apples, apricots, prunes, and cranberries was offset by increases in other fruits, particularly citrus fruits. Despite a decreased acreage, favorable growing conditions resulted in a record crop of truck crops for the fresh market. Prices, on the whole, were fairly good as the improving domestic situation influenced consumption favorably.

Crop	1940	Unit	1939

**Foreign Trade.** Declining exports of horticultural products marked the 1940 season, according to data released in December by the U.S. Department of Commerce. This was shown by a total value of \$48,208,732 for the first ten months of 1940 as compared with \$85,528,992 for the corresponding period of 1939. Imports increased with a value of \$65,899,968 in 1940 and \$54,450,372 in 1939. Leading exports were oranges, apples, grapes, raisins, canned grapefruit, canned peaches, and canned fruits for salad. Bananas were again the principal import item with a value of \$24,797,648.

Other important imports included tapioca, olives, and Brazil and cashew nuts. War was without doubt the limiting factor in foreign trade, eliminating many of the important outlets and upsetting the monetary situation in many countries. As a result of the disastrous January freezes in Florida and Texas, there was a material increase in the import of fresh vegetables from Mexico and Cuba during the winter and early spring season.

**Co-operation.** The vital role that co-operation plays in the successful handling of large horticultural crops was illustrated in California and Arizona, where of a total of over 98,000 carloads of packed citrus, one organization marketed over 73,000 cars. In addition, the association operated a byproducts plant for the conversion of unmerchantable fruit into salable products. Recognizing the important function of this type of co-operation, Texas citrus growers formed a similar organization which handled a considerable portion of the south Texas crop. These organizations study the national situation, direct shipments to the most profitable markets, and prevent glutting in certain areas with consequent depression of prices. Effective advertising is maintained by radio and press to facilitate the marketing of large crops.

**Research Activities.** Interest in growth-promoting substances for increasing the rooting of cuttings and for retarding the dropping of nearly ripe apples and other fruits continued at a high level. There were at least eight papers relating to the control of pre-harvest drop of apples on the program of the 37th annual meeting of the American Society of Horticultural Science held at Philadelphia in late December. The Oregon Station reported that the defoliation of holly leaves from cut branches and wreaths could be prevented by spraying with dilute solutions of naphthaleneacetic acid. One or more proprietary materials for retarding fruit dropping appeared in the trade. Progress was made in studies of the so-called lesser elements such as boron, manganese, and magnesium as factors in fruit and vegetable nutrition, with further evidence that certain disorders of foliage and fruit are essentially nutritional deficiencies. Much work was done on the improvement of blueberries as a cultivated fruit, with an entire session at the Horticultural Science meeting devoted to this fruit.

The U.S. Department of Agriculture continued the development of its new Horticultural Field Station at Beltsville, Maryland. Provided with well equipped greenhouses and laboratories and extensive plantings, this Station is rapidly becoming a highly important center for research with flowers, fruits, and vegetables.

For defense housing, see NATIONAL DEFENSE ADVISORY COMMISSION; RECONSTRUCTION FINANCE CORPORATION.

**HOUSING AUTHORITY, U.S.** The United States Housing Authority came into being in November, 1937. According to the Act under which it was established, this permanent Federal corporation was set up to provide "financial assistance to the States and political subdivisions thereof for the elimination of unsafe and insanitary housing conditions, for the eradication of slums, for the provision of decent, safe, and sanitary dwellings for families of low income, and for the reduction of unemployment and the stimulation of business activity."

Thus the legislative framework for a long-range decentralized public housing program was established, as distinguished from the experimental program of direct construction by the Federal Emergency Administration of Public Works from 1934 to 1937.

To achieve the purposes set forth in the Act, the USHA assists Local Housing Authorities in two ways. First, it makes loans, at low interest, for slum-clearance and low-rent housing projects. Second, after the new homes are completed, the USHA makes annual contributions to enable Local Authorities to operate their projects at rents within reach of low-income families from substandard quarters.

The Local Authorities responsible for planning, building, and operating the new housing are public agencies set up under appropriate State laws. At present, 38 States, the District of Columbia, Hawaii, and Puerto Rico have such enabling legislation. The number of Local Authorities established has reached a total of 517.

By the end of 1940 Local Authorities representing 235 urban and rural communities in all parts of the country had USHA loan contracts covering 511 large-scale projects. These contracts amounted to a total of \$691,627,500 and left initial USHA loan authorizations practically exhausted. Under the terms of these contracts, 118,045 family units either were under construction or had been completed by the end of the year; 36,456 low-income families had moved from unfit quarters into comfortable new homes; and thousands of other families were being rehoused month by month.

Only low-income families from substandard housing are eligible as tenants in USHA homes. The rents being achieved in the projects set an all-time low for decent new housing, public or private. In projects with rents approved by Dec. 31, 1940, the average monthly shelter rent, excluding utilities, was only \$12.71 per family. When all economy factors have been taken into account, the net annual cost of the Government of rehousing a family from the slums amounts to only about \$76, or \$18 to \$20 per person rehoused.

The anticipated average family income in the projects with rents approved is around \$800 a year, though some families with annual incomes as low as \$300 and \$400 are being served.

The average net construction cost on the 344 USHA-aided projects under construction or completed by the end of 1940 was only \$2705 per dwelling unit. This figure is about 26 per cent lower than the comparable cost of new private housing in the same communities—despite the fact that USHA-aided projects, unlike much private construction, are built for a long life, by labor paid prevailing wages.

Some 293,000 building tradesmen and professional workers have been or will be employed on the 344 projects now being built or already com-

pleted. Materials used in these new projects will cost about \$199,689,000. Much of this amount will in turn be paid out in wages to production workers in mines, mills, and factories.

Increased private residential construction continued to accompany the public housing program during 1940. Meanwhile, thousands of dangerously unsafe and insanitary slum quarters were being eliminated under local programs as required by the Housing Act.

Authority for utilizing the Nation-wide public housing framework in the solution of housing needs arising from the national defense emergency was provided in legislation enacted by the Congress in June and October, 1940. By the end of the year 19 USHA-aided projects, comprising 6400 family units, had already been designated for defense workers and their families, and other projects were being planned for development out of Lanhan Act funds.

Widespread housing needs of both permanent and emergency character were thus being met under the USHA program during 1940. Significantly, where emergency needs were being satisfied, there was assurance that the accommodations provided would be available to low-income families from the slums as soon as—and long after—the defense emergency is over.

ROCKEFELLER FOUNDATION.

**HUNAN.** See CHINA under *Area and Population*.

**HUNGARY.** A kingdom in central Europe. Capital, Budapest. Regent in 1940, Nicholas Horthy de Nagybanya.

**Area and Population.** Including the territorial annexations of 1938, 1939, and 1940, the area of Hungary was estimated at 62,162 square miles and the population at 13,400,000. Of this total, 4566 square miles and 1,027,450 inhabitants were ceded by Czecho-Slovakia under the Italo-German arbitral award of Nov. 2, 1938; about 4966 square miles and 633,057 inhabitants were acquired through the annexation of Carpatho-Ukraine (Ruthenia) and additional parts of Slovakia in March and April of 1939. The territory of northern Transylvania, ceded by Rumania to Hungary in accordance with the Italo-German award of Aug. 30, 1940, was said by Rumania to consist of 19,300 square miles with a population of 2,385,987 in 1930; the area was estimated by Hungary at 17,000 square miles with 2,370,000 inhabitants. See *History* below.

Living births in 1939 numbered 172,628 (18.9 per 1000) for that part of Hungary within the frontiers of the Treaty of Trianon; deaths, 123,135 (13.5 per 1000); marriages totaled 73,287 (8.1 per 1000) in 1938. Populations of the chief cities at the census of Nov. 18, 1939, were: Budapest, 1,115,877; Szeged, 131,893; Debrecen, 122,517; Pestszerterzsébet, 71,150; Kecskemét, 83,732; Kispeszt, 62,797; Újpest, 72,940; Pécs, 70,547; Miskolc, 73,503.

**Education and Religion.** In 1938 about 9.6 per cent of the population, six years and over, was illiterate. The number of elementary schools in 1937-38 was 6899 with 963,087 pupils. The country has five universities, all maintained by the State. According to the 1930 census, Roman Cath-

olics comprised 64.9 per cent of the population; Helvetican Evangelicals, 20.0 per cent; Augsburg Evangelicals, 6.1 per cent; and Jews, 5.1 per cent.

**Production.** About 51.8 per cent of the working population is engaged in agriculture, 23 per cent in industry and mining, and 9.3 per cent in trade, transportation, and communications. There were 2,735,263 acres under forest in 1938. Yields of the chief products in 1939 in metric tons were: Wheat, 3,078,200; barley, 789,600; rye, 863,700; oats, 365,900; corn, 2,350,000; potatoes, 2,700,000; beet sugar, 117,200; tobacco, 19,800; coal, 1,107,000; iron ore (including the Northern Territories), 220,000; bauxite, 495,800; beer, 7,608,000 gal. in 1938; wine, 3,060,000 hectoliters in 1938.

**Foreign Trade.** Merchandise imports in 1939 were valued at 489,282,000 pengos (410,607,000 in 1938) and exports at 605,784,000 pengos (522,382,000 in 1938). Imports from Germany in 1939 were 237,926,000 pengos (170,816,000 in 1938); exports to Germany, 303,478,000 pengos (238,755,000 in 1938). See YEAR BOOK, 1939, p. 349 and TRADE, FOREIGN.

**Finance.** The 1939-40 budget (covering 18 months, from July 1, 1939, to Dec. 31, 1940) estimated revenues at 2,563,194,000 pengos and expenditures at 2,693,156,000 pengos. The Minister of Finance announced on Oct. 23, 1940, that the 1941 budget would show a deficit of 48,200,000 pengos. The total public debt on June 30, 1939, was 2,088,527,230 pengos, of which 1,009,000,000 pengos represented foreign and 1,079,600,000 pengos domestic obligations. The average exchange value of the pengó was \$0.1924 in 1939 and \$0.1848 (nominal) in 1940.

**Transportation.** The Hungarian railways (mostly State-owned) extended 9321 miles in 1940. Operating revenue for the State railways in the fiscal year ending June 30, 1939, totaled 275,971,415 pengös; expenditures were 196,475,954 pengös. Passengers carried numbered 88,498,997. The Highway Motor Transportation Co., a subsidiary of the State railways, operated 99 highway passenger lines of which 84 were permanent and 15 were seasonal, having a total length of 1917 miles. Total highways aggregated 51,049 miles Hungarian Air Lines inaugurated on Aug. 15, 1940, a daily week-day service with a flight in both directions between Berlin-Breslau-Vienna-Budapest.

**Government.** The monarchical constitution in effect prior to the republican revolution of Oct. 31, 1918, was restored in 1920, but the throne remained vacant. The head of the State was the Regent, Admiral Horthy (elected Mar. 1, 1920). Parliament consists of an Upper Chamber of 243 members (76 elected by counties and cities, 43 appointed by the Regent, and the rest representing various privileged groups) and a Lower Chamber of 295 deputies chosen for five years by male and female suffrage. Commencing in 1939, the secret ballot was required for the election of all deputies. The Upper Chamber is partly reconstituted every five years.

The composition of the Lower Chamber following the elections of May, 1939, was Party of Hungarian Life (government party), 177; Arrow Cross (National Socialist), 27; Upper Hungarian Union (pro-government), 26; Independent Agrarian, 14; United Hungarian National Socialist party (Arrow Cross Front), 11; Ruthenian party (pro-government), 10; United Christian party, 9; Social Democrats, 5; Liberal Opposition, 5; others, 11. The Ministry during 1940 was headed by Count Paul Teleki (appointed Feb. 16, 1939).

## HISTORY

The Hungarian Government continued throughout 1940 its policy of close collaboration with the Axis powers in European affairs, while fighting the spread of national socialism within the kingdom. The pro-Axis foreign policy enabled Hungary on August 30 to regain approximately one-half of Transylvania from Rumania. It was the third successive slice of territory that Hungary had obtained in three years without resort to armed conflict (see above under *Area and Population*). With this annexation, Hungary had recovered at least 26,532 square miles of territory containing more than 4,000,000 inhabitants out of some 74,100 square miles with 10,782,000 inhabitants ceded under the Treaty of Trianon in 1920.

These territorial adjustments, and the hope of further gains at the expense of Rumania and Yugoslavia, linked Hungary firmly to the cause of the Axis, as was demonstrated by the adhesion of the Budapest Government to the Rome-Berlin-Tokyo alliance on Nov. 20, 1940. However successful collaboration with the Axis was accompanied by the progressive weakening of Hungary's independence and its parliamentary institutions. The Hungarian Government became increasingly subservient to Berlin while the German-supported Hungarian Nazi movement threatened to gain control of the kingdom and reorganize it along Hitlerian lines.

**Foreign Relations.** During the first part of the year the Teleki Government attempted to maintain a degree of independence in its relations with the Reich. Popular feeling in Hungary was still strongly anti-Nazi as a result of the German-Soviet invasion of Poland and the Soviet attack on Finland, Hungary's oldest ally, which was attributed to the free hand given Moscow under the Hitler-Stalin accord of 1939. Nevertheless German economic pressure, threats and propaganda forced Budapest gradually into line with Berlin's program for the political and economic reorganization of Europe. On January 16, Hungary agreed to increase its exports of foodstuffs to the Reich, receiving in return larger shipments of German armaments and other manufactures.

**Collaboration with Italy.** Anticipating a Soviet drive into Rumania, Foreign Minister Count Stephen Csaky of Hungary conferred with the Italian Foreign Minister at Venice on January 6-7 and reportedly received assurances of Italian aid in the events of a Soviet-Hungarian clash over the partitioning of Rumania. Since the efficacy of Italian military assistance depended upon Yugoslav co-operation in permitting the transit of Italian troops, the Budapest Government also sought to develop closer relations with Belgrade. Meanwhile it increased pressure upon Rumania for the voluntary surrender of the Hungarian territories ceded by the Treaty of Trianon.

When King Carol refused and Hungarian-Rumanian tension seemed likely to embroil the two countries in war, Germany and Italy joined in warning Budapest that its claims on Rumania must be shelved for the time being. This order was issued by Mussolini during Premier Teleki's visit to Rome on March 26. It followed the meeting of the Italian and German dictators at Brennero on March 18, when it was agreed that peace must be maintained in the Danube Basin and Balkans to permit the uninterrupted flow of this region's foodstuffs and raw materials into blockaded Germany and into Italy.

**Restoration of Czecho-Slovakia Opposed.** Hungary's willingness to abide by the Axis dictum was accentuated by the agreement for co-operation in the reconstruction of Central Europe reached by the exiled Czecho-Slovak and Polish governments in London, and by a further British step toward recognition of the exiled Czecho-Slovak regime (see CZECHO-SLOVAKIA and POLAND under *History*). These developments led Foreign Minister Csaky to state before the Hungarian Lower Chamber on March 6 that the restoration of Czecho-Slovakia was "against the interests of Europe." His attitude was praised by the Hungarian press and found tangible expression in the imprisonment in Hungary of more than 1000 anti-German political refugees from Bohemia-Moravia and Slovakia. Many of them were reported to have been turned over to the German secret police. Completing the absorption into Hungary of the former Czecho-Slovak territories annexed in 1938 and 1939, the Ministry for the Reannexed Territory was abolished on March 21.

Serious friction continued, however, between Hungary and the German protectorate of Slovakia (q.v.). Early in May the Budapest authorities announced the arrest of nearly 200 persons in the area taken from Czecho-Slovakia; they were charged with espionage and anti-Hungarian propaganda.

**German Pressure Increased.** The Teleki Government, which still hoped to resist German domination with Italian co-operation, was subjected to intensified pressure from Berlin coincident with the German invasion of Norway on April 9. Inspired rumors of a German attack upon Hungary led the government on April 20 to take military precautions and many members of the British and French colonies left Budapest for nearby countries. The official Hungarian news agency on May 8 announced that the Reich had asked for the right to send troops through Hungary, and subsequent Axis reports indicated that this right had been granted. The German victories in the Low Countries and Northern France in May and June, Italy's entrance into the war, and simultaneous Russian troop concentrations along the Rumanian and Hungarian frontiers further restricted Hungary's efforts to follow a semi-independent foreign policy.

When Soviet troops seized Rumania's eastern provinces of Bessarabia and Northern Bukovina at the end of June, the Budapest Government with difficulty resisted Hungarian demands for the immediate seizure of Transylvania and the other former Hungarian territories in Rumania. However the Teleki Government followed Axis orders in return for assurances that Hungary's claims would receive satisfaction. These claims were laid before Reichsfuehrer Hitler and Foreign Minister Ciano of Italy at Munich on July 10 by Premier Teleki and Foreign Minister Csaky. Immediately afterwards the Hungarian Government announced that it would join the Rome-Berlin alliance.

**Axis Arbitral Award on Transylvania.** Early in August Germany and Italy ordered the new pro-Nazi regime in Rumania to negotiate a territorial settlement with Hungary. The negotiations were opened at Turnu Severin in Rumania on August 16 but soon became deadlocked. Incidents flared up along the disputed frontier, where both sides had concentrated troops. The Axis powers intervened on August 26 to prevent war. Hungarian and Rumanian delegates were called to Vienna,

where they agreed to a settlement of their dispute by the German and Italian Foreign Ministers.

The "arbitral award" issued on August 30 gave Hungary the northern half of Transylvania (see map under Rumania) with a population of about 2,370,000 (Hungarian figure), of whom an estimated 1,154,000 were Rumanians. Germany and Italy guaranteed the new frontier against further Hungarian revisionist aspirations, which included additional parts of Transylvania and the Rumanian Banat. Exact delimitation of the new frontier was left to a Rumanian-Hungarian commission. The Rumanians undertook to move their troops out of the ceded territory within two weeks and hand it over "in orderly condition." Rumanians within the ceded area automatically became Hungarian subjects unless they decided within six months of the award to retain Rumanian nationality. In that case they were given an additional 12 months to move into Rumania, they were authorized to take all their movable property with them and were to be compensated by Hungary in a "broad-minded and conciliatory fashion" for immovable property. The same provisions were to apply to some 375,000 Magyars remaining within the new boundaries of Rumania.

The award stipulated that Rumanians in the ceded territory deciding to become Hungarian subjects were to enjoy "the same rights" as Hungarians, and that Hungarians opting for Rumanian citizenship were to receive the same treatment. Questions arising under the award were to be settled directly by Rumania and Hungary, unless this proved impossible, in which case Germany and Italy would again decide.

**Hungarian-Rumanian Relations.** The new Transylvanian frontier, disregarding ethnic and economic considerations, was drawn mainly with strategic factors in mind. It carried Hungary's boundary eastward to the crest of the Carpathians, the great natural barrier obstructing a possible Soviet invasion of the central Danubian plain. The Hungarian army was thus enlisted in Axis plans for checkmating the Soviet Union while the struggle with Britain was fought to its conclusion. The occupation of the ceded territory by Hungarian troops was carried out between September 5 and 13. Admiral Horthy led the troops into some of the principal cities and towns. They were greeted with wild enthusiasm by Hungarian residents, while the Rumanian inhabitants displayed sullen resentment. Minor clashes between Hungarian civilians and the withdrawing Rumanian troops were reported. An attempt by the Rumanian Peasant Party leader, Iuliu Maniu, to obtain a Rumanian-Hungarian agreement for the establishment of an autonomous Transylvania that would preserve the economic and political unity of the historic province was rejected by the Hungarian leaders.

Charges and counter-charges by Hungarians and Rumanians against the alleged mistreatment of each other's nationals in the ceded territory and in Rumania proper forced the Axis powers to send another arbitration board to the region in mid-October. Hungarian-Rumanian relations grew steadily worse, however. The Rumanian press and radio at the year's end reflected a determination to regain the ceded districts at the first opportunity while the Hungarians awaited a turn of the European War that would enable them to fulfill their slogan of "everything back," meaning all of the territories ceded in 1920.

Meanwhile the incorporation of Northern Transylvania into Hungary was unanimously approved by the Lower Chamber in Budapest on October 3. The bill provided for the election of 63 Transylvanian deputies to the Lower Chamber and the appointment by the Regent of 10 Transylvanians to the Hungarian Upper Chamber. Civil administration replaced martial law throughout the ceded area on November 3.

**Expansion of German Influence.** The arbitrary award of the Axis was followed by an immediate increase in German influence in Hungary. German troops were reported to have entered Hungary at the beginning of September and by the end of the year large-scale movements of German troops into Rumania via Hungary were in progress. Other German troop concentrations appeared in Southern Hungary on the Yugoslav frontier. The Germans also lost no time in gaining control of traffic on the Danube River. The International Danubian Commission, established under the Versailles Treaty, was abolished at a conference of the Danubian powers held in Vienna the second week in September. In its place was set up a "consultative committee" under a permanent German director, who was authorized to convene and adjourn the committee, composed of delegates from Italy, Hungary, Bulgaria, Yugoslavia, Rumania, and Slovakia.

Hungary's formal entrance as a minor partner of the German-Italian-Japanese alliance signed at Berlin on September 27 took place in Vienna on November 20. Article II of the protocol signed by Foreign Minister Csaky, the German and Italian Foreign Ministers and the Japanese Ambassador to Berlin read: "In so far as the joint technical commission provided for in Article IV (of the Three-Power Pact) deals with questions that touch Hungary's interests, representatives of Hungary will participate in the commission's consultations." On December 30, as though in co-operation with German military and diplomatic maneuvers in the Balkans, Hungary began to call men to the colors.

German experts were by that time guiding Hungarian economic policies. German technicians were reported to be supervising operations on the main Hungarian railway lines. And German propagandists were busily engaged in strengthening pro-Nazi elements within Hungary. It was believed that Regent Horthy and Premier Teleki were still withholding the full co-operation demanded by Hitler, and that he was scheming to replace them with more amenable Hungarian leaders.

**Friendship Pact with Yugoslavia.** Some observers reported that the pact of "constant peace and perpetual friendship" signed by the Hungarian and Yugoslav Foreign Ministers at Belgrade on December 12 was a move to form a common front against the growing German pressure. Others believed that Hungary acted as the intermediary of Berlin in attempting to bring Yugoslavia into the Axis. The pact pledged the two governments "to consult each other on all questions which they believe could affect their mutual relationship." See YUGOSLAVIA under *History*.

**Internal Divisions.** The government's pro-Axis foreign policy found wider support following the German victories in the Low Countries and France. On May 31 Foreign Minister Csaky expressed hope that these victories would lead to an early peace that would spare the Danube basin from war. On June 10, when Italy entered the

war, World War veterans demonstrated in Budapest, demanding support of the Axis even at the risk of war. At the same time the government reaffirmed Hungary's non-belligerency, favoring Italy and Germany, as against strict neutrality. The French capitulation was greeted with rejoicing, Premier Teleki declaring that the German victory was for Hungary a hope for the future, ending 20 years of humiliation.

As German control tightened, however, there were evidences of mounting discontent with the government's pro-Axis policy. General resentment was expressed at the heavy shipments of foodstuffs to the Reich, which were facilitated by the establishment of government control over the cereal and vegetable crops on September 20. Crops were small due to a severe winter and heavy spring floods. Count Csaky, telling Parliament on November 13 that the government's policy was designed to keep Hungary out of war, emphasized that Hungary's friendship for the Axis "does not mean that we will relinquish national independence or national consciousness."

Replying to criticisms of the signing of the Axis alliance pact, Count Csaky asserted that it was imperative for Hungary to obtain a privileged position at the conference table after the Axis had won the war. However Count Stephen Bethlen and other influential statesmen were reported to have expressed disbelief in an Axis victory before the Foreign Affairs Committees of the Hungarian Parliament. Opposition to close association with the Axis also came from some clerical and legitimist circles in Hungary. In December Cardinal Seregi in a Budapest speech attacked the racial legislation of the Axis powers.

**Political Trends.** The pressure of the totalitarian powers and of European events was reflected also in Hungarian party shifts and trends. The Social Democratic party on January 24 formally abandoned the doctrine of class warfare in favor of a purely nationalist platform. There was constant warfare, accompanied by outbreaks of political terrorism, between different factions of the Arrow Cross (Nazi) movement and between the Nazis and the government. The parliamentary immunity of a Nazi deputy, Ludwig Gruber, accused of terrorism and blackmail, was revoked on March 6 to permit his arrest.

Responding to charges of persecution leveled at the government by a Nazi deputy on April 24, Premier Teleki said the police had uncovered a widespread criminal plot affecting municipal works and the State railways and had acted to maintain public order. Kálmán Hubay, parliamentary leader of the Arrow Cross party, and one of his chief assistants were ousted as members of the Lower Chamber on July 22 for proposing full autonomous rights for the minorities in Hungary. The government and Magyars generally took the position that the proposal was designed to further Hungary's disintegration.

Following the return of Transylvania, the government moderated its anti-Nazi internal policies. Maj. Ferenc Szalasi, leader of the Arrow Cross party, was released from prison after serving two years for high treason. On September 29 his party absorbed the United Hungarian National Socialist party, which previously had united with various other small Nazi groups. This placed virtually all of the Nazis in Hungary under Major Szalasi's direction. Simultaneously the government acquiesced in a new anti-Semitic campaign. More than

70,000 Jews were placed in concentration camps, allegedly for labor service (see **Jews**). The German minority in Hungary, already Nazified, was given a privileged status. And in many other ways, such as in application of the censorship, the Budapest government displayed increasing subservience to Berlin.

The Minister of the Interior on November 8 revealed a Nazi plot to kidnap Regent Horthy, overthrow the government, and name Major Szalasi as Premier. After large-scale raids on Nazi quarters that uncovered large numbers of hand grenades and rifles, a score of Arrow Cross members were charged with participation in the conspiracy and on December 21 16 of them, including one deputy, were convicted and sentenced to prison. At the year's end another group of 24 Nazi conspirators were awaiting trial on a charge of planning to assassinate the Minister of Interior as a signal for widespread sabotage and violence.

Meanwhile a section of the government party led by former Premier Béla Imrédy had displayed increasingly pro-Nazi tendencies. On April 16 Premier Teleki threatened to dissolve Parliament if members of his party joined the opposition. On October 4 Imrédy resigned from the Party of Hungarian Life and with apparent German support sought to lay the groundwork for a new government that would work in closer co-operation with Berlin.

In line with these political trends was the progressive curtailment of civil liberties. There was a country-wide roundup of some 200 suspected Communists and "fifth columnists" on May 18. Stricter government regulation of all forms of communication with foreign countries went into effect June 6. On June 14 men of military age were forbidden to leave the country without permission. Foreign correspondents in Hungary were warned by the Foreign Office Press Bureau on August 2 against sending out news unfavorable to Germany, Italy, or to "known political principles and policies of the Axis." A few days later an American correspondent was expelled from the country on the ground that the Berlin Government had complained about his dispatches from Budapest. The extraordinary powers granted the government by Parliament at the outbreak of the European War were extended until May 2, 1941, by a decree published December 29.

**Debt Payments.** Hungary made partial payments on the war debt installments due the U.S. Government on June 15 and December 15 (see **REPARATIONS AND WAR DEBTS**), but on October 15 the government suspended the transfer of interest payments on its other foreign debts.

**HURRICANES.** The word hurricane has two meanings, one refers to storms of tropical origin (and specifically such storms in the North Atlantic Ocean), the other refers to any wind that attains a velocity exceeding 75 miles per hour. Not every storm of tropical origin has winds associated with it which exceed a speed of 75 miles per hour; those storms of tropical origin which do have winds this strong are usually referred to by saying that they reached full hurricane intensity. The hurricane season of 1940 was normal in most respects. There were eight disturbances of tropical origin charted

over the North Atlantic Ocean, including the Caribbean Sea and the Gulf of Mexico; four of these reached full hurricane intensity. The average number of such cyclones observed annually, based on records for the past 54 years, is about seven, of which three or four usually attain full hurricane force. In 1940, one hurricane was observed in May, three in August, and two each in September and October. Those of full hurricane intensity were the three in August and the first one in September.

There were two barometric pressure records established, the first at the Weather Bureau Office, Port Arthur, Tex., during the hurricane of August 2-10 by a reading of 28.87 inches which is considerably lower than the previous low reading of 29.37 inches on Oct. 16, 1923; the second at the Savannah, Ga., Weather Bureau, during the hurricane of August 5-17 by a reading of 28.78 inches.

The most destructive of the hurricanes was the one of August 5-17. The weather charts on the morning of August 5 showed some indications of a slight disturbance centered between St. Martin and St. Thomas Islands. This was the first evidence of the storm. Severe squalls of 44 miles an hour were recorded later that morning at San Juan. By 6 p.m. this depression was located a short distance north of Mona Passage, having moved rapidly in a west-northwest direction during the preceding ten hours. The Dutch motor vessel *Pygmalion*, near latitude 20° and longitude 66° reported fresh easterly gales and a barometer reading 29.90 inches at 5 p.m. On August 6 the center passed a short distance to the south of Turks Island at noon with a barometer reading of 29.63 inches. During the next three days the storm showed little tendency to increase in intensity as it moved northward. The first indications that this storm had reached full hurricane intensity were received from the American ship *Maine* which gave her position at noon as approximately latitude 32° and longitude 77°. The ship met east-southeast winds of force ten early on that day, and the wind increased to full hurricane force at 4 p.m. At this time there was a very high and rough sea, a large heavy swell and poor visibility. This hurricane crossed the coast at 4 p.m. on August 11, its center passed just north of Savannah, Ga., between 5 and 6 p.m. on this day. Winds of hurricane force were experienced all along the coast between Savannah and Charleston. Tides were very high north of the center, Charleston, S.C., recorded 10.7 feet above mean low tide. The total property damage along the coast resulting from this hurricane was estimated at \$3,000,000, perhaps 20 persons lost their lives as a result of it. As the hurricane passed inland it diminished in intensity, though it continued to cause very heavy rains which in turn produced record-breaking floods. The storm recurved after it passed inland and as it continued to diminish in severity its positive identity was lost on August 17.

The hurricane of August 5-17 was the second one in August. The first one in August also caused damage to property when it crossed the coast line near the Texas-Louisiana boundary. The other two storms which reached full hurricane intensity did not cause property damage, due to the fact that during their maximum intensity they did not cross any coast lines.

Storms of tropical origin also occur over the (North and South) Indian Ocean and over the (North and South) Pacific Ocean. During 1940

there were 25 typhoons, or storms of tropical origin, observed over the North Pacific Ocean.

RICHMOND T. ZOCH.

### HYDROPONICS (Soil-less Agriculture).

See BOTANY.

ICC. See INTERSTATE COMMERCE COMMISSION.

**ICELAND.** An island state situated 190 miles east of Greenland, its northernmost shores touching the Arctic Circle. Area, 39,709 square miles; population (Jan. 1, 1939), 118,888. Chief towns: Reykjavik (capital), 37,366 inhabitants in 1939; Akureyri, 4930; Hafnarfjordur, 3652; Vestmannaeyjar, 3506. Births in 1938 numbered 2326; deaths, 1204; marriages, 644. Elementary education is compulsory and there is virtually no illiteracy. Reykjavik has a university.

**Production and Trade.** Fishing is the chief industry. Potatoes, turnips, and hay are the principal crops. Sheep raising is important. Imports in 1939 totaled 61,151,000 crowns (krónur); exports, 69,654,000 crowns, including 142,000 tons of sea products valued at 53,000,000 crowns (crown averaged about \$0.20 in 1939). Wool, frozen mutton and sheepskins are other exports. Livestock in 1938: 592,000 sheep, 49,000 horses, 37,000 cattle.

**Finance.** Budget estimates for 1940 were: Revenues, 18,594,830 crowns, expenditures, 17,857,448. The public debt on Dec. 31, 1938, totaled 47,161,000 crowns. The crown was devalued by 18 per cent on Apr. 5, 1939, and again by 11 per cent in September, 1939; in 1940 it equalled 15.5 United States cents at par.

**Communications.** There are no railways. Highways extended 2984 miles in 1939. The local air line carried 1100 passengers and 5328 lb of mail in 1938-39. Including fishing boats, the merchant fleet in 1939 comprised 638 ships of 43,080 gross tons.

**Government.** The Constitution of May 18, 1920 (amended in 1934) provides for a constitutional monarchy. The King exercises executive power through a responsible cabinet. Legislative power rests conjointly with the King and the Althing, the oldest parliament in the world, established 930 A.D. The Althing consists of 49 members elected by the people. One-third of its members are elected to the upper chamber by the whole Althing; the other two-thirds form the lower chamber. Ruler in 1940, King Christian X of Iceland and Denmark. Prime Minister, Hermann Jónasson (Progressive), appointed July 29, 1934. In 1940 his government represented a coalition of all parties except the Communist party, which had three members in Parliament.

Iceland was acknowledged by the Act of Union of Nov. 30, 1918, to be an independent, sovereign state having a personal union with Denmark through a common king. This treaty expires in 1943, when it may be denounced by either Iceland or Denmark. In 1938 the Althing voted to terminate the union with Denmark upon expiration of the treaty, and a popular referendum was to have been held on this issue during 1940 (see under History).

**History.** The referendum to determine Iceland's future relationship with Denmark (see above) was interrupted by the German military occupation of Denmark on Apr. 9, 1940. On May 10 the Althing passed two resolutions entrusting the Government of Iceland with the Royal power given to the King under the Constitution and authorizing the government to assume com-

plete charge of Iceland's foreign affairs, controlled by Denmark under the Act of Union.

On April 16 the State Department at Washington announced receipt of a telegram from Iceland's Prime Minister stating that his government was anxious to establish direct diplomatic relations with the United States. The appointment of a consul general of Iceland in New York and of an American consul in Reykjavik was provisionally recognized by an exchange of telegrams between the two governments on April 23-24. Meanwhile the Icelandic Government had proposed the establishment of direct diplomatic relations with Great Britain. Britain complied by recognizing the Icelandic secretary at the Danish Legation in London as chargé d'affaires and agreeing to name Charles Howard Smith, former British Minister at Copenhagen, as Minister to Iceland.

The British Minister arrived in Iceland on May 10, accompanied by a British armed force of unstated size which occupied the island. The British Government announced that the military occupation was undertaken to forestall "a sudden German descent on Iceland." The British communiqué issued May 10 stated in part:

His Majesty's Government have given explicit guarantees to the Icelandic Government that this force has been landed to insure the security of Iceland against a German invasion and that any further measures that may have to be taken will be designed for that purpose. This force will be withdrawn upon the conclusion of hostilities.

His Majesty's Government have made it plain to the Icelandic Government that they have no intention or desire to interfere with the existing administration of the island, further, that they are prepared at once to negotiate with the Icelandic Government an agreement on trade matters which it anticipated will bring material advantages to the inhabitants.

British officials asserted there was reason to fear a German seizure of Iceland with the aid of Nazis planted on the island previous to the European War. A number of German expeditions had visited Iceland shortly before the outbreak of the conflict, ostensibly for scientific investigations, and the British contended that there were many more than the normal quota of Germans in the country when the war began. Iceland was completely defenseless except for a handful of policemen. Nevertheless the government registered a formal protest against the British occupation. Before the end of 1940, it was indicated that some 60,000 British, Canadian, and Norwegian troops, with accompanying air and naval units, were occupying fortified positions in strategic points around the island. Great Britain contracted to purchase the entire fish catch and new trade channels opened with the United States enabled the islanders to obtain essential supplies of food and other commodities. The United States Government advanced Iceland a small loan for the further development of its trade.

Consult Vilhjalmur Stefansson, *Iceland: The First American Republic* (New York, 1939); P. E. Mosely, "Iceland and Greenland: An American Problem," *Foreign Affairs*, July 1940, pp 742-46. See CANADA, DENMARK, and GREAT BRITAIN, under History.

**IDAHO.** Area, 83,888 square miles (includes water, 534 square miles). Population, Apr. 1, 1940 (census), 524,873; 1930, 445,032. Boise City, the capital, had (1940) 26,130 inhabitants.

**Agriculture.** Idaho harvested, in 1940, some 2,724,000 acres of the principal crops. Tame hay, covering 995,000 acres, or about three-eighths of the harvested area, gave 2,287,000 tons; in value,

about \$14,637,000. Wheat, a close second, on 957,000 acres, grew 24,383,000 bu. (\$13,898,000); potatoes, on 124,000 acres, 32,860,000 bu. (\$9,858,000); dry beans, 113,000 acres, 1,667,000 100-lb. bags (\$3,375,000); sugar beets, 72,000 acres, 1,128,000 tons (1939's somewhat smaller crop was valued at \$4,147,000); barley, 170,000 acres, 5,950,000 bu. (\$2,380,000); dry peas, 70,000 acres, 1,120,000 bu. (\$2,016,000); oats, 138,000 acres, 5,106,000 bu. (\$1,481,000); apples for market, 2,160,000 bu. (\$1,620,000).

**Mineral Production.** Nevada's approximate 1940 production (actual 1939 figures in parentheses) of silver, lead, zinc, gold, and copper was valued at \$37,652,600 (\$29,794,144), of which silver, 17,235,000 oz. (17,222,370 oz.), accounted for \$12,256,000 (\$11,690,336); lead, 207,600,000 lb. (181,962,000 lb.), \$10,380,000 (\$8,552,214); zinc, 141,300,000 lb. (95,098,000 lb.), \$9,184,500 (\$4,945,096); gold, 145,000 oz. (116,662 oz.), \$5,075,000 (\$4,083,170); copper, 6,700,000 lb. (5,032,000 lb.), \$757,100 (\$523,328). As given by the U.S. Bureau of Mines in 1940, Idaho's production of native minerals totaled \$31,738,606 for 1938. Fully nine-tenths of this amount was ascribed to silver, lead, zinc, gold, and copper.

**Education.** For the academic year 1939-40, Idaho's inhabitants of school age (from 8 years to 18) plus 38,432 others admissible to public schools were reported to number 143,892. Enrollments of pupils in the public schools totaled, for that year, 120,987: this comprised 86,739 in elementary study and 34,248 in high school. The year's expenditures for public-school education amounted to \$11,076,151. The 3107 teachers in elementary positions and the 1406 in high schools averaged, respectively, \$939.35 and \$1273.35 in yearly pay.

**History.** At the general election on November 5 a vacancy left in the U.S. Senate by the death of William E. Borah was filled by the choice of another Republican, John Thomas, to serve the remaining four years of the unexpired term; Thomas had previously become Senator by the Governor's temporary appointment. Chase A. Clark (Dem.), Mayor of Idaho Falls, was elected Governor, defeating by 2303 plurality C. A. Bottolfsen, the Republican incumbent, who ran for re-election.

The popular vote went to Roosevelt (Dem.) for President and against Willkie (Rep.), by 127,835 to 106,555.

**Officers.** Idaho's chief officers, serving in 1940, were: Governor, C. A. Bottolfsen (Rep.), Lieutenant Governor, Donald S. Whitehead; Secretary of State, George H. Curtis; Attorney General, J. W. Taylor; Auditor, Calvin E. Wright; Treasurer, Myrtle P. Enking; Superintendent of Public Instruction, John W. Condie.

**ILLINOIS.** Area, 56,665 square miles, including 622 square miles of water but excluding the State's part of Lake Michigan. Population, April, 1940 (census), 7,897,241; 1930, 7,630,654. Population of cities (1940): Chicago, 3,396,808; Peoria, 105,087; Springfield, the capital, 75,503. The urban population—dwellers in places of 2500 or more—rose (1930-40) by 3.1 per cent, or 173,923 to 5,809,650. The rural group, rising by 4.6 per cent or 92,664, attained 2,087,591, thus more than making up loss sustained during the decade 1920-30.

**Agriculture.** Farmers in Illinois harvested 18,532,000 acres of the principal crops in 1940. The acreage of corn fell below the under-average total of 1939, and the remarkably high yield, to the acre, attained in 1939 was not repeated. On 7,551,000

acres were produced 332,244,000 bu. of corn, estimated as worth \$205,991,000 to the growers. The soy beans, though gathered from an increased acreage, did not maintain the huge production of 1939: soy beans, on 2,008,000 acres, produced in 1940, 35,140,000 bu. (value about \$24,958,000). Tame hay, oats, and wheat thus all again out-ranked soy beans: 3,399,000 acres of tame hay made 4,515,000 tons (value, \$32,960,000). Wheat, 1,782,000 acres, grew 40,155,000 bu. (\$28,108,000); oats, 3,177,000 acres, yielded an unusual crop of 152,496,000 bu. (\$45,749,000). Also important were barley, 135,000 acres, 4,928,000 bu. (\$2,267,000); potatoes, 39,000 acres, 3,549,000 bu. (\$2,804,000). Farms numbered 213,439 in 1940 and averaged 145.4 acres.

**Manufactures.** Yearly production of manufactured goods in Illinois totaled \$4,795,201,154 for 1939; \$5,304,282,629 for 1937. Other totals for 1939 (each with that for 1937 subjoined) · 12,980 (11,764) establishments employed 596,560 (668,841) persons for wages of \$750,239,085 (\$862,793,453), paid for material, etc., and contract work \$2,593,215,612 (\$2,985,246,895), and added to material, by manufacture, \$2,201,985,542 (\$2,319,035,734).

**Mineral Production.** As reckoned by the U.S. Bureau of Mines in 1940, the native minerals produced in Illinois in 1938 had a total value of \$130,155,803. Coal and petroleum furnished somewhat less than four-fifths of the whole. A trebling of the yearly value of the yield of petroleum for 1938, as against 1937, offset by far the chief part of losses in the production of coal and most of the other native minerals. The rise in petroleum yield went still faster in 1939, but leveled out in 1940, into fairly stable production that approximated 146,000,000 bbl. a year. For 1939 the output of petroleum attained 94,302,000 bbl., as against 24,075,000 for 1938 (value, \$30,100,000). Among two dozen new fields discovered in 1939 several were in so-called old territory at the eastern edge of the State; all were in its southern half. Deep production in the Devonian formation started in the Salem field in November, 1939; and the Salem pool, source of more than half the State total for the year, took rank second only to the East Texas field among the Union's producing areas.

The production of coal recovered to a total of some 46,450,000 net tons for 1939, from 41,912,000 tons (value, \$71,838,000) for 1938. Coke (not accounted a native mineral) was produced to the total of 1,884,240 net tons (1939) and 1,734,511 tons in 1938; in respective values, \$11,963,932 and \$11,706,788. Coal output (1940): 49,495,000 tons.

The production of pig iron, a great non-native mineral industry of Illinois, rose to 2,860,577 gross tons for 1939, from 1,519,572 for 1938; by value, to \$57,718,814, from \$30,899,012. The production of open-hearth steel rose to 3,292,745 gross tons (1939) from 1,950,224 (1938).

**Education.** Inhabitants of school age in Illinois (from 6 years to 21) were stated to number 1,936,806 in 1937. For the academic year 1938-39 (the latest for which the data that follow had appeared) enrollments of all pupils in public schools totaled 1,314,178: this comprised 941,707 in elementary study and 372,471 in high school. The year's expenditure for public-school education amounted to \$133,666,916, current; and with the addition of capital outlay and debt-service, \$201,362,473. Teachers numbered 48,919; their pay for the year averaged \$1682.62.

**History.** Governor Horner died on October 6 after a lingering illness that had kept him from his desk most of the time for nearly two years; he had nearly finished his eighth year in office. His last months were marked by persistent efforts on the part of Lieutenant Governor Stelle and a clique in the Legislature to supplant him on the obvious ground of his physical incapacity and thus to effect Stelle's succession. Stelle overplayed his part in the plan, proclaiming on his assumed authority, on the eve of the State primary and at the moment of Horner's summoning a special session of the Legislature, his own assumption of the Governor's office (April 8). Simultaneously he issued his own summons for the meeting of the Legislature, which Horner had just summoned. Stelle's attempted coup did not help him at the primaries on April 10. Harry B. Hershey won from him the Democratic nomination to be candidate for Governor. Meeting on April 30, the houses of the Legislature sent committees of notification to the Governor's mansion, ignoring Stelle's claims, and Stelle, tacitly dropping his pretension to the higher office, took his place as presiding officer of the Senate. The brief Legislative session dealt with several matters presented in Horner's summons, chiefly the liberalization of the provisions of the State for old-age assistance.

The Director of the State's Department of Public Works, F. L. Smith, died in a bath tub on March 9. He was at the time a defendant in a suit for an accounting of a sum that had been collected on behalf of a campaign, then being planned, for a third term for Horner. Smith had reportedly wounded himself a few days before in a suicidal attempt; the coroner's verdict ascribed his death to suicide by drowning for which, however, no sufficient rational motive appeared.

New efforts on behalf of the Chicago Drainage Canal were started by Illinois in the U.S. Supreme Court, to gain permission to draw more water from Lake Michigan, for diversion through the canal and down the Illinois River. Six other of the States bordering on the Great Lakes—Minnesota, Wisconsin, Michigan, Ohio, Pennsylvania, and New York—took steps to oppose this effort, and the increasing prospect of agreement on the part of the United States and Canada on the long-pending plan to improve the Great Lakes and the St. Lawrence as a waterway was cited in the press as unfavorable to the demands put forward by the State of Illinois.

The State Supreme Court (October 11) held unconstitutional the State's act of 1939 for wages, on public works, at prevailing rates.

**Chicago.** An agreement between Chicago and the owners and creditors of transit lines, concluded in May, subject to a popular vote of ratification, called for the reorganization of the several lines as a united system. The city undertook to give the projected company liberal terms as to the use of streets, paving, and the division of the cost and returns of the unfinished municipal subway; the new transit company was to spend \$102,000,000 in the course of eight years, for cars, structure, and other renovation. (See *RAPID TRANSIT*.) The city acquired the lands needed for expanding the Chicago Air Field to 620 acres. County Judge Jarecky, the usual arbiter of taxes in Cook County under its system of court review in advance of tax-collection, voided \$39,000,445, or about one-fifth, of the total levy for 1938, so called, set by Chicago and the other taxing units in the county.

The rate of the year's tax, for Chicago, was \$9.12 per \$100.

A man alleged to hold a controlling position in commercialized gambling in Chicago, William R. Johnson, prosecuted in Federal Court, was convicted (October 12) of evading \$1,887,864 of Federal income tax. See *FOUNDATIONS; PLANNING; RAPID TRANSIT; SEWERAGE AND SEWAGE TREATMENT; TUNNELS; WATER WORKS*.

**Elections.** The popular vote at the general election, November 5, gave Roosevelt (Dem.) 2,149,934 for President, a moderate plurality of 102,694 over the 2,047,240 for Willkie (Rep.). Republicans, none the less, gained the two chief offices in the particular bestowal of the State: Dwight H. Green (Rep.), for Governor, with 2,197,778, defeated Harry B. Hershey (Dem.), who had 1,940,833, by 256,945; C. Wayland Brooks (Rep.), 2,045,924, for U.S. Senator, beat the incumbent, James M. Slattery (Dem.), 2,025,097, by a small margin; while 16 Republicans and 11 Democrats were elected U.S. Representatives. Elections to the Assembly produced Republican majorities of five in either house.

**Officers.** The chief officers of Illinois, serving in 1940, were: Governor, Henry Horner (Dem.), who died in office and was succeeded by the Lieutenant Governor, John Stelle; Secretary of State, Edward J. Hughes; Auditor, Edward J. Barrett; Treasurer, Louie E. Lewis; Attorney General, John E. Cassidy; Superintendent of Public Instruction, John A. Wieland.

**ILLITERACY.** See the countries under *Education*.

**IMMIGRATION AND NATURALIZATION SERVICE.** See *IMMIGRATION, EMIGRATION, AND NATURALIZATION*.

**IMMIGRATION, EMIGRATION, AND NATURALIZATION.** The Immigration and Naturalization Service of the U.S. Department of Justice administers the Federal immigration and nationality laws.

**Immigration and Emigration.** During the fiscal year which ended June 30, 1940, 70,756 persons left their homes in foreign countries and were admitted to the United States for the first time for permanent residence, a decrease of 12,242 from the 1939 total. Visitors, transients, and resident aliens returning from abroad numbering 138,032 were admitted, a decrease of 47,301, or about 25 per cent from 1939. While this does not include cruise passengers, travelers between continental United States and outlying possessions and persons habitually crossing and recrossing the international land boundaries, it is thus clear that the number of aliens being admitted into the United States from abroad is relatively small. However, unsettled international conditions have made it imperative that the qualifications and credentials of all aliens coming to the United States be examined with even more thoroughness than heretofore.

The greatest volume of movement into and out of the United States takes place across the land boundaries. During fiscal 1940 there were 50,102,398 such entries (including each individual crossing of the border by any traveling alien or United States citizen), of which 28,121,041 were by aliens and 21,981,357 were by citizens. The total number of admissions into the United States, after inspection by officers of the U.S. Immigration and Naturalization Service, was 51,822,280.

The admissions of aliens who commenced their permanent residence in the United States and the

departures of aliens for permanent residence in other countries are shown in Table I. The admissions for permanent residence from countries which are assigned quotas under the Quota Act of 1924 are shown in Table II.

TABLE I—IMMIGRANT ALIENS ADMITTED AND EMIGRANT ALIENS DEPARTED, FISCAL YEARS 1939 AND 1940, BY COUNTRIES OF LAST OR INTENDED FUTURE PERMANENT RESIDENCE

NOTE 1.—The number of immigrants shown above as admitted include not only quota immigrants as shown in Table II but non-quota immigrants, being wives of citizens, husbands who married citizen wives prior to July 1, 1932, children of citizens, etc. It will also be noted that this table is based on the country of last residence of the immigrant. These figures do not, therefore, agree accurately with the immigration quota figures included in Table II, because the quota under which any immigrant is admitted is that of the country of his birth, not that of the country of his last residence. NOTE 2.—Immigrants admitted from the "barred zone" of Asia are mainly persons of the white race.

The number of aliens debarred at ports of entry during 1940 was 5300. Of these 3127 were not permitted to enter because they were without valid consular visas, and 1296 were refused entry because they were likely to become public charges.

**Repatriations and Deportations.** The Immigration and Naturalization Service is authorized to remove to other countries at government expense aliens who have fallen into distress or need public aid from causes arising after their entry and who want to be so removed. Such aliens may not be

re-admitted except upon the approval of the Secretary of State and the Attorney General. Under these provisions, 1575 applications were received during the fiscal year 1940. Of these 1475 were granted and 1151 aliens were so repatriated.

TABLE II—ANNUAL QUOTAS ALLOTTED UNDER 1924 ACT, AND QUOTA IMMIGRANTS ADMITTED, FISCAL YEARS 1939 AND 1940, BY COUNTRIES OR REGION OF BIRTH AND SEX

\* Includes aliens to whom visas were issued during the latter part of the preceding year which were charged to the quota for that year.

\* Quota for colonies, dependencies, or protectorates included with allotment for the European country to which they belong.

During the fiscal year, 6954 aliens were deported under warrants of deportation, and 8594 deportable aliens were allowed to depart at their own expense without warrants of deportation. The total of enforced departures was thus 15,548, as compared with 17,792 during the previous year. The use of more effective methods in preventing illegal entry and the present impossibility of obtaining transportation for aliens deportable to many European countries are among the reasons for this decrease. The principal classes of aliens deported under warrants were, in order, "entered without valid visa," "criminals," "previously debarred or deported," and "remained longer than authorized." Over half of the aliens deported, or 3902, were returned to Mexico; 1503 were returned to Canada; 228 to Italy; and 202 to Great Britain and Northern Ireland.

**The Border Patrol.** Unsettled international conditions always have an effect upon the problems of the Border Patrol. Consequently, assisted by increased appropriations, the equipment and personnel of the Border Patrol is being enlarged. An act of Congress on June 27, 1940, appropriated \$2,000,000 to provide for adding 769 persons to the Border Patrol force, increasing the number of patrol cars from 309 to 500, and for adding a number of

autogiros, more radio equipment, water craft, horses, firearms, and other accessories.

During the fiscal year, officers of the Border Patrol patrolled 7,895,348 miles and questioned 987,274 persons. Criminal prosecutions totalling 2846 resulted from Border Patrol apprehensions of persons for violation of the immigration laws. These were disposed of by 2766 convictions and but 80 acquittals and dismissals.

**Naturalization.** The desire of aliens to become citizens of the United States continued with increasing intensity. In the fiscal year 1940, 203,536 declarations of intention were filed, as compared with 155,691 in 1939 and 150,673 in 1938. Petitions for naturalization numbered 278,028 (213,413 in 1939 and 175,413 in 1938) and certificates of naturalization issued, 235,260 (188,813 and 162,078).

The nations to which aliens admitted to citizenship during the fiscal year, 1940, formerly owed allegiance were: British Empire, 59,680; Italy, 37,357; Poland, 26,964; Germany, 25,802; Soviet Russia, 15,598; Czechoslovakia, 9059; Yugoslavia, 6908; Hungary, 6291; Sweden, 5746; Greece, 4378; all other countries, 37,477.

Among the causes of these increases were the Congressional barring of aliens from WPA employment and the refusal of some States to grant them old-age benefits, the increasing attractiveness of United States citizenship because of international conditions, and the enactment of the "Alien Registration Act, 1940," which requires aliens to register and be fingerprinted.

**New Legislation.** Of the numerous proposals advanced in Congress affecting aliens, several of importance were enacted into law.

Under the Act of Mar. 2, 1929, an alien of good moral character not ineligible to citizenship and not subject to deportation who entered the United States before June 3, 1921, but in whose case there is no record of admission for permanent residence, is permitted to apply to the Immigration and Naturalization Service to create a valid record of entry for immigration and naturalization purposes. By the Act of Aug. 7, 1939, Congress extended this privilege to aliens who had entered the United States before July 1, 1924. The result was that there were 31,565 applications for the creation of such records during 1940, more than double the number received in 1939. Each of these requires thorough investigation to determine whether or not the alien is entitled to have such a record created.

The President's Reorganization Plan No. V, approved June 4, 1940, transferred the Immigration and Naturalization Service from the Department of Labor to the Department of Justice. International conditions had emphasized the need for closer scrutiny and control of the alien population. It was thought that this could be accomplished more easily if the Service were more completely co-ordinated with the police functions of the Department of Justice.

The Alien Registration Act, 1940, approved on June 28, 1940, requires that a record be made and kept of aliens in the United States (including Alaska, Hawaii, Puerto Rico, and the Virgin Islands) and adds to the classes of aliens who are subject to deportation. Under its provisions, aliens are to be registered and fingerprinted when they apply for their visas at the offices of United States consuls abroad. Those aliens who were in the United States sixty days after the passage of the Act were required to be registered and finger-

printed before Dec. 27, 1940. Other aliens who remain in the United States thirty days or longer must apply for registration and fingerprinting within such period. Alien children less than 14 years of age are to be registered through the parent or legal guardian. When they reach the age of 14 years, they themselves must within thirty days thereafter apply for registration and fingerprinting. Foreign government officials and their families are exempt from the requirements to be registered and fingerprinted.

The information required in registration includes data relating to the alien's name, address, date and place of birth, citizenship, personal characteristics, date and other facts concerning the arrival in the United States, length of time in the United States, activities in which engaged including those of a subversive nature, military service, naturalization status, relatives in the United States, and criminal record, if any.

Aliens must also report changes in their addresses. Every alien resident who changes his residence is required to report the change within five days to the Immigration and Naturalization Service. All other aliens not permanently residing in the United States who have been registered must notify the Service of their addresses at the end of each three months of stay in the United States. Parents or legal guardians are to give notices of changes of addresses of aliens less than 14 years of age.

Registration of aliens took place at all first and second class post offices and at post offices in all county seats. The total number of aliens who registered, including those who registered in the Territories and consular offices, and alien seamen, was approximately 4,900,000.

The Alien Registration Act also specifies deportation for aliens who have been convicted of unlawfully possessing or carrying automatic weapons or sawed-off shotguns, or who smuggle other aliens into the United States for gain, or who are convicted of subversive activities. The applicability, in relation to the deportation of all alien violators, of the Narcotic Act of Feb. 18, 1931, and of the Act of Oct. 16, 1918, relating to anarchistic and other subversive activities, was also enlarged.

In the same Act, the Attorney General was given a measure of discretion in suspending deportation in certain classes of worthy cases where, among other things, (1) the alien is of good moral character, (2) he is not ineligible to naturalization, and (3) such deportation would result in serious economic hardship to a citizen or legally resident alien who is the spouse, parent, or minor child of the alien. If the Congress does not disapprove this suspension of deportation, the stay may be made final, the proceedings canceled, and if no record of entry for permanent admission exists one may be created upon the payment of a fee of \$18.

The Act of July 1, 1940, which amended the Quota Act of 1924, removed some of the immunities of government officials, and their families, attendants, servants, and employees. Such an official must now be "an accredited official of a foreign government recognized by the Government of the United States." Moreover, he and his family are now required to maintain the status under which they were admitted. However, such aliens may not be required to depart from the United States without the approval of the Secretary of State.

A significant improvement in the law relating to nationality was accomplished through the enactment of the Nationality Act of 1940, approved

Oct. 14, 1940. This act repeals other acts dealing with naturalization, citizenship, and expatriation and substitutes an orderly codification of their provisions, plus amendments to the former laws where experience had shown them to be weak or vague. Among the changes in the nationality law which were brought about through the enactment of this code are the following:

1. The requirements for the naturalization of persons who have served with the military forces of the United States have been simplified and the necessary proof standardized.

2. More rigid provisions have been included prohibiting the naturalization of persons who are or have been members of anarchistic or other subversive groups or who have believed in or advocated subversive doctrines or sabotage within 10 years of filing a petition for naturalization.

3. More than 100 criminal offenses against the nationality laws, which carry with them penalties up to a maximum of \$5000 or five years in prison or both, have been clearly stated.

4. A number of additional ways in which a person may lose United States nationality have been included.

5. Provision has been made for the termination of dual nationality, unless the person affected returns to the United States and takes up permanent residence within two years of attaining majority as a demonstration of election to retain United States citizenship.

6. Children born in a foreign country must be less than 18 years of age to acquire citizenship through parentage, and, if only one parent is a citizen at the time of the child's birth, the citizen parent must have resided in the United States preceding the child's birth for at least 10 years, five of which must have been after reaching the age of 16 years.

7. The practice of designating naturalization examiners to conduct preliminary hearings in naturalization cases and to make recommendations to the courts has been extended to the State courts, having been confined previously to the Federal courts.

8. Authority is granted to the head of the Immigration and Naturalization Service to determine the scope and nature of the examination to be given to petitioners for naturalization.

LEMUEL B. SCHOFIELD.

**IMPORTS.** See **TRADE, FOREIGN** and articles there referred to. For import quotas, see **CUSTOMS, BURFAU OF**.

**INCINERATION.** See **GARBAGE AND REFUSE DISPOSAL**.

**INDIA.** A dependency of the British Empire, consisting of British India, or the territories subject to British law, and the Indian States, ruled by native princes but under the indirect control of the British Parliament. Capital, New Delhi. Summer seat of government (April to October), Simla.

**Area and Population.** The total population of British India and the Indian States under British control (except Burma) was officially estimated at 365,900,000 on Jan. 1, 1939. The area and population of the British (governors') provinces and of the Indian States and Agencies at the 1931 census are shown in the accompanying table.

Registered births in the British provinces in 1938 numbered 9,398,011 (34.1 per 1000), deaths, 6,685,120 (24.3 per 1000). Populations of the chief cities at the 1931 census were: Calcutta, with suburbs and Howrah, 1,485,582; Bombay, 1,161,383; Madras, 647,230; Hyderabad, 466,894; Delhi (including Shahdara, New Delhi, and Cantonment), 447,442; Lahore, 429,747; Ahmedabad, 313,789; Bangalore, 306,470; Lucknow, 274,659; Amritsar, 264,840; Karachi, 263,565; Poona, 250,187; Cawnpore, 243,755; Agra, 229,764; Nagpur, 215,165; Benares, 205,315.

**Education and Religion.** The number of persons able to read and write is about 30,000,000. The number of pupils reported in attendance by 226,331 educational institutions in the academic year 1937-38 was 13,831,707. About one-half of the elementary schools were aided or maintained

by the State. Universities numbered 15 in British India. The 1931 census showed 229,195,140 Hindus; 77,677,545 Moslems; 12,786,806 Buddhists; 8,280,347 followers of tribal cults; 6,296,763 Christians; 4,335,771 Sikhs; 1,252,105 Jains; 109,752 Zoroastrians; and 24,141 Jews.

#### BRITISH PROVINCES AND INDIAN STATES— AREA AND POPULATION

NOTE.—Figures for the Provinces include those of the States attached to them except in the case of Madras, where they exclude Cochin and Travancore. Aden and Burma were separated from India, Apr. 1, 1937.

**Production.** About 71 per cent of the population is engaged in agriculture or stock-raising. Recent harvests in metric tons (in the 1939-40 season unless otherwise stated) were: Wheat, 10,093,400; rice, 38,532,000 (excluding several States); cane sugar, 2,770,000; tobacco, 495,800 (excluding most Indian States); cotton, 907,200; barley (excluding Indian States), 2,119,500 (1938-39); corn (excluding Indian States), 2,080,800 (1938-39); coffee (incomplete returns), 16,000 (1938-39); tea, 205,000 (1938-39).

Mineral production (in metric tons) in 1939 (except when otherwise specified) was: Steel (ingots and castings), 1,035,000; coal (British provinces only), 25,044,000; crude petroleum, 328,000; copper (smelter), 6800; iron ore, 1,790,000 (1938); pig iron, 1,785,000 (1938); manganese ore, 492,000 (1938); cement, 1,142,000 (1937). Indian mills produced about 1,159,513,000 lb. of cotton yarn in the year ending Mar. 31, 1938. Jute production in 1939 totaled 1,748,100 metric tons.

**Foreign Trade.** Merchandise imports in the calendar year 1939 totaled 1,549,600,000 rupees; exports, 1,814,400,000 rupees. In 1938, imports were 1,502,100,000 rupees; exports, 1,623,700,000 rupees. For distribution of trade see 1939 YEAR BOOK, p. 358. Also see **TRADE, FOREIGN**.

**Finance.** For the fiscal year ending Mar. 31, 1941, revenue was estimated at 926,400,000 rupees;

expenditures at 925,900,000 rupees. Actual receipts in 1939-40 totaled 943,300,000 rupees; expenditures, 877,600,000 rupees. The funded debt amounted to 4,502,300,000 rupees and £280,100,000 on Mar. 31, 1940, as compared with 4,379,200,000 rupees and £297,380,000 a year earlier. The average exchange value of the rupee was \$0.3016 in 1940 and \$0.3328 in 1939.

**Transportation.** On Mar. 31, 1939, railway mileage totaled 41,172. The State railway budget for 1940-41 estimated receipts at 1,030,000,000 rupees and expenditures at 954,600,000 rupees. In 1938-39 the tonnage of vessels which entered and cleared in the interport trade was 16,444,179 and 16,082,155 respectively. Highways in 1940 extended 319,131 miles. Under construction in 1940 was a motor highway between North-West Frontier Province and Baluchistan, to link Quetta and Peshawar. Its course runs through gorges in mountains that stand 11,000 ft. high. The principal Indian cities are connected with British, Dutch, and French air lines to the Far East and, via Hong Kong, with the American trans-Pacific service. In August, 1939, there were also nine internal air routes covering 5247 miles.

**Government.** The King of Great Britain and Northern Ireland also bears the title of Emperor of India. The Constitution, known as the Government of India Act, 1935, provided for an Indian federation and provincial autonomy. Provincial autonomy went into effect Apr. 1, 1937, when elective legislative assemblies with responsible ministries were established in the 11 Governors' Provinces under direct British rule. In October-November, 1939, the All-India Congress ministries in eight of the 11 provinces resigned and on Nov. 5, 1939, the Governor General utilized his emergency powers to restore all governing powers in these provinces to the appointive British governors (see 1939 YEAR BOOK, p. 360). Parliamentary government was retained in the other three provinces throughout 1940.

The federation scheme provided for the union under a central government of the 11 Governors' Provinces and the 584 Native States, ruled by Princes owing suzerainty to the British Crown. For different and often contradictory reasons federation was opposed by most of the politically vocal elements in India (see preceding YEAR BOOKS). Following the outbreak of the European War, the Governor General announced Sept. 11, 1939, that no further steps toward federation would be taken until peace was concluded.

In the meantime executive powers were concentrated in the hands of the Governor General, or Viceroy, who is appointed by the Crown, usually for five years, and assisted by an appointive Council, composed of high officials responsible for the various administrative departments. The Governor General also holds the separate office of Crown Representative (established Apr. 1, 1937) through which he performs the functions of the Crown in relation to the Native States. Pending the federation of the Governors' Provinces and Native States, the Governor General remains under the direction of the Secretary of State for India in the British Cabinet, and the Central Legislature of British India, established in 1921, continued in existence. The Legislature consisted of a Council of State of 32 elected and 26 nominated members (serving five years) and a Legislative Assembly of 102 elected and 39 nominated members (serving three years). The Central Legislature's actions

were not binding on the Governor General and his Cabinet.

The All-India Congress, the most powerful Indian political party, captured 57 of the 102 elective seats in the Legislative Assembly in the 1934 elections. Due to delay in putting the federation scheme into effect, the Governor General extended the life of the 1934 Legislative Assembly by four successive acts to Oct. 1, 1941. Governor General and Crown Representative, the Marquess of Linlithgow, who assumed office Apr. 18, 1936, and whose term was extended in 1940 for an additional year from April, 1941.

## HISTORY

**Political Developments.** The All-India Congress continued throughout 1940 its efforts of 1939 (see YEAR BOOK, 1939) to obtain a pledge of immediate independence from Great Britain as the price of its co-operation in the European War. This demand was opposed by the Princes of the Native States, by the All-India Moslem League, and various other groups. While making conciliatory offers, the British held to their demand for an accord between the Indian political and religious groups as a prerequisite to further self-government. When this stalemate remained unbroken, the All-India Congress, under the leadership of Mohandas Karamchad Gandhi, resorted to passive "civil disobedience" during the last quarter of the year.

Speaking at Bombay on January 11, the Viceroy renewed his offer of eventual Dominion status, but a conference between him and Gandhi on February 5 proved fruitless and on March 1 the Working Committee of the All-India Congress threatened once more to renew civil disobedience. Meanwhile on February 15 the Congress elected a Moslem, Maulana Abul Kalam Azad, as its president in an effort to heal the Hindu-Moslem breach and undermine the position of Ali Jinnah, leader of the All-India Moslem League.

**Gandhi's Leadership Endorsed.** At the annual convention of the All-India Congress held at Ramgarh in March, a serious revolt against Gandhi's moderate policies and methods was staged by the radical wing of the movement led by Subhas Chandra Bose. Bose demanded immediate violent steps to attain complete independence and the adoption of an industrialization policy for India in place of Gandhi's program for developing handicraft industries. The Bose faction was decisively defeated by Gandhi, supported by the party's "old guard," on March 18, and Gandhi thereafter assumed unquestioned control of the Congress's independence campaign. The Ramgarh convention voted him complete authority to launch non-violent civil disobedience at his discretion. On March 20 it passed a resolution rejecting any participation in the European War and demanding the immediate election of a constituent assembly by universal adult suffrage to determine India's future constitutional status.

While Gandhi began preparations for a civil disobedience campaign, the All-India Moslem League held its annual conference at Lahore. On March 23 it adopted a resolution rejecting an all-India federation and urging the union of the predominantly Moslem areas in a group of autonomous states. Jinnah declared that the All-India Congress's program meant "the complete destruction of all that is most precious in Islam" and would lead to civil war. He said Moslem India would support the

British in the European War as "our practical interests are to have Britain win."

The Moslem League's position was denounced by those Moslems affiliated with the All-India Congress. But it caused Gandhi to delay the civil disobedience campaign, and this in turn precipitated more violent attacks upon Gandhi and his followers by the extremist Bose faction of the Congress party. The Indian Government arrested the secretary-general of the Bose faction on April 12, and on April 18 official warning was given that Britain would take "full measures" to repress civil disobedience. At the same time Lord Zetland, Secretary of State for India, called for a resumption of negotiations among all of the interested groups on India's future. He said Britain was anxious to help India attain Dominion status at the earliest possible moment and recognized that the people of India should play a vital part in shaping their future, but that it could not permit the drafting of a new Constitution without its participation. Lord Zetland renewed the offer "to associate the political parties in India with the Central Government."

**Effect of European Situation.** This appeal evoked little response. The outbreak of the threatened civil disobedience campaign appeared imminent when the German invasion of the Low Countries on May 10 caused the Congress leaders to re-appraise the situation. Gandhi, Pandit Jawaharlal Nehru, and other Congress leaders declared they had no desire to embarrass Britain while she was fighting a life and death struggle with Nazi Germany, but they nevertheless insisted that the independence issue could not be postponed until after the war.

Germany's success in over-running the Netherlands, Belgium, and France was reflected in the decision of the All-India Congress working committee on June 21 to discard the principle of non-violence in dealing with internal disorder or external aggression. This decision was taken in defiance of Gandhi's views. It revealed alarm as to India's fate if Britain was defeated. On June 25 the British Government, in view of the possible severance of communications with India, authorized the Viceroy and his officials to govern India without consulting the home government.

Another conference between Gandhi and Lord Linlithgow on June 29 failed to break the stalemate. On July 2 Subhas Chandra Bose was arrested in Calcutta along with other Congress leaders following the launching of a passive resistance movement in Bengal Province to secure removal of the "Black Hole" monument. The Bengal Government on July 23 yielded to this agitation and agreed to destroy the monument. Meanwhile the All-India Congress working committee on July 7 and the executive committee on July 28 adopted resolutions offering to co-operate in Britain's war effort if the British would recognize India's right of complete independence and establish an Indian Government commanding the support of a majority of the elected members of the existing Legislative Assembly.

In reply the Viceroy and the new British Secretary of State for India, L. S. Amery, on August 8 renewed Britain's pledge of a "free and equal partnership in the British Commonwealth" after the war. They again invited representatives of the All-India Congress and other groups to join the Viceroy's Council immediately. In addition, they advanced the new proposal that a war advisory council be established immediately, com-

posed of representatives of all Indian interests, including the Native States. This offer was rejected as inadequate by the Congress working committee on August 22, although the All-India Moslem League hailed it as a "progressive advance" toward its objective.

**Civil Disobedience.** Thereafter the breach between the British Government and the All-India Congress gradually widened. Gandhi was re-elected as director of the civil disobedience campaign on September 17 with only the seven Communist members opposing him. He began to introduce passive resistance a step at a time, while insisting that no action be taken that would hinder Britain in the prosecution of the war. The conditional offer to co-operate in Britain's war effort was withdrawn. Nehru and various other Congress members were selected by Gandhi publicly to oppose Indian participation in the European conflict. They were arrested by the authorities for violation of the Defense of India regulations. The government meanwhile proceeded much more energetically against Bose's extremist faction, arresting many of the leading members. The Secretary of State for India stated before the British Parliament on November 20 that the government recognized Gandhi's right of conscientious objection, but could not grant his followers the right to urge the Indian people not to enlist, co-operate in the manufacture of munitions, or contribute to war funds.

An appeal to all Indian factions to formulate immediately a mutually acceptable plan of government that would enable India to join in the struggle against Hitler was issued December 23 by a group of British members of Parliament acquainted with Indian affairs. They asserted that the British people were "irrevocably resolved to give India full political freedom." On the same date a win-the-war movement was launched in Bombay, in opposition to the All-India Congress policy, by the former Congress premier of the Central Provinces, Dr. Narayan Bhaskar Kare, and a former Indian Communist leader, Mahendranath Roy.

**India's War Contribution.** Despite the opposition of the All-India Congress, the Indian Government proceeded to mobilize India's economic and military resources for the European war on an increasing scale. Indian troops, mostly Moslems, had been sent to Aden, Singapore, and France in 1939. During 1940 heavy reinforcements were dispatched to Egypt and Great Britain. In mid-November 60,000 were serving overseas. The British Government on March 1 announced that it would share the cost of maintaining Indian troops overseas. It advanced £34,000,000, one-fourth as a loan, to modernize the Indian Army and agreed to meet a large share of the cost of emergency war preparations, while India was expected to pay the remainder of the emergency costs and all of the normal defense costs.

Upon the German break-through on the Western Front, Sir Robert Cassels, commander-in-chief of the Indian Army, on May 31 announced that 100,000 more men would be recruited. In November it was announced that an army of 500,000 men was in process of creation. The air force was quadrupled. The land force was partly mechanized and motorized. The increased officer corps was provided largely by commissioning Indians from the ranks of the professional army. A voluntary Civic Guard for home defense duties was organized, and an air training scheme inaugurated for air force

recruits. Compulsory military service for European British subjects in India was introduced and the Viceroy was authorized to conscript British Indian subjects and industries for war purposes should it prove necessary. As in 1914-18, the native Princes made generous offers of men and money toward the British cause and some units of their State armies were incorporated in the Indian Army. The Royal Indian Navy was doubled.

Indian industry was called upon not only to supply most of the arms, munitions, and supplies for these new forces but also to supply British and Dominion forces in Egypt, Singapore, and other defense centers in the Near and Far East. A Department of Supply was established in the Central Government to co-ordinate war production. On October 25 representatives of British colonies, dependencies, and Dominions throughout the Near and Far East met in New Delhi to co-ordinate their war efforts and to increase the flow of war materials to the British Isles and to the Mediterranean fronts.

In connection with the mobilization of India's economic resources, the Indian Government during the year imposed import and export licensing systems covering a wide range of products. On April 6 a heavy tax was placed on excess business profits. Plans were announced for the construction of airplane, shipbuilding, and automobile assembly plants. War orders produced a boom in many sections of Indian industry, but rising commodity prices without increased wages provoked a number of serious strikes and riots and provided mass support for the Congress party's civil disobedience campaign. The war also eliminated markets for about 20 per cent of the country's normal export trade and new outlets had to be found.

**Other Events.** There were also a number of fatal riots between hostile religious groups during the year. A fight between rival Moslem sects at Lahore on March 19 cost 29 lives. In February and August there were new outbreaks of guerrilla warfare between tribesmen and British forces in the Waziristan sector of the Northwest-Frontier Province (see *AFGHANISTAN*). On March 13 Sir Michael Francis O'Dwyer, former Lieutenant Governor of the Punjab, was assassinated by a Sikh during a meeting in Caxton Hall in London. The prohibition law introduced in Bombay Province by the provincial legislature in 1939 was invalidated by the provincial High Court on July 3, 1940.

**INDIANA.** Area, 36,354 square miles, including water (but not the State's part of Lake Michigan), 309,000 square miles. Population, Apr. 1, 1940 (census), 3,427,796 (1,887,712 urban and 1,540,084 rural); 1930, 3,238,503. Indianapolis, the capital, had (1940) 386,972; Fort Wayne, 118,410; Gary, 111,719; South Bend, 101,268.

**Agriculture.** Indiana harvested, in 1940, 10,048,000 acres of the principal crops; all of this but about half a million acres was in five extensive crops—corn, wheat, hay, oats, and soy beans. Corn, on 3,937,000 acres, made 145,669,000 bu. (estimated value to the farmer, \$90,315,000). Wheat, on 1,546,000 acres, grew 30,147,000 bu. (\$21,706,000); tame hay, 2,171,000 acres, 2,828,000 tons (\$21,776,000);

oats, 1,110,000 acres, 49,950,000 bu. (\$15,484,000); soy beans, still a novel and rising feature of farming, 814,000 acres, 10,989,000 bu. (\$8,791,000). A sixth crop, potatoes, on 51,000 acres, yielded 4,335,000 bu. (\$3,425,000).

**Manufacturing.** Yearly production of manufactured goods in Indiana totaled \$2,227,667,013 for 1939; \$2,497,547,946 for 1937. Other totals for 1939 (each with that for 1937 subjoined): 4338 (3939) establishments employed 277,468 (313,342) persons for wages of \$345,474,473 (\$402,116,998), paid for materials, etc., and contract work \$1,257,438,203 (\$1,478,567,753), and added to material, by manufacture, a value of \$970,228,810 (\$1,018,980,193).

**Mineral Production.** Indiana's production of native minerals, for 1938 (as published by the U.S. Bureau of Mines in 1940), totaled \$47,892,364. Coal furnished half of this total; cement, stone, and clay products, most of the remainder. Outside of the total was the important production of coke, iron, and steel, not included among the native minerals. The output of coal was 18,565,000 tons for 1940, 16,650,000 for 1939, and 14,758,484 (value, \$23,968,000) for 1938. Indiana quarried 3,782,410 short tons of stone (value, \$6,486,996) in 1938. Much of this was a fine dimension stone, oolitic limestone, used mainly for building; the yearly value of the sales of such stone rose to \$4,127,310 for 1939, from \$2,605,983 for 1938. The output of clay products (exclusive of pottery and refractories) amounted to \$4,088,658 for 1938. Emulation of Illinois and Michigan, which were developing deposits of petroleum not far over the borders, inspired much drilling in Indiana; thus 176 wells began producing in 1939; they helped raise the small yield of petroleum (995,000 bbl for 1938) to 1,443,000 bbl. for 1939. In 1940 the output of petroleum amounted to 4,843,000 bbl.

Largely or wholly apart from industry in native minerals, Indiana's output of coke, pig iron, and open-hearth steel rose, for 1939, well above the low totals of 1938; coke, to 4,878,033 net tons, from 2,904,779, and by value to \$28,532,944, from \$18,278,201; pig iron, to 2,621,268 gross tons, from 2,023,269; open-hearth steel, to 5,791,520 gross tons, from 3,435,360.

**Education.** For the academic year 1939-40 enrollment of pupils in all public schools of Indiana numbered 671,364: this comprised 461,730 in elementary study, 194,910 in high schools and 14,724 other. The year's expenditure for public-school education totaled \$69,669,356. The teachers numbered 23,252; they averaged \$1293.69 yearly pay.

**History.** The Hoosier Democratic Club, an institution that had flourished since the days of Governor McNutt, was attacked in both Federal and State proceedings. As a successful means of marshaling State employees and others, to elicit from them contributions toward the campaigning expenses of State officers, the club—nicknamed the Two Percent Club—had attracted wide notice and some imitation elsewhere. The club's mission did not suit the popular sentiment behind the Federal Hatch Act; the State itself had a Corrupt Practices Act, which forbade, among other things, some proceedings resembling those of the club; but the Legislature had, in 1937, specifically exempted it. Glenn W. Funk, a Republican candidate in Marion County, started suit in April, under the State's act, to restrain the club from further activity, and he asked a declaratory judgment voiding the exception that the Legislature had made in its favor,

This suit brought no immediate result. But the Federal Treasury, holding that funds raised through the club in a series of years should have paid income taxes, investigated the accounts of the club's treasurers and called upon several unnamed leading Democrats to make good the failure to pay income taxes to the total of about \$250,000. It was reported on May 17, in the press, that these leaders had undertaken to pay. McNutt himself was said not to have been among those thus held liable.

A political group in the State supported the proposals of the Townsend old-age pension plan; this group, combined with the adherents of Governor Townsend, attempted at the State Democratic convention (June 27) to name its own candidate for Governor, but failed to prevent the nomination of Lieut. Gov. Henry F. Schricker. In Indianapolis were started prosecutions (similar to those that had produced convictions in 1939 in Kokomo) for conspiracy to divert the services of the WPA to the alleged conspirators' own purposes. In the course of a dispute among labor unions, the Indiana and Michigan Electric Company's lines of transmission were dynamited in nine places, near South Bend; the police were reported (February 7) to have got a confession from the suspected dynamiter. See PORTS AND HARBORS.

**Elections.** The popular vote for President, at the general election, November 5, gave Willkie (Rep.), a native of the State, a small plurality over Roosevelt (Dem.). The vote was: Willkie, 899,466; Roosevelt, 874,063.

For United States Senator, Raymond E. Willis (Rep.), defeated for the same office in 1938, was elected over Sherman Minton, the Democratic incumbent, by 888,070 to 864,803. For Governor, Henry F. Schricker (Dem.) defeated Glen R. Hillis (Rep.), by 889,620 to 885,657.

The State Election Board excluded from the ballot the Communist and Greenback candidates.

**Officers.** Indiana's chief officers, serving in 1940, were: Governor, M. Clifford Townsend (Dem.); Lieutenant Governor, Henry F. Schricker; Secretary of State, James M. Tucker; Auditor, Frank G. Thompson; Treasurer, Joseph M. Robertson; Attorney General, Omer Stokes Jackson (died) and Samuel D. Jackson (successor); Superintendent of Public Instruction, Floyd I. McMurray.

**INDIAN AFFAIRS, Office of.** The Office of Indian Affairs (created in 1824) is the agency of the Federal Government which administers matters relating to Indians. It has jurisdiction over 361,816 Indians in continental United States and 32,000 Indians, Eskimos, and Aleuts in the Territory of Alaska. The Federal Government does not provide pensions for Indians as is widely believed, but it does provide certain welfare services and exercises certain supervision over their resources.

These services originated as protection for the white man, and constituted partial compensation to the Indian for land cessions. They have continued because of the special relationship of the Indian to the Federal Government, and the consequent unwillingness of local governments to provide essential public services. The Constitution of the United States gives to the Congress the power to regulate "commerce . . . with the Indian tribes," and the authority to raise and spend money "for the general welfare." In addition it vests in the President and the Senate the power to make treaties and in the Congress the power to implement such treaties by legislation and appropriations. It

is principally from these sources and from numerous court decisions based upon them that the peculiar relationship of the Federal Government to the Indians has arisen. Subject to certain exceptions Indians are considered wards of the Federal Government and it exercises extensive powers over matters affecting their welfare.

Until 1871 the United States treated the Indian tribes as sovereign but dependent nations and dealt with them through treaties. These treaties were negotiated primarily to protect the white man and to secure land for him from the Indians. The United States generally offered money and usually promised to provide education and health facilities, and other services. The money—of little use to the Indians—was placed in trust for them in the Treasury of the United States, and expended for their welfare. As these funds became depleted Congress began to appropriate funds gratuitously with which to continue the welfare services already begun. For the fiscal year 1940 these gratuity appropriations amounted to \$34,755,777 and were designated for education, health, agricultural extension work, the construction and operation of irrigation facilities, forestry and grazing, land purchases, organization of tribal self-government, and similar services.

Livestock farming is perhaps the major occupation of Indians. Here the co-operative movement—nothing new to Indian tribes—is making rapid headway. On Jan. 1, 1940, there were 150 Indian livestock associations. Forestry is another major occupation of Indians. In the northwest states, in portions of Arizona and New Mexico, and in Minnesota and Wisconsin, Indians own and operate large stands of commercial timber. Other Indians are farmers. The Pimas in southern Arizona were doing irrigated farming when the Spaniards first found them. Others, especially in the Northwest and in Alaska, derive their livelihood from fishing. There are several co-operative salmon canneries among the Indians in Alaskan communities.

Sickness and disease are still major problems among the Indians, especially tuberculosis, trachoma, and children's diseases. The Federal Government provides hospitals, and field nursing services to Indians under its jurisdiction. An outstanding piece of medical research in trachoma has recently been completed on the Ft. Apache Reservation in Arizona with the discovery that trachoma is definitely caused by a filterable virus. Sulfanilamide treatment is producing amazing results, lending hope that in the near future the Indians may be rid of this dread disease which for years has produced blindness and even death among them in many sections of the country.

Through the Indian Arts and Crafts Board, created by statute within the Indian Service, native arts are being more fully developed. Through co-operative arrangements with the Department of Agriculture, through the Indian branch of the CCC, and through tribal organizations, the conservation of natural resources, particularly of soil, water, and forests is being encouraged in all Indian areas.

Indians are citizens of the United States, but are not, as a rule, subject to the jurisdiction of the states in which they live. Lands held in trust for them by the United States are not subject to state and local taxation. For this reason states do not usually provide essential public services for Indians. In many instances the Federal Government secures these services from the states or local units of government by paying their costs. Consequently

more than half of all Indian children attend local public schools, their tuition being paid by the Federal Government. In areas where there are only Indians it is usually necessary for the Federal Government itself to provide these services.

The Indian population is increasing at a more rapid rate than the general population, and in many areas is tending toward racial purity rather than intermarriage.

**INSURANCE. General.** No legitimate complaint regarding the treatment accorded the insurance industry during 1940 was heard in underwriting circles, nor indeed was there justification for criticism, for companies in each of the major divisions of the business—life, fire, casualty, and marine—reported increases in the amount of new writings, of indemnity in force, in total assets, and in net surplus accounts.

Despite the decrease in the market value of certain securities carried in their portfolios, a number of the fire companies, because of favorable loss records upon their writings, were able to declare extra dividends and at the same time set aside contingency reserves to take care of possible future security declines or excessive loss claims. While managing underwriters continued to speculate upon the possibility of regulation of the insurance industry by the Federal government, no definite move to that end emanated from Washington. The supervision of insurance interests by the States was never more efficient than at present and company officials would regret any change from the existing status.

A decision of great importance to the fire and casualty fraternity was that rendered by the United States Supreme Court in April, upholding the constitutionality of the Virginia law requiring that 50 per cent of the commission allowed upon business in the State, whether written by outside brokers or agents, be paid agents domiciled in the

commonwealth for countersigning policies. Even more drastic legislation was enacted in Montana, requiring as it does that local agents of the State receive full commission upon risks located in Montana regardless of where the business was written. The passage of these laws and the likelihood that similar statutes would be advocated in other States caused lively concern to company officials and to many agents as well, and resulted in a series of conferences between the two interests in an effort to agree upon a uniform resident-agency law that would protect business producers and at the same time not add to the operating costs of the carriers. Discussions as to rates of commissions upon contract and various classes of fidelity and surety bonds have been under review by managers and general agents for some time, and while a program has not yet been worked out distinct progress has been attained justifying the prediction that a graduated scale of compensation will be reached in the near future. The contention of the agents is that through the reduction in rates upon many forms of indemnity effected in recent years—a practice that continues—their incomes have steadily declined. The counter of company officials is that by virtue of rate reductions and broadening of coverages the agents can offer more attractive indemnity to clients and prospective assureds, and hence are able to earn a greater dollar return.

**War-Time Reorganizations.** As is true in most other lines of endeavor the European war has had a direct effect upon the insurance industry here, and the further development of events both in this country and abroad will be closely followed by American underwriters. As soon as the low countries of Europe were invaded by Germany, and later when Italy entered the war, the assets of such insurance companies of the conquered nations as were operating in the United States, were "frozen" under direction of the Washington authorities. To preserve their business in this country several Scandinavian companies transacting fire reinsurance, reorganized their United States branches as domestic corporations. Other companies arranged to the same end, securing New York charters prepared to transfer from the European headquarters to these shores promptly should such procedure be deemed desirable. The large percentage of foreign institutions operating in this country, however, are British, and these, so far as their business here is concerned, are practically domestic corporations; each having deposit capital and complying with regulations even more rigorous in some respects than those applicable to home organizations. While it is inconceivable that any of the British companies would want to deplete their American funds by remitting to home offices at this time, those operating in New York would be barred from sending in excess of \$50,000 from free funds during any quarter under the laws of the State. No question as to the financial strength of any of the British corporations represented here has been raised, and the insurance department of the Empire State, as well as that of several other States, has assured property-owners of that fact.

**National Defense Operations.** The associations of life, fire, casualty, surety, and marine companies have each assured the Federal government of their complete sympathy with and willingness to co-operate to the utmost in making the National defense plan effective. The National Board of Fire Underwriters, at its annual meeting in May, tendered the full service of its engineering staff to

assist in designing fire protection facilities for cantonments, war and navy construction plants, and in such other direction as might be required. Engineers of the National Board were in Washington by the close of the year working in close conjunction with Army and Navy officers. At the same time field men of the fire companies were checking with unusual care potential fire hazards in manufacturing plants, particularly those engaged in war contracts, while safety engineers of the casualty companies were performing similar service in checking the operations of machines, and in recommending use of the most efficient safety devices.

**Marine.** Naturally the first impact of the European war felt by insurance interests here concerned the marine companies. Profiting by the lessons learned during the World War marine underwriters promptly devised an effective plan for meeting the unusual calls certain to be made upon them, and at their weekly and oftentimes daily conferences, altered the original program to conform to constantly changing situations. To facilitate handling business the underwriters formed the American Cargo Marine Reinsurance Clearing House in June, through which a distribution of risks is effected. The Clearing House would also supply an avenue for excess cargo reinsurance, should demand therefor develop.

With the extension of the war area the considerable volume of cargo insurance once placed with American companies was largely lost, while shipments to Britain in the main consisted of war material, coverage of which is carried by the government of that country. This loss of business was offset in large part, however, through the increased demand for indemnity on cargo shipments to South American countries. The increase in the number of vessels lost through submarine attacks, induced the entry of many ships of an obsolete type into service, which in their journeys are often forced to leave direct and charted lanes in order to avoid danger zones, thereby prolonging the length of voyages and increasing the general marine hazard. The heavy demand for shipping facilities resulted in a substantial increase in the cost of vessel repairs, which are estimated at from 5 to 10 per cent greater than figures ruling in peace times. As an offset, the marine-writing companies have profited through the heavy calls for additional insurance and from increased values of cargoes.

Although Congress enacted the so-called Bland bill, authorizing the Maritime Commission to set up an insurance bureau for insuring or reinsuring war risks on American hulls and cargoes in the event sufficient coverage could not be secured in home companies, no call has yet been made for Government aid, for the facilities of the private companies have proved adequate to meet every demand upon them.

A gratifying gain in premiums was had from inland marine insurance during 1940, and was accompanied by a satisfactory loss ratio. The major claim under an inland marine cover was caused through the collapse of the Tacoma Narrows Bridge on November 7. The loss to underwriters will probably be determined only after extended litigation, but it will doubtless run well into the millions of dollars, and go upon record as being the worst bridge loss ever suffered by insurance companies.

A heavy and unusual loss sustained under inland marine policies was the death of thousands of turkeys upon mid-western farms as the result of the

wind and snow storm that swept the territory on November 11. When all claims are in, it is expected the interested companies will pay close to \$2,000,000 on this account.

**Fire.** Partly because of increased demand for war coverage of various forms, but mainly due to increased writings in their automobile and inland marine departments, the fire companies were enabled to offset the loss in income caused by numerous rate reductions on properties, and at the same time score an over-all increase in premiums for 1940, estimated to be 6 per cent greater than the returns of 1939, which totaled \$1,019,715,911 for all types of carriers—stock, mutual, reciprocal, and Lloyds. Fire losses during 1940 totaled \$306,469,520 (\$313,498,840 in 1939), according to the tabulation of the National Board of Fire Underwriters. (See FIRE PROTECTION.)

The arrangement entered into by the Stock Company Association with the Home Owners Loan Corporation (q. v.), under which properties the latter are compelled to take over, granted insurance at a 25 per cent reduction in rate, failed to meet the sanction of several State insurance departments—including New York—which prohibited operation of the plan within their respective borders, on the broad theory that it was discriminatory. The allegation of the parties to the arrangement was that it effected a marked saving in accounting practice by the insurance offices, and at the same time guaranteed the prompt and full payment of all earned premiums. The merits and shortcomings of the proposition have been debated by the insurance commissioners of the country. The contract now in force will expire early in February, 1941. Losses on HOLC business from 1935 to June, 1940, inclusive, totaled \$21,000,000, of which \$17,000,000 represented fire losses and \$4,000,000 was due to wind or hail. The potential premiums on the business approximate \$6,000,000 annually.

Anticipating a demand for bombardment insurance might develop in the United States, fire companies prepared a policy of such character and listed rates at which the indemnity would be issued. However, the interest of property-owners is confined thus far to inquiring whether, if called for, protection of such character was available, and what its cost would be. Company executives, familiar with the frightful damage wrought through bombing activities in Britain and in Continental Europe, have guardedly consented to write the business in order to meet a supposed need.

As a direct result of the National war preparedness program of the government, goods ordinarily turned out by industrial plants are being shunted aside altogether, or produced in limited quantities and after extended delay. This condition has had a disturbing effect upon the writing of use and occupancy insurance, or as it is often called "business interruption insurance." Indemnity of this character assumes liability for loss suffered by an assured while waiting for the replacement of building and machinery in plants destroyed by fire, and obviously the longer the delay in securing new equipment the greater the loss to the insurance companies. So threatening has the situation become that the companies are now limiting closely the liability assumed upon any one risk, and may be forced to increase the rates, unless there is early improvement in conditions. Another notable development in the fire field was the creation by several of the leading companies of service offices at strategic centers in various parts of the country, the

purpose being to supply the needs of agents and assureds more promptly and efficiently, particularly as to risks calling for peculiar types of coverage with which local representatives as a rule are not fully informed.

In point of premium income that had by the fire companies from their automobile business is second only to that derived from the long established straight fire lines, and if the rate of increase of the past few years continues it will not be long before the automobile division will surpass as to premium volume that of any other risk classification. In 1939 the total premiums from automobile business aggregated \$644,313,000; greater by \$48,141,110 than the figures of the preceding year. That the record of 1939 was attained in 1940 is generally agreed, though the exact amount had not been determined at the close of the year. The loss record under the fire and theft features of the automobile policy again proved satisfactory, but losses resulting from collision still proved excessive, despite the increased income derived from the coverage and the general application of the deductible clause, under which assured in consideration of a reduction in rate assumes liability for losses up to a stipulated amount. The comprehensive type of policy, adopted by the fire companies some three years ago and which greatly broadens the coverage, has proven highly popular with motorists, and now constitutes at least 85 per cent of the total indemnity written.

How to handle insurance placed by institutions financing the purchase of motor cars, has long been a troublesome problem for underwriters, and while efforts to outline a program that would solve the question were put forth several times during 1940, all proved futile. Meantime, as a counter to the move of the underwriters, several large financing corporations launched insurance companies of their own through which indemnity is furnished upon automobiles in which they have a mortgagee interest. Banks in different cities, too, were active in loaning funds with which to purchase cars, working in such connection with local insurance agents who place the indemnity.

**Casualty.** A rough calculation of the income derived in 1940 from the major casualty lines in workmen's compensation and public liability shows that it will be not far from \$350,000,000, which will be a two point gain over the aggregate of the previous year. In both of these divisions rate reductions were applied, and the conditions of the liability policies were materially broadened, embracing under a single contract forms of protection either not previously granted at all or written under separate instruments. Rates for workmen's compensation insurance are predicated upon the loss experience of each particular State, and, of course, upon the awards provided injured workers or their beneficiaries under their respective statutes.

That the loss experience for the year 1940, taken as a whole, has been rather favorable is evidenced from the downward trend of rates. This policy naturally has worked against any marked gain in premium income by the carriers. Some increase will result from the present activity of industry engaged in turning out war material, but insurance companies will not profit through increased premiums before 1941. A new method of rate-making for compensation risks, determined upon early in 1940, more accurately measures the loss experience of individual risks, and has found considerable

favor with plants carrying large amounts of indemnity. As Arkansas enacted a compensation law in November, Mississippi alone, of all States of the United States is now without any such legislation.

Despite aggressive solicitation and the broadening of policy coverages, it yet remains true that but 35 per cent of the motor cars of the United States carry personal liability or property damage insurance, probably because many motorists feel they cannot afford to pay the premiums demanded for the coverage. If the volume of business written were increased and the loss percentage kept within bounds, insurance companies would be able to reduce their rates, a process that would continue steadily as the aggregate insurance in force was increased. To meet the non-insured situation a compulsory automobile liability measure was introduced in the New York legislature patterned after the law in force in Massachusetts for the past 10 years, though eliminating certain provisions in the Bay State statute that have proved to be highly objectionable.

A marked increase in the amount of fidelity coverage was scored by virtually all companies, and with satisfactory profit. The great demand for indemnity, so far as surety offices were concerned, was for bonds covering projects of varied types ordered by the Federal Government as part of its defense program. Corporations given contracts for the building of naval and freight vessels and airplanes, especially, were required to furnish completion bonds, and these aggregated enormous amounts. Although rates for the indemnity were fixed at low figures as a patriotic move on the part of underwriters, the premiums still totaled large figures.

Healthy income gains were made in the personal accident and health line, and the same holds as to machinery and steam boiler indemnity; the material gain in the latter division, however, was due to the renewal of three-year business originally issued in 1937.

**Life Insurance.** Developments in the life field included steady progress in the amount of insurance in force, which gained \$3,500,000,000 to reach a year-end total of \$117,500,000,000, or an average of about \$4000 per family. Payments to policyholders and beneficiaries totaled close to \$2,700,000,000, an increase of \$59,000,000 over 1939 and 16 times the amount disbursed in 1900. Policy loans, which reached new peaks during the depression period, stood at \$2,767,000,000 at the close of 1940, a drop of \$131,000,000 for the year. Continued low interest kept dividends down. Because of the interest decline a number of companies raised their annuity rates and still others are expected to follow suit early in 1941. Mortality and expenses, the other factors affecting dividends, were highly favorable. With a view to protecting policyholders from heavy mortality resulting from the unduly large purchases of insurance by men called to military service, plans were studied for excluding the death benefit from policies issued in future to those enrolled for active military duty.

**INTER-AMERICAN BANK.** See **FINANCIAL REVIEW** under *Latin America*; **INTERNATIONAL BANKING**; **PAN AMERICANISM**.

**INTER-AMERICAN UNION OF THE CARIBBEAN.** An organization composed of representatives of governments and cultural organizations of countries and possessions bordering on the Caribbean Sea, with headquarters at Havana, Cuba. It was organized for the purpose of convening meetings "to further closer relations and to contribute toward the development of cultural as well as economic and tourist relations among the nations in this portion of the New World."

The Second Conference of the Caribbean was held at Ciudad Trujillo, Dominican Republic, May 31-June 6, 1940, with official representatives of the United States and most of the other republics of that area in attendance. The conference was devoted mainly to discussion of subjects of a cultural and economic nature listed on the agenda. However political issues were raised before a special committee formed to consider matters not included in the agenda. The head of the Cuban delegation, Secretary of State Miguel Angel Campa, introduced a motion calling for the independence of all the colonies of European powers in this hemisphere and administration of those unable to maintain their independence under a joint mandate of the 21 American republics. The motion provided that the matter be brought before the American Foreign Ministers when they met in Havana in July. It was approved by the committee, with the United States and several other delegations abstaining from voting on the ground that they were not authorized to consider political issues. The same committee approved a resolution for the restriction to citizens of the American republics of control and operation of all airlines in the hemisphere.

**INTERNATIONAL BANKING AND FINANCE.** The nations of the world found it necessary to adjust their monetary and financial systems to wartime conditions during 1940. The totalitarian countries, which had previously established comprehensive government control systems, needed few further adjustments. The European countries occupied by Germany, no longer concerned with their own armaments, nevertheless had to defray the heavy costs of military occupation, largely through the issuance of paper money by their central banks. Public finance in the occupied countries was disrupted through the difficulty of collecting taxes under the abnormal conditions prevailing. This was particularly true in the case of France, which was divided into occupied and unoccupied portions with separate government authorities in each, and virtually no intercourse between them.

Great Britain adopted a very drastic system of foreign exchange control which went far beyond

the relatively mild restrictions imposed at the outbreak of the war. When the conflict began, provision was made for separate official and free sterling markets. So long as the conflict was in its initial relatively inactive stages, the quotation of free sterling was not much different from the official rate. Early in 1940, it was quoted above \$3.96. With the collapse of France, however, free sterling broke severely, declining below \$3.20 at the beginning of June. On June 7, a new series of regulations went into effect greatly limiting the use to which free sterling balances could be put, while sharply contracting the sources of free exchange by limiting severely transfers of such balances owned abroad. The free sterling rate rebounded, and by September the difference in quotation between official sterling of \$4.03½, and free sterling was only nominal, although transactions in the latter were few.

By the end of the year, Great Britain was carrying on her financial relations with the rest of the world on three different bases. With the sterling area, settlements were made with sterling deposits in London or resales of securities held by British investors. A system of bilateral exchange agreements on an official sterling basis was effected with nearly all other countries with which the British Empire maintained trade relations. Only in the case of the United States and Switzerland were payments made in the currencies of these countries. In effect, this meant that gold and dollar resources still held by Great Britain were freed almost entirely for making payments in the United States. As a result of the heavy purchases completed in America during the year and advance payments on contracts calling for future deliveries, the gold reserves of Great Britain were largely exhausted by the end of 1940, and a substantial part of American security holdings and dollar balances had been liquidated. British Empire countries, particularly Canada and South Africa, still held substantial gold and liquid balances of their own, however.

The extent to which the United Kingdom's liquid resources were depleted during the year is shown by the following table, in millions of dollars, which was released in Washington shortly after the turn of the year by Secretary of the Treasury Morgenthau:

**GOLD AND DOLLAR EXCHANGE ASSETS OF THE UNITED KINGDOM (000,000 OMITTED)**

Type of assets	Aug 31, 1939	Dec 31, 1940
Gold	\$2,038	\$ 292
Official dollar balances	50	54
Private dollar balances	545	305
Marketable United States securities	950	616
Direct and miscellaneous investments in United States	900	900
Total gold and dollar exchange assets	\$1,483	\$2,167

The United States received the largest volume of gold imports that any country has yet reported in one year, as a result of enormous shifts of yellow metal to this country to pay for armaments and for safekeeping. Foreign exchange transactions in the United States were in greatly reduced volume, however, for trading was suspended in currencies of European countries occupied by Germany as a result of the Treasury's orders to freeze assets in this country of Norway, Denmark, Belgium, Luxemburg, the Netherlands, France, Latvia, Estonia, Lithuania, and Rumania, and their nationals. Transactions in the pound sterling, while effected freely by American banks, were mostly at

the official rate, the domestic institutions acting merely as agents of the Bank of England in the transactions. The quotation of the yen was little changed through the year, because of the severe foreign exchange restrictions in effect. Approximately \$100,000,000 of gold was shipped by Japan to this country.

Changes in major foreign exchange rates during 1940 were as follows:

## FOREIGN EXCHANGE RATES, 1940

[Average of noon buying rates for cable transfers in New York. In cents per unit of foreign currency]

**Latin America.** Latin American countries were confronted with peculiar monetary problems of their own because of the loss of European markets for their products and the tendency of British Empire countries to curtail purchases there to conserve exchange for war implements bought in the United States. Apart from limited aid obtained from the Export-Import Bank (q.v.) and the Exchange Stabilization Fund in the United States, and special sales of commodities for stock piles to subsidiaries of the RFC (q.v.) and the War Department, interest centered in the completion of negotiations for the establishment of an Inter-Ameri-

**Central Banking Policies.** Central banking activity in the normal sense was virtually suspended all over the world because of the very abnormal economic conditions created by the war. The relatively mild financial controls provided by central banks were universally regarded as altogether inadequate to solve the problems produced by the conflict, and far more drastic measures, especially price fixing and direct production controls, were resorted to in greater or lesser degree by nearly all governments. Because of these direct controls, there was less concern about the expansion of currency in circulation and the inflation of bank de-

posits reported by most countries. In Germany, the rise in currency circulation was less marked than in the year before, outstanding Reichsbank notes increasing from 11,798,000,000 reichsmarks on Dec. 30, 1939, to 13,198,000,000 reichsmarks on Nov. 30, 1940. The fact that countries harboring German armies of occupation were made to finance their cost helped to reduce the financial burden of financing the war to the Reich government to some extent.

The Reichsbank reduced its rediscount rate from 4 to 3½ per cent on April 9. The only other important changes in discount rates of leading central banks during the year was a reduction by the National Bank of Belgium from 2½ to 2 per cent early in January and a rise in the Swedish central bank rate from 3 to 3½ per cent on May 17. The paucity of central bank rate changes emphasizes the minor role played by central bank policy under wartime conditions.

JULES I. BOGEN.

**INTERNATIONAL LABOR ORGANIZATION.** A permanent diplomatic and administrative association, having in its membership more than 40 nations of the world, including the United States. Its objective is the improvement of labor conditions. Its machinery consists of an annual *Conference* of representatives of the member nations, and an *International Labor Office* controlled by a *Governing Body*, the latter consisting of 32 persons, 16 of whom represent the governments, 8 the employers, and 8 the workers, meeting quarterly.

The annual Conferences draw up draft conventions and recommendations affecting industrial conditions which are presented to the competent authorities in each member nation for ratification or adoption. Up to July, 1940, the Conference had adopted 67 Draft Conventions, and 874 ratifications had been registered. The International Labor Office, which is situated at Geneva, Switzerland, acts as a secretariat for the annual Conference and as a research agency for the collection and dissemination of information bearing on the problems of labor and industry throughout the world.

The International Labor Organization maintains offices in various member countries to provide contact with social, labor, and industrial trends. At the present time there are branch offices in Washington, D C, London, Shanghai, Paris, and New Delhi. In November, 1940, a new office was opened in Montreal, Canada, through the co-operation of the Canadian Government and on the invitation of McGill University to provide service for the member countries in the Western Hemisphere during the European conflict.

In June, 1940, President Roosevelt submitted to Congress the Draft Conventions adopted by the International Labor Conference in 1939. These relate to the protection of native laborers in the matter of contracts of employment; arrangements for the eventual abolition of penal sanctions for breaches of contract of employment by indigenous laborers; the protection of migratory workers with respect to recruiting, placing, and conditions of labor; and regulation of hours of work and rest periods in road transport. The last mentioned Convention establishes a basic 8-hour day and 48-hour week for persons employed in commercial motor transport.

From July, 1939, to July, 1940, member countries registered 22 ratifications of I.L.O. Conven-

tions. In the United States two bills were introduced in Congress in 1940 to implement the I.L.O. Conventions on Minimum Age at Sea and Ship-owners' Liability for Sick and Injured Seamen. These were among the five Maritime Conventions ratified by the United States in 1938. Legislation to implement the Convention on Officers' Certificates of Competency was enacted by Congress in 1939.

Since the United States joined the International Labor Organization, full tri-partite delegations—representing government, employers, and workers—have been sent to every I.L.O. Conference. The International Labor Organization joined with the Peruvian Government in holding an Inter-American Conference on Social Security in Lima, Peru, in early December, 1940. The occasion was the dedication by the President of Peru of the largest hospital for workers in South America.

A citizen of the United States, Hon. John G. Winant, was elected Director of the International Labor Organization in 1938, taking office in January, 1939. Three other United States' citizens are at the present time on the Governing Body:—Hon. Carter Goodrich, United States Government representative, Chairman; Henry I. Harriman and Robert J. Watt, elected by the employer and worker delegates respectively. Director of the Washington Office is Ethel M. Johnson, 734 Jackson Place, Washington, D C.

**INTERNATIONAL LAW. Literature.** *Books:* "The Int. Law of John Marshall" (1939, pp. XIV, 386) by B. M. Ziegler; reviewed, 34 *Am Jnl. of Int. Law*, 542; "Making Int. Law Work," (London, 1939; pp. 214) by Keeton & Schwarzenberger; *La Notion de l'Abus du Droit dans le Droit International* (Paris, 1940; pp. VI, 188), Trifu Selea. From Moscow on May 15, came the announcement of a work by F. Koshevnikoff which is expected to provide the first chapter of a text book on International Law from the standpoint of the Soviet Union.

*Current Articles:* "The Reality of International Law," 18 *Foreign Affairs*, 244 (P. C. Jessup), "In Support of Int. Law," 34 *Am Jnl Int Law*, 505 (*id*); "Changing Conceptions of," *ib* 503 (P. M. Brown); "The Needs of," *ib* 699; "Positivism, Functionalism and Int.-Law," *ib* 260 (H. J. Morgenthau); "Status of the British Commonwealth in Int. Law," 3 *U of Toronto L Jnl* 348 (P. E. Corbett).

**Radio Conferences.** The Third South American Radio Conference, with representatives from 10 countries, met at Santiago, Chile, January 13-17, and adopted resolutions to modernize broadcasting, secure protection of authors through uniform practices, and for short wave news transmission. It was followed by the Second Inter-American Radio Conference on January 18-27, representing all independent, western hemisphere nations. Subjects included: Allocation of radio frequencies and need of additional ones for aeronautical services; uniform time and signals; short-wave broadcasting; frequency tolerances; suppression of non-essential radio; freedom of radio communications; aviation aids, and international radio police services for law enforcement (See also PAN-AMERICAN UNION.)

**Nationality.** Dr. Albert Einstein, famous German scientist, renounced his former nationality and took the oath of allegiance as an American citizen in the Federal Court at Trenton, N.J., on October 1. By the U.S. Act of Congress of June

28, all resident aliens were required to be registered and fingerprinted. A total of over 4,900,000 responded.

Orfield); "Minimum Standard of the Treatment of Aliens," *ibid.* 445 (E. M. Borchard); "Constitutionality of State Legislation Affecting Aliens," 17 *N.Y.U.L. Quar.* 242 (P. Weiden).

**Territory.** Since the outbreak of the second World War more European territory has changed masters than during any like period since Napoleon's ascendancy. (See *EUROPEAN WAR*.) Territorial integrity seems to have been repudiated by the totalitarian states, nor did their aggressions affect Europe only. Because of the extensive colonies held by Britain, France, and Netherlands in the western hemisphere, the independent powers there feared that the invaders might extend their activities by claiming the colonies. To avert such changes was the chief purpose of the Second American Foreign Ministers' Meeting which provided for "a regime of provisional administration" of such colonies, pending their acquisition of independence or return to their former status.

**Antarctica.** Admiral Byrd's report of finding 900 miles of Antarctic coast, previously uncharted, following Ellsworth's air survey of 81,000 square miles, caused the lower South American states to assert claims to this latest of the continents to be explored. Chile has filed a demand for all of it between 53° and 90° W longitude, and has entered into an agreement with Argentina as regards other portions. But the United States claim harks back to Lieutenant Wilkes who, nearly a century ago, explored the region as far as 45° W longitude. See *POLAR EXPLORATIONS*.

**Boundaries.** The truce agreement between Honduras and Nicaragua in their boundary dispute (1939 *YEAR BOOK*, 372) expired early in the year and the conciliation commission which arranged it was not reconvened, but each power had signed a non-aggression pact and friendly relations have continued. "International Boundaries: Functions and Problems" afforded the subject of a work by S. W. Boggs (1940, pp. XVII, 272).

**Waters.** "The Hemisphere Zone of Security and the Law," 26 *A.B.A. Jnl.* 860 (W. S. Master-son); "Marginal Seas Around the States," 2 *La. L. Rev.*, 252 (G. Ireland). The opinion, replete with citations, in *People v. Stralla*, 98 Cal. 440, 34 *Am. Jnl. Int. Law*, 143, recognizes Santa Monica Bay as a "harbor," subject to State police jurisdiction.

**Extraterritoriality.** The face-saving "treaty" of December between Japan and its puppet President, Wang-Ching-wei, provides for the abolition of extraterritoriality in China, which would mean merely the substitution of Japanese judges in the courts for Chinese and Whites.

See the general subject discussed in 51 *Jurid. Rev.* 303 (T. Baty). Cf. "Extraterritorial Validity of *Ex Parte* Divorces," 28 *Ky. L. Jnl.* 247 (E. Rosenbaum); "Extraterritorial Application of Workmen's Compensation Acts," 26 *Va. L. Rev.*, 95; "Extraterritorial Effect of Foreign Decrees and Seizures," 88 *U. of Pa. L. Rev.*, 983; "Application of the Anti-Trust Laws to Extraterritorial Conspiracies," 49 *Yale L. J.*, 12 (R. T. Molloy).

**Treaties. General.** See Vitta, *La Validité des Traités Internationaux*, (Leiden, 1940; pp. X, 247); *Les Clauses de Révision dans les Traités internationaux multilatéraux*, de Papres Guerre, 20 *Revue de Droit International et de Législation*

Jnl.*, 184 (Feidler & Duran); "Retroactive Effect of Ratification," 34 *Am. Jnl. of Int. Law*, 51 (J. M. Jones).

**Commercial Pacts.** January 5, United States-Canada (supplementary); United States-Chile (provisional), January 8, Anglo-French-Turkish, January 17, Spanish-Bulgarian, January 18, Spanish-French; January 23, Brazil-Argentina; January 31, France-Greece, February 3, Britain-Turkey, February 21, Yugoslavia-Slovakia (renewal), February 23, France-Hungary; February 12, Germany-Soviet Russia; February 15, Britain-France, March 1, France-Belgium, Britain-Belgium, March 18, Britain-Spain, March 20, Italy-Rumania; March 25, Soviet Russia-Iran, April 2, Britain-Denmark; April 10, Hungary-Yugoslavia, April 20-24, Germany-Rumania; April 26, France-Switzerland; May 4, Japan-Uruguay, May 26, Soviet Russia-Yugoslavia, June 6, Britain-Rumania; June 8, Germany-Greece, June 13, Germany-Turkey, June 20, Britain-Brazil, June 21, Italy-Japan (Manchukuo), June 28, Soviet Russia-Finland, July 20, Germany-Hungary; October 6, Argentina-Brazil ("the most important commercial accord in South American history"), October 11, Italy-Finland.

**Reciprocity pacts** with twenty countries had been concluded by the United States, when, on April 12, the act authorizing them was extended for another three years. The list (See 1939 *YEAR BOOK*, p. 763) includes twelve Latin-American states and negotiations have been in progress with Argentina (which sent a trade delegation to Washington in November), Chile, and others; but the Second World War has seriously retarded the movement's progress and on July 11, the State Department transferred to the newly created "Division of Commercial Treaties and Agreements," the functions of the former "Division of Trade Agreements."

**United States-Dominican Republic.** In September, President Roosevelt announced the termination of the Dominican receivership by which, since 1905, the former had supervised the collection of the latter's revenues, reserving 55 per cent for the payment of certain Dominican bonds. Holders of the latter now complain that their security has been impaired.

**Non-Aggression Pacts** to the extent of nine have now been ratified by most of the American nations. See 34 *Am. Jnl. Int. Law* 279 n. 3. Stuyt, "Survey of International Arbitrations," 1794-1938 (The Hague, 1939; pp. 12, 479; reviewed *ibid.* 554, where the author's 409 arbitrations are contrasted with the 540 of Darby's, "Modern Pacific Settlements," the difference being due to the lack of documents for the latter); Wambaugh, "The Saar Plebiscite," (1940; pp. xvi, 489). On February 13, Japan denounced its arbitration and conciliation treaty of 1933 with Netherlands Yugoslavia and Hungary signed a "perpetual friendship" pact on December 12.

**War.** The Japanese invasion of China, now nearing the end of its fourth year, began without a declaration of war, and the invader, for reasons of technical advantage, has never acknowledged that "war" between Japan and China existed. In a case before the British Court of Appeal, the umpire's finding that operations constituting war were in progress was upheld *Kawasaki Kisen Kabushiki v. Bantam S.S. Co.*, 55 *L. Times Rep.* 503, 34 *Am. Jnl. of Int. Law*, 533; discussed in 26 *Va. L. Rev.* 226. See Willoughby, "Japan's Case Examined" (1940; pp. x, 237); "The Enemy Problem in the present War," 34 *Am. Jnl. of Int. Law*, 443 (R. M. W. Kempner).

**Neutrality.** "Its Present Status," 34 *Am. Jnl.*

*Int. Law*, 391 (Q. Wright); "Scandinavia: The Background for" (1940; pp. 358 & index; A. L. Olson; reviewed *ib.* 537); "Neo-Neutrality" (*Columbia Univ. Press*, 1939, G. Cohn, chiefly valuable as a book of reference, 34 *Ill. L. Rev.* 372); "American Neutrality: Trial and Failure" (1940; pp. xiv, 190; C. G. Fenwick); "The 300 Mile Neutral Belt," 26 *A.B.A. Jnl.* 237 (P. S. Wild); "The Arms Embargo Repeal," 28 *Ky. L. Jnl.*, 210 (A. Vandenbosch); see also 25 *L. Quar.* 255 (H. R. Wellman); 28 *Georgetown L. Jnl.*, 82 (W. J. Deem).

**Private.** See Raape, *Deutsches Internationales Privatrecht* (Berlin, 1938; vol. ii, pp. 141-397), reviewed 34 *Am. Jnl. Int. Law*, 186 where the author is termed "the leading writer on the Conflict of Laws still remaining in Germany"; Cock, *Tratado de Derecho Internacional Privado* (2d ed., 1940, pp. 275).

**Assimilation (Conflict) of Laws.** "Public Policy and the Conflict of Laws," 49 *Yale L. Jnl.*, 1027 (A. Nussbaum); "India, Burma and Far-eastern Cases on the Conflict of Laws," 1935-39, 22 *Jnl. Comparative Legislation, etc.*, 53-73 (S. V. Fitzgerald); "El Principio Rebus sic Stantibus como Causa de Extinción de las Obligaciones Internacionales Contractuales," 36 *Revista de Derecho Internacional*, 117 (A. P. Mendez).

**Contracts:** 53 *Harv. L. Rev.*, 792 (P. W. Thayer); 28 *Georgetown L. Jnl.*, 447 (Schmittthoff), 18 *Canadian Bar Rev.*, 77 (J. D. Falconridge; Bills of Lading).

**Property:** 28 *Georgetown L. Jnl.* 739 (A. H. Robertson).

**Succession** in Guatemala, 3 *Revista de la Facultad de Ciencias Jurídicas y Sociales de Guatemala*, 20 (M. C. Fiallos).

**Tort** on the high seas, 18 *Canadian Bar Rev.*, 308 (J. D. Falconbridge).

**Enforcement.** "Jurisdiction to Determine Property Rights of Foreign Government," *Lamont v. Ins. Co.*, 281 N.Y. 362, discussed in 25 *Cornell L. Quar.* 459; 14 *St. John's L. Rev.*, 419; 26 *Va. L. Rev.* 824; "Foreign Corporations and Venue in the Federal Courts," 38 *Mich. L. Rev.* 1047 (T. R. Vogt); "Procuring Evidence Abroad," 14 *Tulane L. Rev.* 29 (T. Helpern).

**Property.** The Cardenas policy of seizing alien property in Mexico (1939 *YEAR BOOK*, 373) continued. See Mexico under *History*. Under date of January 12, the Standard Oil Co. of N.J., issued an 80-page pamphlet reviewing the situation since 1934. A reply entitled "The True Facts about the Expropriation of the Oil Companies' Properties" was published by the Mexican government. Other publications are: "Expropriation in Mexico" (1940, pp. xii, 204, (R. B. Gaither); the two latter are reviewed, 34 *Am. Jnl. Int. Law*, 769); "Mexican Supreme Court Decision in the Expropriation Cases," *ib.* 297 (A. K. Kuhn); "The Mexican Expropriations," 17 *N.Y.U.L. Rev.* 327 (Kunz).

On December 4, the Rumanian premier decreed the expropriation of all oil properties, including fixtures, and all watercraft owned and used by companies with Jewish stockholders.

C. SUMNER LOBINGIER

**INTERSTATE COMMERCE COMMISSION (ICC).** The Interstate Commerce Commission, established by act of Congress in 1887, is the oldest regulatory agency of the Federal Gov-

ernment. The carriers subject to its jurisdiction transport the greater part of the freight and commercial passenger traffic in the United States. Created originally for the purpose of improving conditions affecting railroad transportation, it has also for many years exercised certain powers over water carriers engaged in rail-water transportation in connection with railroads as well as over pipe lines. Since 1935 it has been charged with the regulation of motor carriers, and in 1940 Congress enacted the Transportation Act of 1940 which enlarged its powers over water carriers.

Under this new legislation, which for the most part will become effective early in 1941, common carriers engaged in transportation by water between a place in one State and a place in another State will have to secure certificates of convenience and necessity from the Commission, and contract carriers similarly engaged will have to obtain permits. If such carriers were in bona fide operation on Jan. 1, 1940, the issuance of a certificate or permit is mandatory upon the seasonable filing of an application therefor. Provision is made for exempting certain water transportation from regulation under this law, which in general is similar to that now applied to rail and motor carriers. Common carriers will be required to publish tariffs showing their rates or charges to be filed with the Commission, and contract carriers will have to publish and file schedules of minimum rates or charges. The Commission is empowered to require changes in such rates and charges after a full hearing. Water carriers subject to the law may be required to file reports of their affairs with the Commission.

The changed conditions which have almost revolutionized land transportation in the past quarter of a century have had an important effect on the Commission's work. Railroad mileage in the United States increased steadily until 1916 and since that year has slowly declined. The figure for 1938 was almost exactly the same as that for 1909. In 1940 the Commission authorized the abandonment of 2278 miles of line, offset by authorized new construction of only 37 miles. Since 1935 more than 100,000 motor-carrier operators have sought operating authority under the motor-carrier act, and the Commission's identification plate appears on 280,431 motor vehicles. Of these 46,216 were issued in 1940.

A considerable part of the Commission's routine work in 1940, as in former years, had to do with the regulation of railroad rates, the authorization of securities issued by railroads, the collection and publication of statistics relating to railroads and other carriers, enforcement of statutes for the promotion of safety in railroad operation, and the discovery of violations of criminal and penal statutes intended to prevent illegal practices on the part of shippers and carriers.

The extraordinary number of bankrupt railroads in recent years has added to the work of the Commission, which under the bankruptcy act must approve plans for the financial reorganization of such railroads. In 1940 the Commission approved reorganization plans for seven class I railroad systems.

The Commission's work in the regulation of motor carriers has passed beyond the initial stage, which was occupied chiefly with applications for operating rights. The emphasis has now shifted to safety, enforcement, and rates. Rules have been prescribed concerning safety and insurance, and revised tariff rules to facilitate ascertainment of

applicable rates have been adopted. Safety inspectors have been added to the field staff, who, in co-operation with representatives of State governments, are engaged in educating motor carriers in methods of operation designed to reduce highway accidents and secure compliance with the Commission's safety regulations. With the object of promoting safety of operation the Commission has prescribed qualifications and maximum hours of service of certain classes of employees of motor carriers, including private carriers of property by motor vehicle.

See RAILWAYS; UNITED STATES under *Administration*.

**INTERSTATE COMPACTS.** See LAW.

**INVESTIGATION, Criminal.** See FEDERAL BUREAU OF INVESTIGATION.

**INVESTMENT COMPANIES.** See FINANCIAL REVIEW.

**IOWA.** Area, 56,146 square miles, including water, 561 square miles. Population, Apr. 1, 1940 (census), 2,538,268; 1930, 2,470,939. Des Moines, the capital, had (1940) 159,819 inhabitants; Sioux City, 82,364; Davenport, 66,039; Cedar Rapids, 62,120; Waterloo, 51,743; Dubuque, 43,892. The State's urban population, 1,084,231 (1940) exceeded that of 1930 by 104,939; the rural population, 1,454,037 (1940), while still predominant, had lost 37,610 in the decade.

**Agriculture.** Farmers in Iowa harvested 20,961,000 acres, approximately, of the principal crops in 1940; eight crops accounted for all but some hundreds of thousands of acres. Corn, occupying 9,031,000 acres, made 460,581,000 bu. (51 bu. to the acre), and was estimated as worth \$267,137,000 to the growers. Oats, on 5,166,000 acres, gave 206,640,000 bu. (about \$55,793,000); tame hay, 4,381,000 acres, 6,572,000 tons (\$39,432,000); soy beans, 733,000 acres, 15,026,000 bu. (\$10,518,000); barley, 462,000 acres, 14,553,000 bu. (\$5,530,000); potatoes, 60,000 acres, 6,120,000 bu. (\$4,284,000); wheat, 341,000 acres, 8,121,000 bu. (\$5,441,000); flaxseed, 180,000 acres (a sharp increase over lately preceding years), 2,520,000 bu. (\$3,301,000). Farms, in 1940, totaled 213,318; their area averaged 160 1/2 acres.

**Mineral Production.** As stated in 1940 by the U.S. Bureau of Mines, Iowa's production of native minerals totaled \$24,794,058 for 1938; coal contributed nearly one-third of this total, cement was a close second, and stone and clay products made up most of the remainder. The coal output was 2,908,000 tons for 1940, 3,050,000 tons for 1939, and 3,103,187 tons (value, \$7,963,000) for 1938. Makers' shipments of portland cement, fairly close to yearly production, fell off a little, to 4,717,295 bbl. (1939), from 4,759,390 (1938); but their yearly value rose somewhat, to \$7,771,503, from \$7,327,048. The clay products (other than pottery and refractories) attained \$2,868,233 for 1938.

**Education.** For the academic year 1939-40, Iowa's inhabitants of school age (from 5 years to 21) were reckoned at 677,263. Enrollments of pupils in the public schools numbered 505,862; this comprised 364,071 elementary, 139,410 high-school, and 2381 junior college enrollments. The year's expenditures for public-school education totaled \$37,250,768, plus \$7,202,358 of capital outlay and \$5,514,500 of interest or principal paid on debt. Salary paid in the year to 25,151 teachers in public schools averaged \$1007.03.

**History.** The popular vote at the general election on November 5 was prevailingly Republican.

It gave Willkie (Rep.) 632,370 for President, a moderate plurality over Roosevelt (Dem.), who obtained 578,800. The State's Republican Governor, George A. Wilson, was re-elected, defeating John K. Valentine (Dem.). As neither Senator's term was to expire the State's two Democratic incumbents remained in the United States Senate. Farmers' dissatisfaction with some of the agricultural policies of the Roosevelt administration accounted, in prevalent opinion, for the strength of the Republican vote.

**Officers.** Iowa's chief officers, serving in 1940, were: Governor, George A. Wilson (Rep.); Lieutenant-Governor, Bourke B. Hickenlooper; Secretary of State, Earl G. Miller; Auditor, C. B. Akers; Treasurer, Willis G. C. Bagley; Attorney-General, Fred D. Everett; Secretary of Agriculture, Mark G. Thornburg; Superintendent of Public Instruction, Jessie M. Parker.

**I.R.A.** Irish Republican Army. See IRELAND, IRELAND, NORTHERN, and GREAT BRITAIN under *History*.

**IRAN (PERSIA).** A kingdom of southwestern Asia. Capital, Tehran (Teheran); sovereign in 1940, Riza Shah Pahlevi, who was crowned Apr. 25, 1926.

**Area and Population.** Area, about 628,000 square miles; population, estimated at 15,000,000, including besides the dominant Iranians large minorities of Turks, Kurds, Leks, Baluchis, and Gipsies. There are about 3,000,000 nomads. Estimated populations of the chief cities: Tehran and district, 360,000; Tabriz, 219,000; Meshed, 139,000; Shuaz, 119,000; Isfahan, 100,000; Hamadan, 99,000.

**National Defense.** Iran in 1939 had an active army of 3200 officers and 116,800 men, with one mechanized brigade equipped with 100 new Skoda tanks and 5 aviation regiments with 280 aircraft, mostly of British construction. The navy consisted of 2 sloops, 5 patrol vessels, and several smaller craft in the Persian Gulf and several motor patrol boats in the Caspian Sea. There is also an armed police force of 7 regiments and 15 battalions.

**Education and Religion.** Despite rapid extension of educational facilities in recent years, the population remains largely illiterate. There were 4939 schools with 273,680 pupils in 1937, and some 900 Iranians were studying in foreign universities, mostly at government expense. The people are mainly Moslems of the Shiite sect; there are also about 50,000 Armenians, 40,000 Jews, 30,000 Nestorians, and some native Christians, Bahaists, and others.

**Production.** Agriculture and stock raising are the main occupations, but the oil industry is the chief source of government revenue. Production of the chief crops in 1937-38 was estimated as follows (in metric tons): Wheat, 1,942,300; barley, 706,900; rice, 382,100; beet sugar, 25,200 (in 1939-40); tobacco, 15,900; sesamum, 7500; cotton, 32,900. The 1938 wool clip was about 18,100 metric tons. Dates, raisins, and other fruit are widely grown. The output of crude petroleum in 1939 was 78,151,332 bbl. (78,320,840 in 1938), giving Iran fourth rank among world producers. Carpet making remains the leading industry. Cement, matches, cotton and woolen yarns and fabrics, refined sugar, silk textiles, and iron and steel are new industrial products fabricated with government backing. There is a large oil refinery at Abadan.

**Foreign Trade.** For the year ended Mar. 21, 1939, merchandise imports were valued at 1,072,-

700,000 rials (1,445,200,000 in 1937-38), while exports were 2,501,300,000 rials (2,394,600,000 in 1937-38). Crude petroleum normally accounts for about three-fourths of the value of all exports (1,877,262,000 rials in 1937-38). The chief imports are cotton piece goods, machinery and tools, sugar, vehicles. Normally, trade is carried on mainly with the Soviet Union, Great Britain, Germany, and the United States (see *TRADE, FOREIGN* for commerce with United States). Foreign trade has been a government monopoly since 1931.

**Finance.** Budget estimates for the year ended Mar. 21, 1941, placed receipts at 3,094,977,000 rials (1,930,096,700 in 1939-40) and expenditures at 3,210,973,000 (2,613,482,000). Oil royalties (amounting to £4,568,674 in 1938) are kept in a reserve fund and omitted from the budget. In addition to regular budget expenditures, £2,000,000 from the reserve fund was spent on the army in 1940-41. The recognized foreign debt on May 15, 1939, was £991,120. The rial was pegged at 17.1133 rials to the U.S. dollar (1 rial = \$0.0585) on Dec. 21, 1939, instead of the previous official fixed rate of 80.50 to the pound sterling.

**Transportation.** The railways, with over 1000 miles of line in 1940, are of recent construction. The 866-mile Trans-Iranian line from Bandar Shahpur on the Persian Gulf to Bandar Shah on the Caspian Sea was completed Aug. 26, 1938. Under construction in 1940 were the lines Tehran-Tabriz, of which the Tehran-Zinjan section was completed Oct. 4, 1940; Tehran-Meshed, opened from Tehran to Semnan in September, 1939; and Tehran-Yezd. Highway mileage (1939), 15,043. The important Meshed-Bandar Shah highway, 126 miles long, connecting Eastern Iran with the Caspian Sea was opened in November, 1939. An air line connects Tehran and Kermanshah with Baghdad in Iraq. The port-improvement project at Now-Shahr on the Caspian Sea was completed in 1940. Improvements on the Persian Gulf ports of Bandar Shahpur and Khorramshahr (formerly Mohammerah) were under way.

**Government.** Executive power is exercised by the Shah, acting through his cabinet appointees. The parliament (Medjliss) of 136 members, elected for two years, sanctions measures proposed by the Shah and his cabinet. Premier in 1940, Dr. Ahmed Matine-Daftary, appointed Oct. 26, 1939. There are no political parties.

**History.** During 1940 the European whirlpool of war threatened repeatedly to suck Iran into the conflagration. Russia, Turkey, Germany, and Great Britain all strove to draw Riza Shah Pahlavi into open or tacit alliances through material inducements or threats. Britain signed a technical-financial agreement with Iran on February 16 under which the British were reported to have agreed to supply arms to the Iranian army. Numerous German army officers and political agents were said to have arrived in Tehran early in the year and to have worked against British, Turkish, and, to some extent, Russian influence.

Turkish diplomacy was particularly active in attempting to strengthen and extend the Saadebad non-aggression pact signed by Turkey, Iran, Iraq, and Afghanistan on July 8, 1937. The Moscow press in mid-February reported that Turkey was trying to align Iran, Iraq, and Afghanistan behind its anti-German stand. About the same time it was announced in Turkey that consultations under the Saadebad accord were in progress, with a view to converting it into a military alliance. The result of

these consultations was not made public up to the end of 1940.

On April 5 the Medjliss ratified a reciprocal trade balancing pact with the Soviet Union, replacing a commercial pact that expired June 21, 1938. Soviet commercial representatives in Iran were given diplomatic status and authorized to side-step the Iranian foreign trade monopoly by dealing directly with private firms as well as with the Iranian Government. Iran also granted the U.S.S.R. storage and retail sales facilities for petroleum products. In return Moscow was reported to have granted Iran permission to ship its products to Germany across Soviet territory. This accord was hailed as a considerable diplomatic victory in Moscow. Another agreement concluded September 22 authorized Soviet trains to enter Iran and vice versa. Relations between Moscow and Tehran remained far from cordial, however. The Soviet Government on various occasions assumed threatening attitudes and early in July was reported to have demanded the cession of a strip of Iranian territory along the Soviet frontier.

In accordance with the decision reached in 1939 for the resumption of diplomatic relations with the United States, a new Iranian Minister presented his credentials to President Roosevelt on Feb. 13, 1940. Near the year's end, a "friendly agreement" was reached between the Iranian Government and the Presbyterian Board of Foreign Missions in New York for the termination of the Board's educational work of more than a century in Iran. The government, which was taking over all foreign educational institutions, agreed to pay \$1,200,000 in installments for the Board's properties.

Internal conditions were adversely affected by the European War, which curtailed Iran's chief export markets and cut off imports of machinery and other items ordered to speed the Shah's industrialization and modernization program. Nevertheless construction of railways, ports, and highways continued (see above under *Transportation*). Legislation approved during the year authorized a tax in foreign currency on the tonnage of foreign steamers calling at Iranian ports; provided for repayment of government loans from the Mellie Bank in seven years; and authorized the abolition of corporations and monopolies owned exclusively by the government and the transfer of their functions and assets to the reorganized Ministry of Finance.

Settlement of a dispute over oil royalties between the Iranian Government and the Anglo-Iranian Oil Co. was announced August 25. To compensate for the drop in the value of the pound sterling, the company undertook to pay the government £1,500,000 sterling for 1938 and 1939, in addition to royalties already paid for those years, and to pay £4,000,000 sterling in round numbers for each of the years 1940 and 1941. The company received a written assurance that this arrangement did not affect the terms of the concession. The net profit of the company declined from £6,109,477 in 1938 to £2,986,358 in 1939.

See *AFGHANISTAN, IRAQ, TURKEY, and UNION OF SOVIET SOCIALIST REPUBLICS under History*.

**IRAQ (IRAK).** An Arab kingdom occupying the basin of the Tigris and Euphrates Rivers in Mesopotamia. Capital, Baghdad. King, Feisal II, who succeeded to the throne Apr. 4, 1939.

**Area and Population.** Area, 116,600 square miles; population, estimated at 3,670,000 on Jan. 1, 1938. Chief cities, with estimated populations

(1938): Baghdad, 340,000; Mosul, 98,000; Basra, the chief port, 62,000. Language, Arabic.

**Education and Religion.** Despite free primary education, illiteracy remains high. Latest available education statistics show 777 state and private elementary schools, with 110,106 pupils; 47 intermediate schools (11,396 pupils); 16 secondary schools (2233 pupils); 12 vocational and professional schools (2019 students); and 4 colleges (905 students). In 1935 there were 3,136,632 Moslems, 101,375 Christians, 90,970 Jews.

**Defense.** Compulsory military service for men from 19 to 25 years of age was introduced in 1936. The standing army and air force in 1938 was about 28,000 men, with a war strength of 40,000, and about 50 airplanes. A British military mission aids in training the army, which is mainly British-equipped. There was a police force of 10,339 officers and men on June 30, 1939.

**Production.** The principal occupations are agriculture, stock raising, and petroleum mining. Most of the petroleum output goes from Kirkuk, Iraq, by pipeline to Haifa, Palestine. The other pipeline to Tripoli, Syria, was closed in 1940 (see *History*). Petroleum production was 4,116,000 metric tons in 1939 (4,363,000 in 1938). The chief crops are cotton (about 16,500 bales in 1939), dates, wheat (600,000 metric tons in 1938), barley (1,138,400 metric tons, 1938), rough rice (360,000 metric tons, 1938), tobacco (4000 metric tons, 1938). Several large irrigation projects are expanding the area under cultivation. The 1938 wool clip was 8300 metric tons.

**Foreign Trade.** Total imports in 1939 were valued at 8,156,179 dinars (9,361,002 in 1938); exports, excluding petroleum, gold bullion and currency, 3,759,401 dinars (3,688,835 in 1938). During 1939 oil pumped through the pipeline from Kirkuk to Haifa amounted to 1,811,916 metric tons. Other leading exports were dates, barley, wheat, wool, hides and skins, and cotton. The United Kingdom supplied 30.1 per cent of the 1938 imports; Japan, 14.8; United States, 9.1; Germany, 7.4. Of the 1938 exports, the United Kingdom took 24.2 per cent; United States, 15.1; Japan, 9.6; India, 8.1; Syria, 8.1. See **TRADE, FOREIGN**.

**Finance.** For the fiscal year ended Mar. 31, 1941, ordinary budget estimates placed receipts at 6,426,500 dinars and expenditures at 6,666,780 dinars. Actual general budget receipts for 1939-40 were 5,993,712 dinars; expenditures, 6,235,270. The deficit of 241,558 dinars was cancelled by a surplus of 957,356 dinars in the capital works budget (receipts, 3,074,088; expenditures, 2,116,732). Capital works receipts include oil royalties. The public debt on Dec. 31, 1939, was unofficially estimated at 5,752,000 dinars. The dinar, equal to the pound sterling, averaged \$4.44 in 1939 and \$4.89 in 1938.

**Transportation.** Completion in 1940 of the Baiji-Mosul railway link gave Basra and Baghdad direct connections with Mosul, and with Europe via Syria and Turkey. Through train service started on July 19. The mileage of main-line railways in 1939 was 753 miles. Highways totaled 4065 miles in 1940. The Iraq section of the important new Haifa-Baghdad highway was being asphalted. Of the seven air lines serving Iraq at the beginning of the European War, four continued in operation in 1940, including the international services of Imperial Airways, Royal Dutch Air Lines, and Air France. The Iranian State Air Lines operated a weekly service between Baghdad and Tehran. During the 1938-39 fiscal year 260 steam-

ers of 1,328,324 gross registered tons entered the port of Basra. With the spread of the European War to the Mediterranean in June, 1940, much of Iraq's trade was diverted to Basra from Syrian and Palestine ports.

**Government.** Iraq became an independent State on Oct. 3, 1932, when the mandate for Iraq held by Great Britain was abolished and the kingdom was admitted into the League of Nations. An Anglo-Iraqi alliance was concluded June 30, 1930. The constitution of Mar. 21, 1925, made Iraq a constitutional, hereditary monarchy with a parliamentary government. There is a Senate of 20 members nominated by the King for eight years and a Chamber of 150 elected Deputies. There are no stable political parties. Feisal II, born May 2, 1935, became King Apr. 4, 1939, when his father, Ghazi I, was killed in an automobile accident. During his minority power is exercised by the Regent, Emir Abdul Ilah, uncle of the King.

**History.** Internal political difficulties and the growing danger of direct involvement in the European War beset Iraq during 1940. Nationalist elements in the army, inspired either by the desire for personal advancement or for elimination of British influence and treaty rights in Iraq, made further trouble for Premier Nuri es-Said and other pro-British leaders. On January 18 the Minister of Finance in General Nuri's cabinet, Seyyid Rustum Haidar, was mortally wounded by a dismissed police inspector. There was suspicion that the assassination was inspired by military and other elements seeking to overthrow the government. Premier Nuri inaugurated a strict inquiry into the circumstances of the crime. At the same time he announced his intention of proceeding with electoral reforms designed to strengthen representative government in Iraq.

Opposition to these policies led to the resignation of the cabinet on February 20 and the formation of a new government, headed by General Nuri as Premier and Foreign Minister on February 22. Another military revolt like that suppressed in 1939 was narrowly averted during the cabinet crisis. The Chief of the Iraqi General Staff and other high army officers openly objected to the inclusion of Gen. Nuri es-Said and Gen. Taha el-Hashimi, the Defense Minister, in the new cabinet. Firm action by the Regent, supported by General Nuri and his colleagues and by the British, overcame this opposition. However on March 31 another reorganization of the ministry was deemed advisable. General Nuri surrendered the Premiership to former Premier Rashid Ali Al-Gailani but retained control of the Ministry of Foreign Affairs.

The anti-British elements were placated in part by the restrictions of Feb. 28, 1940, on land sales to Jews in Palestine (q.v.) and by British support of the Turkey-Iran-Iraq-Afghanistan bloc in its efforts to stave off Soviet and German control. After Italy's entrance into the European War and the collapse of France, Nuri es-Said and the Minister of Justice hastened to Ankara on a "secret" mission. On June 26 an agreement between Turkey and Iraq for the joint defense of French-mandated Syria in collaboration with Great Britain was announced at Ankara. Like Turkey, Iraq feared that Italy would seize Syria from France and use it as a base for further expansion in the Near East. After discussing the future status of Syria with Turkish officials in Ankara and with Syrian politicians at Aleppo, Beirut, and Damas-

cus, the two Ministers returned to Baghdad on July 5. There General Nuri declared that both the Iraq and Turkish governments favored complete independence of Syria from France. When the French forces in Syria accepted the Franco-German armistice, the Iraqi Government approved the decision of the British-controlled Iraq Petroleum Co. to divert to Haifa, Palestine, the oil that previously flowed through the pipeline from the Kirkuk, Iraq, fields to the port of Tripoli, Syria.

See **AFGHANISTAN, ARABIA, IRAN, PALESTINE, SYRIA AND LEBANON, and TURKEY** under *History*.

**IRELAND (EIRE).** A sovereign, independent state, affiliated for certain purposes with the British Commonwealth of Nations; comprising the 26 counties of Southern Ireland formerly designated the Irish Free State. The name was officially changed to "Ireland" in English and to "Eire" in Gaelic by the Constitution effective Dec. 29, 1937. As used in the official sense, Ireland excludes the six counties of Northern Ireland (q.v.).

**Area and Population.** The area is 26,601 square miles and the population was estimated at 2,934,000 on June 30, 1939, as compared with 2,965,854 at the 1936 census. The decline in population was attributed chiefly to emigration to the United Kingdom and elsewhere. Living births in 1939 numbered 56,097 (19.1 per 1000); deaths, 41,730 (14.2 per 1000); marriages totaled 14,934 in 1938 (5.1 per 1000). Populations of the chief cities in 1936 were: Dublin with suburbs, 467,691; Cork, 80,713; Limerick, 41,395; Waterford, 27,962.

**National Defense.** See *History* below.

**Religion and Education.** School attendance is compulsory and there is practically no illiteracy. Attendance at elementary schools averages 470,000; excluding the cost of administration, the estimated state expenditure on elementary education for the year 1939-40 was £3,749,697. Secondary school enrollment (1937-38) was 36,092. University attendance was 5326 in 1939-40. The institutions of higher learning are Trinity College, Dublin, and the University of Ireland, the latter with constituent colleges at Dublin, Cork, and Galway. According to the 1936 religious census, there were 2,773,920 Roman Catholics, 145,030 Episcopalians, 28,067 Presbyterians, 9649 Methodists, and 11,754 others.

**Production.** Agriculture, stock raising, manufacturing, and fishing are the principal occupations. Yield of the chief crops in 1939 (in metric tons) except where otherwise indicated was: Wheat, 259,400; rye, 1300; barley, 75,000; oats, 548,300; potatoes, 3,046,600; beet sugar, 58,600; scrutched flax (excluding tow), 900; turnips, 2,506,000 long tons (1938); mangels, 1,544,000 long tons (1938); hay, 4,593,000 long tons (1938). On June 1, 1938, there were 4,056,209 cattle; 3,196,601 sheep; 958,805 swine; 441,970 horses; 19,630,230 poultry. The sea fisheries yielded 9500 metric tons of fish valued at £230,000 in 1939. Gross value of output of electricity undertakings in 1938 was £1,999,215; output of malting and brewing establishments was valued at £8,355,568.

**Foreign Trade.** General merchandise imports in 1939 were valued at £43,200,000 (£41,404,903 in 1938); exports of Irish products were valued at £26,600,000 (£23,878,720 in 1938). Livestock and foodstuffs accounted for 90 per cent of the exports. For distribution of trade, see 1939 YEAR BOOK, p. 379. Also see **TRADE, FOREIGN**.

**Finance.** For the fiscal year ending Mar. 31, 1940, actual revenues were £32,389,000 and expend-

itures £34,395,000, leaving a deficit of £2,007,000. The gross public debt on Mar. 31, 1939, was £61,438,000, net debt, £30,876,000. The Irish pound is convertible into the pound sterling. The average exchange value of the Irish £ was \$4.9440 in 1937, \$4.8894 in 1938, \$4.4354 in 1939, \$3.83 in 1940.

**Transportation.** The total length of railways, first track, on Jan. 1, 1939, was 2511 miles. Receipts aggregated £5,473,500 in 1939. Highways extended 48,550 miles in 1940. Air service between Ireland and England was continued throughout 1940, but the British terminus for the Irish air line, *Aer Lingus Teoranta*, was transferred from the Speke Airport (Liverpool) to an airport farther inland. British Airways, Ltd., resumed transatlantic air-mail service between the United States and Great Britain, via Foynes, Ireland, on Aug. 3, 1940.

**Government.** Under the Constitution proclaimed Dec. 29, 1937, there is a President elected by popular vote for seven years. He summons and dissolves Parliament on the advice of the Prime Minister, signs and promulgates laws, appoints judges, appoints a Prime Minister nominated by the Dáil, approves other cabinet ministers nominated by the Prime Minister, and commands the armed forces. The Oireachtas (Parliament) includes two houses: the Dáil or House of Representatives of 138 members elected by popular suffrage, and the Senate of 60 members (43 elected on a vocational basis, 6 elected directly to represent the two universities, and 11 nominated by the Prime Minister). Executive power is exercised by the government, or cabinet, which is responsible to the Dáil. For further particulars, see 1937 YEAR BOOK. President in 1940, Dr. Douglas Hyde (assumed office June 25, 1938).

The composition of the Dáil following the election of June 17, 1938, was: *Fianna Fáil*, 77; United Ireland party, 45; Labor, 9; Independents, 5; Farmers, 2. Members of the *Fianna Fáil* government, as reorganized Sept. 27, 1939, were: Prime Minister, External Affairs, Education, Eamon de Valera; Deputy Prime Minister and Finance, Seán T. O'Kelly; Local Government and Public Health, Patrick J. Ruttledge; Supplies, Seán F. Lemass; Industry and Commerce, Seán MacEntee; Agriculture, Dr. James Ryan; Co-ordination of Defensive Measures, Frank Aiken; Lands, Thomas Derrig; Justice, Gerald Boland; Defense, Oscar Traynor; Posts and Telegraphs, Patrick J. Little.

#### HISTORY

The de Valera Government in 1940 continued its efforts to avoid involvement in the European War, while striving to end the partition of 1920 by peacefully establishing its jurisdiction over Northern Ireland. It had to contend with the growing threat of civil war from the illegal Irish Republican Army, which urged the subjugation of Ulster by force of arms. Following German occupation of the entire French Atlantic coast in June, there developed acute danger of a German attempt, with I.R.A. collaboration, to seize Ireland as a base for air and sea warfare against Britain and its vital overseas trade. Seeking to forestall such an attack, the British Government brought increasing pressure upon Dublin to conclude a mutual defense pact or to permit British use of the naval bases in southern Ireland that Britain had turned over to Ireland by the Anglo-Irish accords of Apr. 25, 1938, (see YEAR BOOK, 1938, p. 351).

**Struggle with I.R.A.** Aroused by the mounting violence of I.R.A. activities late in 1939 (see

YEAR BOOK, 1939), the government took vigorous steps to reassert its authority early in 1940. On January 3 it won the Dáil's approval, 82 to 9, of amendments to the Emergency Powers Act and the Offenses Against the State Act. The amendments authorized the government to intern native-born citizens suspected of illegal anti-government activities. Both Prime Minister de Valera and Minister of Justice Boland told the Dáil that the government's policy of conciliation had failed and that firm measures were necessary. The Minister of Justice said that "a highly organized body" (the I.R.A.) was receiving large sums of money from the United States and had accumulated stores of explosives and arms to further its rebellion.

Following validation of the amendments by the Supreme Court on February 9, soldiers and police carried out a series of raids that netted a number of I.R.A. leaders and uncovered additional arms, munitions, and supply dumps in various parts of the country. The Roman Catholic Primate and Bishops joined in the effort to curb the I.R.A. by issuing pastoral letters condemning its terroristic activities and declaring membership in the organization a sin. Nevertheless there were demonstrations against the de Valera Government on the March 24th anniversary of the 1916 Easter rebellion, and recurrent terrorist outbreaks.

Six I.R.A. members, arrested in a Dublin raid on February 17 and sentenced by a military tribunal, started a hunger strike on February 25 to force the government to recognize imprisoned I.R.A. members as prisoners of war. The government stood firm against this maneuver to obtain recognition of the I.R.A. activities as legitimate warfare. One of the prisoners died on April 16 and another on April 19. The four survivors then abandoned their strike. On April 25 a powerful time bomb exploded alongside detectives' headquarters in Dublin Castle, wrecking the lower yard of the castle and shaking the entire capital. On May 7 two motor-cycle detectives carrying mail bags to the British High Commissioner in Dublin were fired upon and seriously wounded by six gunmen in the center of Dublin.

While German armies were driving steadily ahead in Belgium and Northern France, the Dublin police during a raid on the home of Stephen Carroll Held in the Templeogue suburb on May 22 uncovered evidence that prominent I.R.A. members were collaborating with German agents and aiding them to collect information on Ireland's defenses. Held, who was of German extraction, and Mrs. Iselt Stuart, prominent society matron, were arrested along with a number of other I.R.A. members suspected of "fifth column" activities on behalf of Germany. On June 7 Held was charged with having a used parachute, secret codes, radio transmitting set and military information in his home, and with having received \$20,000 in United States currency between October, 1939, and May, 1940, for use by the I.R.A. Two other I.R.A. members were executed on September 6 for killing two detectives during a raid on a Dublin hideout on August 17. The I.R.A. meanwhile was carrying on an even more active terrorist campaign in Northern Ireland (q.v.).

**Defense Preparations.** To meet the growing threat from within and without, the government on May 27 placed the standing army and reserves on a war footing and called for volunteers to expand the armed forces and to establish home defense units. The two opposition parties pledged their full

co-operation with the government in resisting aggression and suppressing treasonable activities. The Prime Minister on May 27 appointed a National Defense Council of eight (3 government, 3 United Ireland, and 2 Labor members) to serve as a supreme war commission.

A drastic defense bill, giving the government sweeping emergency powers and imposing the death penalty for treachery, was rushed through Parliament on June 5-6 by unanimous vote. The Prime Minister and his colleagues addressed repeated appeals to the country to rally for its defense. Extensive preparations were made to deal with an invasion by air. Mine fields were laid at strategic points along the coast. Air raid shelters were built in Dublin. Stocks of essential supplies were accumulated. The censorship regulations were drastically tightened on August 24.

The Irish army with its reserves had totaled only about 25,000 men in the spring. By mid-September about 100,000 men were ready to take the field and another 100,000 were enrolled in local defense organizations. The army, however, had virtually no tanks, aircraft, and other modern weapons. On September 15 eight regional commissioners were appointed to assume governmental powers in their districts if invading forces succeeded in cutting off parts of the country from Dublin.

**Neutrality Violations.** The danger of a German invasion was emphasized by a number of incidents that brought the war close to Ireland. During August German planes bombed and machine-gunned five ships along the Irish coasts. On August 20 a German plane, containing an air map of Ireland with routes to the Foynes airport marked in red, crashed on a mountain in County Kerry. Its crew of six men was interned. On August 26 German planes bombed four villages in County Wexford, killing three girls. The Berlin Government apologized for each of these incidents, and the de Valera Government did no more than register formal protests. The German Minister continued his activities in Dublin, although the British complained that his Legation served as headquarters for espionage activities in Great Britain, and that the Reich was financing I.R.A. activities by way of the United States. More bombs were dropped on the night of December 20.

**Anglo-Irish Relations.** The I.R.A. campaign of terroristic bombings in Great Britain to force the withdrawal of British authority from Northern Ireland (see YEAR BOOK, 1939, p. 380) waned markedly in 1940 following the hanging in Birmingham on February 7 of two young Irish terrorists convicted of a bombing outrage that cost the lives of five persons in Coventry. The executions aroused deep anger in Ireland, where many anti-Republican elements had joined in petitioning the British Government to reprieve the condemned men.

In June and July, when a German invasion of Ireland appeared imminent, the British Government proposed the establishment of a joint defense committee, including representatives of Ireland, Northern Ireland and Britain, to cope with this threat. The Northern Ireland Government consented to these negotiations only under severe pressure from London. However Prime Minister de Valera declared that his government could not consider the proposal unless Northern Ireland agreed to end the partition and accepted Dublin's policy of strict neutrality. The Northern Ireland Government emphatically rejected this course and the discussions ended in mid-July. It was unofficially reported that

Dublin had agreed to align itself with Britain in case of a hostile attack. In the meantime Irish officials made it clear that they would resist British as well as German attempts to infringe upon their neutrality.

The issue of Anglo-Irish collaboration was revived by Prime Minister Churchill before the House of Commons on November 5. He called attention to the growing danger from German submarine warfare and pointed out the great handicap under which British anti-submarine units in the Atlantic operated as the result of the British withdrawal from the naval bases in southern Ireland in 1938. The British press and spokesmen of the three chief British political parties all urged the Irish Government to permit the British navy to use the Irish base facilities. Prime Minister de Valera bluntly rejected these appeals in a speech before the Dáil on November 7.

**Economic Trends.** The chief economic effects of the European War upon Ireland were a rapid increase in prices and in the general cost of living, a consequent wave of serious strikes for higher wages, the growing difficulty experienced by manufacturing industries in obtaining raw materials, and the relatively favorable condition of agriculture as a result of the rising demand for Irish foodstuffs in Great Britain. A strike of 2200 municipal employees in Dublin left the city virtually without fire-fighting, public health, and street cleaning services from February 29 to March 18. There were other important strikes in the timber, relief works, textile, and highway transport industries. Unemployment, after rising to a peak of 118,000 in January, steadily declined as a result of enlistments in the armed forces, expansion of farming, and an improvement in business during the summer months. The autumn and winter saw a reversal of these trends due to the increasing effectiveness of the German blockade.

The vital export trade to Britain was carried on at prices fixed by the British Ministry of Food. Constant negotiations between the two governments were required to adjust the British scale of prices to rising production costs in Ireland. On June 25 the British Food Ministry agreed to double its imports of Irish bacon and to take the entire surplus of Irish cheese. Under a compulsory tillage scheme the acreage planted to food crops increased by 410,000 acres, or 10 per cent, in 1940. A further increase was required for 1941. To conserve foreign exchange, restrictions on security transactions were imposed on July 31.

In a Christmas Day broadcast to the United States Prime Minister de Valera said that stocks of food and raw materials were being rapidly exhausted and appealed for aid in obtaining both arms and foodstuffs. He pointed out that "probably no country of Europe is so effectively blockaded as we are." The growing scarcity of shipping led the British Government on December 27 to place restrictions on the re-export to Ireland of cattle feed, fertilizer, tobacco, oranges, lemons, and certain tools, all important to the Irish economy but which had to be imported into Britain under convoy.

See ANTHROPOLOGY; NAVAL PROGRESS.

**IRELAND, Northern.** An area, largely co-extensive with the region of Ulster, in the north of Ireland; consisting of six counties and two parliamentary boroughs, it is integrally united with Great Britain. Capital, Belfast.

**Area and Population.** The area is 5237 square miles and the estimated population on June 30,

1939, was 1,290,000 (1,279,753 at the Feb. 28, 1937, census). Living births numbered 25,254 (19.5 per 1000) in 1939; deaths, 17,549 (13.6 per 1000); marriages totaled 8623 (6.7 per 1000) in 1937. The population of Belfast (1937) was 438,112; that of Londonderry, 47,804. The census of 1937 showed 428,290 Roman Catholics, 390,931 Presbyterians, 345,474 Episcopalians, 55,135 Methodists, and 59,915 of other religious faiths. Public elementary schools in 1938-39 numbered 1700 with 191,862 pupils; preparatory, intermediate, and secondary schools numbered 210 with 37,081 students. Queens University at Belfast had 1590 students.

**Production.** Stockraising and dairying contribute materially to the proceeds of agriculture. Live-stock, Jan. 1, 1939, included 700,564 cattle, 551,262 sheep, 565,726 swine, and 6,038,001 poultry. The harvest of potatoes, the chief food crop, yielded (1938) 711,369 tons. The crop of flax, in 1938, was 4036 tons. Other agricultural production (1938), in tons, included turnips, 320,497, and hay, 824,989. The two principal manufacturing industries, linen-making, and shipbuilding, employed respectively about 70,000 and 15,000 persons. Almost all the linen (value, 1938, £5,480,000) exported from the United Kingdom originates in Northern Ireland. The shipyards of Belfast were building 200,000 tons of ships a year before the war broke out in September, 1939. Statistics for the foreign trade of Northern Ireland are included in those for the United Kingdom.

**Finance.** The budget, as estimated for the fiscal year that ended with Mar. 31, 1940, included revenues of £13,859,000 and expenditures of £13,823,000. The greater part of taxation is imposed and collected by the British Imperial authority, but Northern Ireland exercises certain powers of taxation on its own account. Taxes collected in Northern Ireland contributed, in the fiscal year 1939, more than £1,000,000 to the expenses of defense and other Imperial services.

**Transportation.** The total length of railway line is 741 miles. Canals extend 180 miles, highways, 13,043 miles. Shipping lines operate regularly between ports in Great Britain and those of Belfast and Londonderry. Other ports affording communication by sea are Newry, Larne, and Coleraine.

**Government.** Although an integral part of the United Kingdom and represented by 13 members in the British House of Commons, Northern Ireland exercises a degree of local autonomy, through a Parliament of its own and a cabinet responsible thereto. The Senate of this Parliament has 24 elected and 2 ex-officio members; the House of Commons has 52 members, all elected. The composition of the House of Commons elected Feb. 9, 1938, was: Unionists, 39; Nationalists, 8; Independent Unionists, 2; Labor, 2; Independents, 1. The chief permanent officer is a Governor (since 1922, the Duke of Abercorn). The head of the cabinet is a Prime Minister, the office was held continuously by Viscount Craigavon from the establishment of Northern Ireland in 1921 until his death in 1940.

**History.** The Irish Republican Army's underground warfare gained momentum during 1940 and was met with increasingly severe measures of repression. The IRA campaign was carried on simultaneously in Northern Ireland, Great Britain and Ireland (Eire) with the announced objective of expelling British authority from Ulster and establishing a republic embracing all Ireland.

The hanging of two I.R.A. terrorists in Birmingham, England, on February 7 was followed on February 11 by serious street fighting in Belfast, when police charged a pro-Republican demonstration. Defying the Ulster Government's ban on Easter Week demonstrations, 400 armed I.R.A. members paraded through Belfast on March 22, anniversary of the 1916 rebellion. An I.R.A. manifesto issued the same day stated that the terrorist campaign in Britain would be continued until every British soldier had withdrawn from Ireland (including Ulster) and Britain recognized the I.R.A. underground government as the only Irish government. Two days later a railroad bridge near Londonderry was dynamited and there was a clash between police and Irish Nationalists in that city. There were innumerable minor raids, bank robberies, bombings, and clashes between I.R.A. members and their opponents throughout the year. The I.R.A. campaign was directed not only against the Ulster and British governments and their supporters, but also against the de Valera government and its adherents in Northern Ireland.

The Northern Ireland authorities reacted to this campaign by harassing members and suspected members of the I.R.A. with constant police raids. When apprehended they were held for long periods without trial, particularly after the danger of a German invasion with I.R.A. assistance became acute in May. On May 24, 76 men were rounded up in overnight raids throughout Ulster. Forty more suspects were arrested in Belfast July 1, 300 were interned on July 22, 18 on July 28. In many instances the police raids uncovered stores of arms. As a result of these measures, there was a noticeable decline in I.R.A. activities during the latter part of the year. On the other hand the Catholic minority in Ulster was incensed by the police raids and on December 8 the Bishop of Down and Connor voiced a sharp protest.

The Ulster Government was concerned not only with curbing the I.R.A. but also with contributing to the British war effort and with preparations to meet a German invasion through Southern Ireland. After conferring with British officials, Prime Minister Craigavon on May 23 inaugurated an intensified recruiting drive and also authorized expansion of the police forces. As the German menace developed, the Ulster defense program was expanded. The British Government also strengthened the Ulster garrison and made preparations to rush reinforcements across the Irish Sea if a German attack was launched at Ireland.

British efforts to reach an agreement on a joint defense program with both Ireland and Northern Ireland were wrecked on the partition and neutrality issues (see IRELAND under *History*). Despite pressure from London and the urgings of a growing band of prominent Ulster residents, Prime Minister Craigavon rejected all demands for a co-ordinated military defense based upon the termination of the partition and acceptance by Ulster of Prime Minister de Valera's neutrality policy. He said Northern Ireland was prepared to co-operate with de Valera provided Ireland entered the war on the side of the Allies and Dublin undertook "not to raise any issues of a constitutional nature."

In October the Ulster Government decided to merge the Northern Ireland Home Guard with the Royal Ulster Constabulary. This produced an appeal to Prime Minister Churchill by 24 prominent Irishmen headed by General Sir Hubert Gough. They asked him to revoke the Ulster decree as a

conciliatory gesture toward southern Ireland. They asserted that the constabulary had "incurred the odium attached to a political police force of the type familiar on the Continent of Europe" and that "clashes on the border may result from the activities of this large force directed by local civilian or police officials without regard to consideration of British policy as to external affairs or to British military arrangements designed to conform to the requirements of that policy."

Secret inspections of Ulster defenses were made by the British War Minister, Anthony Eden, in July and by the Duke of Kent in October. The first German air raid on Ulster territory was made by a single plane on September 13. In connection with its war preparations, the Ulster Government offered a subsidy of £2 for every acre of new land ploughed and planted to food crops. On August 9 it banned strikes and lockouts in Northern Ireland for the duration of the war.

Viscount Craigavon (see *NECROLOGY*) died on Nov. 24, 1940, arousing hopes in some quarters that a compromise agreement could now be worked out on the partition issue that would permit of a co-ordinated defense program for all Ireland. His successor as Prime Minister and leader of the Unionist party was John Miller Andrews, former Deputy Prime Minister. He announced on December 8 that there would be no change in his government's attitude toward Eire. "We in Ulster are anxious to live on friendly terms with the people of the south," he said, "but it must be as neighbors and not as partners in an all-Ireland republic . . . Under no circumstances will the people of Ulster surrender their birthright as citizens of the United Kingdom and the empire they have had a part in building up."

See *GREAT BRITAIN and IRELAND under History*. **IRISH FREE STATE.** See *IRELAND (EIRE)*. **IRON AND STEEL.** Production of steel in the United States during 1940 reached the highest level ever recorded, according to the American Iron and Steel Institute. The volume of production reflected the influence of the war in Europe and the defense program of the United States. Production of steel ingots amounted to 66,500,000 net tons, 8 per cent above the previous record figure of 61,400,000 tons in 1929, and nearly 20 per cent greater than the 1939 output of 52,500,000 tons. About 18 per cent of finished and semi-finished steel products was produced for export trade, half of which was sold to Great Britain. There was plenty of steel to meet demands in 1940.

In producing its record-breaking tonnage the industry operated at the following average rates of ingot capacity for the four quarters of the year: 72.6, 72.7, 87.9, and 95. All existing tonnage records were broken in the fourth quarter. The "rated" capacity of the industry was about 83,000,000 tons per annum, with a practical working capacity of 85,000,000 tons.

Employment and payrolls rose far above 1929 levels. Employment throughout the year averaged about 550,000 men, nearly 20 per cent more than in 1929; and pay rolls of \$950,000,000 were 13 per cent above 1929 despite a shorter work week. Hourly wages of steel workers were at the highest level in history, nearly 30 per cent higher than 1929.

The composite price of various kinds of finished steel products was 2.26¢ per lb., 40 per cent less than the average price for 1917-18, although hourly wages are 65 per cent higher than in those years.

Domestic scrap consumption in 1940 was estimated at 41,000,000 gross tons, breaking all previous records, even rising above the 1937 figure of 38,006,272 tons.

New construction of furnaces—blast, open-hearth, and electric—was either completed or under way on a large scale in an effort to meet the tremendous demand for steel in 1941 for national defense.

Pig iron production was approximately 46,700,000 net tons, compared with 35,310,042 tons in 1939. No data are available on world production of steel, pig iron, and ferro alloys.

H. C. PARMELEE.

**IRON ORE.** Production of iron ore in 1940 was greatly stimulated to meet the war demands for steel. According to the Lake Superior Iron Ore Association, shipments from upper lake ports in 1940 aggregated 63,712,982 gross tons. This represents an increase of more than 41 per cent over 1939, but is still below the all-time high 1929 production of 65,205,000 tons. The 1939 Census of Manufactures records 100 companies operating 174 iron ore mines in the United States. Average number of wage earners was 20,126, receiving wages amounting to \$27,199,913. Salaried workers numbered 2178 and they received \$5,674,482. Production of iron ore in 1939 was 51,641,055 long tons, of which about three-fifths came from open pits. Average iron content of the natural ore was 51.01 per cent.

Estimates of iron ore mined in the United States in 1940, compared with actual output for 1939, are given by the Bureau of Mines in the accompanying table.

IRON ORE MINED IN THE UNITED STATES

(Gross tons)

	1940 est	1939 actual
Michigan	12,671,000	9,159,222
Minnesota	47,470,000	31,547,701
Wisconsin	1,267,000	972,685
S. E. States	7,239,000	6,021,781
N. E. States	3,547,000	3,112,893
Western States	1,212,000	917,448
Total	73,806,000	51,731,730

The average value of ore at the mines in 1940 was estimated at \$2.56 per gross ton; in 1939 it was \$2.89.

Imports of iron ore for 12 months of 1940 were 2,483,234 gross tons valued at \$6,210,971, compared with 2,412,515 tons valued at \$5,865,510 for the entire year 1939.

Exports for 12 months of 1940 were reported at 1,386,304 tons valued at \$4,624,555, compared with 1,057,304 tons valued at \$3,578,086 for the entire year 1939.

See MICHIGAN, MINNESOTA.

**ISOTOPES.** See CHEMISTRY.

**ITALIAN AEGEAN ISLANDS.** See AEGEAN ISLANDS, ITALIAN.

**ITALIAN EAST AFRICA.** An Italian Colony in East Africa established by the decree of June 1, 1936, which merged the colonies of Eritrea

and Italian Somaliland with the newly conquered empire of Ethiopia. Capital, Addis Ababa. The area and population of Italian East Africa by provinces, according to official Italian estimates of May, 1939, are shown in the accompanying table.

ITALIAN EAST AFRICA. AREA AND POPULATION

Province (Capital)	Sq. Miles	Population
Eritrea * (Asmara)	89,274	1,500,000
Amhara (Gondar)	76,235	2,000,000
Shoa (Addis Ababa)	24,125	1,850,000
Galla and Sidamo (Jimma)	124,369	4,000,000
Harar (Harar)	79,844	1,600,000
Somaliland * (Mogadiscio)	270,972	1,150,000
Totals	664,819	12,100,000

\* Eritrea and Somaliland are not co-terminous with the former colonies; they include parts of Ethiopia (see map in 1936 YEAR BOOK, p. 240, for the former provincial boundaries).

Estimated populations of the chief cities: Addis Ababa, 150,000; Harar, 50,000; Dire Dawa, 30,000; Asmara, 23,000; Mogadiscio, 21,000; Massaua, 15,000; Gondar, 6000; Dessye, 5000. The number of permanent Italian residents was 200,000, according to census results announced in July, 1940. The native population includes some 2,000,000 Amharas, the former rulers of Ethiopia, who are Coptic Christians; more than 3,000,000 Gallas, who are part Christian, part Mohammedan, and part pagan; and the Danakil, Somalis, and numerous other tribes, mostly Mohammedan or pagan. The official languages are Italian, Amharic, Arabic, and Tigrinish.

**Religion and Education.** On Dec. 1, 1937, the Viceroy declared the Ethiopian Coptic Church independent of the Egyptian Church and appointed the Abuna (patriarch) and bishops for all of Italian East Africa.

Education was entrusted to the Italian Fascist party, which established primary schools in the principal occupied cities. In 1938-39 there were 157 elementary schools, with 15,668 pupils (11,623 natives, 3908 Italians, 137 others), and 9 secondary schools, with 1515 pupils (1497 Italians).

**Production.** Stock raising and primitive agriculture are the chief occupations. Cultivated and wild coffee (exports, 13,000 metric tons in 1937-38), cotton, sugar, flax, bananas, dates, grapes, cereals, tobacco, fruits, and vegetables are grown in small quantities. Agricultural produce is grown for export on some foreign plantations using native labor. Salt exports in 1939 were about 250,000 tons. Gold, platinum, iron, and potash are produced in commercial quantities. A 1939 census showed 4007 industrial firms in Italian East Africa with an invested capital of about 2,700,000,000 lire, and 4785 commercial firms (capital, 1,100,000,000 lire), most of them in Eritrea. A new hydro-electric power station was opened in Addis Ababa in December, 1939.

**Trade and Finance.** Imports in 1938 totaled 2,447,057,000 lire (2,062,038,000 from Italy) and exports were 191,877,000 lire (114,845,000 to Italy). The lire exchanged at \$0.0526 in 1938. Revenue and expenditure for the fiscal year ended June 30, 1940, were estimated to balance at 2,183,000,000 lire, excluding expenditures from the special fund of 12,000,000,000 lire allocated by the Italian Government in 1938 for public works and equipment. A substantial part of the regular budget receipts was contributed by the Italian Treasury.

**Transportation.** A railway connects Djibouti in French Somaliland with Addis Ababa (486 miles). Another line extends inland from Massaua

on the Red Sea to Asmara, Cheren, Agordat, and Biscia. The network of strategic motor highways, totaling 12,083 miles in 1939, was extended in 1940. A shorter motor route between the Red Sea and Addis Ababa (538 miles), via Assab, the Danakil desert and Dessye, was opened late in 1939. This asphalted road cost 675,000,000 lire and was built in 2½ years by an average daily labor force of 32,000 workmen. Three other roads from Addis Ababa to the port of Mogadiscio on the Indian Ocean were under construction—one by way of Lakes Soddu and Neghelli (916 miles), another by way of Ghignar, Imi, and Mustahil (863 miles), and the third by way of Dire Dawa, Jijiga, and Gorahai (1086 miles). Also under construction was the Imperial Road forming the main traffic artery of Addis Ababa. A network of military airlines linked the chief centers and military posts of the colony. Chief ports, Massaua and Assab on the Red Sea and Mogadiscio, Merca, and Chisimaio on the Indian Ocean.

**Government.** The Italian Government formally annexed Ethiopia and proclaimed the King of Italy its Emperor on May 9, 1936. On June 1, 1936, Eritrea and Italian Somaliland were merged with Ethiopia to form Italian East Africa. The colony is administered by a Viceroy and Governor General at Addis Ababa, assisted by a Vice Governor General, a Chief of Staff, a consultative Council of Government composed of high government officials, and the governors of the six provinces (governments). There is also a Board of Consultors representing the white colonists and native chieftains. Viceroy in 1940, the Duke of Aosta (appointed Nov. 20, 1937).

**History.** Italy's entrance into the European War on June 10, 1940, interrupted the task of the Italian conquerors in opening up Ethiopia and subjugating the guerrilla bands operating in inaccessible parts of the colony. The Italian military forces, estimated at 60,000 to 80,000 white troops and additional native units, were cut off from overseas sources of supply and confronted with enemy forces on all sides.

The collapse of France ended the resistance of French military units in French Somaliland, gave the Italians access to Djibouti, and enabled them to outflank the small British force in British Somaliland, which was conquered in August (see SOMALILAND, BRITISH; SOMALILAND, FRENCH). This gave the Italians complete control of the African shore of the Gulf of Aden and Strait of Bab el Mandeb, but they were unable to prevent British shipping from using this entrance to the Red Sea. From Eritrea and Western Ethiopia the Italian forces invaded the Anglo-Egyptian Sudan (q.v.) and Kenya (q.v.) but made relatively little progress up to the end of 1940. From bases in Italian East Africa the Italian air force made repeated raids on British military and naval bases in Aden, Kenya, and the Sudan.

Meanwhile British and South African air units continually raided Italian military and air bases and railway and highway communications throughout the colony, while British naval and air forces from time to time bombarded the ports. Traffic on the Djibouti-Addis Ababa railway was reported to have been disrupted and considerable damage done to camps and public works.

The British also helped Ethiopian leaders hostile to the Italian occupation to reorganize and strengthen their guerrilla forces. Even before Italy entered the war, reports from neighboring territo-

ries indicated that there was growing unrest among the Ethiopian tribes. A Djibouti report of June 11 stated that the Italians had executed Ras Hailu, a prominent chieftain who had aided them during the Ethiopian War. At the end of June the ex-Emperor Haile Selassie left London by air for Khartoum in the Anglo-Egyptian Sudan, where he made preparations to reconquer his kingdom with British aid. In October he moved nearer the Ethiopian border. Meanwhile on July 12 the British Government informally recognized Haile Selassie as a full ally in the struggle against the Axis powers, thus reversing its formal recognition of Italian sovereignty in 1938.

At Haile Selassie's order, his former War Minister, Ras Birru, flew from Jerusalem to the Anglo-Egyptian Sudan on June 13 to assume command of Ethiopians fighting with the British. Other leading Ethiopian exiles in Palestine also left to organize Ethiopian resistance within Italian East Africa or on its frontiers. As a result of their activities and the gradual exhaustion of supplies, the Italian position at the year end was said to be difficult.

See EUROPEAN WAR under *Campaigns in Africa*, ITALY under *History*.

**ITALIAN LITERATURE.** The literary horizon in Italy in the past few years has had varying fortunes, jolts, and indeed, many a surprise. Unfortunately for our Italian literati, disturbances have not arisen from within the ranks, for if it were so, then one would term them "polemics," a preoccupation quite consonant with the idea of literature. These disturbing factors, however, have absorbed all Italy in the past five years: national crises (Ethiopia, Albania, the present Cataclysm in Europe) have forced all cultural activities into a remote background. The 1940 season, as the one previous, again will have to forfeit its major premise to the department of history.

An event that stands in relief was the admittance of gracious and benign Ada Negri to the Royal Italian Academy. This is indeed an honor, accentuated the more so since it went to a woman. In this connection, Renzo Rendi said, in his *The Literary Scene in Italy* (See *The New York Times Book Review*, Jan. 19, 1941): "The Royal Italian Academy for the first time opened its portals to a woman. The fact caused a certain surprise, as in Italy also the idea that academies are reserved to men is widespread. But, as it was explained in the press, the academy wanted to renew an old tradition largely adopted by the ancient Italian academies of two centuries ago, in which female members were often elected."

Concurrently with Ada Negri's appointment to the Academy came the news that her recent offering, *Erba sul sagrato* (*Grass on Sacred Ground*, Mondadori), was a best seller. And in this connection also could be recorded a list of some popular books in Italy in the past season. Heading the list was Giovanni Papini's *Italia mia* (Vallecchi), then, Mosca's *Ricordi di scuola*, (*School Memories*, Rizzoli); Carlo Linati's *A vento e sole* (*With Wind and Sun*, Soc. Subalpina); Lucio D'Ambrà's *Passo di strada* (*Step Along the Way*, Mondadori); P. Bargellini's *Ritratto virile* (*Virile Portrait*, Morcelliana); F. Tombari's *I ghiottoni* (*Gluttons*, Mondadori); Trilussa's *La sincerità* (*Sincerity*, Mondadori); Emilio Cecchi's *America amara* (*Bitter America*, Sansoni). Among other volumes which enjoyed popularity were a reprinting of the famous novel of Giovanni Verga *I*

*Malavoglia* (Mondadori) and G. Mazzoni's translation of Catullus, *Poesie* (Zanichelli). An anthology of Italian literature which reached a wide public was G. Zoppi's *Antologia della letteratura italiana*. An exclusive place, if lastly, should be given to the ever increasing popularity of the famous Bompiani *Almanacco letterario*, a literary year book, unique in format and content, which with exhaustive criticism on publications, original contributions, and letters of famous authors, illustrations, sketches, and cartoons, will continue in popularity principally for its vitality and freshness.

**Fiction.** A novel of clear pattern and material continued to be read in the past season and, because of its incisive character deserves this belated discussion. Its author, A. Frateili, has been very active in literature and movements, and his latest novel, *Clara tra i lupi* (*Clara Among the Wolves*, Bompiani), may well lay claim to an artistic achievement. In an exhaustive evaluation of this novel, Angelo Mele has stated with justification that in all of Frateili's creations there is a groping for some conciliation with the spiritual restlessness of our era, accentuated by an ardent and sincere desire to define the shadowy vicissitudes of daily life. Likewise, in this novel, Arnaldo Frateili has sketched out a cross section of our times with masterly delineations of characters. The novel is persuasive enough, and the reader cannot escape an interest and sympathy for the creatures of the author's imagination. Lorenzo Ruggi, better known as the author of *Madonna del gatto nero* (*The Madonna of the Black Cat*) of some seasons back, published a little over a season ago, *Romanzo della Neve* (*The Novel of the Snow*, Cappelli); its habitat is in the Dolomites during the height of the winter sport season. But for a serious and mystic undertone the novel would give the off-hand impression of levity and gayety, of the type destined for the "smart set." A novel with this cosmopolitan formula runs, *a priori*, the dangers of numerous pitfalls, which unfortunately the author has not fully avoided. But for other redeeming qualities, the novel might have been promptly discarded. This judgment on the novel should be a source of encouragement to the author: "At a certain point in the book something akin to a fable is present which suggests moral attitudes bordering on the mystic. It is a point in the story that rises unexpectedly, imparting merit to the whole. This serious undertone appears in the form of a conception of divine providence as expressed by a nun in the story speaking with a captivating logic that arrests the reader's attention and forces him to contemplate. This is the persuasive note of the author whose gaze and meditation is ever on crests of the Dolomites."

Apparently the women writers of Italy had a banner year, and Alba de Céspedes had the distinction of having the most widely read novel of the season. Alba de Céspedes is a recent comer in the field of literature, for still fresh in memory is her volume of short stories *Concerto* (1937), a volume which gave promise of a good future. Though the present volume, *Nessuno Torna Indietro* (*No One Turns Back*, Mondadori), was published a little over a season ago, its success continued rather in the past season. The work seems to be detached from any particular formula for novel writing, and, in the main, the author seems to proceed simply and directly with the story of eight young ladies, classmates, whose destiny becomes

as varied as their distinctive characters. The highly introspective mood, so much overworked in Italian novels, is eminently absent in this volume. Although a novel of some 460 pages, it does not "give the impression of a long work, for Alba de Céspedes has a chatty, narrative style which, in a sanely descriptive way, grips firmly whatever there is to be gripped, without digressions." The novel has already been translated into French, German, and Danish. Fulvia Giuliani Barberi, another young woman writer, has apparently abandoned her career as an actress to enter the literary field. Her novel, *L'uomo che camminò nella luce* (*The Man Who Walked in the Light*, Casa Editrice Quadermi di Poesia), was well received. Fortunately for her, the novel had other qualities to make up for an obviously hackneyed theme—that of the brilliant young doctor, rich, attractive, who in the end sacrifices his life in quest of a new serum.

In the short stories, Raffaele Calzini's collection *Il Tatturmo* (*The Tatturmo*, Mondadori) may be placed at the head of the list. The stories for the most part are on attractive themes and take us all over the world. Calzini, of course, is an old hand at writing, having already over two dozen volumes to his credit. His novel, *Segantini, Romanzo della Montagna* received the Viareggio Literary Prize of 1934. A collection of stories of humility and dignity were assembled by the popular novelist, Virgilio Brocchi. Those in this volume, called *La Gran Voce* (*The Great Voice*, Mondadori), have a major theme, that of the glorification of motherhood. The story *Mater Mirabilis*, is indeed touching and representative of the rest in the collection. Grazia Deledda, the distinguished Sardinian woman writer produced a series of stories, *Il cedro del Libano* (Garzanti, Milan), dealing for the most part on children's themes they reveal the most salient characteristics of Grazia Deledda's art: "a penetrating, intuitive psychology and the mania of looking deep into the heart of man." It is well to mention again the volume of short stories assembled by the Academician, Angelo Gatti, *La Terra* (*The Earth*, Mondadori). Angelo Gatti is known as a political writer as well as literary, and he will best be remembered by his very successful novel, *Ita ed Alberto* published not many seasons ago and well in its seventh printing. The stories represented in his latest volume are about the peasants and the country-side of Piedmont, and may well be called tales of the soil.

**Criticism and Varia.** Pietro Pancrazi brought out a sort of anthology of the short story of the 19th century, *Racconti e Novelle dell'800*, published by the time-honored house of Sansoni in a revised edition of over nine hundred pages. The same house published recently Agostini Savelli's *Storia d'Italia* from its origin to the present day, in simple though scholarly presentation. The second volume on the history of the Italian theater, *Storia del Teatro Italiano*, dealing with the Renaissance, was prepared by Maio Apolonio and published also by Sansoni. The same publishers put out Emilio Cecchi's curious but scathing invective against American life, *America Amara* (*Bitter America*). This book was read extensively in Italy in the past season, and unfortunately, the author does not refrain from speaking at length on trivial, if not weak themes. Some of the chapters deal with "Father Divine," dowagers of the metropolis, students of California, etc. The book can hardly bring enlightenment as to American cultural pursuits of the day. Lin Yutang's popular book, *The Impor-*

*tance of Living* was translated and published by Bompiani of Florence. The book was popular also in Italy in the past season and a half. And speaking of translations, equally popular were Margaret Mitchell's *Gone with the Wind* (*Via col vento*), Hervey Allen's *Antony and Cleopatra*, John Galsworthy's *La Saga dei Forsyte*; Louis Bromfield's *La Grande Paggia*. All these volumes were published by Collezione Omnibus. All three volumes of John Steinbeck were translated and the *Grapes of Wrath* (*Furore*, Bompiani) went into a third printing. Manlio Lo Vecchio Musti assembled the various essays of Pirandello, *Saggi* (Mondadori, Milan), among which are to be found essays on Humor, the Subjective and Objective in Literature, the poetry of Dante, Teatro Nuovo e Teatro Vecchio, etc. In addition Musti brought out a monograph on the Sicilian dramatist, *L'Opera di Luigi Pirandello*. The house of Paravia brought out the third and last volume of Francesco Luigi Mannucci's *Storia della letteratura italiana (The Eighteenth and Nineteenth Centuries)*. The first volume, *Dalle origini alla fine del Quattrocento (From the Origin to the End of the Fifteenth Century)* and the second volume dealing with the 16th and the 17th centuries, comprise the series. The sixth volume of *Storia Universale dell'Arte*, 18th and 19th centuries was prepared by Anna Maria Brizio. Along with 400 reproductions, the house of Editrice Torinese (Unione Tipografica) is to be congratulated for the numerous expensive series it undertakes. And now mention could be made of some English volumes on Italian themes. First in order should be recorded Thomas Caldecot Chubb's *Aretino (Scourge of Princes)*, (New York), an entertaining and scholarly work with profuse information on the life and times of the early 16th century Orestes Ferrara wrote the biography of Alexander VI, *The Borgia Pope* (New York). James Whittall translated Marcel Brion's *Michelangelo* (New York). Lastly may be recorded Paul Tabor's translation of Zsolt de Harsanyi's study on the dramatic life of Galileo, *The Star Gazer* (New York).

O. A. BONTEMPO.

**ITALIAN SOMALILAND.** See **ITALIAN EAST AFRICA**.

**ITALO-GREEK WAR.** See **EUROPEAN WAR**.

**ITALY.** A kingdom of southern Europe, upon which a Fascist dictatorship is superimposed. Capital, Rome. Sovereign in 1940, King Victor Emmanuel III, who ascended the throne July 29, 1900.

**Area and Population.** Excluding Libya (q.v.), which became part of Italian national territory in 1938 and Albania (q.v.), which was annexed in 1939, Italy has an area of 119,714 square miles and a population estimated at 44,109,000 on June 30, 1940 (42,444,588 at the 1936 census, which did not include 528,542 workers and soldiers in Africa). The 1936 census showed 31,735,027 urban and 11,258,575 rural residents. Living births in 1939 numbered 1,040,413 (23.5 per 1000); deaths, 590,652 (13.4 per 1000); marriages totaled 324,843 (7.4 per 1000). In 1938 Emigrants in 1938 numbered 61,548; emigrants who returned to Italy totaled 36,892. Foreigners in Italy at the 1936 census numbered 108,597 as compared with an estimated 9,600,000 Italians living in other countries.

The city of Rome had an estimated population of 1,327,126 on Dec 31, 1939. Other chief cities with the estimated populations on Jan 1, 1939 (not including workmen and soldiers absent in

Africa and the Dodecanese), were: Milan (Milano), 1,205,542; Naples (Napoli), 920,460; Turin (Torino), 690,015; Genoa (Genova), 654,211; Palermo, 431,666; Florence (Firenze), 351,055; Bologna, 315,158; Venice (Venezia), 283,926; Trieste, 258,612; Catania, 251,978; Bari, 210,777; Messina, 202,375; Verona, 166,315; Padua (Padova), 150,203; Taranto, 151,150; Leghorn (Livorno), 134,545; Brescia, 134,340; Ferrara, 122,913; Reggio di Calabria, 121,876; Cagliari, 119,934; La Spezia, 119,067.

**National Defense.** See **EUROPEAN WAR**; **NAVAL PROGRESS**, also *History* below.

**Colonial Empire.** The total area of Italy's colonies and dependencies (including Albania and all of Libya) is 1,279,589 square miles, total population (1939 estimate), 14,186,401. They are treated elsewhere in the YEAR BOOK under **AEGEAN ISLANDS**, **ITALIAN**; **ALBANIA**, **ITALIAN EAST AFRICA**; and **LIBYA**.

**Education and Religion.** School enrollment in 1937-38 was: Elementary, 5,051,306; secondary (including technical and art), 613,588; higher education (1938-39), 77,429. Illiteracy is about 20 per cent. According to the census of 1931 there were 41,014,096 Roman Catholics (99.6 per cent), 83,618 Protestants, and 47,825 Jews.

**Production.** About 46.3 per cent of the working population is engaged in agriculture and fishing, 30.4 per cent in mining, quarrying, and industry, 8.3 per cent in commerce, and 4.6 per cent in transportation. The total number of industrial workers, according to statistics issued by the Fascist Confederation of Industrialists in 1940, is 3,825,542, apportioned mainly as follows: Building enterprises, 623,000; foodstuffs, 389,000; mechanical and metallurgical, 709,000; building materials, 541,000; textiles, 653,142; chemicals, 155,192. Agricultural production (in metric tons) for 1939 except where otherwise specified was: Barley, 245,400; rye, 151,500; oats, 586,800; wheat, 8,000,000; corn, 2,939,700 (1938); potatoes, 2,941,600; beet sugar, 420,300; olive oil, 175,300 (1938); tobacco, 42,100 (1938); silk, 2800; rice, 41,185,000 bu (1940); wine, 41,780,000 hectoliters (1938). One hectoliter equals 26.4 U.S. gal.

Mineral and metallurgical production in metric tons in 1938 (except where otherwise specified) was: Iron ore, 520,000; lead (smelter), 38,000 (1939); zinc (smelter), 33,600 (1939); pyrites, 437,000; lignite, 1,322,000; sulphur (crude), 397,000; asphaltic and bituminous rock, 258,047; marble, 457,222; marine salt, 883,420; bauxite, 360,800; mercury, 195,523; aluminum, 28,000 (1939); tin (smelter), 300; pig iron, 929,000; steel ingots and castings, 2,307,000; copper, 4700; cement, 4,587,000. Rayon production in 1939 was 54,000 metric tons; cotton (1938), 7500 metric tons. Woolen textiles, chemicals, sulphuric acid, superphosphate, copper sulphate, cheese, and alimentary pastes are other important manufactures.

**Foreign Trade.** According to the annual statement of the Bank of Italy, published in 1940, total imports during 1939 amounted to 10,000,000,000 lire as compared with 10,900,000,000 in 1938; exports to foreign countries (excluding trade with the colonies) were valued at 8,500,000,000 lire against 7,960,000,000 in 1938. For distribution of trade, see 1939 YEAR BOOK, p. 386. Also see **TRADE**, **FOREIGN**.

**Finance.** For the fiscal year ending June 30, 1940, ordinary revenues were estimated at 29,740,000,000 lire (according to a statement issued by

the Finance Minister on May 17, 1940), and expenditures at 56,140,000,000 lire, leaving a deficit of 26,400,000,000 lire. An official preliminary draft of the 1940-41 budget (issued in February, 1940) estimated ordinary revenues and expenditures at 29,002,000,000 and 34,895,000,000 lire respectively. The total deficit for the year ended June 30, 1939, was 12,278,000,000 lire. As of June 30, 1940, the total public debt was said by the Minister of Finance to be somewhere in the neighborhood of 200,000,000,000 lire. The last official statement published on the subject showed the debt to be 107,-185,000,000 lire on Aug. 31, 1935. The average exchange value of the lira was \$0.0526 in 1938, \$0.0520 in 1939, and \$0.0504 (nominal) in 1940.

**Transportation.** On June 30, 1939, Italian railways extended 14,448 miles (State, 10,551; private, 3897). For the year ending on that date, the State railways carried 107,800,000 passengers, compared with 103,047,509 in 1937-38. Total revenues in 1938-39 were 4,366,100,000 lire, total expenses, 4,153,252,000 lire. A new railway connecting the cities of Novara and Biella was opened on July 20, 1940, with a daily service in each direction of three trains. During 1940, in order to conserve fuel, the government curtailed railway transportation both before and after the country entered the war. Effective Feb. 24, 1940, 84 trains were suppressed, 56 more went out of operation on December 14 and 96 on December 19. The mileage of roads and highways in 1940 was 127,104. Statistics of civil aviation for 1938 (released by the Italian Air Traffic Bureau in 1940) were: Miles flown, 8,419,493; passengers carried, 140,815; mail carried, 1,054,670 lb.; newspapers, 659,744 lb.; baggage, 4,607,488 lb. In August, 1939, Italian air lines covered 25,373 route miles. Transatlantic service between Rome and Rio de Janeiro, inaugurated on Dec. 21, 1939, was still in operation during 1940. The Italian merchant marine on June 30, 1939, comprised 1350 vessels of 1,979,482 tons. During 1939, 12,119 vessels of 22,816,000 net registered tons entered Italian ports in the foreign trade.

**Government.** Italy's Fascist dictatorship was superimposed upon the constitutional monarchy established by the Constitution of Mar. 4, 1848. Under the law of Dec. 9, 1928, the Fascist Grand Council, consisting of (1) life, (2) ex-officio, and (3) extraordinary members, acts as "the supreme organ co-ordinating and uniting all the activities of the regime." The life members (three in 1940) are the Quadrumvirs of the March on Rome. Members in the other two categories are all appointed by the Head of the Government (Benito Mussolini).

Parliament consists of a Senate (535 members in 1940), all appointed for life by the King on nomination by the Head of the Government, and a Chamber of Fasci and Corporations, which on Mar. 23, 1939, replaced the Chamber of Deputies provided for in the 1848 Constitution. The Chamber of Fasci and Corporations is composed of about 700 National Councillors, who hold their seats by virtue of membership in the Fascist Grand Council, the National Council of the Fascist party, and the National Council of Corporations. By the law of Oct. 7, 1938, both the new Chamber and Senate were restricted to voting by a show of hands or by acclamation, instead of the former secret ballot, on measures presented to them by the Head of the Government or on measures the discussion of which had been previously authorized by him.

The cabinet as reorganized Oct. 31, 1939, consisted of: Premier, Chief of the Government, and Minister of Interior, War, Navy, Air, and Land Reclamation, Benito Mussolini; Foreign Affairs, Count Galeazzo Ciano; Italian Africa, Ottilio Tezzutti; Corporations, Renato Ricci; National Education, Giuseppe Bottai; Agriculture and Forests, Giuseppe Tassinari; Finance, Count Paolo Thaon di Revel; Justice, Count Dino Grandi; Communications, Giovanni Host Venturi; Popular Enlightenment, Alessandro Pavolini; Public Works, Adelchi Serena; Trade and International Payments, Raffaello Riccardi; Secretary-General of the Fascist party, Ettore Muti. For changes in 1940, see *History*.

## HISTORY

After nine months of "non-belligerency," marked by close diplomatic and economic co-operation with Germany and by increasing friction with Britain and France, Italy seized the opportunity presented by the French military debacle to declare war on the Allied powers on June 10, 1940, effective at one minute past midnight. Ignoring peace appeals from the Pope, President Roosevelt, and the heads of the French and British Governments, Premier Mussolini announced his decision to a great throng in the Piazza Venezia at 6 o'clock in the evening. He said in part:

We are taking up arms, after having solved the problem of our continental frontiers, to solve our maritime frontiers. We want to break the territorial and military chains that confine us in our sea because a country of 45,000,000 souls is not truly free if it has not free access to the ocean.

This gigantic conflict is only a phase of the logical development of our revolution. It is the conflict of poor, numerous peoples who labor against starvers who ferociously cling to a monopoly of all riches and all gold on earth.

It is a conflict of fruitful, useful peoples against peoples who are in a decline. It is a conflict between two ages, two ideas.

Now the die is cast and our will has burned our ships behind us.

I solemnly declare that Italy does not intend to drag other peoples bordering on her by sea or land into the conflict. Switzerland, Yugoslavia, Greece, Turkey, and Egypt, take note of these words of mine. It depends on them and only on them if these words are rigorously confirmed or not.

**Prelude to War.** During the first months of 1940 Italian policy continued along the lines laid down following the outbreak of the European War in 1939 (see YEAR BOOK, 1939, p. 387 f.). Although allied to Germany, Italy employed its non-belligerent status to extract the greatest possible economic and political concessions from all three belligerents. Italian industries and shipping were entering markets and trade routes formerly dominated by the warring powers. Moreover Italian factories were filling war orders from Britain and France, which allowed the importation of the necessary raw materials and coal through their blockade. However the economic gains of neutrality were not as great as had been hoped. The Allied blockade also became increasingly onerous, after Britain in February and March tightened its contraband control and cut off imports of German coal into Italy in Italian ships.

During this period Rome also strove to strengthen its influence in the Balkans, at the expense of Germans, British, and French alike. In particular, Mussolini sought to prevent Soviet penetration into that area and to avoid a rupture of the Balkan status quo under conditions unfavorable to Italian ambitions. Consequently Mussolini joined Hitler in restraining Hungarian revisionist aspirations

and appeared to support the peace efforts of the other Balkan powers.

Nevertheless Fascist spokesmen and the Italian press made it plain that "non-belligerency" was a temporary policy and that the Fascist regime's expansionist ambitions would be pressed as soon as the time was opportune. Mussolini's newspaper *Popolo d'Italia* declared on January 13 that "three points of Fascist policy and life must in any case remain untouched, the struggle against democracy, against bolshevism, and against the bourgeoisie." The government proceeded step by step to strengthen the military forces, tighten discipline, and speed the transformation of the economic system to a complete war basis. The cabinet on January 22 approved 63 decrees promoting economic self-sufficiency, extending the rationing of foodstuffs, and curbing profiteering and hoarding. A decree approved April 2 authorized the mobilization for war service of the entire civil population of both sexes above 12 years of age. Another created a Supreme Commission of Defense to govern in war time.

All war preparations were speeded up after the conference between Hitler and Mussolini at Brennero on March 17. There an agreement was worked out for joint Italo-German action in promoting Axis interests in the Balkans, and for Italian diplomatic support of the forthcoming German military initiatives. The German attack upon Denmark and Norway was followed by the intensification of the Italian propaganda campaign against the Allies. Hostility was whipped up by press and radio attacks of such violence as to bring protests from Paris and London. In Milan, Florence, Rome, and other cities Fascist-inspired demonstrations against Britain and France occurred with increasing frequency.

The end of April witnessed demonstrations and troop concentrations against Yugoslavia, which had taken strong measures against Axis "fifth column" elements and resisted Italo-German demands for closer co-operation. Military preparations in Albania, Libya, and Italian East Africa were made on the basis of early entry into the war. A series of warnings that Italy would soon be at war was issued by leading members of the government. Mussolini, however, remained silent on this issue until his speech of June 10. On May 9, at the celebration of the founding of the Empire four years earlier, he said: "After my speeches, you must accustom yourself to my silence. Only facts will break it."

These warlike activities, no doubt designedly, caused the Allies to reinforce their naval and military forces in the Mediterranean area and thus facilitated the German triumphs in Norway and, to a lesser degree, in the Low Countries. The German army and air force produced the "facts" that Mussolini was awaiting in demonstrating their overwhelming superiority in Norway, the Low Countries, and France. With the defeat of the French and British in the Battle of Flanders at the end of May, the Italian attitude became much more threatening. Trade negotiations with the British were broken off completely on May 31. The semi-official *Relazione Internazionale* on June 1 announced that Italy would intervene with arms. On June 3 the government postponed indefinitely the great Universal Exposition scheduled to be held in Rome in 1942. Italian ships at sea were ordered to take refuge in neutral ports on June 7. Mobilization of the military reserves and of the

civil population was begun on a gradual scale.

These tactics helped to immobilize large Allied defense forces on the Italian frontier with France and in the Mediterranean during the final German offensive, beginning June 5, which sealed the fate of France. This battle was already won when Mussolini declared war, although it was June 25 before the Franco-German and Franco-Italian armistice terms were agreed upon and placed in effect (see EUROPEAN WAR). As if to answer the widely made charges that he had entered the conflict without provocation when the issue of battle was decided in order to claim a share of the spoils, Mussolini in a letter published July 2 declared that Italian troops had battled the French on a 120-mile Alpine front during June 21-24, breaking through fortified defenses against stubborn resistance to depths of five to 20 miles.

**"New Europe" Planned.** With France out of the conflict, Fascist officials anticipated the early capitulation of Britain following a joint German-Italian offensive against the British Isles and the Mediterranean outposts of the Empire. As an equal partner in the Axis, Mussolini would then be in a position to secure Italian claims, which included complete control of the Mediterranean, North Africa, the Red Sea, and a part of Asia Minor. While German preparations for an assault on England were under way, Fascist officials and writers outlined Italy's role as a much more extensive and powerful empire in the new European order to be created under Axis auspices. The program called for the destruction of the democratic world and its reconstruction, beginning with the whole of Europe, along Fascist lines.

Efforts to adjust conflicting Italian and German ideas and interests with respect to the new European order were made at a series of conferences between Axis officials. The first German curb on Italian ambitions was imposed by Hitler during his conference with Mussolini in Munich on June 18, where details of the peace terms to be imposed on France were discussed. The Fuehrer induced the Italian Premier to moderate his claims so that the French fleet and colonial empire would not be driven into the arms of the British. At the same time Italian and German economic experts were planning the co-ordination of Axis economic resources, with the objective of providing continental raw materials for Italian war industries in place of overseas imports cut off by the British blockade and increasing Italian food shipments to the Reich.

Further conferences were held between Hitler and Count Ciano in Berlin on July 7; by Count Giuseppe Volpe di Misurata, head of the Fascist Confederation of Industrialists, and German economic experts, in Berlin early in August; by Foreign Minister von Ribbentrop of Germany and Fascist leaders in Rome on September 19-21; and by Hitler and Mussolini at the Brenner Pass on October 4 and at Florence on October 28. Beginning in August some 20,000 Italian industrial workers were sent to the Reich to relieve the labor shortage in German war industries. There was a progressive extension of this economic co-operation and a corresponding increase in German guidance of Italian policy in the economic as well as the political sphere. It was disclosed on December 5 that Italy had agreed to accept German aid in increasing agricultural production. The Reich undertook to purchase the increased output "at good prices."

**Italy at War.** Italian hopes for the early capitulation of Britain soon faded. The problem of forging the new Europe was necessarily subordinated to the task of defeating Britain and of keeping the United States and Russia out of the conflict. A warning of the hard road ahead came on June 29 when it was announced that Marshal Italo Balbo, Governor General and commander-in-chief in Libya and popular air hero, had been killed when an airplane he was piloting over Tobruk, Libya, "fell in flames during an enemy bombing raid." The London Foreign Office denied that British planes were in the Tobruk area when the Marshal's plane crashed. This aroused speculation as to whether Balbo had been shot down by Italian anti-aircraft fire in the mistaken belief that his plane was a British raider. There were also charges that the Marshal, whose wide popularity was said to have irked Mussolini, had been put out of the way because of his opposition to Italy's entrance into the war on the side of Germany. Marshal Rodolfo Graziani, Chief of Staff of the Italian Army, was appointed to succeed Marshal Balbo in Libya.

Italy received another blow to its aspirations on July 3, when the British seizure or destruction of a large part of the French fleet ended Rome's hope of getting control of the French warships and thus securing naval preponderance in the Mediterranean. At the end of July Italian air and land units took up positions in Northern France to join the German forces in an assault upon Britain. However the Fascist planes suffered a severe mauling at the hands of the R.A.F. during the first Italian raids on Britain and no further reports of Italian participation in the German air offensive were forthcoming. In mid-August the British began long-range air raids upon cities in Northern Italy.

By the beginning of September, when the German air assault on Britain failed to show the expected results, the Fascist press began to prepare the Italian people for a long, hard war. The strangulation of Italian overseas trade by the British blockade at Gibraltar and Suez was already seriously affecting Italy's economy, which was greatly dependent upon imports of raw materials. Hitler and Mussolini therefore arranged to co-ordinate their strategy and forces. Il Duce undertook to break the British hold on the Suez Canal, restore the severed communications with Italian East Africa, and aid Hitler in ousting British influence from the Balkans. Hitler assumed the task of pressing the assault and counter-blockade of the British Isles, while bringing Japan into the Axis in the hope of forestalling American and Russian intervention, and lining up France and Spain behind the Axis (see FRANCE, GERMANY, JAPAN, and SPAIN under *History* for details of these negotiations).

In August the Italian forces in East Africa registered an encouraging victory by the conquest of British Somaliland and in mid-September Fascist armies in Libya and Italian East Africa began a gigantic pincers movement designed to overcome the British defenses in Egypt (see EUROPEAN WAR under *Campaigns in Africa*). When the Italian drive into Egypt from Libya became stalled at Sidi Barrani, Mussolini on October 28 launched his invasion of Greece from bases prepared in Albania (see ALBANIA and GREECE under *History*). This offensive was apparently designed to divert British naval and military forces from Egypt and

to secure Italian air and sea bases on the Greek peninsula.

Although Mussolini conferred with Hitler in Florence on the very day he launched the Greek military venture, observers were uncertain whether or not it was undertaken with German approval. There was known to be resentment in Fascist circles over the rapid spread of German influence in Hungary and the Balkans, and in some quarters it was believed that Mussolini's invasion of Greece was intended to forestall Hitler and assure Italy of a voice in the future course of Balkan events. The Germans displayed no great concern over the disastrous outcome of the Italian attack, which was undertaken without due preparation, reportedly on advice from the Italian Minister in Athens that the Greeks would not resist. See EUROPEAN WAR under *The Italo-Greek War*.

The Italian debacle in Greece, followed by British naval and military victories in the Mediterranean and Egypt, rocked the Fascist regime in Italy to its foundations. Italian prestige was shattered throughout the world and the fruits of two decades of Fascist diplomatic activity in the Balkans, the Near East, and Africa were swept away. Contracts of Italian military missions in Ecuador and Peru were cancelled and Bolivia was reported considering similar action. The drive against the Suez Canal was rebuffed and turned into a rout which threatened the Italian colonial empire in North and East Africa. To prevent a complete military collapse, Mussolini in December was obliged to ask Hitler's aid. With the entrance of German land and air forces into Italy en route to the Libyan and Albanian fronts, Mussolini became a distinctly subordinate member of the Axis directorate and the direction of Italian policy in all fields fell increasingly under German control.

**Shake-up of Fascist Officials.** Sweeping changes among the Fascist leaders of Italy's war effort were made by Premier Mussolini in an effort to restore morale and retrieve his regime's damaged prestige. Coincident with the attack on Greece, Ettore Muti resigned as Secretary-General of the Fascist party to serve in the air force. He was succeeded by Minister of Public Works Serena, and the latter's portfolio was taken over by Giuseppe Gorla, Secretary of the National Engineers Syndicate. It was reported from London November 21 that between 50 and 60 highly placed Italian officers on the Greek front had been summarily dismissed by Mussolini.

Marshal Pietro Badoglio, Chief of the General Staff, conqueror of Ethiopia and outstanding Italian military leader, resigned on December 6. He was replaced by Gen. Count Ugo Cavallero, organizer of the Blackshirt Militia and a close associate of Mussolini. Gen. Cesare Maria de Vecchi, quadrumvir of the March on Rome and one of the most influential Fascist officials, was replaced as military and civil Governor of the Dodecanese Islands on December 7 by Gen. Ettore Bastico. The following day Adm. Domenico Cavagnari was ousted as Chief of the General Staff and Under-Secretary of State for the Navy in favor of a relatively unknown naval man, Adm. Arturo Riccardi. New men were appointed as Assistant Chief of Staff and as commander of the fleet at sea. The shake-up extended to many subordinate ranks of the army, navy, and air force. It was accompanied by a meeting of the national directorate of the Fascist party on December 5 at which, according to the official communiqué, "the

secretary of the party reported on the provisions that have been adopted for the further strengthening of the activity of the . . . party with particular reference to the problems of party structure, discipline, aid to the families of combatants, and development of the basic party organizations."

**Repercussions in Italy.** The effect of these changes in the Italian high command, following upon a series of military reverses, was to undermine public confidence in Mussolini and his regime. The Italian people had never displayed enthusiasm for the war against Britain and they were left in complete ignorance of the invasion of Greece for several days after the attack was launched. Following the British attack on the Italian navy at Taranto, Mussolini on November 18 delivered his first public speech since Italy's entrance into the European War. Addressing the provincial hierarchy of the Fascist party, he gave a glowing picture of Italian achievements during five months of warfare and asserted that victory was already within the grasp of the Axis. He sought to calm Italian misgivings by placing complete blame for the war upon Britain, deriding British claims of severe damage to the fleet at Taranto, and affirming his perfect identity of views with Hitler. He attributed the delays experienced by the Italian armies in Greece to mountainous terrain and mud, but gave his "absolute" pledge that "we shall break Greece's back." He ordered the party to initiate a vigorous drive against the "small bourgeois" and "universalistic pacifism."

The shake-up in December gave rise to a new wave of criticism and uncertainty in Italy. This was answered by an official communiqué of December 9 asserting that the "uproar that has followed changes in the Italian High Command . . . will only sharpen the will to victory of the Italian people and their reverent and absolute faith in the Duce and in the commanders who, in the name of the King-Emperor, have the responsibility and honor of conducting the nation toward its supreme military and historic objectives." The statement went on to say:

Moreover, Premier Mussolini and the Italian people know they can count on one another and are indissolubly bound in this great fight, in which the pilot has need of the greatest liberty of action, while the people are bound to place all their faith in the man who incarnates the virtues of the race and its capacity and will to power

A further blow to Mussolini's prestige came on December 22 in the form of a detailed report by Marshal Graziani on the Italian defeat at Sidi Barrani in Egypt. This gave the Italian people the first account of the extent of the disaster. It also attributed the inability of Graziani to continue his offensive to the government's failure to send him the needed motor vehicles from Italy.

Thus the year ended with Italy rife with criticism and dissension. There was dissension within the Fascist party over the conduct of the war and over the growth of German control in Italy, dissension between Fascist party leaders and professional military and naval officers, and widespread grumbling among the people at the regime. The discontent, however, was curbed by various control measures that had been introduced since the declaration of war. Government control over all news sent out from Italy was established June 10. A month later Italians were forbidden by decree to listen to enemy or neutral radio broadcasts or to pass on news from such sources. Criticisms of the government were punished with increased se-

verity. On September 10 it was announced that the head of a princely family had been arrested for an anti-Fascist remark.

In December the Fascist press intensified its campaign against pacifists, pessimists, and "scoundrels" who read the Swiss press to get news of the war from anti-Axis sources. Pitiless vengeance was promised fascism's "open and hidden enemies" within Italy. Appeals were made for the continued support of the Italian masses on the ground that fascism was a proletarian, anti-capitalist, and anti-bourgeois movement that was fighting for a social revolution. The execution of two Italian spies and imprisonment of 22 others charged with "acting in the interest of a foreign power" was announced December 22.

On December 25 the controlled press printed excerpts from Prime Minister Winston Churchill's radio appeal to the Italian people to get rid of Mussolini and make peace (see GREAT BRITAIN under *History*). But the important passages in which Churchill placed the sole responsibility for Italy's entrance into the war upon Mussolini were deleted.

**Economic Pressures.** Rising political discontent was spurred by the progressive lowering of the standard of living and the spread of economic hardship due to the blockade, a short wheat crop, the shipment of surplus food supplies to Germany, and the ever increasing financial and other sacrifices demanded by the war. The working week was extended from 40 to 48 hours on June 28. Rationing of bread, meat, and a few other staple products was introduced in July and the list was gradually extended during the remainder of the year. In December drastic cuts in food and other rations were decreed. On December 7 heavy penalties were decreed for farmers holding back products from compulsory storage and for mine owners failing to increase their output.

The Minister of Agriculture was appointed food dictator on December 29, with control of rationing and over the distribution of all foodstuffs imported or produced at home. The death penalty was authorized for serious cases of hoarding or sabotage. Similar powers over industry and over the distribution and consumption of all domestic and imported industrial materials were vested in the Minister of Corporations on December 31.

**Church-State Friction.** The efforts of Pope Pius XII to keep Italy out of the war, the pacifist sentiments expressed by some of the clergy, and the publication in the Vatican organ *Osservatore Romano* of Allied communiqués and war news deepened the hostility toward the Church latent in Fascist circles (see VATICAN CITY under *History*). Under pressure from the government, the Pope on July 5 stripped the Italian Catholic Action organization of every semblance of a political and social character.

**Italo-American Relations.** Following the visit of Under-Secretary of State Sumner Welles to Rome on his diplomatic tour of Europe in February-March, 1940, a serious effort was made in Washington to end the coolness that had developed in Italo-American relations in order to keep Italy out of the war. Early in May interchanges took place between President Roosevelt and Premier Mussolini in which the President pointed out the possibly disastrous political and economic consequences of Italian participation in the war. He was reported to have suggested the development of closer economic relations if Italy would remain

neutral. Mr. Roosevelt made at least two additional appeals to Premier Mussolini to stay out of the war, but they received a cool reception. On June 6 Mussolini's spokesman, Virginio Gayda, in turn warned the United States to keep out of the conflict on pain of "automatically giving the European powers the right to retaliate today or at any future time in American history and on American territory."

When Italy declared war, President Roosevelt on June 11 at Charlottesville, Va., publicly denounced the move as a stab in the back of France. This attack was bitterly resented by the Fascist press and was followed by steadily growing recriminations and increasing coolness between the two countries. In October the Rome correspondent of the *New York Times* was temporarily expelled from the country for reporting that Italian propaganda was directed toward securing the defeat of President Roosevelt in his campaign for re-election. Following Roosevelt's victory, the Fascist press intensified its attacks upon Washington's foreign policy and threatened America with early involvement in the war if the program of aid to Britain was extended.

#### IVORY COAST. See FRENCH WEST AFRICA

**JAMAICA.** A British West Indian crown colony. Area, 4450 square miles; population (Jan. 1, 1939 estimate), 1,173,645, including 19,039 East Indians. The CAYMAN ISLANDS (see below), TURKS AND CAICOS ISLANDS (see below), Morant Cays, and Pedro Cays are dependencies of Jamaica. Chief towns (with 1921 census figures) Kingston (the capital), including Port Royal (63,711), Spanish Town (8694), Montego Bay (6580), Port Antonio (6272).

**Production and Trade.** Bananas, sugar, coffee, rum, coconuts, pimento, grapefruit, logwood extract, ginger, cacao, oranges, tobacco, and logwood were the principal products. The 1939-40 sugar crop totaled 99,329 tons. Trade (1939): imports, £6,506,689; exports, £4,764,746 (sugar, £989,563; bananas, £2,439,177). There were 6914 miles of roads in 1940. Shipping (1938): 1390 vessels aggregating 4,242,295 net tons cleared.

**Government.** Finance (1938-39): revenue, £2,841,887; expenditure, £2,872,440. Budget (1939-40): revenue, £2,737,940; expenditure, £2,851,942. Public debt (Mar. 31, 1939): £6,303,139. The governor is assisted by a privy council. There is a legislative council of 30 members (the governor as president, 5 ex-officio, 10 nominated, and 14 elected). Captain-General and Governor-in-Chief, Sir Arthur Richards (appointed June 15, 1938).

**Cayman Islands.** Area, 104 square miles; population (1938), 6850. Capital, Georgetown. Chief products: coconuts, green turtle, thatch rope, and turtle shell. Trade (1938): imports, £29,555, exports, £12,744. Finance (1938): revenue, £13,253, expenditure, £11,854; public debt (December 31), £3660. Commissioner, A. W. Cardinali.

**Turks and Caicos Islands.** Area, 166 square miles; population (1938), 5300. Capital, Grand Turk. Chief products: salt (1,305,932 bu. exported

during 1939), conchs, turtle shell, sponges, and sisal. Trade (1938): imports, £25,974; exports, £23,052 (salt accounted for £18,451). Finance (1938): revenue, £14,359; expenditure, £14,660. Commissioner, H. C. N. Hill.

**History.** Jamaica was one of the British possessions in which the United States acquired the right to lease naval and air bases under the Anglo-American agreement of Sept. 2, 1940 (see GREAT BRITAIN under *History*). The areas to be leased and the provisions governing their administration were announced by the Navy Department in Washington on November 18, as follows:

- (a) Fleet anchorage at Portland Bight.
- (b) Land area to include Goat Island and the adjacent bays of approximately thirty-three square miles in and east of Gallion Harbor.
- (c) An area on Portland Bight and Portland Island for the location of defense batteries.
- (d) Approximately 100 acres in the vicinity of Williams Field Station for recreational purposes and a hospital mess.
- (e) An area of about one square mile about five miles south of May Pen along Bakers Canal for use as an emergency and auxiliary landing ground.
- (f) The right to develop resources and facilities for the Port Royal Dockyard under British control for the joint use of United States and British forces.
- (g) Reciprocal rights to be granted to both United States and British military aircraft to use the air fields established by the United States Government and His Majesty's Government, within the limits of capacity, the controlling authorities to have the first call on the available accommodation.

President Roosevelt inspected these sites on December 6 during a cruise in the Caribbean. At that time the Governor said that the increased employment and tourist trade anticipated in connection with the development of the bases would be "most welcome" and of immense benefit to the island. The depressed economic conditions and social maladjustments that had previously caused concern (see YEAR BOOK, 1939, p. 390) became worse during 1940 as a result of the war and of severe floods in November that drowned more than 80 persons. The shipping shortage forced the British Government in November to end all British imports of bananas from Jamaica. To cushion this shock to the island's economy, Britain guaranteed the banana producers three shillings per bunch up to a maximum of 12,000,000 stems of marketable fruit annually. Other measures were taken to relieve unemployment and distress among dock workers and others dependent upon the banana export trade.

The tightening of the economic depression was indicated by the curtailment of United States shipping and air services to the island, and by the revival of the agitation for political and economic reform among a section of the colored population, represented chiefly by the People's National party. A leader of this movement, named Bustamente, was arrested on September 8 and detained without trial under the Defense Regulations on a charge of inciting to bloodshed, racial war, and revolution.

The People's National party joined with unofficial native representatives of other British West Indian colonies and a group of British West Indians in New York City to form the West Indies National Council for the protection of the native populations. W. A. Domingo, elected president of the Council, was a Jamaican. The Council sent an unofficial representative to the Havana Conference in July (see PAN AMERICANISM). In connection with the establishment of the United States naval and air bases, it demanded that the British West Indian governments subject foreign (United

States) nationals to local law and custom outside the leased area, that foreign labor be barred from unskilled jobs on the bases, that foreign nationals be forbidden to interfere in political or economic affairs, and that no racial discrimination or segregation be tolerated.

The British Government early in the year adopted a program for the economic and social rehabilitation of Jamaica and other West Indian possessions (see *BRITISH WEST INDIES* under *History*) but this was modified in June with the intensification of the European conflict. During the year a considerable number of British evacuees from Gibraltar were sent to Jamaica for the duration of the war. About 1000 German prisoners were also sent to the island for internment.

**JAPAN.** A Far Eastern empire, comprising (1) Japan proper, or the five main islands of Honshu, Kyushu, Shikoku, Hokkaido, and Ryukyu, with some 600 smaller islands; (2) Formosa (Taiwan); (3) Korea (Chosen); (4) Karafuto (southern Sakhalin); and (5) Pescadores (Bokoto) Islands. In addition Japan controlled the leased territory of Kwantung and the South Manchuria Railway Zone in Manchuria and mandated territories (Marianne, Caroline, and Marshall Islands) in the North Pacific. During 1931-33 it established a protectorate over three Chinese provinces (Liaoning, Kirin, and Heilungkiang) in Manchuria and Jehol Province in Inner Mongolia, forming them into the new state of Manchoukuo. Capital of Japan, Tokyo; Emperor in 1940, Hirohito, who ascended the throne Dec. 25, 1926. See separate articles on *FORMOSA*, *KOREA*, *KARAFUTO*, *JAPANESE PACIFIC ISLANDS*, *KWANTUNG*, and *MANCHOUKUO*.

**Area and Population.** The area and population of the empire at the censuses of 1930 and 1935 are shown in the accompanying table.

JAPANESE EMPIRE AREA AND POPULATION

Island	Area sq. miles	Population, 1930 census	Population, 1935 census
Japan proper . . . . .	147,593	64,450,005	69,254,148
Korea . . . . .	85,228	21,058,305	22,899,038
Formosa * . . . . .	13,889	4,592,537	5,212,426
Karafuto . . . . .	13,934	295,196	331,943
Japanese Empire . . . . .	260,644	90,396,043	97,697,555
Kwantung * . . . . .	1,438	1,328,011	1,656,726
Mandated Pacific Is . . . . .	830	69,626	102,537

\* Including Pescadores (Bokoto) Islands, area, 49 square miles.

† Including South Manchuria Railway Zone

The estimated population of Japan proper on Jan. 1, 1940, was 72,876,000. The number of Japanese residing abroad at the end of 1938 was 1,059,913, while the number of foreigners in Japan was 28,857. Living births in 1938 numbered 1,928,321 (26.7 per 1000 as against the pre-war rate of about 36 per 1000); deaths, 1,259,805 (17.4 per 1000); marriages, 538,831 (7.46 per 1000). The estimated populations of the chief cities on Oct. 1, 1938, were: Tokyo, 6,457,600; Osaka, 3,221,200; Nagoya, 1,224,100; Kyoto, 1,159,800; Kobe, 989,100; and Yokohama, 777,500. Populations of other important cities on Oct. 1, 1937, were: Hiroshima, 326,600; Fukuoka, 308,200; Kure, 248,400; Yawata, 229,600; Sendai, 229,400; Nagasaki, 214,600; Hakodate, 211,700; Shizuoka, 211,600; Sapporo, 205,900; Yokosuka, 203,800.

**National Defense.** Military training is compulsory. Estimates of Japan's land, air, and sea strength vary. According to official estimates, the active army on Nov. 1, 1940, numbered 1,570,000

men and the trained reserves 685,000. The air force comprised 35,500 men exclusive of 16,000 trained reserves. Naval units completed at the end of 1939 were reported to include 9 battleships, 5 coast defense ships, 6 aircraft carriers, 39 cruisers, 118 destroyers, 12 torpedo boats, and 64 submarines.

**Education and Religion.** Illiteracy is confined largely to people over 50 years of age. The school enrollment in 1937 was: Kindergarten, 152,627; elementary, 11,566,912; secondary, 842,792; universities and colleges, 72,195; special and technical schools, 531,807; preparatory technical schools, 1,964,599. There is no State religion. Shintoism, with 13 different sects, and Buddhism, with 12 sects, are the principal religions. In 1940 all religious groups were brought under State control and the Christian denominations were merged in a single Japanese Christian Church (see below under *History*).

**Production.** Manufacturing normally accounts for about 32.7 per cent of the national income (estimated at 24,519,036,000 yen in 1939), commerce for 25.4 per cent, and agriculture for 17.7 per cent. Agriculture, however, supports nearly half the population of Japan proper. The Ministry of Agriculture and Forestry estimated the value of agricultural products in 1939 at 5,614,000,000 yen, including rice, 2,874,000,000 yen; silk cocoons, 883,000,000 yen; wheat, 604,000,000 yen. The crop of rough rice for 1940-41 was estimated at 549,968,000 hu. The output of other leading products (in metric tons and in 1939 unless otherwise stated) was: Wheat, 1,662,500; barley, 1,778,100; oats, 205,200 in 1938; potatoes, 1,848,100 in 1938; beet sugar, 28,100 in 1939-40; cane sugar, 138,300 in 1939-40; tobacco, 82,000; soybeans, 348,300 in 1938; raw silk, 39,325 in 1938; rayon, 108,569. The value of deep-sea fisheries products in 1937-38 was 89,877,000 yen; of coastwise fisheries, 219,600,000 yen (including sea-weed, etc.).

The value of manufactures produced in 1937 by plants employing five or more workers was 16,412,000,000 yen, out of a total industrial production of 21,349,000,000 yen. Textiles accounted for 25 per cent of the value of manufacturing output; metals and metal products, 21 per cent, machinery and tools, 15.3; chemicals, 18.9 per cent. The world's leading exporter of cotton piece goods, Japan in 1939 shipped abroad 2,445,537,000 sq. yd. valued at 403,946,000 yen. The approximate mineral and metallurgical production of Japan proper (in metric tons) was: Crude petroleum, 380,000 in 1939 (including Formosa); coal, 53,000,000 in 1938 (including Korea and Formosa); pyrites, 1,751,000 in 1936; manganese ore (metal content), 34,000 in 1936; iron ore, 470,000 in 1936; pig iron and ferro-alloys, 2,635,000 in 1937; steel ingots and castings, 5,811,000 in 1937 (including Korea); copper ore (metal content), 77,000 in 1939; aluminum (smelter), 23,000 in 1939; gold, 26,000 kilograms in 1939.

**Foreign Trade.** Preliminary estimates of Japan's trade in 1939 placed imports at 2,917,000,000 yen and exports at 3,576,000,000 yen. (These figures include commerce of Japan with other parts of the Japanese empire.) As compared with 1939, imports increased 19 per cent and exports 1 per cent in 1940. In 1938 imports were valued at 2,663,337,000 yen; exports at 2,689,677,000 yen. The principal imports (in the order of their value) were cotton, beans, wool, coal, oil cake, crude rubber, and wood pulp. Leading exports were cotton

tissues, raw silk, machinery, rayon cloth, canned goods, wheat flour, paper, wrought iron, silk tissues. The value of imports from the principal sources of supply in 1938 were: United States, 915,354,000 yen; Manchoukuo, 339,117,000 yen; British India, 172,231,000 yen; Germany, 171,170,000 yen; China, 164,611,000 yen. Of the 1938 exports, the United States took 425,123,000 yen; Manchoukuo, 316,323,000 yen; China, 312,900,000 yen. For Japan's trade with the United States in 1939 and 1940, see TRADE, FOREIGN. Also see *History* below.

**Finance.** Expenditures budgeted for the fiscal years 1936-37 to 1941-42 are shown in the accompanying table. The China Incident Account refers to expenditures on the Chino-Japanese War, which began in July, 1937.

EXPENDITURE BUDGETS  
(Millions of yen)

Fiscal year April 1-March 31	Expenditures General Account (original and supplementary budgets)		China Incident Account	Total*
1936-37	2,282 1 <sup>a</sup>			2,282 1
1917-38	2,709 1 <sup>b</sup>	2,540 0		5,249 1
1918-39	3,288 0	4,850 0		8,138 0
1939-40	4,804 5	4,605 0		9,409 5
1940-41	6,173 8	5,460 0		11,633 8
1941-42	7,994 0	4,880 0		12,874 0

\* This total overstates expenditures by the amount transferred each year from the General Account to the China Incident Account: 1917-38, 1,100,000 yen, 1938-39, 317,100,000 yen, 1939-40, 535,100,000 yen, 1940-41, 600,000,000 yen, 1941-42, not yet disclosed. <sup>b</sup> Actual expenditures. <sup>c</sup> Including in this account the 1,000,000,000 yen supplementary budget for military expenditures passed in January, 1941.

Military expenditures constituted 35.2 per cent of the total expenditures in 1932, 47.3 per cent in 1936, 76.4 per cent in 1938-39, and 61.6 per cent of the budget approved for 1940-41. Revenue receipts (exclusive of loans) increased from 1,709,600,000 yen in 1936-37 to an estimated 4,902,000,000 yen in 1941-42. However the revenue receipts represented only 40 per cent of total estimated net expenditures for 1941-42 as compared with 77.2 per cent of actual expenditures in 1936-37. Out of total authorized expenditures of 22,335,000,000 yen under the China Incident Account for the period 1937-41, 18,399,400,000 yen, or 82 per cent, was to be met by government borrowing.

The total funded public debt rose from 6,002,800,000 yen in December, 1931, to 9,854,000,000 in March, 1936, and to 27,750,000,000 in December, 1940. Additional bond issues totaling 7,574,000,000 yen were projected for 1941. The outstanding short-term debt in September, 1940, was 557,873,000 yen. The average exchange rate of the yen was \$0.2596 in 1939 and \$0.2344 in 1940.

**Transportation.** In 1938 Japan had 11,144 miles of State and 4240 miles of private railway lines. A four-year plan to improve railway communications was launched in 1939. Freight carried on government lines increased from a monthly average of 4,972,000 tons for 1921-25 to 8,549,000 tons for 11 months of 1939, and passenger traffic showed a similar increase, due mainly to the war in China. Highways extended about 594,749 miles (see ROADS AND STREETS). Air services, covering 9598 route miles in August, 1939, were further extended in 1940. The merchant marine in 1938 comprised 2187 vessels of 5,006,712 gross tons.

**Government.** Under the Constitution of Feb. 11, 1889, executive power was vested in the em-

peror, acting with the advice and aid of a ministry appointed by and responsible to him, but every law normally required the approval of the Imperial Diet of two chambers. The Upper Chamber (House of Peers) consisted in 1940 of 422 members, of whom 193 were chosen for life on the basis of rank, wealth, and other qualifications and the remainder were elected from and by special groups for seven years. The House of Representatives consisted of 466 members elected for four years. The elections of Apr. 30, 1937, divided the House into two major parties (Minseito, with 175 seats, and Seiyukai, with 172), three minor parties and various independents. The military-Fascist groups gradually extended their control over the government after the invasion of Manchuria in 1931 and in 1940 the transformation of Japan into a completely totalitarian State was initiated. See *History* below.

## HISTORY

**Economic Strain of War.** By the end of 1940 the war to establish Japanese political and economic control over China had dragged on for three and a half years, with no sign of a break in the military stalemate that developed toward the end of 1938. The year 1940, like 1939, was one of almost continuous heavy fighting in China without decisive military gains by either side (see CHINA under *History* for a full account).

The drain upon Japan's human and economic resources by this war of attrition became more and more onerous. Between 800,000 and 1,000,000 soldiers had to be maintained on fronts extending from Inner Mongolia on the north to Hainan and French Indo-China on the south. By Dec. 31, 1940, Japanese troops had suffered more than 1,000,000 casualties from death, wounds, and disease. The conflict had cost Japan approximately \$3,680,000,000, in U.S. currency, or more than twice the total national debt in 1936. During 1940, the total expenditure for war and rearmament was estimated at \$1,750,000,000. This was seven times greater than national defense costs in 1936-37, the year preceding the outbreak of the so-called "China Incident," and nearly 18 times as large as the defense budget preceding the attack upon Manchuria in 1931. The funded debt by December, 1940, amounted to \$6,500,000,000.

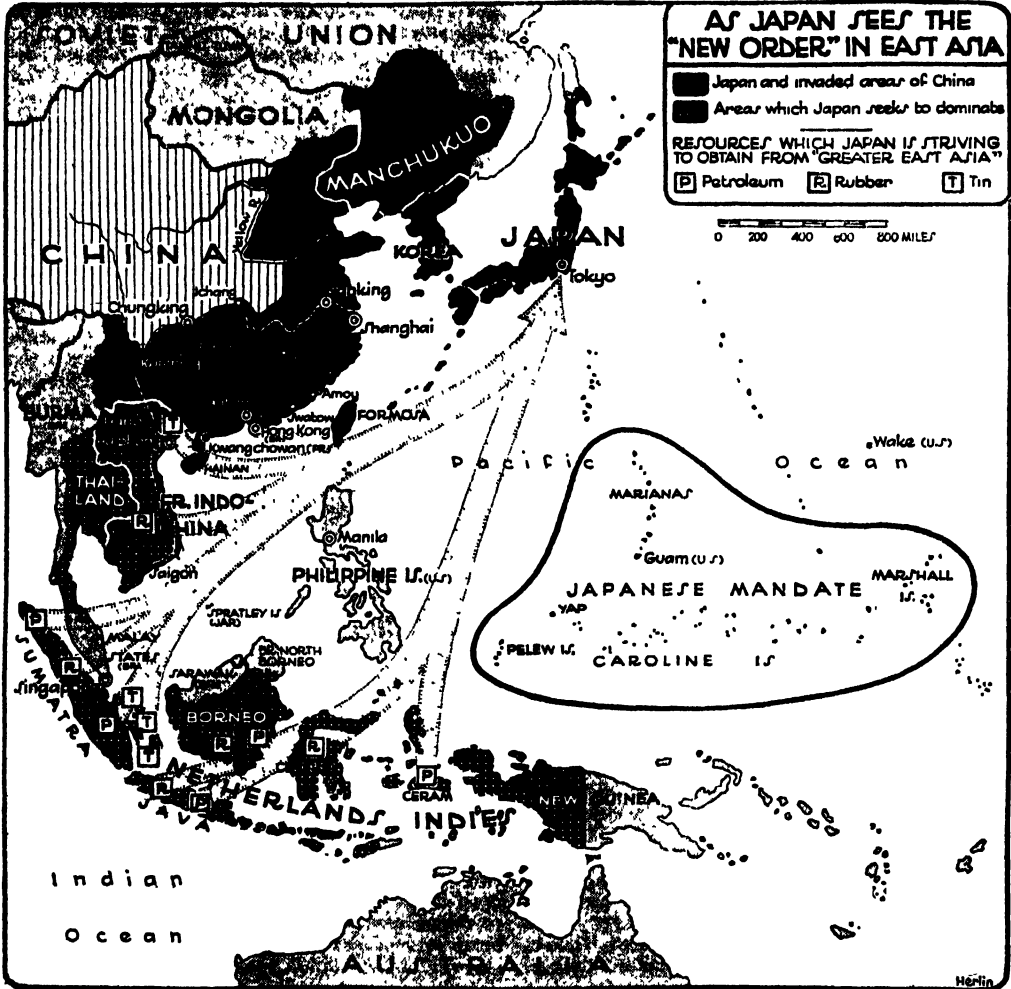

There were many evidences of the growing economic and financial strain. Serious shortages of essential commodities and materials, labor, and electric power developed. Industrial efficiency continued to decline. Prices of staple foodstuffs rose sharply while prices of such export products as raw silk slumped. The rice shortage, which developed in 1939, continued through 1940. By the end of that year coal, milk, butter, eggs, potatoes, and meat were almost unobtainable, while charcoal, sugar, matches, and gasoline were strictly rationed. The merchandise import balance with foreign currency countries increased from U.S. \$93,150,000 in 1939 to \$202,400,000 in 1940. Trade slumped sharply in the last half of 1940 and there was a growing shortage of foreign exchange. The note issue increased from 2,968,887,000 yen on Jan. 11, 1940, to 4,030,694,000 on Jan. 11, 1941. All this necessitated the progressively greater regimentation of the economic system by the government.

In January the shortage of electric power became so acute that all industries except those making armaments and munitions were partially paralyzed and more than three million workers were

rendered temporarily jobless. The manufacture and sale of all luxury articles was prohibited on July 6. Rice, the staple food of the nation, was placed under State control on November 1. The largest iron and steel company in Japan underwent forced reorganization in December as a result of the difficulty experienced in obtaining scrap and pig iron from the United States and the British Empire. As of Jan. 1, 1941, the Ministry of Finance suspended publication of foreign trade figures. On that date the *New York Times's* correspondent in Tokyo reported that while Japan's economy was severely strained, it appeared able to continue to function.

ficient to justify them in the eyes of the Japanese people.

The plan for seizing Outer Mongolia and all of Eastern Siberia, long advocated by an influential section of the Japanese high command, had been abandoned in 1939 as a result of the unexpected defeat inflicted upon the crack Japanese Kwantung Army by mechanized Soviet forces in the fighting of August–September, 1939, along the Manchoukuoan–Outer Mongolian frontier (see *YEAR BOOK*, 1939, p. 457). The other alternative was expansion southward at the expense of the French, British, Dutch, and American possessions in south-eastern Asia and Malaya. The risks of such a

#### PROGRESS OF JAPAN'S EXPANSIONIST CAMPAIGN AS OF AUGUST, 1940

**Dilemma of the Militarists.** Inability to end the military stalemate in China or to relieve the growing economic pressure in Japan through exploitation of their Chinese conquests placed the military-Fascist clique in control at Tokyo in a dilemma. To avert economic collapse at home, they had either to liquidate their imperialistic adventure in China and confess their failure or to hazard another desperate gamble in the hope of gains suf-

course appeared too formidable as long as the outcome of the European War appeared in doubt. But with the collapse of France, the isolation of Britain and the entrance of Italy into the conflict on the German side in June, 1940, the military-Fascist rulers of Japan determined to stake their future upon the success of a program of southward expansion.

Speaking on May 3, a week before Hitler

launched his successful blow at the Low Countries and France, Foreign Minister Arita of Japan denounced as "sheer stupid blustering" the demands of Japanese extremists for war with Russia or the United States. He declared his policy aimed at constructing the "new order in East Asia," proclaimed as Japan's goal in 1938 (see *YEAR BOOK*, 1938, p. 158 f.), and avoiding friction with other foreign powers. But on June 29, following the Franco-German armistice, the Foreign Minister broadcast an address to the Japanese Empire picturing it as the dominant military power and "stabilizing force" in a vast area comprising not only East Asia but Southeastern Asia and the South Seas. This expanded program, described as "a new order for Greater East Asia," was formally proclaimed by Premier Prince Fumimaro Konoye on August 1.

**Progress of Southward Drive.** Taking advantage of the Allied disasters in Europe, Japan exerted increased pressure upon the British and French during June, July, and August. She forced them to capitulate in the Tientsin concession dispute, withdraw British troops from Shanghai, cut off shipments of virtually all supplies from Hong Kong and French Indo-China to the Chinese Nationalists, and close the Burma Road (see *CHINA* under *History*). Japanese pressure took the customary form of military threats and of attacks upon British and other foreign residents in Shanghai and other Japanese-occupied parts of China.

The way for a Japanese advance into French Indo-China was cleared in mid-September when Hitler offered to give Japan a free hand in French Indo-China and the Netherlands Indies in return for Japanese adherence to the Axis military alliance. Hitler also undertook to neutralize Soviet Russia while Japan was occupied in Southeastern Asia, and to force the Vichy Government to permit a peaceful Japanese occupation of French Indo-China. It was reported that Hitler's offer was accompanied by a threat to isolate Japan diplomatically and leave her exposed to attack by Britain, the United States, and Russia unless his proposal was accepted.

**Japan Joins the Axis.** Japanese acceptance of the alliance was agreed upon at an Imperial Conference—the sixth since 1900—held in the presence of the Emperor on September 19. An advance payment was obtained from Berlin on September 22 in the form of the Franco-Japanese agreement for the establishment of Japanese air bases and a garrison in the northern part of French Indo-China (see *FRENCH INDO-CHINA* under *History*). This opening wedge was obtained through German pressure upon the Vichy Government. On September 27 Japan fulfilled her part of the bargain by signing the Axis alliance pact at a ceremony in Berlin (see *GERMANY* under *History*). This fateful decision, which linked Japan's fate inextricably to that of the Axis and carried with it the imminent threat of war with both Britain and the United States, was approved in a rescript issued by the Emperor Hirohito the same day.

Once entrenched in northeastern French Indo-China, the Japanese were able to extend their influence southward toward Saigon, metropolis of the southern part of the colony, and westward into Thailand. This advance was pushed forward gradually by economic and diplomatic pressures, with the threat of military force ever present. The Japanese encouraged the Thai Government to press its territorial claims against French Indo-China,

gave it arms and diplomatic support, obtained German aid in paralyzing French resistance, and then offered to mediate the dispute. As a further step toward securing a foothold in Thailand for a future advance toward Singapore and the Netherlands Indies, the Japanese Government on December 6 signed a treaty of friendship with Thailand. In it, the two countries agreed to respect each other's territories, to maintain contact and exchange information on matters of mutual interest, and to remain neutral if either country was attacked by a third power. This assured Thailand that Japan would not give military aid to French Indo-China in connection with the territorial controversy. See *THAILAND* under *History*.

Meanwhile a Japanese economic mission in Batavia and Japanese business men, consular officials, and agents throughout the Netherlands Indies were laying the groundwork for a Japanese bid for domination as soon as Anglo-American resistance was overcome. For details, see *NETHERLANDS INDIES* under *History*.

**Obstacles to Expansion.** Japan's drive southward was unexpectedly slowed during the last quarter of 1940 by the failure of the German offensive to knock out Great Britain, the firm opposition offered by the United States, and Tokyo's inability to reach an understanding with Moscow. These developments induced Tokyo to avoid the open use of armed force for fear of precipitating a war with a major power at a time when Japan's national resources were badly strained. At the same time these obstacles encouraged the Vichy Government, the French authorities at Saigon, and the governments of Thailand and the Netherlands Indies to resist Japanese diplomatic and economic pressure.

**American-Japanese Relations.** It was the United States battle fleet, concentrated at Hawaii, and the increasingly firm opposition offered by Washington to Japan's expansionist drive that caused the greatest uneasiness in Tokyo. American influence adverse to Japan was encountered in Japanese dealings with China, the Soviet Union, Great Britain, France, French Indo-China, the Philippines, and the Netherlands Indies (see each country under *History*). In addition, Washington took successive measures of both a military and economic nature to reinforce the numerous strong diplomatic representations made by the American Ambassador in the Japanese capital.

When the Japanese-American commercial treaty, denounced by Washington on July 26, 1939, expired on Jan. 26, 1940, the State Department informed Japan that commercial relations would continue on a day-to-day basis and be regulated in accordance with future developments. This left Washington free to exert further economic pressure and if necessary to end all commercial interchange. The attacks upon United States policy in the Japanese Diet and press occasioned by this economic threat became increasingly violent later in the year when Japan's espousal of the "Greater East Asia" policy and entrance into the Axis was followed by the progressive restriction of Japanese purchases of war materials in the United States by Presidential order (see *UNITED STATES* under *Foreign Affairs*).

The Japanese Government on August 3 formally protested the embargo on exports of American high-test aviation gasoline. It was reported without confirmation or denial on August 24 that Under-Secretary of State Sumner Welles had

warned the Japanese Foreign Minister in an *aide-memoire* that a show-down between the United States and Japan would inevitably come if Japan persisted in her expansionist course. The Japanese leaders were alarmed by the American-Canadian defense accord in August, the Anglo-American base-destroyer deal in September, and negotiations between the United States, Britain, Australia, New Zealand, and the Netherlands for collaboration in the Pacific.

**War Threatened.** Japan's adhesion to the Axis alliance on September 27 was designed in part to force a reversal of American policy by confronting Washington with the threat of involvement in war on two oceans. This threat, implicit in the alliance, was reaffirmed in numerous blunt warnings from Japanese leaders and the press. Premier Konoye's statement of October 4 was typical. Asserting that Japan would recognize United States leadership in the Americas if Washington recognized Japan's leadership in East Asia, he added:

If the United States refuses to understand the real intention of Japan, Germany, and Italy in concluding an alliance for positive co-operation in creating a new world order and persists in challenging those powers in the belief that the accord is a hostile action there will be no other course open to it than to go to war.

**Limits of Axis Obligations.** The hope that Washington would be deterred by these threats proved unfounded. Instead the United States added an embargo on scrap metal exports and advanced another loan to China on September 25-26. The violently anti-American attitude of the Japanese press and individuals led the State Department on October 8 to urge all American citizens in Japan and Japanese-occupied parts of China to return home. This action and Britain's reopening of the Burma Road caused a change of tone in Tokyo. The anti-American press campaign was moderated and the Foreign Office spokesman declared (October 9) that "we wish Americans would understand that there is nothing to be alarmed about." Two days later another official declared that Japan was the judge of her obligations under the Axis alliance, which did not necessarily bind her to enter the war because of American aid to Britain.

Nevertheless the military-Fascist leaders in the saddle at Tokyo plainly indicated their determination to proceed on their course even at the risk of war with the United States. On October 23 Japan announced the abrogation, effective a year later, of her treaty with the United States, Great Britain, and Russia for the protection of fur-bearing seals in the North Pacific. After President Roosevelt's re-election, Adm Kichisaburo Nomura, former Foreign Minister, was appointed Ambassador to the United States in another effort to win American acceptance of the Japanese program for "Greater East Asia."

Foreign Minister Matsuoka gave a further explanation of Japan's obligations under the Axis alliance in a press interview on December 9. He stated that Japan was "honor bound" to fight the United States if the latter attacked Germany, but only provided Tokyo was satisfied that the United States started the trouble. He said there would be no serious clash between the United States and Japan if both countries kept "cool" and minded their own business. But in a speech to the Japan-American Society in Tokyo on December 19, the Foreign Minister said: "Japan is and will remain loyal to her allies. Japan's foreign policy will revolve in the future around the Three-Power Pact,

and to have any illusion on such an issue would do no good to anyone." He again urged the United States to keep out of the European conflict. Justifying Japan's "Greater East Asia" policy, he said that she was "not waging an imperialist war of aggression" but was "engaged in a moral crusade" in fulfillment of her "great mission as a civilizing and stabilizing force." To this the American Ambassador in Tokyo replied:

Mr. Matsuoka lived long enough in the United States to know that the American people are fundamentally peace-minded. But they are firmly determined on certain matters—their obligations and rights. He also knows that the only thing that counts is the concrete evidence of facts and actions regardless of the persuasive garb in which such facts and actions may be dressed. Let us say of nations as of men: "By their fruits ye shall know them."

Japanese activities and ambitions in the Philippines were another source of irritation to Japanese-American relations. The Tokyo Government on April 20 asked Washington to prevent the curtailment of Japanese immigration to the Philippines under a bill before the Philippine Assembly limiting the number of immigrants from any one country to 500 annually. Also see PHILIPPINES under *History*.

**Negotiations with U.S.S.R.** In the negotiations carried on with the Soviet Union during this period of growing tension with Britain and the United States, the Japanese military leaders abandoned their former haughty and intransigent attitude toward the Russians and announced their readiness to pay a high price for a Soviet-Japanese understanding that would assure them of Russian neutrality. Without concealing their deep distrust of Soviet intentions, the Rightist press in Tokyo nevertheless declared in September that Japan's traditional policy of "defending the south and advancing in the north" on the Asiatic mainland must now be reversed and that "therein lies the full possibility of adjusting Japanese-Soviet relations."

Germany acted as the go-between in these negotiations, but the terms asked by Moscow as the price of a Soviet-Japanese non-aggression pact were so high as to preclude, or at least delay, an agreement. In October Tokyo sent Lieut Gen. Yoshitsugu Tatekawa to Moscow as its new Ambassador to speed the conclusion of an accord. Predictions of an early settlement were issued from time to time by the Japanese press. Anti-Stalinist circles also confidently asserted that a "deal" between Moscow and Tokyo at the expense of China, the United States, and Britain was in the making (see letter of Alexander Barmine in *New York Times*, Nov 10, 1940).

However on December 5 Moscow officially announced that its policy of aiding Nationalist China had not been changed by Japan's recognition of Wang Ching-wei's regime in Nanking. The Japanese Foreign Office was much less optimistic about a general Soviet-Japanese agreement on all outstanding issues at the end of the year, although negotiations in Moscow were still continuing. The temporary arrangement permitting Japanese fishing in Soviet waters in the North Pacific expired on December 31 without agreement having been reached either for its extension for another year or for a permanent fisheries treaty that would remove this perennial source of controversy between the two governments. Also see CHINA under *History*.

**Internal Affairs.** The shift in Japanese foreign policy to one of accelerated southward expansion during 1940 was accompanied by the trans-

formation of the Japanese political system to full-fledged totalitarianism. The government formed Aug. 29, 1939, by Gen. Nobuyuki Abe was overthrown Jan. 14, 1940, mainly as a result of popular discontent with economic conditions (see *YEAR BOOK*, 1939, p. 393 for background of the cabinet overturn). A new cabinet was formed on January 15 with Adm. Mitsumasa Yonai as Premier. Admiral Yonai was a moderate leader who had opposed the army's proposal for a military alliance with Germany. He reappointed the War and Naval Ministers holding office under Yonai and continued the Yonai Government's cautious foreign and domestic policies.

The criticisms that the Abe Cabinet had avoided by resigning were launched against the Yonai Government when the Diet reconvened on January 21. The boldest attack upon the army's policy of expansion in China that had been made since the outbreak of the war was uttered by Takao Saito, a member of the Minseito party, on February 2. His speech, which threw the Diet into an uproar, cast doubt on the prospect of achieving the "new order in East Asia," questioned the army's assurances of the impending defeat of Chiang Kai-shek, and declared that the proposed Wang Ching-wei puppet regime at Nanking could not unify China or fulfill its pledges to Japan unless supported by a strong Japanese army. He asked what the Japanese people had gained in return for their great sacrifices in the struggle with China, which he said was being carried on "under the cloak of a holy war." The army demanded Saito's expulsion from the Diet but so great was his popular support that the government deemed it wise to wait several months before carrying out this demand. Meanwhile other members attacked the government for its failure to maintain production of consumers goods.

**The Konoye Government.** When the Allied collapse in France opened the way for the achievement of the army's aims at home and abroad, the military-Fascist clique decided to dispense with the Yonai Government. On June 25 War Minister Gen. Shunroku Hata informed his staff that posterity would never forgive them if they failed to seize the opportunities presented by the international situation. Acting on behalf of the military-Fascist clique, General Hata suddenly offered his resignation as War Minister on July 16 and on July 17 the Yonai Cabinet was forced to resign.

The political parties were completely ignored in the new government formed on July 22 by Prince Fumimaro Konoye, who had been Premier from June, 1937, to January, 1939. The new government's policies were framed by the army and navy chiefs, acting through an Inner Cabinet comprising Prince Konoye, Lieut. Gen. Eiki Tojo, Minister of War; Adm. Zengo Yoshida, Navy Minister; and Yosuke Matsuoka, Foreign Minister. In his statement issued on August 1, Prince Konoye linked the program for "a new order in Greater East Asia" with a policy of internal reconstruction along totalitarian lines and closer relations with the Axis powers.

**Totalitarian "Reforms."** During subsequent months the Konoye Government carried out a series of sweeping totalitarian "reforms." The Minseito party, last and largest of the political parties, "voluntarily" dissolved itself on August 15 to make way for the new order. The Japanese diplomatic corps, stronghold of the forces opposed to military-Fascist domination of Japan's govern-

mental and foreign policies, was purged beginning August 22 by the recall of more than 40 Ambassadors, Ministers, and other officials in foreign diplomatic posts. Many of those removed were hostile to the government's policy of closer relations with the Axis powers.

All organizations tinged with liberalism or internationalism, such as the labor unions and the Rotary clubs, were forced to dissolve. A new system for the organization of labor was decreed on November 8, providing for a special "co-operative body" for all employees in each enterprise, under "the leadership of the operator." These local labor units were to be federated into district and national bodies. Religious organizations were forced to adjust themselves to Japan's new totalitarian order. All of the Christian denominations were divested of foreign control and influence and merged in a single Japanese Christian Church, with all of their properties vested in Japanese hands. Foreign missionaries and church officials were sent home.

All forms of dictatorial control were progressively tightened. Dr. Toyohiko Kagawa, famous social reformer and religious leader, was arrested on September 4 for contributing an article considered disadvantageous to Japan to an American magazine. He was released September 17 with the understanding that he would retire to a small island in the Inland Sea and devote the rest of his life to tuberculosis work. Further curbs on the reporting of news were imposed December 14 along with other decrees extending government regulation of political and economic activities.

**Government Party Formed.** The Premier on August 28 announced that the precise form of the new totalitarian State would be fixed by a committee appointed for that purpose. While he rejected the principle of the one-party State as not compatible with Japan's national policy of "one sovereign over all," he fixed the ultimate goal as a set of corporative institutions that would control every political, economic, and cultural activity.

The committee undertook not only to formulate the structure of the new State but also to establish a political organization through which it could function. This new political agency, known as the Imperial Rule Assistance Association, contained no trace of democracy, being organized strictly on the "leadership principle" in vogue in other Fascist States. It consisted of a powerful Executive Council, created to "convey the will and ideas of those who govern to those who are governed" and functioning through local units of the association in every city and village in the country. A Co-operative Council representing the local units was to "convey the will and ideas of those who are governed to those who govern." The Premier of Japan was made *ex-officio* President of the Imperial Rule Assistance Association, with power to appoint its officers. This association was still in the formative stage at the year's end.

**Structure of New State.** In creating the structure of the new State, the Premier's committee first of all established a Supreme Economic Council, charged with directing and co-ordinating all economic activities, and a Supreme Cultural Council to control all aspects of the nation's cultural life. The Konoye Government itself undertook the organization of agricultural, vocational, and industrial associations to control their respective branches of production and of similar agencies to supervise education, sports, religion, means of communication, art, etc.

This new State system gave the military-Fascist group operating through the government an effective means of squelching opposition to its domestic and foreign policies. Nevertheless Japanese big business, which still remained influential, was alarmed at extremist demands for the introduction of complete State socialism and forced the government to curtail its program. The moderates obtained formal assurance from the Cabinet that Japanese industry would, in general, remain under private direction and control. Big business and other opposition elements also fought a military-Fascist move to reduce the membership of the Lower Chamber of the Diet and restrict manhood suffrage. The military-Fascists, in turn, were unwilling to permit the holding of elections to the Lower Chamber due in 1941. Consequently a bargain was struck under which the military-Fascists agreed to drop their plans regarding the Lower Chamber in return for the opposition's assent to the postponement of the elections for one year and a pledge to support the government's program in the meantime.

**Other Ultra-Nationalist Trends.** Symptomatic of the new ultra-nationalist policy in Tokyo was the amnesty extended on November 4 to 130 prisoners convicted of political crimes, including the fanatical nationalists who on Feb 26, 1936, assassinated a number of leading governmental officials during an unsuccessful military revolt (see *YEAR BOOK*, 1936). On December 4 former Premier Baron Kiichiro Hiranuma, ultra-nationalist leader, joined the cabinet as Minister without Portfolio. In an effort to relieve growing complaints at economic difficulties and violations of government price restrictions, Premier Konoye on December 21 appointed new Ministers of Justice and Home Affairs.

The death of Prince Kimmochi Saionji on November 25 eliminated the last of the Genro or Elder Statesmen, who guided Japan's transition from feudal hermit kingdom to a modern, quasi-democratic State (see *NECROLOGY*). For the preceding 10 years his liberal influence had been ineffective in stemming the mounting anti-democratic and militarist tide in Japanese affairs.

**JEWISH WELFARE BOARD.** The Board has a twofold purpose. It is the parent body for Y.M.H.A.'s, Y.W.H.A.'s and Jewish Community Centers in the United States and Canada. It also provides for the religious and welfare needs of men in the service of the U.S. Army, Navy, Marine Corps, disabled veterans, young men in CCC camps, and C.M.T.C. The Board is composed of 317 constituent societies in the United States and Canada, which have 400,000 members, and own 238 buildings. Seven regional organizations are affiliated in the work of the Board.

The Board works in the fields of Jewish Center problems relating to programs of activities and administration, vocational guidance, educational and recreational activities, cultural and social adjustment of immigrants, community surveys and institutional studies, club leadership training, summer and day camps, health and physical education, extension education, forums and lectures, and maintains a field service in contact with its affiliate organizations.

The Army and Navy Committee, John M. Schiff, Chairman, serves men of the Jewish faith in the Army, Navy, and Marine Corps, government hospitals and soldiers' homes, Civilian Conservation Corps, and Citizens' Military Training Camps. The Board is in contact with 270 army posts, naval stations, and veterans' institutions in the United States and outlying territories. The Board was organized Apr. 9, 1917.

The officers of the Board are Irving Lehman, Honorary President; Frank L. Weil, President; Lloyd W. Dinkelspiel and Mrs. Felix M. Warburg, Vice-Presidents; Frederick L. Ehrman, Treasurer; Joseph Rosenzweig, Secretary; and Louis Kraft, Executive Director. The headquarters are at 220 Fifth Avenue, New York City.

**JEWS.** In 1940 as so often in the past, Germany and her ally Italy reaffirmed their total war against the Jews. After the capitulation of France when an Axis victory seemed assured, the German Minister of Labor, Robert Ley, declared "the expulsion of the Jews to be the prime necessity of the new Europe" (June 26). As a faithful Italian echo, *La Stampa*, leading newspaper of Turin, announced that "a preliminary necessary condition [of peace] is the total and definitive elimination of the Jews from Europe" (July 18). A few weeks later, the *Schwarze Korps*, organ of the Nazi Elite Guard and a frequent mouthpiece for Germany's policy toward the Jewish people, proclaimed that "a European continent without Jews, who will be banished to some remote quarter of the globe, will be one of the prerequisites of a German peace" (August 7). German conquests and the extension of Nazi and Fascist spheres of influence have brought, for the time being at least, about 3,700,000 European and 380,000 North African Jews to a position where these threats can be executed. West of the Russian frontier, the overwhelming majority of European Jews live either under the menace or in the actual process of extermination. The table on page 385 will indicate the gravity of their plight.

In sum, a third of the world's Jewish population

\* The figures are perforce estimates and include refugee as well as long established populations

(estimated at sixteen million) lives *incomunicado* in the Soviet dominions, their religion and traditions on the way to extinction; another quarter and more have passed into the hands of an enemy vowed to their destruction; well over another million in Great Britain and her Empire know that their existence depends on a British victory; while in the Americas and the remainder of the world, the maintenance of democracy is their surest bulwark.

**France and the Lowlands.** In these countries, where native Antisemitism is negligible, the policies introduced by the German conquerors follow substantially a single pattern. Either with or against the will of the defeated governments, political and economic measures have separated the Jews from their fellow nationals and set them on the road to starvation. Mass deportations from Germany and the confinement of refugees in internment camps have not only added to the hardships of the victims but placed a strain on the resources of the conquered peoples. Agitation by the press and radio has sought to arouse popular feeling against the outcast minority with the purpose of diverting hatred from the Germans and at the same time creating a common bond between the conquerors and conquered as a step toward future "collaboration." The latter point is crucial in German strategy. Just as Antisemitism helped to disrupt the morale of a country before its conquest, so the Nazis bank on it to help make allies of their former foes. Hitler put the point clearly in his speech of Jan. 30, 1941 "We already see how our racial ideology spreads from nation to nation, and I hope that the peoples who now stand in enmity to us will one day recognize their greater domestic enemy and enter a great common front with us, which will be a front of Aryan humanity against international Jewish destroyers and exploiters." As a result of these tactics, however great has been the suffering of the conquered peoples, the Jews among them—as the Nazis' arch-victims—have suffered worse, and with no hope of armistice, appeasement, "collaboration," or peace.

In occupied France, where the Germans are in complete control, no Jew among the hundreds of thousands of French who fled south to escape the German armies has been allowed to return home. Jews have been banned from the liberal professions. All places of business owned in whole or in part by Jews must post a sign in French and Ger-

man indicating they are Jewish enterprises. The authorities decreed the registration of all native and foreign Jews (October 2)—the usual preliminary to confiscation of property. According to German reports, the registration totalled 150,000 Jews and 11,000 Jewish businesses in Paris. By the end of the year 4500 of the latter were "Aryanized." Dr. Blankel, war councillor in the occupied region, stated that "the occupation authorities aim at the definitive exclusion of the Jews from French economic life," and added that he hoped the French population would co-operate.

Meanwhile in so-called *France Libre* or unoccupied France, the government has given extensive co-operation. Wealthy and prominent Jews who had left the country were deprived of citizenship and property. On October 18, as its contribution toward collaboration in the "new order" of Europe, the Vichy government decreed a body of racial legislation which echoed the Nuremberg Laws of Germany. Jews were defined not by religion but by race; they were barred from the police, the army, the teaching profession, practically every branch of the government, all executive or editorial posts in connection with the press, cinema, theater, and radio, and all administrative posts in any enterprise subventioned or controlled by the government. They were made liable to a *numerus clausus* in all the liberal professions, and were barred from membership in any organization officially representing these professions. The provisions of this legislation were extended to Algeria (where, in addition, the Jews lost their citizenship), and all French colonies, protectorates, and mandated areas. Furthermore, the statutes empowered the government to establish internment camps for Jewish aliens or assign them a compulsory place of residence. This directly affects at least 60,000 refugees, 20,000 of whom are already confined in such camps, and unknown thousands of non-naturalized residents. To date hundreds of naturalized Frenchmen, about half of whom are Jews, have been deprived of their citizenship and become candidates for internment.

Although little news has seeped out of the Lowlands, the procedure there is apparently much the same. In Holland dismissals, arrests, and seizures of property were widespread. Large numbers of refugees were sent back to the Reich charged with evading taxes and indulging in anti-Nazi propaganda. On October 3 a decree excluded all Jews and half-Jews, as well as persons married to them, from all government and educational posts—an order which was publicly protested by the Protestant clergy. On October 21 another decree prescribed the registration of Jewish business enterprises—doubtless a prelude to confiscation or forced sale for worthless money. Finally Jewish children were barred from the public schools. In Belgium similar decrees were issued in November, with the further provisions that Jews were excluded from any employment in public utilities or news services. According to a report from Brussels (Jan. 20, 1941), the Jews of Flanders, numbering more than 40,000, have been sent to concentration camps, in order to eliminate them from a region where the Flemish, that is Germanic, nationalist movement has its greatest strength.

**Poland.** Conditions in German-occupied Poland are typified by the ghetto wall of Warsaw. The 500,000 Jews of this city, a third of its total population, have been crowded into 100 blocks surrounded by a concrete wall 8 feet high. Eighteen

exits are provided, and no Jew may leave or Gentile enter the confines without a special pass. Once out, every Jew, male or female, must wear a white arm band bearing the Star of David. Within the wall, gas and electricity cannot be used after 8 p.m. Similar ghettos have been established in Radom, Lodz, and other cities. Next to Warsaw, the largest is in Lodz, where 166,000 Jews, including 55,000 children, are huddled together in a small area enclosed by barbed wire. Within these medieval monstrosities disease is rampant and starvation imminent. In Lodz, for example, only 40,000 still possess means to buy food, and the average death rate for over the year was 50 daily. Throughout occupied Poland all able-bodied Jews are compelled to undergo two years' compulsory labor at pay which barely sustains life. German censorship and restrictions do not permit a comprehensive picture of the situation; but, without claiming to meet more than part of the needs, the American Jewish Joint Distribution Committee is rendering daily assistance to 250,000 Polish Jews who would otherwise perish.

**Germany** (including Austria and Czechoslovakia). In Germany and its incorporated territories, restrictions against the Jews have progressively tightened under pressure of both the war and of Antisemitic policy, and hardships have increased. Milk, cheese, chocolate, new clothing of any kind, and even thread to mend the old, are denied the Jews. Food may be bought only during one hour late in the afternoon; fuel is doled out in dribbles. The possession of a telephone or radio is forbidden. It is reported that 25,000 Jews are still in concentration camps. For the remainder the only occupation allowed, or rather prescribed, is compulsory hard labor, for which it is estimated 50,000 are drafted. In Austria, Jewish women must work in the fields. City after city has banished its Jews by shipping them to Berlin. And the Reich, in turn, shipped on one day's notice the entire Jewish population of Baden and the Palatinate, some 10,000 souls, to unoccupied France. In Prague, the Jews were consigned to a ghetto (May 5). Throughout Bohemia and Moravia, Jewish children have been excluded from the public schools. However, the Czechs, alone among the populations of Central Europe, show manifest sympathy for their Jewish fellow victims. Slovakia, according to its premier, Dr. V. Tuka, "is systematically carrying through measures to solve the Jewish problem." That is to say, a bureau has been set up "to liquidate all Jewish businesses." According to the decree passed in February, this process should have been completed by June. In the capital, Bratislava, the Jewish population was instructed, on November 29, to prepare for mass transfer to concentration camps; and Berlin reports that similar evacuations will take place in other Slovak towns.

**Elsewhere in Europe.** Rumania has been the scene of the most brutal events of the year. According to Leigh White (Overseas News Agency correspondent in the Balkans), "Rumania's 'Jewish problem' no longer exists. All but a few scattered hundreds of Rumanian Jews have been reduced to pauperism." The cession of Bessarabia in June and later of Transylvania were the signal for virulent pogroms. In between these pogroms the government passed a series of laws "far harsher than the Nuremberg laws of Germany." Finally, under circumstances too revolting to describe, the Iron Guard uprising of January, 1941, added hundreds of further victims. Between July and mid-

January it has been estimated that 5000 Jews were massacred, and thousands more maimed and tortured. All the synagogues and a great portion of the Jewish business quarter in Bucharest were destroyed.

Hungary's Jewish population was increased by 150,000 through its acquisition of Transylvania; and while the chances of the newcomers to earn a livelihood under Hungarian law are meager, they were probably fortunate to escape Rumanian barbarism. Among the other 600,000 Jews of Hungary 40 per cent were reported destitute and jobless.

Bulgaria has joined the "new order" in Europe, at least in its Jewish policy. On October 7 a series of decrees deprived its 50,000 Jews of their citizenship and prohibited them from occupying State, municipal, or public posts. They cannot serve in the army or own agricultural land. They are barred from banking, publishing, and the cinema and theater business. Yugoslavia introduced Antisemitic legislation (September 20) by excluding Jews from the foodstuff trades. A week later a *numerus clausus* was decreed for high schools and universities. In October it was reported that legislation was in preparation to ban Jews from all fields influencing public opinion, such as press, theater, and radio.

The Soviet Union continued to be chary with information concerning its Jews as well as its other internal affairs. Its Jewish population has been enormously increased by the acquisition of the Baltic States, Eastern Poland, and Bessarabia. Since the number of merchants and traders, however poor, were proportionally higher among the Jews than the general population of the newly acquired territories, the problems following their "declassification" were correspondingly graver. No outside relief agencies, however, are permitted to alleviate their plight. According to Jacob Lestchinsky *Contemporary Jewish Record*, III, 607-621), religion is declining among the Russian Jews, Yiddish is slowly vanishing, and "as a result of Soviet policies, the eventual disappearance of Jews as a distinct people in the Soviet Union seems inevitable."

**Palestine.** Despite the hardships of war, Palestine (q.v.) continues to be one of the few bright spots in the Old World. It is the only country, in the Old World or New, where a newcomer is not a refugee but an immigrant. Eight new settlements were added to the 272 Jewish towns and villages. The Jewish population was increased by about 25,000 immigrants, and 10,000 acres were acquired. About 137,000 persons, or 25 per cent of the Jewish population, derived their living from the land. Sixty-three new industrial enterprises were established. According to Dr. Bernard Joseph, legal advisor to the Jewish Agency for Palestine, 8000 Jews have enlisted with the British fighting forces, of which 15 per cent are in the R.A.F.; 900 have been recruited in four Jewish infantry companies; and a total of 136,000 men and women have volunteered for various war services. A common enemy and common danger have appreciably lessened the tension between Arabs and Jews. On the other hand, the Jews expressed universal dissatisfaction, going to the extent of violent demonstrations on several occasions against the British restrictions on the purchase of land. On the economic front, the citrus industry and allied agricultural export enterprises have suffered a severe depression owing to the curtailment of overseas trade. But industrial enterprises necessary to the war have flourished, particularly in drugs and medicaments supplied to the Near East and India. Nearly 100,000 persons

have required economic relief, in large part furnished by the United Palestine Appeal, the Government, and the Joint Distribution Committee. See BOLIVIA, BULGARIA, FRANCE, SLOVAKIA under *History*; REFUGEES; WAR RELIEF. For Jewish Congregations, see RELIGIOUS ORGANIZATIONS.

**JUVENILE DELINQUENCY.** Recent efforts in the field of juvenile delinquency have been directed largely to prevention through dealing with individual and community problems that lead to juvenile delinquency. The provision for preventive services has been steadily extended through the development of child-welfare services, child-guidance clinics, and group-work activities.

The Children's Bureau (qv) of the U.S. Department of Labor with local co-operation is conducting in St. Paul, Minn., a neighborhood project known as Community Service for Children. Its major objectives are to determine the types of behavior and delinquency cases that can be handled on an administrative basis without juvenile-court participation; the methods and types of community organization best suited to this purpose; and the means of informing parents, teachers, social workers, and the community of factors in the causation, prevention, and treatment of behavior problems.

Co-ordinating councils on a neighborhood or community basis, established first in California, seek through the joint effort of lay and professional groups to co-ordinate the social forces of the community in behalf of all children. Started originally because of interest in the prevention of juvenile delinquency, these councils tend to broaden their programs to include other problems of child welfare, because they recognize the interdependency of juvenile delinquency and other social problems.

Since 1936 the widespread development of county welfare departments and of child-welfare services in such departments as a result of Federal aid to the States under the Social Security Act has provided in many rural areas child-welfare workers who are in a position to give case-work services to children in danger of becoming delinquent. In approximately 500 counties or local areas where such workers are now employed, they are increasingly called upon by the parents, the schools, and the juvenile courts to assist in working out the problems of individual children. As a result of such

experience they bring to the attention of community leaders the need for recreation and other facilities in the community that will benefit all children. Consultation service from the State welfare departments and the Children's Bureau tends to strengthen and extend this type of protective service for children. The National Council of State Public Assistance and Welfare Administrators and the Board of Directors of the American Public Welfare Association in December, 1940, expressed their appreciation of the value of child-welfare-service programs in local communities and urged the extension of local child-welfare services with Federal and State co-operation.

Recreational and other group activities have long been recognized as an important community method of preventing juvenile delinquency. Group experience is being used increasingly in the treatment of behavior difficulties by agencies dealing with children on a therapeutic case-work basis.

The child-guidance clinic employs the psychiatrist, the psychologist, and the psychiatric social worker to deal with the behavior problems of children of a fairly normal range of intelligence. These clinics for children exist mainly in urban centers, but there is growing effort on the part of State welfare and mental-hygiene departments to provide traveling units to serve smaller communities. Experience in these clinics is resulting in increased attention, on the part of physicians who take care of young children in their homes and in child-health conferences, to the early training that will prevent behavior difficulties.

During its early years the juvenile court was the only agency widely available in local communities to deal with child dependency, neglect, and delinquency. The problems that it brought to light led to the establishment of child-welfare services in public-welfare agencies and to the provision of public aid to dependent children. The White House Conference on Children in a Democracy (Jan. 18-20, 1940), in recognizing the changing position of the juvenile court, pointed out that it is the function of the juvenile court to provide legal action based on social study with a view to social treatment in cases of delinquency requiring court action and in cases involving adjudication of custody and guardianship or enforcement of responsibilities of adults toward children. The Conference also recommended that as local public-welfare departments become equipped for adequate child-welfare service, juvenile courts should be relieved of cases not coming within these classifications. In many States the juvenile courts have already been relieved of much of their administrative responsibility for dependent children. The juvenile-probation officer attached to the juvenile court was in many communities the first child-welfare worker publicly employed. Today the juvenile courts in the smaller counties are calling on the trained child-welfare workers in local welfare departments for social study and treatment in cases of juvenile delinquency. The courts have increased opportunity for co-ordination of service with the newly developed community child-welfare agencies.

At present 46 States, Alaska, the District of Columbia, Hawaii, the Philippine Islands, and Puerto Rico either have separate courts for juvenile offenders or have provided specialized jurisdiction and procedure for children's cases. Maine and Wyoming have embodied certain aspects of juvenile-court legislation in laws relating to the protection of children and to procedure in chil-

dren's cases. In 26 States and the District of Columbia the age limit for juvenile-court jurisdiction is now set at 18 years or higher for some or all cases of delinquent children. Juvenile-court law is based on the concept that the child who breaks the law should be regarded not as a criminal but as a ward of the State to be given parental care and treatment. Juvenile Court Standards, adopted by the Children's Bureau and the National Probation Association, have guided much of the juvenile-court legislation. In 1938 Congress passed a Federal Juvenile Delinquency Act and a new juvenile-court act for the District of Columbia based on the principles embodied in the standards recommended. Mississippi passed a new juvenile-court act in 1940.

The Children's Bureau received reports on juvenile-court statistics for the year 1938 (the latest year for which summary statistics are available) from 476 courts in 28 States and the District of Columbia, 90 of which served areas of 100,000 or more population. During 1938 these courts disposed of 77,289 delinquency cases: 84 per cent boys' cases and 16 per cent girls' cases. White children were involved in 79 per cent of the cases; Negro children in 20 per cent; and children of other races in 1 per cent. In 63 per cent of the boys' cases and in 72 per cent of the girls' cases the children had had no previous court experience. In one-half of the boys' cases the referral was for some type of stealing, and in more than one-fourth (28 per cent) of the cases it was for acts of carelessness, mischief, or traffic violation. In 62 per cent of the girls' cases the referrals were for running away, for being ungovernable, or for sex offenses. Forty-five per cent of the boys' cases and 35 per cent of the girls' cases were dismissed, adjusted, or held open pending further developments. Approximately one-third of all cases were referred to a probation officer for supervision. In 10 per cent of the boys' cases and 16 per cent of the girls' cases the children were committed or referred to an institution.

As a result of a study of crime among the youth between 16 and 21 years of age the Criminal Justice-Youth Committee of the American Law Institute drafted two model acts designed to improve State methods of dealing with youthful offenders under 21 years of age who are not under the jurisdiction of the juvenile court. The first of these, the Youth Correction Authority Act, was approved by the American Law Institute in 1940. The second, the Youth Court Act, which would set up a court organization with an improved procedure, is still under consideration.

Since 1937 an Advisory Committee on Training Schools for Socially Maladjusted Children has been working with the Children's Bureau on the evaluation of institutional methods in State training schools for boys and girls and on the development of more effective treatment programs. A Directory of State, County, and Municipal Training Schools caring for children in the United States was issued by the Children's Bureau in 1940. The total number of children in the 115 State training schools on June 30, 1939, was 28,652, of whom 71 per cent were boys and 29 per cent were girls. In the 43 county and municipal institutions from which it was possible to obtain information there were 3945 children. The increasing availability of child-welfare workers in local communities is affecting commitments to the training school both by keeping at home children whose behavior problems can be handled through local resources and by

sending to the schools the children who need the training-school service.

Recently some of the State training schools have been providing social workers to consider the individual problems of boys and girls entering and leaving the schools. In several States on request the State welfare departments have made the services of social workers available on a demonstration basis. Supervision, after the training-school experience, has been limited in most States by the small number of workers assigned to this service and the consequent heavy case loads and extensive territories to be covered. To some extent this condition is being improved as local child-welfare services are established and close working relationships are developed with the training schools.

See CHILDREN'S BUREAU; PRISONS, PAROLE, AND CRIME CONTROL; PSYCHOLOGY.

KATHARINE F. LENROOT.

**KANSAS.** Area, 82,158 square miles, including water, 384 square miles. Population, Apr. 1, 1940 (census), 1,801,028; 1930, 1,880,999. Kansas City had (1940) 121,458; Wichita, 114,966, Topeka (the capital), 67,833. The rural population, 1,047,087 (1940), lacked 104,078 of its total of 1930 but still predominated. The urban population (inhabiting places of 2500 or more), 753,941 (1940), had risen in the same interval by 24,107.

**Agriculture.** Kansas harvested, in 1940, about 20,324,000 acres of the principal crops—about 10 per cent more than the year before. Occupying about 44 per cent of this total, or 8,857,000 acres, wheat yielded 123,848,000 bu, estimated as having a value of \$78,024,000 to the farmer. Corn, on 2,647,000 acres, made 41,028,000 bu (about \$24,617,000); oats, 1,557,000 acres, 43,596,000 bu (\$12,643,000); grain sorghums, 2,211,000 acres, 27,638,000 bu (\$10,779,000); tame hay, 1,005,000 acres, 1,580,000 tons (\$8,690,000); barley, 1,136,000 acres, 18,176,000 bu. (\$6,180,000). There were 156,327 farms in 1940; in area they averaged 308.2 acres.

**Mineral Production.** As reckoned by the U.S. Bureau of Mines in 1940, Kansan production of native minerals totaled \$129,675,438 for 1938. The chief component, petroleum, gave five-ninths of this figure; the next, natural gas, over one-fifth; zinc, coal, and cement made up most of the remainder. In 1939 the great flow of petroleum in Illinois, hurting the market for the Kansan product, led operators to drill fewer new wells. None the less, the production of petroleum rose a little, to some 60,723,000 bbl. (1939), from 60,064,000 bbl., in value \$72,100,000 (1938). Rising demand brought a higher production (1939) of natural gas for consumption, largely outside the State; the total of such production of natural gas for 1938 had been 75,203 million cu. ft., in value at points of consumption, \$27,485,000. Mines' production of zinc diminished to 68,971 short tons for 1939, from 73,024 tons (value, \$7,010,304) for 1938.

Coal mines' output of 1938 totaled 2,654,141 net tons (value, \$5,263,000). Makers' shipments of portland cement, fairly close to yearly production, increased to 3,746,370 bbl. for 1939, from 3,217,497 bbl. for 1938; by value, to \$5,614,112, from \$4,949,018. Producers of salt sold or used 641,752 short tons of divers types of salt (value, \$2,591,934) in 1939.

**Education.** For the academic year 1938-39 (the latest covered by all data that follow) the number of persons of school age in Kansas—from 5 years to 21—was reported as 500,846. The year's enroll-

ments in public schools totaled 372,493: this comprised 263,227 in elementary and 109,266 in high school. Outside these figures were a considerable enrollment in kindergartens and 4923 in junior colleges. The year's expenditures for public-school education (capital outlay excepted) to \$26,552,397. The teachers numbered 19,454.

**History.** The competition between the contiguous communities of Kansas City, Kansas, and Kansas City, Missouri, took a striking form. The Kansas municipality had opened for occupancy, in December, 1939, an extensive food terminal in which a number of firms from across the Missouri line had become tenants. The Missourian Kansas City felt the neighboring enterprise to be an unfair blow at its own commerce. A Federal suit was brought against Kansas City, Kansas, and against the Union Pacific Railroad Company, by the Interstate Commerce Commission, with a view to restraining the practices of the terminal; the railroad was sued as having taken an important part in the municipal enterprise. Kansas City, in Missouri, and several railroads competing with the Union Pacific entered the suit. A Federal District Court, after six weeks of preliminary hearings, held that, because of the railroad's relation to the enterprise, concessions made to merchants to rent quarters in the terminal were rebates in interstate commerce; a temporary injunction issued on May 25 forbade letting such quarters below a specified rate and undertook to try the case at a later date. The market was leased to a private company in September.

Success in drilling for petroleum raised the potential production of wells in Kansas to the highest figure recorded, but lack of a market kept the actual output from advancing to the extent of the producers' hopes. This raised apprehension lest leading companies should keep purchases of the commodity down and thus at length acquire wells in Kansas at bargain prices. Public sentiment in the State was directed also to another feature of the Kansan economy, the lack of a satisfactory market for wheat and some of the other main crops. With dissatisfaction over markets for agricultural products and petroleum went a certain amount of resentment at the admittance of competing foreign products, as provided in the reciprocal trade treaties. These considerations had a bearing on the loss, in the year's election, of about one-fourth of the State's Democratic vote of 1936. Among Federal efforts in 1940 to extend the benefits of the New Deal more palpably to Kansas was the Bureau of Reclamation's commencement of preliminary work on an enterprise to dam the Republican River and supply water for the irrigation of 100,000 or more acres in western Kansas.

A feature of the lack of a sufficient outside market for petroleum was the encouragement that the situation gave to the idea of refining petroleum in the State, for the home market; the Consumers' Co-operative Association of Kansas City, Kansas, built with this aim a refinery at Phillipsburg, completed in May, at a cost of \$800,000. See **LABOR LEGISLATION**.

**Elections.** The State's popular vote for President at the general election on November 5 gave Willkie (Rep.) 489,160; Roosevelt (Dem.) 364,725. For Governor, Payne H. Ratner (Rep.), running for re-election, defeated W. H. Burke, (Dem.) by a margin of 427 votes, on a complete unofficial count, including absentees' ballots.

**Officers.** The chief officers of Kansas, serving

in 1940, were: Governor, Payne H. Ratner; (Rep.); Lieutenant Governor, Carl E. Friend; Secretary of State, Frank J. Ryan; Auditor, George Robb; Treasurer, Walter E. Wilson; Attorney General, Jay S. Parker; Superintendent of Public Instruction, George L. McClenny.

**KANSU.** See **CHINA** under *Area and Population*.  
**KARAFUTO.** The Japanese part (south of 50° N.) of Sakhalin. Area, 13,935 square miles; population (1937), 326,946. Chief towns: Toyohara (capital), 37,365 inhabitants; Esutoru, 31,959; Shikka, 24,399; Otomari, 24,269. Chief products: Timber, paper, fish, coal, and petroleum. Trade (1937): Imports, ¥59,403,628; exports, ¥121,372,966 (yen averaged \$0.2879 for 1937; \$0.2596 for 1939). Budget (1939-40): ¥48,734,000. Governor, Shun-ichi Munesue.

**KEDAH.** See **BRITISH MALAYA**.

**KEEWATIN.** See **NORTHWEST TERRITORIES**.

**KELANTAN.** See **BRITISH MALAYA**.

**KELLOGG FOUNDATION.** See **BENEFACCTIONS: DENTISTRY**.

**KENTUCKY.** Area, 40,598 square miles, including water, 417 square miles. Population, Apr. 1, 1940 (census), 2,845,627; 1930, 2,614,589. Louisville had (1940) 319,077; Frankfort (the capital), 11,492. The rural population, rising to 1,996,300 (1940), exceeded by 180,737 its total of 1930, having gained 10 per cent. The urban dwellers (those in places of 2500 or more), numbering 849,327 (1940), gained 6.3 per cent, but became proportionately fewer.

**Agriculture.** Kentucky harvested, in 1940, about 5,330,000 acres of the principal crops. Most of the return for the cultivation of the soil came in nearly equal shares from corn and tobacco. Corn apparently surpassed tobacco in 1940: 2,816,000 acres of corn produced 70,400,000 bu., estimated as worth \$50,688,000 to the grower; tobacco, on 343,200 acres, gave 295,890,000 lb., similarly worth \$47,948,000. Tame hay, 1,424,000 acres, made 1,629,000 tons (\$17,756,000); wheat, 375,000 acres, 5,625,000 bu. (\$4,388,000); potatoes, 46,000 acres, 4,140,000 bu. (\$3,146,000); sweet potatoes, 23,000 acres, 1,955,000 bu. (\$1,760,000).

**Mineral Production.** Kentucky (as reckoned by the U.S. Bureau of Mines in 1940) produced native minerals to the total value of \$106,654,903 in 1938. To this total coal contributed almost two-thirds, natural gas more than one sixth, and petroleum and stone most of the rest. The yearly production of bituminous coal, as usual around 11 per cent of that for the entire Union, rose to 42,805,000 net tons, approximately, for 1939, from 38,545,218 tons (value, \$70,094,000) for 1938. For 1940 the output of coal totaled 44,477,000 tons.

The quantity of natural gas produced and delivered to consumers attained 46,163 million cu. feet for 1938; the value of such gas at points of consumption totaled \$19,539,000. A considerable increase in the consumers' demand for Kentucky's natural gas, appearing late in 1939, offered encouragement to further development and exploration of the fields in 1940. The output of petroleum declined to 5,581,000 bbl. approximately, for 1939, from 5,821,000 bbl. (value \$7,570,000) for 1938.

The clay products of 1938 (except pottery and refractories) amounted to \$1,266,284. Fluorspar shipped from mines, responding to the resumed demand from steelmakers, jumped to 89,563 short tons for 1939, from 34,803 tons for 1938; in value, to \$1,773,063, from \$678,094; almost half of the domestic fluorspar of 1939 originated in Kentucky.

**Education.** For the academic year 1939-40 Kentucky's inhabitants of school age were estimated to number 778,429. The year's enrollments of all pupils in the public schools totaled 608,621, including 472,544 in elementary schools and 136,077 in high schools. The year's expenditure for public-school education amounted to \$22,563,115. There were 18,417 teachers in the public schools. The median salary of the teachers for 1940-41 was \$717.

**History.** The Legislature met in regular biennial session at the beginning of January and adjourned on March 4. It ratified the compact of the States having territory in the basin of the Ohio River, for the sanitation of the river's water; West Virginia, Ohio, Illinois, and New York, had previously ratified.

A \$52,000,000 general appropriation bill was voted. A system of retirement, with pension, for teachers in the public schools, was created; it required both teachers and the State to make periodical contributions to a fund for such pensions and set the beginning of the payment of pensions for July 1, 1942. A soil-conservation act, to allow the operation of the system of soil-conservation previously set up by the Federal Government with provisions for subvention to conforming farmers, was passed; it contained a requirement that the owners of not less than 80 per cent of the land in a proposed district must concur, to permit of its creation. Another act required second-class cities having systems of civil service for their employees to match the latter's contributions to pension funds. Judicial procedure was changed, to allow a wife to testify on behalf of her husband. A religious denomination originally active in Harlan County and known as the Church of God had made a practise of handling venomous snakes as a demonstration of the power of faith; this practice was prohibited by law. Taxes on chain stores, previously invalidated, were set up on a new plan.

An act of the Legislature establishing pensions for retired members of the State Court of Appeals was challenged as to validity, and a special court of seven selected members was created in September to handle the subject. The Court of Appeals removed Circuit Court Judge Sam M. Ward in May, after hearing testimony on a charge that he had bribed voters at his re-election in November, 1939. His opponent in the election moved to be declared holder of the judgeship, as the qualified candidate who had received the highest vote. This was refused and the vacancy was left to be filled by appointment.

Kentucky strictly enforced its limit of 18,000 lb. on the loads of trucks using its highways—a figure far below allowables in adjacent States; it arrested in 1940, up to October, 1904 outsiders charged with exceeding its limit. At Bowman Field, Louisville, the U.S. Army started building a post for a bombing squadron of airplanes.

**Elections.** At the general election on November 5, beside giving a substantial plurality to Roosevelt for President—vote: Roosevelt (Dem.), 557,222; Willkie (Rep.), 410,384—the voters elected former Gov. Albert B. Chandler (Dem.) to a

full term in the U.S. Senate, which he had entered in 1939 as temporary appointee at the death of Senator Logan. The Republican candidate for Senator was Walter B. Smith.

**Officers.** Kentucky's chief officers, serving in 1940, were: Governor, Keen Johnson (Dem.); Secretary of State, Charles D. Arnett (d. December 3) and George G. Hatcher (successor); Treasurer, John E. Buckingham; Attorney General, Hubert Meredith; Auditor, Ernest E. Shannon; Commissioner of Agriculture, Labor, and Statistics, Garth Ferguson; Superintendent of Public Instruction, Harry W. Peters.

**KENYA.** A British colony and protectorate in East Africa. Area, 224,960 square miles; population (Jan. 1, 1939), 3,365,888 (3,280,774 natives, 44,635 East Indians, 20,894 Europeans, 14,077 Arabs, 3734 Goans, and 1774 others). Chief towns: Nairobi (capital), 61,000 inhabitants; Mombasa, 50,000; Nakuru; Kisumu. Education (1938): 1977 schools (exclusive of some Koran schools on the coast) and 141,417 students.

**Production and Trade.** Chief products: cotton, maize, sugar, coffee, pyrethrum, sisal, tea, timber, sodium carbonate, wattle, and gold. Live-stock in European areas (1938): 497,478 cattle, 563,949 sheep, 13,192 pigs, and 1689 goats. Gold exported during 1939 amounted to 101,149 troy oz. Kenya and Uganda are considered a single unit for customs purposes. Trade (1939): imports (Kenya and Uganda combined), £8,942,436; exports (Kenya only), £4,176,476. In addition to the foregoing external trade there is an interchange of goods among Kenya, Tanganyika, and Uganda.

**Communications.** The State-owned Kenya and Uganda railways carried 1,026,229 tons of freight during 1939. There is a network of airways (totaling 3093 miles in 1940) linking the important centers of the colony. Shipping entered and cleared the ports during 1938 totaled 4,697,252 tons.

**Government.** In the 1940 budget, expenditure was expected to exceed revenue by £53,000. On Dec. 31, 1938, the total public debt was £17,580,600 and of this amount £13,251,808 represented the capital debt of Kenya and Uganda railways and harbors. The executive power rests with the governor who is advised by an executive council. There is a legislative council of 41 members (the governor as president, 11 ex-officio, 12 nominated, and 17 elected). By the Kenya Annexation Order in Council, 1920, the territories of the mainland, excluding the mainland dominions of the Sultan of Zanzibar, were recognized as a colony; the coastal belt rented from the Sultan of Zanzibar remains a protectorate. Governor and Commander-in-Chief, Sir Henry Moore (appointed Oct. 26, 1939).

**History.** Northern Kenya became one of the fronts in the struggle between British and Italian forces in Africa that began with Italy's entrance into the European War on June 10, 1940. The Italians occupied the sector of Kenya between southwestern Ethiopia and Italian Somaliland and advanced to Moyale, Buna, and Wajir. See *EUROPEAN WAR under Campaigns in Africa*. To meet this offensive, the British concentrated troops in Kenya from South Africa, Rhodesia, the Gold Coast and many of the other African colonies. Kenya was placed upon a war basis, with conscription for Europeans, and steps were taken to co-ordinate economic and commercial policies with other British East African colonies for war purposes. See *SOUTH AFRICA under History*.

**KOREA (CHOSEN).** A former empire of eastern Asia, annexed by Japan on Aug. 22, 1910, and incorporated as an integral part of the Japanese Empire by an Imperial Rescript of 1919. Capital, Keijo (Seoul).

**Area and Population.** Area, 85,246 square miles. Estimated population on Dec. 31, 1938, 22,633,851 (Koreans, 21,950,716; Japanese, 633,320; Chinese and other foreigners, 94,815). Populations of the chief cities on Dec. 31, 1937, were: Keijo (Seoul), 705,395; Fusan, 213,142; Heijo (Pyongyang), 185,419; Taikyu, 110,866; Jinsen (Chemulpo), 102,473. The Koreans have their own spoken and written language, but Japanese is the language of the government.

**Education and Religion.** About 60 per cent of all adults are illiterate. In May, 1938, there were 3033 elementary schools with 1,051,070 pupils, 43 middle schools with 23,407 pupils, 51 girls' high schools with 19,072 pupils, 203 vocational and professional schools with 30,406 students, and the University of Keijo with 542 students. Inculcation of Japanese ethics and loyalty to the Emperor is strongly emphasized. On Jan. 1, 1937, there were 489,626 Christians (499,300 on Jan. 1, 1939), 285,640 Buddhists, and 104,602 adherents of Shintoism, the principal religion of Japan. Confucianism is spreading among the upper classes. Shintoism receives government support. On Oct. 7, 1940, Christian denominations with about 60,000 Korean members were dissolved by the government and merged in a new association pledged to eliminate foreign influence and condemn communism, individualism, democracy, and doctrines at variance with Japanese national policy. The schools maintained by these denominations were reorganized and military drill introduced.

**Production.** Over three-fourths of the population is engaged in agriculture and forestry. Production of rice in 1939 was about 137,200,000 bu. Yields of other cereals was (in metric tons): Wheat, 334,400; barley, 1,329,700; oats, 39,600 (1938); corn, 98,600 (1938). Millet, cotton, raw silk, soybeans, hemp, tobacco, and fruit are widely grown. Livestock in 1938 included 1,713,000 cattle, 1,620,000 swine, 51,000 horses, and 20,000 sheen. Fisheries production (1938) was valued at 89,920,000 yen. Mineral production in 1936 was valued at 110,429,655 yen (gold, 59,353,700; coal, 13,310,000; pig iron, 7,866,600; steel, 6,533,000). Copper, silver, lead, tungsten, and graphite are also mined. Manufacturing has undergone marked development, the value of output reaching 959,308,000 yen in 1937.

**Foreign Trade.** Korean merchandise imports from the rest of the Japanese Empire in 1939 totaled 1,229,400,000 yen (921,300,000 in 1938) and from foreign countries 159,000,000 yen (134,600,000 in 1938). Exports to the Japanese Empire were 736,900,000 yen in 1939 (710,500,000 in 1938) and to foreign countries 269,900,000 yen (169,100,-

000 in 1938). Rice, fertilizers, heavy iron, and other minerals were the chief exports.

**Finance.** Budget estimates for the fiscal year ended Mar. 31, 1940, placed both receipts and expenditures at 656,099,928 yen. On Mar. 31, 1938, the public debt was 593,546,214 yen (549,731,000 on Mar. 31, 1937). The yen exchanged at \$0.2344 in 1940, \$0.2596 in 1939.

**Communications.** With 2320 miles of line, the State railways in 1937-38 carried 35,906,000 passengers and 11,370,000 metric tons of freight. About 310 miles of new line were opened in 1939. Highways covered 19,043 miles in 1939. Airlines connected Keijo with the other chief cities of Korea, Japan, Manchoukuo, and North China. Shipping tonnage entered at the ports in 1938 totaled 14,677,742.

**Government.** Korea is ruled by a governor-general appointed by the Emperor of Japan. He is assisted by a Privy Council of 82 Koreans. Governor-General in 1940, Gen. J. Minami (appointed December, 1937).

**History.** The difficulties encountered by Japan in China and in its relations with the Western democracies during 1940 encouraged the underground Korean independence movement. The press agency of the Chinese Nationalist Government announced Sept. 19, 1940, that headquarters of a "Korean restoration army" had been established the previous day at Chungking, with members of the "Korean provisional government" in attendance. The Japanese in July rounded up a number of foreigners in Korea in connection with an anti-espionage drive. During November 51 American missionaries stationed in Korea left for the United States on the advice of the U. S. State Department. Construction proceeded during 1940 on the first of seven huge dams projected by the Japanese authorities in connection with the gigantic Yalu hydroelectric development program. It was said that the first dam would be the largest storage dam in the world.

**KWANTUNG.** The territory occupying the southern part of the Liaotung Peninsula, Manchuria, leased from China by Japan. Area, including 40 adjacent islands, 1337 square miles; population (1937), 1,190,004, including 1,009,870 Manchurians and 174,587 Japanese (exclusive of the armed forces). Chief towns: Dairen (capital), 515,743 inhabitants in 1938; Port Arthur (Ryojun), 145,286; Pulantien; Chinchow. Trade (1937): Imports, Y680,061,785; exports, Y451,798,860 (yen averaged \$0.2879 for 1937). Budget (1939-40): Revenue, Y34,341,000; expenditure, Y34,191,000 (yen averaged \$0.2596 for 1939). In December, 1934, the Kwantung Government was replaced by the Kwantung Bureau and subordinated to the Japanese Ambassador in Hsinking, Manchoukuo. Director General of Kwantung Bureau, Toshio Otsu. See JAPAN and MANCHOUKUO.

See also the articles on the States of the United States; AUSTRALIA, CANADA, GERMANY, GREAT BRITAIN, NEW ZEALAND and the other principal countries under *History*.

**LABOR, American Federation of.** See AMERICAN FEDERATION OF LABOR.

**LABOR, U.S. Department of.** See LABOR CONDITIONS; UNITED STATES under *Administration*; and separate articles on the following branches of the Department: CHILDREN'S BUREAU; CONCILIATION SERVICE, U.S.; WAGE AND HOUR DIVISION; WOMEN'S BUREAU.

**LABOR CONDITIONS.** War-time labor policies demanding maximum production with minimum protection for workers prevailed in many countries during 1940. Governmental regulations were imposed where workers did not voluntarily sacrifice some of the standards built up since the last war. Freedom of organization suffered severe set-backs. Longer hours, lower real wages, and less opportunity for movement from one job to another were common throughout the world. Stern measures for protection of industry against suspected saboteurs to some extent curtailed the liberty of all workers.

The experience of Germany may not be typical, but perhaps it provides some indication of developments which may occur if they have not yet occurred elsewhere. With the invasion of Poland in September, 1939, Germany established what their officials called "Kriegsverpflichteten Wirtschaft," meaning something like compulsory or forced war economy. Wage rates were lowered by official decree. Overtime, Sunday, and holiday earnings were conscripted by the government to help finance the war. Paid vacations were prohibited. Workers were barred from leaving their jobs and employers from dismissing them without permission of the State authorities. Working hours were increased in some cases to as many as 16 a day.

Within a short time, however, production began to fall off rapidly, and there was an alarming increase of industrial accidents and stoppages. The government very soon began to lighten somewhat the labor conditions prescribed by decree. Vacations were restored to workers for certain periods and under certain limitations. Where wages appeared to be too low for proper nourishment and decent living conditions, the workers' incomes were supplemented by relief payments. New regulations defined working hours so that the 10-hour day was most usual, and overtime earnings were paid to the workers themselves. (See "Labor Policy in Germany," *Monthly Labor Review*, June, 1940, pp. 1374-1376.)

It is not clear that intensified efforts for greater production have led other countries through similar cycles. The experience may still lie ahead for some. In most countries, however, it appears that government authorities recognize that there are limits to the extent to which good labor conditions can

be sacrificed for the sake of national defense or offense.

**Employment and Unemployment.** Unemployment was markedly reduced in several countries during 1940, but on the basis of the limited statistics available it is not clear that unemployment was greatly reduced throughout the world as a whole. The accelerated production of airplanes, munitions, and other war supplies created more jobs in the belligerent nations and some of the neutrals preparing for defense. Simultaneously, however, some neutral countries experienced a trend toward more unemployment because of transport problems, the disorganization of their foreign markets, and the difficulties in obtaining necessary raw materials. It also appears that instead of drawing substantially on the reservoirs of the unemployed, some countries met their increased labor needs by lengthening the work week and employing housewives and others who normally would not be counted as unemployed.

Conscription of workers for military service caused a serious dislocation of labor and also created a variety of other employment problems. There was need for protecting the future of men called to arms. Most countries faced with this problem adopted the rule that while a worker's relations with his employer are interrupted, the contract of employment is not broken and the worker is entitled to claim reinstatement in his former employment when he finishes his military service. More urgent was the need for assisting the families of mobilized workers. Some governments provided subsistence allowances for the families. Some provided that the employer must continue to pay part of the mobilized worker's wages to his family. Other plans involve collaboration on a wider scale by distributing costs over all employers concerned and requiring contributions from workers who have not been called up. (See "National Service and Contracts of Employment" by E. Herz and I. Bessling, *International Labour Review*, July, 1940, pp. 1-28.)

Several countries in 1940 made legislative provision for the requisitioning of labor if emergencies should arise, and Norway followed a German practice by decreeing that nobody may leave his occupation without permission of the Ministry of Social Welfare. Germany, Bulgaria, and Rumania continued their systems of compulsory labor service to which young people are liable for a specified period.

Official data published in Germany indicated that the number of unemployed persons dropped from 257,000 at the end of January, 1940, to 39,000 by the end of June; and it was claimed that of the 39,000 only 3500 were employable.

Unemployment in Great Britain rose from about 1,200,000 in August, 1939, before the war began, to more than 1,500,000 in January and February, 1940, and then dropped to less than 800,000 by August, 1940. There was relatively little change in the unemployment situation in Sweden. Of a total of approximately 700,000 members covered by the returns of the reporting trade unions, 10.8 per cent were unemployed at the end of April, 1940, as compared with 9.0 per cent at the end of April, 1939. In Denmark, however, unemployment rose from 11.5 per cent in May, 1939, to 31.2 per cent in May, 1940, according to returns received by the Danish Statistical Department from approved unemployment funds with a total membership of approximately 497,000. On the other hand, in Switzerland

EMPLOYMENT, PAY ROLLS, AND EARNINGS IN  
UNITED STATES INDUSTRIES DURING 1940\*

	Employ- ment index	Pay-roll index	Average weekly earnings (dollars)	Average hours worked per week	Average hourly earnings (cents)

\* Condensed from tables of Bureau of Labor Statistics, U S Department of Labor. Indexes are based on 3-year average, 1923-25 = 100, and has been adjusted to preliminary 1939 census figures

only about 9000 applicants for employment were registered at employment exchanges at the end of June, 1940, as compared with more than 35,000 the previous year. In Canada the estimated number of wage earners unemployed was 367,000 in April, 1940, compared with 473,000 in April, 1939.

Unemployment was reduced in the United States. The Bureau of Labor Statistics does not publish estimates of unemployment, but its estimates of the level of total non-agricultural employment give some indication of the trend. The employment level was at its lowest for the year in February, when approximately 34,381,000 workers were employed in non-agricultural industries, but in February, 1939, only 33,265,000 were employed. By November, 1940, the level of employment had risen to 36,535,000, compared with 35,418,000 in November, 1939.

American Federation of Labor estimates placed the number of unemployed at 10,656,000 in January, 1940, compared with 11,369,000 in January, 1939. By December, 1940, the estimates dropped to less than 7,906,000 compared with 9,248,452 in December, 1939. The Congress of Industrial Organizations launched a new series of unemployment estimates during the year. Its figure for January was 11,936,000. By December the estimate had dropped to 9,034,000.

**Hours of Work.** Governmental restrictions on hours of work were relaxed or discarded in many neutral as well as belligerent countries during 1940 under the pressure of intensified production for war. In some countries the movement toward the shorter working week was merely slowed down. The only important steps toward shorter hours were in Australia, where the Commonwealth Court recognized the 44-hour week which already existed in many industries as the standard hours, and in the United States, where the Fair Labor Standards Act cut maximum hours from 42 to 40 a week and collective agreements providing a 40-hour week continued to be signed. A long-range study by the Bureau of Labor Statistics, published in the September issue of the *Monthly Labor Review*, showed a drop in average hours actually worked in United States Industry from 51.7 a week in 1909 to 37.8 in 1939.

Statistics of working hours throughout the world are too incomplete to permit generalization, but changes in governmental regulations give some indication of the trend. Modifications usually took the form of removal of limitations on overtime and the adjustment of overtime rates. In Finland,

for example, the usual limit of overtime was extended to 40 hours in any fortnight. In Great Britain, where collective agreements usually fix no limit to overtime provided that prescribed rates are paid, modifications dealt mainly with changes in the time-table due to the black-out and payment for time lost on account of air raid warnings. Belgium, Bulgaria, India, New Zealand, and Rumania authorized extensions of hours of work under certain conditions.

**Wages.** Despite war-time price controls in many countries, the cost of living increased throughout the world in 1940. Every one of the forty countries from which the International Labour Office has reports experienced a rise in the index during the year, in some cases as much as 15 points. Information on actual wage rates is less complete, but there appear to be few important rises in money wages. Chiefly because of the increase in the cost of living, therefore, it can be inferred that real wages declined in most countries during the year. In other words, while their income was changed very little, workers in most countries were unable to get as much or as good food, clothing, shelter, and other necessities with their earnings as they got in previous years.

The exceptions were essentially in those countries where organized workers had adjusted wage rates to cost of living. In Belgium, for example, the leading organizations of employers and workers determined late in 1939 that the various collective agreements should be applied on the basis of the cost of living index, that wages should remain stable until the end of February, 1940, and thereafter should vary according to the arithmetic mean of the indices for the three preceding months. Sweden continued its previously established policy of annual wage adjustments by which a six-point rise in cost of living necessitates upward adjustments in wages provided in contracts between the Swedish Employers Confederation and the Swedish Confederation of Trade Unions. In Denmark the Employers' Confederation and the Danish Confederation of Trade Unions in November, 1939, agreed to extend to March, 1941, all agreements due to expire in March, 1940, subject to quarterly adjustment of wages according to changes in the official cost of living index; it was provided that all wage increases resulting from the agreement should be regarded as cost of living bonuses and should be at flat rates so that the lowest-paid workers accordingly receive proportionately the highest bonuses (See "Remuneration of Labour," *The I.L.O. Year-Book 1939-40*, Geneva, 1940; pp. 183-196.)

An 8 per cent increase of wage rates occurred in Great Britain from August, 1939, to March, 1940. This was in contrast to conditions in the last war when the level of wages showed little change during the 7-month period following the outbreak of hostilities. Even with the increases during the present war, however, wage rates have not kept pace with cost of living, which showed a rise of 14 points from August, 1939, to March, 1940.

In the United States the average hourly earnings of manufacturing workers changed from 66.3 in February, 1940, to 67.3 cents in October. Corresponding figures for 1939 were 64.3 cents in February and 64.6 cents in October. Average weekly earnings were \$25.20 in February, 1940, compared with \$24.01 in February, 1939, and \$27.13 in October, 1940, compared with \$25.81 in October, 1939. The Bureau of Labor Statistics' new index of cost

of living meanwhile showed a change from 99.1 on Mar. 15, 1939, to 99.8 on Mar. 15, 1940, to 100.5 on June 15, 1940, to 100.1 on Nov. 15, 1940. See *LIVING COSTS AND STANDARDS*.

A long-range study by the Bureau of Labor Statistics, published in the September issue of the *Monthly Labor Review*, showed a rise of average hourly earnings from 20.7 cents in 1909 to 66.1 cents in 1939. Even when changes in cost of living are taken into account, the figures show a rise in real hourly earnings of 101.5 per cent during the 30-year period. Because of a reduction in weekly hours, weekly or annual earnings did not rise as much as hourly earnings, but the Bureau estimates a gain of 47 per cent in real weekly earnings during the 30-year period.

**Union Movements.** Throughout the world in 1940 organized labor faced these alternatives: collaboration with the government or domination if not elimination by the government.

The most notable example of collaboration with the government appeared in Great Britain, where the Trades Union Congress took on substantial responsibilities of the war program. Ernest Bevin, secretary of the Transport and General Workers Union and leader in the Trades Union Congress, became Minister of Labour and National Service when Churchill replaced Chamberlain as Prime Minister. Sir Walter Citrine, secretary of the Trades Union Congress, and other labor leaders also acquired duties in support of the government.

Besides appointment of trade union officers to administrative positions in the government, government-labor co-operation appeared in the National Joint Advisory Council, created in October, 1939, which included representatives of the Trades Union Congress and the British Employers' Confederation. The Council has important policy-making functions in connection with production and labor problems arising out of the war.

In addition to this main Council, a whole series of joint advisory groups, consisting of employer and employee representatives, have been attached to the various Ministries—the National Trade Union Advisory Committee attached to the Ministry of Supply, which is assisted in its work by district committees acting as advisory bodies to the Ministry's area boards; the Advisory Committee attached to the Ministry of Agriculture and Fisheries; the Advisory Committee to the Ministry of Food; the central and local price regulation committees attached to the Board of Trade, etc.

In Germany and Italy official control of the determination of conditions of employment and wages has been intensified so that very little scope is left to the initiative of the parties concerned. The German-speaking trade unions in Czecho-Slovakia have been absorbed by the German Labor Front, and the Czech-speaking organizations disappeared soon after the establishment of the German protectorate in Bohemia-Moravia. Trade unions also disappeared in Poland with the occupation by German and Soviet troops. In Spain the government promulgated a Trade Union Unity Act which makes the Trade Union Organization of the Spanish Traditionalist Phalanx the only organization recognized by the State; all workers' associations and employers' associations must be incorporated in the Phalanx and subject to its discipline.

Organized labor in the United States experienced no fundamental change, although several important developments appeared. Machinery for collaboration with the government was established by

appointment of Sidney Hillman, president of the Amalgamated Clothing Workers and vice-president of the Congress of Industrial Organizations, as labor member of the Advisory Commission to the Council of National Defense. Hillman then appointed an advisory group consisting of representatives of the American Federation of Labor, the Congress of Industrial Organizations, and the railway brotherhoods. See *NATIONAL DEFENSE ADVISORY COMMISSION*.

Political issues threatening to disrupt unions became a paramount problem during the year. Pres. John L. Lewis of the C.I.O. endorsed Republican Candidate Wendell Willkie for President of the United States and announced he would resign from the C.I.O. presidency if Willkie were not elected. Many high-ranking C.I.O. officials meanwhile campaigned actively in behalf of the re-election of President Roosevelt. Following the re-election of President Roosevelt, Mr. Lewis resigned from the C.I.O. presidency during the third constitutional convention at Atlantic City in November and was succeeded by Phillip Murray, who had been C.I.O. vice-president and chairman of the Steel Workers Organizing Committee. Rivalry between alleged Communist and anti-Communist factions also brought a variety of political differences in unions to the foreground during the year.

Government proceedings against labor racketeering in a few unions were intensified. Ben Gold, president of International Fur Workers Union, C.I.O., and ten other defendants were found guilty in New York Federal Court of having violated the Sherman Anti-Trust Act by employing terrorism to control jobs in New York's fur industry. George Scalise, president of Building Service Employees International Union, A.F.L., was convicted of stealing union funds. Several other indictments and convictions of a similar character occurred during the year. The A.F.L. in its Sixtieth Annual Convention at New Orleans in November authorized the A.F.L. Executive Council to "use all its influence" to bring about the removal of dishonest union leaders and urged A.F.L. affiliates to amend their constitutions so as to provide for discipline of such officials. See *AMERICAN FEDERATION OF LABOR; CONGRESS OF INDUSTRIAL ORGANIZATIONS*.

**Collective Bargaining.** Two somewhat conflicting trends in connection with collective bargaining appeared to develop further than ever before during 1940. Both trends led away from employer dictation of labor conditions and toward greater government participation in determination of labor conditions; but simultaneously they encouraged and discouraged negotiation between management and worker representatives on matters of wages, hours, and working conditions. On the one hand, governments throughout the world appeared to be facilitating collective bargaining processes by providing more mediation and arbitration machinery. On the other hand, in many countries there were growing tendencies to regulate wages, hours, and working conditions by statute or governmental order rather than by collective bargaining.

In most of the countries which had highly developed systems of collective bargaining, such as Great Britain, Switzerland, and Sweden, the collective contracts were preserved with modifications necessary for adjustment to war-time economies. Switzerland not only maintained the agreements almost intact but required that all agreements should be registered with the government and provided machinery for settlement of labor disputes.

Great Britain maintained its network of agreements but simultaneously introduced governmental auxiliaries into collective bargaining processes. Following a recommendation of the National Joint Advisory Council, the Minister of Labour promulgated an order to prevent work from being interrupted during the war by trade disputes. Known as the Conditions of Employment and National Arbitration Order, it came into effect in July, 1940, establishing a National Arbitration Tribunal and outlawing strikes and lock-outs under certain conditions. It provided first that all conciliation machinery should be used to handle disputes; but if settlement appeared to be unduly delayed or if no machinery for conciliation was available in the trade or industry concerned, the Minister of Labour was empowered to refer the dispute to the Tribunal, which had authority to make binding awards. Strikes and lock-outs were prohibited unless disputes were reported to the Minister and not referred by him for settlement within three weeks from the day on which reported.

In countries with less mature systems of collective bargaining—the United States, Canada, and some of the South American nations—conciliation devices were expanded. The Conciliation Service (q.v.) of the U.S. Department of Labor was enlarged, and simultaneously mediation activities were carried on by the staff of Mr. Sidney Hillman, labor member of the National Defense Commission. In Canada an order in council approved June 19 provided that where any controversy arises which cannot be adjusted between the parties, resort should be had to government conciliation agencies; it was further provided that if settlement could not be effected by direct negotiation, the differences should be dealt with under terms of the Industrial Disputes Investigation Act, which under the War Measures Act was made applicable to all war work.

**Strikes.** Accelerated production and the rising cost of living tended to create more disputes in 1940 than usual, but on the basis of the incomplete statistics available it does not appear that these disputes resulted in any increase in strikes throughout the world. No doubt improved conciliation machinery and patriotic sacrifices by working people for national defense were important factors in keeping strikes at a minimum.

Great Britain in June, 1940, had only 30 strikes, the lowest number in any month since September, 1934, and only about a third of the number in June, 1939. The total of strikes in the first five months of 1940, however, was larger than the total for the corresponding period in 1939. But after the Conditions of Employment and National Arbitration Order went into effect there was a definite decline in strikes.

Strikes in Canada increased in frequency and intensity during 1940, but the increase is not sufficient to be considered significant. An unusually long strike occurred in India. It was reported that on March 5 about 150,000 of Bombay's textile workers walked out following a demand for a 15 per cent increase in wage rates to offset increases in the cost of living. The strike ended April 12 with the workers getting raises amounting to roughly 10 per cent.

Another severe strike occurred in Australia March 11 when about 25,000 employees of more than 200 mines walked out, demanding a 44-hour week for surface workers, with wage adjustments to avert reduction of earnings. They also asked for an annual holiday of two weeks. It was re-

ported that the employers refused to confer with the Miners' Federation until the latter obeyed a ruling of an arbitration court. The strike ended May 15 when it was agreed that the chief judge of the arbitration court would call a conference to determine all outstanding differences.

Strikes in the United States were substantially reduced in 1940. Measured by man-days idle, they amounted to less than half the strikes in 1939. There were fewer strikes than in any other year since 1935 and fewer workers involved in strikes than in any year since 1930.

The most publicized strike of the year was the 12-day tie-up in November of the Downey, California, plant of the Vultee Aircraft Company by the United Automobile Workers, C.I.O. About 5200 employees were involved. The company was reported to have military contracts totaling \$84,000,000 and to be the sole source of basic training planes for the Army Air Corps. Originally the strikers' demand was for a minimum wage of 75 cents an hour instead of the 50 cents which had been paid. As negotiations developed there was also disagreement concerning provisions for adjusting disputes under the proposed agreement. The strike was settled November 26 with the signing of a 16-months contract providing that beginning workers without experience shall receive a minimum of 55 cents an hour, 57½ cents in 30 days, and 62½ cents in 60 more days. The agreement contains a no-strike clause and provides a set-up for handling grievances, with disagreements going to an arbitration board.

Another prominent strike was that at the New Kensington, Pennsylvania, works of the Aluminum Company of America in November. About 7500

## TREND OF STRIKES IN THE UNITED STATES\*

Year or month	No. of strikes beginning in year or month	Workers involved in strikes beginning in year or month	Man-days idle during year or month
1933	1,695	1,168,272	16,872,128
1934	1,856	1,466,695	19,591,949

\* From tables of Bureau of Labor Statistics, U S Department of Labor

workers were involved. Officials of the company and two locals of the Aluminum Workers Union, C.I.O., were deadlocked on the strikers' only announced demand—that the company discharge an employee who was alleged to have threatened a union official when he asked the worker to pay about \$12 in back dues. Settlement was reached when the company agreed to transfer the worker in question to another plant.

**Health and Safety.** The hazards of war and accelerated production undoubtedly affected health and safety records in industry adversely during the year, but statistics from only a few countries are available.

Canada's records show that by the end of September a total of 56,907 accidents was reported for the year, compared with 42,946 during the same period in 1939. Commenting on the increase, the Industrial Accident Prevention Association of Ontario pointed out that it should be borne in mind that there are many more men employed, quite a percentage of whom are working on new operations, and the tendency, under pressure of war demands, to increase the hours of work, increases the proneness to accident. Canada's report is typical of the experience of the other countries that made reports.

The Bureau of Labor Statistics of the U.S. Department of Labor in July published its annual statistics of accidents, showing that about 1,600,000 persons in industry were killed or injured during 1939. Of these about 16,400 were fatalities or permanent disabilities. About 109,400 persons suffered some partial but permanent impairment, and another 1,477,700 were temporarily but totally disabled. These figures represent increases over those for 1938 for all types of disability except death and permanent total disability, for which there was no difference between the 1939 and 1938 experiences.

Another Bureau of Labor Statistics survey published during the year dealt with the relation of age to industrial injuries. The study grew out of workers' objections to discrimination against older workers in management's hiring policies; one of the reasons cited in justification for this policy has been that the older worker is more of an accident risk than the younger worker. The study evaluat-

ing this contention shows that older workers are injured less frequently than younger workers; but once injured, they experience proportionately more deaths and permanent impairments than younger workers. Similarly, the healing periods of older workers in temporary disability on the average are longer (See "Relation of Age to Industrial Injuries," *Monthly Labor Review*, October, 1940, pp 789-804.)

**Women in Industry.** Several phenomena in connection with the employment of women in business and industry appeared during the year. In many countries affected by war or mobilization there were increases in the numbers of women employed and simultaneously increases in the numbers of women unemployed. The International Labour Office reports that in Great Britain, for example, unemployment of women increased by 174,981 in one month near the end of 1939 when the hostilities began. At the same time, however, women were replacing male workers drawn from industry into military service.

This curious circumstance can be explained in part at least by the following considerations. Evacuation of large cities and war-time economies resulted in a decline of businesses which happened to employ large numbers of women—the luxury industries, hairdressing, retail trade, hotels, and domestic service. In addition to women laid off from such employments, the ranks of unemployed women were swelled by the wives of mobilized men in search of a living for themselves and their families. Development of war industries meanwhile called for large labor forces at a time when men were needed for military service, and although statistics are not available it is likely that by the end of the year the numbers of employed women were higher than ever before. If at the end of the year the numbers of unemployed women also were higher than ever before it was only because of the greater numbers of women entering the employment market.

Throughout the world it appears that employment of women in branches of business and industry where they had seldom worked before was common. On the basis of data from the American consul general at Leipzig, the U.S. Department of Labor reported:

Many wives or daughters of tradesmen—butchers, bakers, tailors, barbers, and hairdressers—have assumed charge of their husband's or father's business while the latter is away on military service . . .

Other professions usually carried on by men but not in the hands of women are those of the postmen and local railway and streetcar conductors . . .

One unusual change of vocation reported was that of a mannequin who lost her position on account of the curtailment of textile fashion trades and became the driver of a farm tractor. (*Monthly Labor Review*, May, 1940, pp. 1147, 1148.)

At the same time that women were entering new fields of employment, the trend toward greater protection of women workers was retarded. Although the full facts are not available it appears that where women replace men on jobs they work under conditions practically the same as those under which the men worked. While the protective laws for women workers adopted in most countries have not been completely abandoned, enforcement of the laws has been deliberately relaxed.

**Child Labor.** Young persons and children entered industry in increasing numbers under the wartime pressures. While it appears that circumstances have not yet produced serious problems in connection with their employment, the normal development of protective legislation for young workers has nevertheless been impeded by the war, and in some countries special exceptions to the existing legislation have been authorized. Switzerland, however, raised the minimum age of employment from 14 to 15 years despite the general pressure in Europe for change in the opposite direction.

In the United States the youth labor problem in recent years has not been so much a problem of children working prematurely or under unfavorable conditions but a problem of idleness among young people unable to find jobs. The helpfulness of the National Youth Administration and Civilian Conservation Corps in coping with this latter problem continued during 1940, unemployment among young people was further relieved by the large-scale army and navy recruiting.

See also articles listed under LABOR.

WILLIAM M. LEISERSON.

**LABOR LEGISLATION.** The annual grist of new labor laws was less in 1940 than during almost any other year during the past quarter of a century. This meagerness of legislation is accounted for only in part by the comparatively few States regularly holding legislative sessions during the even-numbered years, which legislatively are always the "off years." In addition, there was a slowing up of the positive drive for new kinds of legislation—perhaps because it was general election year and on the assumption that unprecedented rapid advance had recently been made requiring an interval for assimilation. Finally, as always in a period of "national emergency," the opposition to further legislation not only used the occasion for insistent pleas to be unhampered in speeding up production, but they also intensified their attacks upon existing labor laws and particularly upon their administration.

Eight States (Kentucky, Louisiana, Mississippi, New Jersey, New York, Rhode Island, South Carolina, and Virginia) held regular sessions in 1940. There were also special sessions in twelve States (Arizona, California, Illinois, Louisiana, Maine, Missouri, Nebraska, Ohio, Pennsylvania, Vermont, New York, New Mexico) but these resulted in little that could be classed as new labor laws. In fact, the special sessions added little except the

amendment of unemployment compensation laws in Illinois, Louisiana, Maine, Nebraska, and Pennsylvania. Moreover, the only notable advance made in those States which in November submitted proposals for ratification by vote of the people were the final approval of the 1939 workmen's compensation law in Arkansas and the substitution of a new old-age pension law in Washington. The third session of the 76th Congress which met throughout the year contributed much less than usual.

Of the States, it is interesting to note that Kentucky was the most productive, while the most important single piece of social security legislation was enacted by Congress—a very substantial liberalization of unemployment compensation for railway workers.

Of importance, too, was the only child labor amendment of the year—a unique New Jersey system for the certification of children employed in agriculture outside school hours and within vacations. Further possibilities of State co-operation in administration of the Federal Fair Labor Standards Act was provided by new laws in Kentucky and Rhode Island, making a total of nine States and Hawaii now having such enabling acts.

Rather than substantive changes, the new State labor legislation this year put special and encouraging emphasis upon improving the administration of existing laws. Administrative changes made in Kentucky and Virginia as well as in Illinois and New York, it is hoped, will bring better law enforcement. But Mississippi—the most backward of all States—not only preserved her unenviable distinction of being the only State without a workman's compensation law but also killed a bill which would have provided for the first time a State Labor Department for the enforcement of her existing meager beginnings of protective laws.

**Social Security.** Repealing all other acts in conflict therewith, the voters of the State of Washington by an initiative measure provided for a minimum old-age pension of \$40 monthly to citizens over 65, conformed State and Federal matching funds and age limit, abolished liens on property, and strengthened administration. By congressional amendment Federal annuity benefits under the Railway Retirement Act are to be determined with reference to military pensions based on such compulsory service prior to Jan. 1, 1937, but duplication of pensions is avoided.

State unemployment compensation laws in Kentucky, Louisiana, Maine, Nebraska, Pennsylvania, Virginia, Illinois, New York, and South Carolina were amended to conform with the 1939 revisions of the Social Security Act. Especially changes in definitions to widen exemption of "agricultural labor," to exclude student part-time workers, golf caddies, newspaper carriers under 18, and non-profit associations, as well as to exclude wages in excess of \$3000 per year, were enacted. The waiting period in Rhode Island was reduced. Mississippi and Virginia increased benefit amounts and strengthened eligibility provisions. New Jersey protected benefit rights of those inducted into military service, and Virginia joined the vast majority having experience rating provisions under unemployment compensation. Very substantial liberalization of the Railroad Unemployment Insurance Act was provided by Congress (See RAILWAYS).

**Workmen's Compensation.** Kentucky increased the duration and the maximum amount limits of accident compensation in cases of death and total disability. Benefits to totally disabled silicosis vic-

times were increased in New York from a \$3000 to a \$5000 maximum by December, 1943, and medical care was extended to 360 days instead of 180 days beyond the first 90 days of continuous treatment. Alabama lowered her strikingly excessive numerical exemption of 16 to "employers of eight or more," reduced the waiting period from two weeks to seven days, and required bond or proof of financial ability from non-insuring employers. By referendum Arkansas approved her suspended workmen's compensation law of 1939.

**Labor Relations.** The National Labor Relations Act continued to weather the storm of proposed amendments. In the States the trend was in the direction of widening the mediation powers of industrial commissioners and labor boards. The New York law as amended permits the State Labor Relations Board to engage in efforts to obtain voluntary adjustments. Kentucky enacted a declaration of public policy in favor of peaceful picketing and the right to strike as well as self-organization and collective bargaining free from employer coercion. Where both parties to the dispute agree the labor commissioner may mediate with strike and lockout prohibited for 15 days.

**Child Labor.** New Jersey enacted the only new child labor law. It provides a 16 year minimum (formerly 14) for full time employment and for work in a factory, and minors from 12 to 16 may work after school hours and during school vacation depending on type of work as defined in the Act, which also designates the type of certificate that must be issued to minors under 18 years of age before they may be employed. For all minors under 16, except those engaged in agriculture pursuits, domestic, and messenger services, the combined hours of work and school should not exceed eight hours per day. Work in agriculture is permitted at 12 years for 10 hours per day. Minors under 16 years of age must attend schools when schools are in session in the district where they are employed.

Federal Child Labor Amendment ratification resolutions were defeated in Louisiana, New York, Rhode Island, and South Carolina, with eight State ratifications short of the required 36.

**Health and Safety.** Kentucky provided for study of the causes of occupational injuries, the promotion of safety measures, the tagging of dangerous machines, inspection of work places in co-operation with Federal agencies, improvement of labor statistics, and the promulgation of safety rules. Employers are required to make the work places safe, and to furnish safety devices. Failure of the worker to use such devices is to be regarded as prima facie evidence that his injury was self-caused. Virginia excluded machinery for production, harvesting or processing agricultural products from the provisions relative to safety appliances of her safety law.

**Wages and Hours.** Aside from a Kentucky law for prevailing rate of pay and the 8-hour day and 40-hour week in contracts for public work, the legislation under this head looked to increased Federal action and co-operation. Both Kentucky and Rhode Island authorized joint administration of the Federal Fair Labor Standards Act, bringing such enabling acts to a total of nine States and Hawaii. Meanwhile, Congress changed the Federal law, permitting its administrators to recommend for Puerto Rico and the Virgin Islands hourly wage rates below the statutory minimum. Owing to the national defense emergency, Congress modi-

fied hour restrictions from time to time and gave to the President special power to suspend the Public Contract law when such course is in the public interest.

**Miscellaneous.** Industrial homework laws were clarified and strengthened in New Jersey and New York. Kentucky prohibited wage "kick backs." Virginia safeguarded her semi-monthly pay law. Rhode Island required employers soliciting labor during a strike or lockout to announce the existence of the labor dispute. New York abolished the right of a prospective employer to waive employment agency investigation of references of applicants for work in private families or in a fiduciary capacity. Alabama and Illinois requested review of their merit rating programs under unemployment compensation, and Kentucky authorized a study of civil service in relation to unemployment compensation administration.

**Administration.** Kentucky took an important step toward unification of labor law administration by greatly extending the functions of her Department of Industrial Relations. This includes rule-making authority through a representative industrial safety board. Virginia transferred authority to appoint the chief mine inspector from the Commissioner of Labor to the Governor, and transferred the employment office system to the Unemployment Compensation Board. Louisiana reorganized her Department of Labor under a 4-year term director with a 3-member board appointed for 9-year staggered terms. Also provided are a 5-member board of review, and special divisions of employment security and of women and children in industry. Rule-making authority is included. In New York the old mediation facilities in the Department of Labor were transferred to the newer Mediation Board, which like the Industrial Relations Board, is within the Labor Department.

The Advisory Commission to the Council of National Defense (q.v.), includes a Labor Division headed by a representative of labor with 16 other labor representatives drawn from the outstanding groups of labor organizations.

See OREGON.

JOHN B. ANDREWS.

**LABOR UNIONS.** See AMERICAN FEDERATION OF LABOR; CONGRESS OF INDUSTRIAL ORGANIZATIONS; LABOR CONDITIONS.

**LABRADOR.** See under NEWFOUNDLAND.

**LABUAN.** See BRITISH MALAYA.

**LACROSSE.** The 1940 season in lacrosse was marked by three indelible factors—the consistent power of the University of Maryland, the reappearance of Johns Hopkins in the ranks of strong contenders, and the collapse of Navy after two years at the top of the game.

Maryland remained unbeaten throughout the year and administered to Johns Hopkins the latter's only defeat. Navy, bereft of all its recent champion players, encountered its most disheartening season and was even humiliated by its traditional rival, Army. Princeton ranked third among the teams.

An all-star Northern team defeated an all-star Southern combination, 6-5, in what was regarded by some as a substitute attraction for the regular international competition. The Northerners were piloted by King and Turner of Princeton, the Southerners by Brown of Duke and Litz of Loyola. Players from 18 colleges participated in the event.

**LADIES' GARMENT WORKERS UNION, International.** See AMERICAN FEDERATION OF LABOR.

**LANDS, Public.** See GENERAL LAND OFFICE; GEOLOGICAL SURVEY; LAND UTILIZATION, OFFICE OF.

**LAND UTILIZATION, Office of.** Co-ordination of forestry conservation and soil erosion control activities on 285,000,000 acres of public domain was advanced in 1940 with the establishment on October 2 in the U.S. Department of the Interior of the Office of Land Utilization. Made possible by the President's Reorganization Plan IV, the new agency resulted from the transfer from the Department of Agriculture of soil erosion and moisture control operations on the public domain, and a strengthening of the organization under which forestry activities in the Department of the Interior were administered by the Office of Director of Forests. Lee Muck, Director of Forests, was named Assistant to the Secretary in Charge of Land Utilization, to supervise the new conservation agency.

Although the co-ordination was set under way too late for the assembly of detailed statistical information concerning the 1940 fiscal year, the soil and moisture conservation activities on the public lands do not impose a new responsibility or present new technical problems to the Department of the Interior, since hitherto the bureaus and agencies under its jurisdiction have formulated and carried out such soil conservation programs as available funds would permit.

In general, the task confronting the new Office involves soil and moisture conservation on large tracts of public domain, principally in the West, where a complex ownership pattern, also embracing lands in State and private ownership, presents an extremely difficult management problem requiring a high degree of co-operation for its solution.

In the field of forestry conservation, the Office of Director of Forests registered notable progress during the 1940 fiscal year. Ever since 1850, forest administration has been one of the principal functions of the Department of the Interior, and because of the highly diversified conditions existing on the public domain, the National Parks and on Indian Lands, the Department carries on a wider range of forestry functions than any other Federal Department. It is also highly significant that under its jurisdiction at the present time is almost two-thirds of the area of all Federal lands in the United States proper, and, if Alaska is included, its jurisdiction extends over almost three-fourths of all Federal lands.

It is the policy of the Department of the Interior to make the management of its industrial forests a model of economy and good business. In fact, the administration of Indian forests and the 2,500,000 acres of revested and reconveyed Oregon and California Railroad and Coos Bay Wagon Road grant lands in Oregon has always been conducted well within income.

A consideration of the results of operations on Indian forests for the period from 1910 to 1939, inclusive, discloses a gross income of \$46,142,780. The cost of administration and protection during the same period totaled \$7,542,900, reflecting an average ratio of cost to income of approximately 16 per cent. The total income from Indian forest and range lands during the fiscal year ended June 30, 1940, was \$2,718,397, and the cost of administration and protection was \$501,500, reflecting an op-

erating coefficient of approximately 18 per cent.

The income from the sale of timber on the O and C grant lands for the period 1918 to 1939, inclusive, was \$10,350,150 and the cost of administration and protection during this same period averaged less than 3 per cent thereof. Subsequent to the enactment of the act of Aug. 28, 1937, administrative costs have increased materially by reason of the application of a policy of sustained-yield forest management. However, there has been an increase in revenues and costs are constrained by law to 25 per cent of the income.

According to the report of the Chief Forester, receipts for the fiscal year ended June 30, 1940, totaled \$852,647 and the cost of Administration and protection was \$160,000, thereby reflecting a ratio of cost to income of approximately 18 per cent or less than the operating coefficient provided by the 1937 act.

For the first time in the history of the Department funds were provided for the protection of the Interior forests of Alaska during 1940 and an efficient protection unit, supplemented by the CCC was organized and marked progress made in fire prevention and suppression.

**LAOS.** See FRENCH INDO-CHINA.

**LATAKIA.** See SYRIA AND LEBANON.

**LATIN AMERICA.** See articles on the various countries of the Caribbean, Central America, and South America; also COMMUNISM; FASCISM; PAN AMERICANISM; PAN AMERICAN UNION; SPANISH-AMERICAN LITERATURES

**LATIN STUDIES.** See PHILOLOGY, CLASSICAL.

**LATTER-DAY SAINTS (Mormons).** A religious connection founded in 1830 at Fayette, N.Y., by Joseph Smith. After his death in 1844 several factions developed, one of which became the Reorganized Church of Jesus Christ of Latter-day Saints or Josephites (headquarters at Independence, Mo.). See RELIGIOUS ORGANIZATIONS.

**Church of Jesus Christ of Latter-day Saints,** the oldest group of Latter-day Saints, has its membership largely in the mountain States. As of Dec. 31, 1939, the organization included 126 stakes, 1055 wards, and 133 branches with a total population of 803,528. There are 16 missions in the two Americas with 488 branches and a membership of 106,108. In Europe there were 315 branches and the membership 31,745. Those in the Pacific Islands 199 branches and a membership of 19,957. Of the 2083 missionaries, 1049 were at work outside of the United States.

The administrative affairs of the Church and the performance of all Church ordinances are attended to by the Priesthood, consisting of the Melchizedek Priesthood, a senior order, with 105,355 male members, and the Aaronic Priesthood, a junior order, with 101,979 male members. The Church maintains seven temples devoted to sacred ordinances for the living and the dead, such as baptisms, endowments, and marriages. It also maintains the Brigham Young University, Ricks Junior College, Latter-day Saints Business College, 12 collegiate institutes, 2 high schools, 103 senior seminaries (schools adjoining high schools that provide special religious instruction), 118 junior seminaries (schools for the religious training of junior high school students), and 6 elementary schools. Enrollment in senior seminaries is 20,211; in junior seminaries, 5418.

The auxiliary bodies include a Women's Relief Society, numbering in 1939, 86,142 members who care for the sick and the poor. The Sunday Schools in 1939 had an enrollment of 370,965. The two Mutual Improvement Associations composed of young people had an enrollment of 142,737. The Primary Association for those under twelve, 125,202 members.

The Church holds in Salt Lake City, Utah, two General Conferences each year, one during the first week in April and the other the first week in October. On Jan. 1, 1939, the General Authorities were: First Presidency—Heber J. Grant, President; J. Reuben Clark, Jr., first counselor; David O. McKay, second counselor.

**LATVIA.** A former Baltic State, which proclaimed its independence from Soviet Russia Nov. 18, 1918, and was reannexed to the U.S.S.R. as a constituent republic Aug. 5, 1940. Capital, Riga.

**Area and Population.** Area, 25,402 square miles; estimated population on Dec. 31, 1939, 1,951,000. About 35 per cent of the population lives in communities of 2000 or more. Living births in 1939 numbered 36,932 (18.5 per 1000); deaths, 27,827 (13.9 per 1000). The population of Riga in 1939 was 393,211; of other towns at the 1935 census: Liepaja (Libau), 57,098; Daugavpils (Dvinsk), 45,160; Jelgava (Mitau), 34,099.

**Education and Religion.** At the 1930 census, 13.6 per cent of the population 10 years of age and over were illiterate. In 1938-39 there were 1895 elementary schools, with 229,825 pupils; 114 secondary schools, with 25,225 pupils, 135 technical and vocational schools, with 11,442 students; and one university (at Riga), with 7281 students. At the 1935 census, 56.13 per cent of the inhabitants were Protestants, 24.45 Roman Catholics, 14.4 per cent Greek Catholics and members of the Orthodox Church, and 4.79 per cent Jews.

**Production.** Agriculture, stock raising, lumbering, and manufacturing are the principal occupations. Yields of the chief crops in 1939 were (in metric tons): Wheat, 198,700; barley, 209,000; rye, 429,700; oats, 450,300; potatoes, 1,640,100; beet sugar, 36,000 in 1939-40; linseed, 25,000. Live-stock in 1939 included 1,271,720 cattle, 1,469,570 sheep, 891,470 swine, and 414,470 horses. State and private forests covered 4,317,482 acres and produced 3,439,250 cubic meters of timber in 1937-38. There were 5977 industrial enterprises with 98,497 employees on Dec. 31, 1938. Metallurgy, textiles, wood-working, foodstuffs, and chemicals were the principal manufacturing lines.

**Foreign Trade.** Merchandise imports in 1939 were 224,600,000 lats (227,400,000 in 1938); exports, 228,100,000 lats (227,200,000 in 1938). Pre-war trade was mainly with Germany and the United Kingdom. See **TRADE, FOREIGN** for commerce with United States.

**Finance.** For the fiscal year ended Mar. 31, 1940, revenue was estimated at 198,852,000 lats; expenditure, 198,696,000 lats. For 1938-39, actual receipts were 204,807,000 lats and expenditures 186,471,000 lats. As of Mar. 31, 1940, the public debt totaled 197,200,000 lats (internal, 51,900,000; external, 145,300,000). Average exchange value of the lat, \$0.1938 in 1938 and \$0.1852 in 1939.

**Transportation.** At the beginning of 1940 there were about 2075 miles of railway lines, 58,730 miles of roads, 2775 miles of inland waterways, and air connections from Riga to Liepaja, Kaunas, Tallinn, Stockholm, and Moscow. The Latvian merchant marine in 1939 comprised 194,000 gross tons

(see **GREAT BRITAIN** under *History* for detention of Latvian ships in British ports in 1940).

**Government.** The democratic Constitution adopted by a Constituent Assembly on Feb. 15, 1922, was suspended May 15, 1934, when a *de facto* anti-Communist dictatorship was established by the government headed by Premier Karlis Ulmanis. Parliament was dissolved, political parties abolished, and legislative functions were assumed by the Ulmanis Cabinet. When the term of President Kviesis expired Apr. 11, 1936, Dr. Ulmanis assumed the Presidency in addition to the Premiership. See *History* for 1940 developments.

#### HISTORY

After 22 years of independent existence, the republic of Latvia was annexed by the Soviet Union on Aug. 5, 1940. It was expunged from the list of sovereign States by exactly the same methods that brought simultaneous doom to the neighboring States of Estonia and Lithuania. The mutual assistance pact signed with the U.S.S.R. Oct. 5, 1939, under threat of invasion (see 1939 YEAR BOOK, p. 418), permitted the establishment of Soviet military, naval, and air bases on Latvian soil and gave the Russians a stranglehold which they later used to destroy Latvian independence.

In February of 1940 the Latvian Government indicated fear that Moscow had further designs upon the republic. The Latvian and Estonian army chiefs conferred on mutual defense measures. On February 13 President Ulmanis warned his countrymen to be "ready to make great sacrifices in the near future." The Foreign Ministers of Estonia, Latvia, and Lithuania, meeting in Riga in mid-March, again proclaimed that the Baltic Entente would follow a neutrality policy as "the best assurance of maintaining their independence."

The futility of these efforts was demonstrated on June 16 when Moscow, alarmed by the French capitulation to Germany, accused Latvia and Estonia of forming a secret military alliance against Russia and presented another ultimatum. It demanded the establishment of a pro-Soviet government that would assure fulfillment of the mutual assistance pact and the passage of additional Soviet troops into Latvia. The Ulmanis Government hastily assented, but without waiting for the ratification or proclamation of the new agreement Soviet troops poured across the frontiers on June 17 and occupied the capital. While the Russians continued to occupy the other principal cities and towns, a representative of the Soviet Foreign Office supervised the establishment on June 20 of a pro-Soviet government headed by Prof. August Kirchenstein as Premier and Foreign Minister.

The new government on July 5 called parliamentary elections for July 14-15. It legalized the Communist party, purged the Latvian army of "reactionary elements," introduced the Soviet system of political commissars in the army with a Latvian Communist as chief commissar, dissolved the anti-Communist National Guard, introduced the death penalty for sabotage, and inaugurated the sovietization of the republic in the economic and social as well as in the political fields.

As in Estonia and Lithuania, only candidates of the Communist-controlled Working Peoples' Bloc, representing a small fraction of the population, were given places on the ballot. According to the Latvian Minister to the United States, all voters were obliged to go to the polls under the threat of being treated as "enemies of the people" if they

failed to have balloting stamps on their passports. The press, radio, and all other instruments of propaganda were placed under Communist control in advance of the elections. There were numerous arrests. The government announced that 94.7 per cent of the voters went to the polls in the July elections and that 97.6 per cent voted for the one-party pro-Soviet ticket. This contrasted with reports that in some rural districts only about 25 per cent of those registered actually voted.

Immediately after the elections a government-sponsored campaign for union with Russia was intensified. The new parliament met on July 21 and voted to establish a soviet government, and to petition the Supreme Soviet of the U.S.S.R. for Latvia's admission into the Soviet Union. On the same day President Ulmanis was removed from office and Premier Kirchenstein took over his functions. On August 4 it was reported that Ulmanis had died of wounds in a Riga hospital. The following day Latvia's independence was formally ended when the Supreme Soviet in Moscow voted to admit it as a constituent republic of the U.S.S.R. The newly elected Latvian parliament, called into special session on August 24-25, completed these formalities by voting unanimously to enter the Soviet Union and adopt a soviet constitution. Professor Kirchenstein was supplanted as Premier by the Communist leader, Latsis, who formed a new government.

Even before this, a campaign for complete coordination of Latvia with the Russian political, economic, and social system had gotten under way. A decree of July 25 nationalized all banks and credit institutions, insurance companies, pawnshops, safe deposit boxes of private persons, and 804 specified commercial and industrial enterprises. All precious metals in ingots and finished articles, precious stones, etc., in jewelry shops were ordered deposited with banks. On July 28 the merchant marine was nationalized, on September 28 all retail stores with a turnover of 100,000 lats or more annually. The other sovietization measures taken, the methods employed, and the internal and external repercussions were much the same as in Estonia and Lithuania.

**Palestine.** "The Mandate in Practice," 25 *La. L. Rev.* 32 (B. Akzin).

**Legislative.** In general. "Interpretation," 25 *Wash. U. L. Quar.* 2 (H. W. Jones); *Guggenheim v. Rasquin*, 61 *S. Ct. Rep.* 507, reviewed, 14 *Tulane L. Rev.*, 141; "Time of Taking Effect," *Cuthbert v. Smuts*, N.Dak. reviewed, *ib.*

**Proportional Representation** was retained in New

York City (788,640 to 567,165). In an *Opinion to the Governor*, (R.I.) 6 Atl. (2d.) 147 (following 21 R.I. 579) the Supreme Court, one judge dissenting, advised that the system would infringe the State constitution's grant of the "right to vote in the election of all civil officers." Constitutionality of the system had been upheld in several States; (e.g. *Johnson v. State*, 274 N.Y. 411). See 88 *U. of Pa. L. Rev.* 112.

**Federal.** Congress convened Jan. 3, 1940, and adjourned Jan. 2, 1941. In this, its longest single session, it, especially in the later months, gave most attention to defensive measures; but enacted much important legislation, including over 500 public acts and the first recodification, since 1874, of the internal revenue laws. (See UNITED STATES.) In 22 *Minn. L. Rev.* 165, Dwan and Feidler describe compilations of U.S. laws and how to use them; "Constitutionality of Private Acts of Congress," 49 *Yale L. J.* 712.

**State.** Only nine legislatures held sessions in 1940. Their work is discussed in the law journals as follows: *California*; 13 *So. Cal. L. Rev.* 1; "Recent Social Legislation," 28 *Cal. L. Rev.* 442 (B. N. Armstrong); *Illinois*; 18 *Chicago-Kent L. Rev.*, 1. *Kansas*; 8 *U. of Kansas City L. Rev.* 240. *Kentucky*; "The New Statutes," 2 *Ky. St. Bar Jnl.* 19. *Minnesota*, 24 *Minn. L. Rev.* 240. *North Carolina*; 17 *N. Car. L. Rev.* 327. *Pennsylvania*; 44 *Dickinson L. Rev.* 84. This is one of the States in which a school for "Freshmen" legislators was held. (See also the different States.) Other current articles are: "Need of Simpler Legislation," 2 *Tex. Bar Jnl.* 7; "Constitutionality of State Legislation Affecting Aliens," 17 *N.Y.U.L. Quar. Rev.*, 242; "Retroactive Application," 38 *Mich. L. Rev.* 30 (E. S. Stimson); "Statutory Validation of Public Bonds," 7 *U. of Chicago L. Rev.* 281 (Horack & Dutton). "State Tax Barriers to Interstate Trade," 53 *Harv. L. Rev.* 1253 (W. B. Lockhart) touches one phase of interstate competition which has received much attention in the press.

**Interstate Compacts.** The four "middle" States (N.Y., N.J., Pa., and Del.) have agreed to act in common to abate and prevent excessive pollution of the Delaware River. An act of Congress of August 31, approves compacts between Atlantic States to regulate fishing in territorial and connecting waters. In *Del. etc. Com. v. Colburn*, 310 (U.S.) 419, a State court's judgment, construing such a contract, was reviewed (overruling *People v. R. Co.*, 12 Wall 455) and it was held that neither the compact in question (for construction of Pa.-N.J. bridges) nor the N.J. statute to which it referred, authorized consequential damages for land so expropriated.

**Judicial.** (See COURTS; SUPREME COURT; WORLD COURT.)

**Penal Law.** (See also FEDERAL BUREAU OF INVESTIGATION; LYNCHING; PRISONS, PAROLE, AND CRIME CONTROL). Current articles in this field include:

"Criminal Attempts: A Study of Liability Foundations," 49 *Yale L. Jnl.*, 789 (J. Hall); "Preventive Justice" (Bonds to Keep the Peace, etc.), 88 *U. of Pa. L. Rev.* 331; "Ignorance and Mistake in Criminal Law," *ib.* 35 (R. M. Perkins); "Restitution and the Criminal Law," 39 *Columbia L. Rev.*, 1185; "Political Crimes," 5 *Mo. L. Rev.* 293 (E. M. Million); "The Modern Felony Murder Doctrine," 28 *Ky. L. Jnl.* 215 (J. G. Clark); *id.* "Distinguished from Criminal Negligence," *ib.* 218 (J. W. Turner); "Negligent Murder," *ib.* 53 (M. Tineher); *id.* "Contributory Negligence of the Victim," 74 *N.Y.L. Rev.* 88; "The English Criminal Justice Bill," 40 *Columbia L. Rev.* 105; "The

Federal Juvenile Delinquency Act," 14 *St. John's L. Rev.* 214 (B. M. Biensstock).

**Criminal Procedure.** On June 29 the President signed the bill authorizing the Supreme Court "to prescribe . . . rules of . . . procedure in criminal cases in district courts," including those overseas. (See 24 *Jnl. Am. Jud. Soc.* 81 (G. Dean); "Practical Advantage of Rules," 25 *A.B.A. Jnl.* 825 (R. Pound) Successive steps in procedure are discussed as follows:

"Arrest without Warrant," (U.S. v. *Clark* 29 Fed. Supp. 138 reviewed) 8 *U. of Kansas City L. Rev.* 121; "Streamlining the Indictment," 53 *Harvard L. Rev.* 122; "Joinder of Conspiracy and Attempt," 28 *Georgetown L. Jnl.*, 608 (D. Kauffman); "Presumptions in Criminal Law" (Pa.), 13 *Temple U. L. Quar.* 523; "Public Defenders," 26 *Va. L. Rev.* 275 (M. C. Goldman); "Directing Verdict of Guilty," 25 *Ia. L. Rev.* 128; "Factors to be Considered in Recommendation of Clemency," (State v. *Caldwell* 135. O. 424), reviewed 6 *O. St. U. L. Jnl.* 73; "Criminal Appeal on the Facts; The Federal System," 34 *Ill. L. Rev.* 332 (L. J. Shapiro); "Criminal Appeals in America" (Lester B. Oldfield), reviewed 26 *A.B.A. Jnl.*, 398 (Mason Ladd); "Statutory Presumptions in Criminal Cases," 38 *Mich. L. Rev.* 366 (E. M. Watson).

**Penology.** Dr. Warner Brown, Univ. of California, finds from experiments on rats, that "punishment itself, quite apart from failure to receive reward, has positive and potent effect in altering all subsequent behaviour." So, while psychiatrists deplore severe and afflictive penalties, it is not because they are considered ineffectual. (*Jnl. of Comparative Psychology*.) See PRISONS, PAROLE, AND CRIME CONTROL.

**Pardons.** On May 17 President Roosevelt granted an unconditional pardon, restoring civil rights, to Dr. Frederick A. Cook (74) arctic explorer, who had been paroled after serving about one half of a sentence for "using the mails to defraud." He died soon afterward William P. Buckner, serving a sentence of two years for the same offence, and Felipe Buencamino, serving one of 18 months for conspiracy, were both pardoned after about one third of the time in Lewisburg (Pa.) Federal Prison. But the application of Ex-Judge Manton (1939 YEAR BOOK, 420) for a parole was denied. In discussing "The Effect of a Pardon," 88 *U. of Pa. L. Rev.* 177, Henry Weihofen urges that every pardon state on its face the reasons for granting it and, if on the ground of innocence, reparation should be granted.

**Administrative Law.** (See also FEDERAL COMMUNICATIONS COMMISSION; FEDERAL TRADE COMMISSION; INTERSTATE COMMERCE COMMISSION; NATIONAL LABOR RELATIONS BOARD, ETC.) As usual of late, this is among the most popular themes in the legal periodicals. The *George Washington Law Review* for Jan.-Feb. was devoted almost entirely to the work of the Federal Trade Commission (which had just passed its quarter centennial) and contained 15 articles. The *Iowa Law Review* for March published seven articles, mainly on administrative procedure. Other current articles are:

"Comparative Administrative Law (Economic Improversation by Public Authorities)," 88 *U. of Pa. L. Rev.* 425 (F. M. Marx); "Administrative Law and the British North America Act," 53 *Harv. L. Rev.* 251 (J. Willis); "Crucial Issues in Administrative Law," 53 *Harv. L. Rev.* 1077; 7 *Cur. Leg. Tho'ts.*, 110 (J. M. Landis); "An Approach to Administrative Law," 18 *N. Car. L. Rev.* 183 (R. F. Fuchs); "Administrative Legislation," 34 *Ill. L. Rev.* 651 (J. F. Davison); "Delegation of Legislative Power," *State v. Maitrejean*, 193 La. 824 (reviewed, 8 *G.W.L. Rev.* 1102; 9 *Fordham L. Rev.* 275); *Miller v. Schuster*, 227 La. 1005 (reviewed 25 *Ia. L. Rev.* 812); "Administrative Contempt Powers," 25 *A.B.A. Jnl.*, 954 (E. F. Albertsworth).

**Police Power. Trade: Intrastate.** Sec. 1033 of the Pa. Vehicle Code, regulating the size and

weight of vehicles, is not displaced by the Federal Motor Carrier Act of 1935 (*Maurer v. Hamilton*, 309 U.S. 598) and it is those employees only "whose activities affect the safety of operation" of such vehicles whose qualifications and hours of labor may be regulated by the ICC. (*U.S. v. Am. Trucking Ass'ns*, 310 U.S. 534.) "... where there is no claim of confiscation, the State authority is competent to establish intrastate rates," etc. and due process of law, under amendments VI and XIV of the U.S. Const. is followed where a State court, "on an appropriate hearing, . . . determines that there is evidence to sustain a finding of the violation of State law." (*Bell Tel. Co. v. Penn. P. U. Com.* 309 U.S. 30) Prohibition of peddling. *Goodhumor Corp. v. Long Beach*, 22 N.Y. S. (2d) 282 (comment, 5 *U. of Newark L. Rev.* 299); "Police Power and Interstate Commerce (in Michigan)," 3 *U. of Detroit L. Jnl.* 24, 98

**Health and Safety.** Amendment XIV, 1, to the U.S. Constitution, is not infringed as to the "equal protection" clause, by a State statute authorizing segregation of those with a "psycopathic personality." *Minnesota v. Probate Court*, 309 U.S. 270. On Nov. 5, 1940, Oklahoma voted to restrict the powers of the State Medical Examining Board; Michigan, "to regulate the practice of dentistry," while Arizona voted not to prohibit certain forms of dental advertising.

**Morals.** Measures to legalize gambling were rejected in Arizona and Colorado (pari-mutuel betting) and Oregon.

**Liquor control**, by prohibition, was continued in Oklahoma (374,911 to 290,752) and Prince Edward Island (10,426 to 8,861); restriction was rejected (102,186 to 79,563) in Idaho (which also rejected county option, 112,972 to 70,544) and Oregon (235,128 to 158,004) which also rejected private sale (309,183 to 90,681). Johnston County, N.C. (7579 to 3956) and Talbot County, Md. (3672 to 705) each rejected dispensaries; the South Carolina advisory party referendum resulted in 189,361 to 130,366 in favor of prohibition. In *Ziffrin Inc. v. Reeves*, 308 U.S. 132, an order of the district court was affirmed, dismissing a bill by an Indiana distiller to enjoin the enforcement of a Kentucky statute penalizing the unlicensed importation of intoxicating liquors into the latter State.

**Policy.** Prohibition of contraceptives: *State v. Nelson*, 126 Conn. 412 (reviewed, 3 *U. of Detroit L. Jnl.* 216).

**Administrative Procedure.** "Reform in," 26 *A.B.A. Jnl.* 465 (W. Gellhorn); "And the Public Interest," 25 *Wash. U. L. Q.* 308 (A. H. Feller); "Removal of Board Members," *Morgan v. TVA*, 28 Fed. Suppl. 732 (reviewed in 88 *U. of Pa. L. Rev.* 357; 2 *La. L. Rev.* 183)

"Parties in Interest" (Transportation and Communications Acts) 13 *So. Cal. L. Rev.* 450 (E. A. Mosk); "Individual's Right to Initiate Administrative Process," 25 *La. L. Rev.* 485 (L. L. Jaffe). "A special administrative procedure for determination of the status of persons or companies under a regulatory act, and which meets all requirements of due process . . . is exclusive." *Sunshine etc. Coal Co. v. Adkins*, 310 U.S. 381, 404 (reviewed 24 *Minn. L. Rev.* 854). The I.C.C. may act on its own motion, without complaint from shippers, *U.S. v. Chicago etc. Co.*, 310 U.S. 44; Necessity of Joining Departmental Heads, *Eastman v. U.S.*, 28 Fed. Suppl. 807 (comment 26 *Va. L. Rev.* 370).

"Notice and Hearing," 25 *La. L. Rev.* 457 (R. B. Hankins); 12 *Miss. L. Jnl.* 295, 393 (E. S. Magaw); "N. H. Fire Ins. Co. v. Murray," 105 Fed. (2d) 212 (reviewed 28 *Georgetown L. Jnl.* 261); *Carroll v. Cal Horse Racing Bd.*, (Cal.) 105 Pac. (2d) 110 (comment, 28 *Georgetown L. Jnl.*, 839).

"Process (Compulsory)," 25 *La. L. Rev.* 646; 53 *Harvard L. Rev.* 842 (Subpoenas).

**Appearance (by attorney).** "Morgenthau v. Barrett," 71 D.C. 148 (reviewed 8 *G. W. L. Rev.* 974).

**Proof.** "Int. Ass'n. of Machinists v. NLRB," 110 Fed. (2d) 29 (reviewed 15 *Ind. L. Jnl.* 228); "Practical Problems," 26 *A.B.A. Jnl.* 491 (J. W. Norwood); "Use of Public Documents," 25 *La. L. Rev.* 555 (J. F. Davison); "Consolidated Edison Co. v. NLRB," 305 U.S. 197 (reviewed 24 *Cornell L. Q.* 583); "NLRB v. Columbia etc. Co.," 306 U.S. 292 (reviewed 8 *G. W. L. Rev.* 108 (sufficiency of evidence); "Who must Read the Evidence," *State v. Wrabets*, 231 Wis. 147, (com. 1940 *Wis. L. Rev.* 125).

**Findings of the ICC** that rates under the Motor Carrier Act are discriminatory, will be preferred to those of a three judge court, where the evidence is undisputed, *U.S. v. Chicago etc. Trucking Co.*, 310 U.S. 44. (Cf. *NLRB vs. Waterman SS. Co.*, 309 U.S. 206; *Perkins v. Lukens Steel Co.*, 310 U.S. 113)

**Effect (res adjudicata)**, 49 *Yale L. Jnl.* 1278; 28 *Minn. L. Rev.* 854 **Judicial Review** "An Approach," 28 *Georgetown L. Jnl.* 1042 (H. P. Warner); 34 *Ill. L. Rev.*, 680 (B. P. McAllister); 17 *Chicago-Kent L. Rev.* 342 (M. A. Kallia); 24 *Marquette L. Rev.* 61 (G. H. Seefeld); 3 *U. of Detroit L. Jnl.* 53 (F. E. Cooper); "Method and scope," 27 *Cal. L. Rev.* 738, 12 *Rocky Mt. L. Rev.* 173. **Mandamus**, 25 *La. L. Rev.* 638, *Drumrey v. State Board*, 97 *Cal. Dec.* 272 (reviewed 13 *So. Cal. L. Rev.* 500); "Statutory Roads," 28 *Cal. L. Rev.* 129 (B. P. McAllister); "The Morgan Cases," 53 *Harv. L. Rev.* 105; 25 *La. L. Rev.* 622; 25 *Wash. U. L. Q.* 608; "F. C. C. v. Pottsville Broadcasting Co.," 309 U.S. 134 (reviewed 40 *Columbia L. Rev.* 513); 8 *G. W. L. Rev.* 849, 28 *Georgetown L. Jnl.* 929; 25 *Ind. L. Rev.* 658; 1 *Wash. & Lee L. Rev.* 253; "Negative Orders," *Rochester Tel. Corp. v. U.S.*, 307 U.S. 125, 83 *L. ed.* 1147; 59 *S. Ct. Rep.* 754 (reviewed, 53 *Harv. L. Rev.* 98, 28 *Georgetown L. Jnl.* 392 (H. B. Merican); 24 *Minn. L. Rev.* 379, 19 *Boston U. L. Rev.* 645; 15 *Ind. L. Jnl.* 151; 28 *Ky. L. Jnl.* 492; 38 *Mich. L. Rev.* 682 (R. J. Miller); 18 *Chicago-Kent L. Rev.* 74 (R. W. Bergstrom); "The Logan Walter Bill," after passing the Senate by a majority of two, providing, *inter alia*, for full judicial review was vetoed by the President on December 18, and an attempt to override the veto, failed in the House. The measure is discussed in 8 *Int. Jurid. Ass'n. Bull.* 101, 2 *La. L. Rev.* 294 (A. Jaretzki); 27 *A. B. Jnl.* 52; 34 *Ill. L. Rev.* 727 (Rule-Making Provisions). Cf. "Saks v. Higgins" 29 Fed. Suppl. 996 (comment, 28 *Georgetown L. Jnl.* 996).

#### PRIVATE

**Contracts.** Samuel Williston, who taught for 50 years in Harvard Law School, gave a course of four public lectures at the Catholic University in Washington, during May, on "Progress of the Law of Contracts." His new work on the subject has been favorably reviewed. See 18 *N.Car. L. Rev.* 1 (L. L. Fuller); 3 *U. of Toronto L. Jnl.* 387 (J. Finkelman).

**Form.** See "Present Status of the Sealed Obligation," 34 *Ill. L. Rev.* 457; "Louisiana Contracts Involving Property Rights," 14 *Tulane L. Rev.* 16 (L. Sarpy).

**Consideration.** Professor Rodell "falls viciously upon the doctrine of consideration," says Max Radin (38 *Mich. L. Rev.* 504) reviewing Rodell's "Woe Unto You Lawyers" (1939) and pronouncing his illustration thereof, "a pure abstraction."

**Parties.** Privy of contract, *McGuire v. Dalton*, 191 So. La. 168 (reviewed 14 *Tulane L. Rev.* 295); "Third Party Beneficiaries (in Michigan)," 3 *U. of Detroit L. Jnl.* 135 (F. J. Chmielnicki).

**Legality.** "In pari delicto," 26 *Va. L. Rev.* 326.

**Insurance.** "Group Insurance," 26 *Va. L. Rev.* 377; 28 *Georgetown L. Jnl.* 273, 25 *La. L. Rev.* 169; "Suicide and Incontestable Clauses," 26 *Va. L. Rev.* 380; 16 *Tenn. L. Rev.* 472; Effect of Aeronautical Employment, 1 *Wash. & Lee L. Rev.* 127; "Is a trailer a 'building' in accident insurance?" (ib. 284); Insured's duty to undergo medical treatment, 88 *U. of Pa. L. Rev.* 749; 16 *Tenn. L. Rev.* 353.

**Special Forms.—Agency.** "Imputation of Agent's Knowledge to Principal," 26 *Va. L. Rev.* 949; "Agent's Liability to Third Parties," 53 *Harv. L. Rev.* 1047; "Relief Worker's Principal in Workmen's Compensation," 39 *Columbia L. Rev.* 1411.

**Bailment.** "Burden of Proof and Presumptions," 14 *Temple U. L. Q.* 261; "A Re-examination of the Winkfield Case," 9 *Fordham L. Rev.* 247; "Effect of Bailee's Misdelivery," 18 *Tex. L. Rev.* 330.

**Carriers.** "Commissions, Rates and Policies," 53 *Harv. L. Rev.* 1103 (R. L. Hale); "Liability of Connecting," *St. John's L. Rev.* 396; "Escalator as Common Carrier," 14 *Jno. Marshall L. Quar.* 464; "Development of Railway Corporate Structures," 7 *L. & Contemporary Problems* 367 (J. W. Barriger).

**Mortgages and Pledges.** "Mortgagor's Right of Possession," 24 *Minn. L. Rev.* 434; "Suits for Interest under the N.Y. Moratorium," 25 *Cornell L. Quar.* 401; "Guaranteed Mortgages," 9 *Brooklyn L. Rev.* 288 (H. Weiner); "Deficiency Judgments," 53 *Harv. L. Rev.* 1400; "Foreclosure Reform," 88 *U. of Pa. L. Rev.* 957; "Application of Collateral to Other Debts," 36 *Mich. L. Rev.* 921.

**Negotiable Instruments.** In Ohio, 6 *O. St. U. L. Jnl.* 140; "Acceleration Clauses," 88 *U. of Pa. L. Rev.* 94; "The Argentine Bill of Exchange," 14 *U. of Cincinnati L. Rev.* 357 (H. P. Crawford); "The Imposter Payee," 1940 *Wis. L. Rev.* 161, 362 (A. S. Abel); *Sec. 1st Nat. Bank v. U.S.* 103 Fed. (2d) 188 (Comment, 13 *So. Cal. L. Rev.*, 112; 25 *La. L. Rev.* 154).

**Sales.** "In Legal Theory and in Practice," 26 *Va. L. Rev.* 651 (N. Isaacs); Conditional: In Louisiana, 2 *La. L. Rev.* 338; In Maine, 4 *Peabody L. Rev.* 52 (M. Greenberg); "The Proposed Federal Sales Act," 9 *Fordham L. Rev.* 233 (G. W. Bacon); 26 *Va. L. Rev.* 638 (G. G. Bogert); *ib.* 537 (H. Thomas); *ib.* 558 (K. N. Llewellyn); *ib.* 572 (W. E. McCurdy); "Warranty of Quality (A Comparative Study)," 14 *Tulane L. Rev.* 327, 529 (C. J. Morrow); 25 *Cornell L. Quar.* 625; 14 *Tulane L. Rev.* 470.

**Suretyship.** "Effect of Principal's Bankruptcy on Surety's Right to Indemnity," 5 *Jno. Marshall L. Quar.* 469; "Of Married Women (in Pennsylvania)," 6 *U. of Pittsburgh L. Rev.* 29 (P. F. Cooney); "Premature Payments as Discharge of Surety," *Corp. of (Mormon) Pres. v. Hartford etc. Co.*, 95 *Pac* (2d) (Utah) 736 (Comment, 26 *Va. L. Rev.* 521).

**Corporations.** "Constitutional Genesis of the Private Corporation," 28 *Georgetown L. Jnl.* 165 (J. J. Robbins); "Origin and Early Development of American Dividend Law," 53 *Harv. L. Rev.* 36 (D. Kehl); "Abrogating Accrued Dividends," (by Charter Amendment), 40 *Columbia L. Rev.* 633 (A. C. Becht); (by Merger), 88 *U. of Pa. L. Rev.* 624; "Improper Purposes of Non-Profit Corporations," 44 *Dickinson L. Rev.* 264 (W. H. Wood); "Disregard of Corporate Entity," 14 *Wash. L. Rev.* 285 (C. Horowitz); "Statutory Revival of Corporate Existence," 28 *Cal. L. Rev.* 195 (L. A. Schei); "Infants as Corporators," 28 *Georgetown L. Jnl.* 320 (W. Q. de Funiak); "Federal Gov't. Corporations," 27 *Cal. L. Rev.* 712 (H. Pinney); "The SEC Proxy Rules and Shareholder Participation," 53 *Harv. L. Rev.* 1165; "Voting Trusts," 24 *Minn. L. Rev.* 347 (C. Burke); 28 *Georgetown L. Jnl.* 1121 (Dougherty & Berry); "The Louisiana Business Corporation Act," 2 *La. L. Rev.* 597 (D. E. Bennett); "The 1939 Amendments in Ohio," 6 *O. St. U. L. Jnl.* 123 (N. M. Lattin).

**Reorganization** (and the SEC), 2 *La. L. Rev.* 693 (B. B. Taylor, Jr.); (and the Supreme Court), 28 *Georgetown L. Jnl.* 24 (L. D. Swannstrom); 53 *Harv. L. Rev.* 713 (E. M. Dodd, Jr.); (and the Rights of Labor), 53 *Harv. L. Rev.* 1360 (Technique of), 17 *N. Y. U. L. Quar. Rev.* 23 (Cohen & Simpson); *ib.* 254; 24 *Marquette L. Rev.* 12 (H. M. Knoeller); 5 *Jno. Marshall L. Quar.* 180 (B. Wham); "Stockholders' Participation," 28 *Georgetown L. Jnl.* 24 (L. D. Swannstrom); 26 *Va. L. Rev.* 504; 8 *G. W. L. Rev.* 1054 (E. M. Cagle); "Recent Developments," 26 *Va. L. Rev.* 999 (J. Gerdes).

**Dissolution**, 40 *Columbia L. Rev.* 220; 28 *Cal. L. Rev.* 219 (recent legislation, 14 *Tulane L. Rev.* 124) Oklahoma adopted a constitutional amendment forbidding public service corporations to merge with competitors.

**Foreign.** "In Latin America," 14 *Tulane L. Rev.* 42 (G. H. Voelkel); "The Argentine Limited Liability Company," *ib.* 232 (H. P. Crawford); "May an Ohio Corporation enter an Argentine Partnership?" 13 *U. of Cincinnati L. Rev.* 559 (*id.*); "Service on a Domestic Affiliate," 3 *U. of Detroit L. Jnl.* 194 (R. E. Bine).

**Delicts (Torts).** The latest (1939-40) *Current Legal Thought* Index contains more than six columns of titles of legal articles on this topic. Its

April number is devoted entirely thereto with a leader by former Dean Pound on "The Economic Interpretation," reprinted from 53 *Harv. L. Rev.* 365. Among the important articles of the year are:

"Rationale of 'the Last Clear Chance'" *ib.* 1225 (M. McIntyre; based mainly on English and Canadian decisions, it advocates discarding the contributory negligence doctrine, from which that discussed "is only a disguise-escape"); "Intermarital Torts," 4 *U. of Newark L. Rev.* 355 (S. A. Bahr); "Tort Claims against the U.S.," 25 *A.B.A. Jnl.* 828 (A. Holtzoff); 14 *Tulane L. Rev.* 407 (E. E. Naylor). On February 17 Attorney General Jackson urged passage of the bill providing liability for such claims, on the analogy of governmental suitability on contracts; "Right of Privacy," 13 *So. Cal. L. Rev.* 81 (T. M. Leovy); (Recent Developments) 44 *Dickinson L. Rev.* 39 (E. Handler); (Radio Broadcasts) 12 *Rocky Mt. L. Rev.* 127 (R. De Mott), 38 *Mich. L. Rev.* 748; 24 *Marquette L. Rev.* 171, 18 *Tex. L. Rev.* 356; "Joint Tortfeasors," (*ib.* 354); (Contribution), 14 *Temple U. L. Quar.* 125; 44 *Dickinson L. Rev.* 49 (A. S. Hollister).

**Special Forms.** Defamation (by radio) *Summit Hotel Co. v. Nat. Broadcasting Co.*, 8 *Atl* (2d) (Pa.) 302 (this case has been the subject of comment in 15 or more legal periodicals. See 6 *Current Legal Thought*, 546); "Immunity for," 24 *Minn. L. Rev.* 607; 38 *Mich. L. Rev.* 732. While a wife may not sue her husband for false imputation of unchastity, those who induced him to make it are liable. *Ewald v. Lane*, 104 *Fed* (2d) 89, 70 *App. D. C.* 89, (Comment, 25 *Cornell L. Quar.* 312).

**Fraud.** "Constructive (in Virginia)," 1 *Wash. & Lee L. Rev.* 98 (W. S. Burns); "Civil Imprisonment for Fraud or Malice," 7 *U. of Chicago L. Rev.* 137.

**Negligence.** "Willful and Wanton," (in Minnesota) 24 *Minn. L. Rev.* 81; As Conduct, 28 *Ky. L. Jnl.* 237 (M. M. Tinscher); "Original Tortfeasor's Liability for Intervening Criminal Act," 24 *Minn. L. Rev.* 666; "Limits of Objectivity in," *ib.* 242 (E. P. Young); "The Humanitarian Doctrine" (Bases Re-examined), 5 *Mo. L. Rev.* 56 (G. A. MacCleary); (Restrictions) 4 *Mo. L. Rev.* 472; "Causation," (Failure to sign license) 38 *Mich. L. Rev.* 558).

**Domestic Relations.** "Recent Statutory Changes in Washington," 14 *Wash. L. Rev.* 271 (W. L. Shattuck); "Confusing Maryland Procedures," 4 *Md. L. Rev.* 275.

**Marriage.** "Pre-Marital Health Tests for," 53 *Harv. L. Rev.* 309. Eighteen States now have such tests; 30 require a waiting period between notice of intent and issue of license, as in Rhode Island (6 days) or between the latter and the wedding as in Delaware (24 hours).

Brown); "Same; Procedure in, compared with Civil Law," 15 *Notre Dame Lawyer*, 232 (J. C. O'Connor); "Common Law" (informal), 6 *U. of Pittsburgh L. Rev.* 104; 3 *U. of Detroit L. Rev.* 34; 14 *Ind. L. Jnl.* 539.

**Support** (of wife by husband), 24 *Marquette L. Rev.* 52; (separate maintenance), 5 *Newark L. Rev.* 56; 16 *Tenn. L. Rev.* 246; Contractual Liquidation of Liability, 40 *Columbia L. Rev.* 677. Of husband by wife, 25 *Cornell L. Quar.* 300. O. W. Nygren of Nassau Co. N.Y., aged 40 and unemployed 4 years, committed suicide two days after the county court had ordered his employed but estranged wife to pay him \$8.50 per week.

**Community Property.** "The Oklahoma Act: A Comparative Study," 2 *La. L. Rev.* 575 (H. S. Daggett) (Gifts), *McDonald v. Lambert*, 43 *N.M.* 27 (Comment, 18 *Tex. L. Rev.* 227); (Life Insurance), *ib.* 121; *Occidental L. Ins. Co. v. Powers*, 192 *Wash.* 475 (Comment, 19 *Oreg. L. Rev.* 384); (Succession) *Estate of Ratway*, 13 *Cal.* (2d) 702 (Comment, 13 *So. Cal. L. Rev.* 115); 27 *Cal. L. Rev.* 748 (Survivorship), *McDonnell v. Miller*, (Tex.) 133 S.W. (2d) 142 (Comment, 18 *Tex. L. Rev.* 339); *Fidelity Union Ins. Co. v. Hutchins*, 134 *Tex.* 268 (Comment, *ib.* 338).

**Parentage.** Custody of child (surviving parent), 2 *La. L. Rev.* Mch.; (mother's release), 9 *Fordham L. Rev.* 130; "Jurisdictional Bases of Custody Decrees," 53 *Harv. L. Rev.* 1024.

**Adoption.** "Intestate Succession as Affected by," 13 *So. Cal. L. Rev.* 369. The California Department of Social

Welfare issues a folder (No. 6) giving a brief history of adoption in that State, with information as to the procedure and statistics, disclosing 921 adoptions there in 1938. (In Texas), 18 *Tex. L. Rev.* 523; "Adopted Child's Right to Sue Parent," 1 *Wash. & Lee L. Rev.* 136; 14 *Tulane L. Rev.* 468).

**Divorce.** "Cruelty as Ground for," 19 *Ore. L. Rev.* 341 (D. Fain); 28 *Georgetown L. Jnl.* 694; "Support Orders for Infants in," 26 *Va. L. Rev.* 401; "Recognition of Foreign Divorces in New York," 9 *Fordham L. Rev.* 342 (F. L. Kane); "Connivance in Procuring," 28 *Cal. L. Rev.* 99. On March 22 the U.S. P.O. Department issued a mail fraud order against Mexican "divorce bureaus." In Canada, where the Dominion Parliament is the sole authority for divorces in Quebec and Prince Edward Island, protests were registered in the Commons on July 15 when the House was asked to accept without question the approved report of a Senate Committee upon some 30 such divorce bills and to dispose of them in about 12 minutes. Prime Minister Mackenzie King hoped that this would hasten the establishment of divorce courts in the two provinces. In Denmark, divorce petitions require approval of the King, who recently passed on that of Barbara Hutton Haugwitz-Reventlow, granddaughter of F. W. Woolworth.

**Annulment and Divorce** (in Mississippi), 12 *Miss. L. Jnl.* 1264 (D. H. Shell); "Fraud in the N. Y. Law of Annulment," 9 *Brooklyn L. Rev.* 51 (M. Gershenson). On March 22 Governor Lehman signed the bill providing for alimony in annulment proceedings as in those for divorce. (See COURTS.)

Haskell); "Unreal Appraisements in Louisiana," 2 *La. L. Rev.* 426 (L. Sarpy).

**Legal Education.** Of the 180 American law schools, 106 have now received at least provisional approval by the A.B.A.'s legal education section; but some 13,000 students were reported at unapproved schools. The latest total enrollment figures are 34,539 as against 37,406 in the preceding year. The eight states without the two year college requirement (1939 YEAR BOOK 422) were reduced to six in 1940, Kentucky and Oklahoma having adopted it and also Hawaii Territory. But in the District of Columbia the movement received a setback by the passage of an act, quietly worked through Congress, substituting the Washington School Board (which is not concerned with higher education) for the regional organ of the Association of American Universities, as the body to pass on schools giving the "college work." Significant of the higher standard's results, was the N.Y. Law Examiners' announcement that out of 1057 who took the March examinations, only 398 passed, and these were subject to further tests as to character and fitness in their respective judicial districts.

**Curriculum.** An experiment which would shorten the terms of study by a year, was announced in June by Dean Landis of the Harvard school. A group of 25 freshmen were to be selected who would study the social sciences for three years in the academic departments; then take an "intensified" course in the law school for two years; finally returning to the academic field for a combined two year course in the advanced social sciences, including law, the object being to visualize law, "not as a collection of abstract facts and opinions but as a vital part of our everyday life." Dean Landis, while hopeful of a successful outcome, expects the experimental stage to last several years (See 26 *ABA Jnl.* 814.) Dean A. T. Martin of the Ohio State University Law School, who recently succeeded Dean Arant, also announces a drastic revision of the curriculum, with "emphasis on vocational competency and the training of socially minded lawyers." "The Proposed Four-Year Law Curriculum" is criticized in 38 *Mich. L. Rev.* 945 (P. Mechem); "The Yale Legal Aptitude Test," 49 *Yale L. Jnl.* 1237 (Crawford & Gorham); "A Generation of Law Teaching," *ib.* 16 (R. Pound); "Legal Education in Philosophical Perspective," 3 *U. of Detroit L. Jnl.* 181 (B. F. Brown); "The Teaching of Legal Cause," 39 *Columbia L. Rev.* 1087. Consult UNIVERSITIES AND COLLEGES.

See COURTS; INTERNATIONAL LAW; PRISONS; SUPREME COURT.

C. SUMNER LOBINGIER.

**LEAD.** In common with other metals, international trade in lead was considerably disturbed in 1940, although probably less than for copper and zinc. War cut off the normal European market for lead and caused producers to seek an outlet in the United States. Foreign metal exerted a controlling influence on the domestic market, practically putting a ceiling on the domestic price. Imports of both lead concentrates and pig lead and bullion were heavy, as shown in Table 1 on page 406, from *Engineering and Mining Journal*.

Changes in United States production, shipments, and stocks of lead, are shown in Table 2 on page 406.

The price of lead at New York, according to *Engineering and Mining Journal* opened in January at 5.50¢, declined to 4.75 in August, rose to 5.80 in November, and closed the year at 5.50¢. The average was 5.179 compared with 5.053¢ for 1939.

TABLE 1—UNITED STATES LEAD IMPORTS

	[Short tons]	
	1939	1940
Lead concentrates (lead content)		
Newfoundland		27,565
Mexico	5,847	1,804
Argentina	3,362	16,469
Peru	7,176	18,384
Australia	7,613	17,473
Canada	5,624	8,666
South Africa		7,539
Base Bullion		
Mexico	47,914	19,623
Pigs and Bars		
Peru	3,976	18,335
Australia	1,118	2,800
Mexico		128,678

TABLE 2—CHANGE IN DOMESTIC PRODUCTION, SHIPMENTS, AND STOCKS OF LEAD\*

	[In short tons]	
	1939	1940
Mine Production	462,200	480,894
Secondary and Foreign Production	35,800	104,586
Domestic Shipments	555,100	603,143
Refined Pig Lead Stocks (December 31)	58,800	40,926
Total Stock-all forms (December 31)	146,800	140,600

\* American Bureau of Metal Statistics

Lead has not been quoted in the London market since September, 1939, when the London Metal Exchange was closed and the Ministry of Supply fixed the price for consumers.

According to the census of manufactures, 1939, for primary smelting and refining of lead, compared with 1937, there was a striking decrease in number of establishments, salaried personnel, and salaries; wage earners and wages; cost of materials and energy; value of products, and value added by manufacture.

Estimates of production in 1940 by the Bureau of Mines totaled 458,000 tons of refined lead from domestic ores, compared with 420,967 tons in 1939. The output of lead smelted and refined from foreign ore and bullion was about 77,000 tons, compared with 63,068 tons in 1939. Total primary lead smelted or refined in the United States in 1940 was thus 535,000 tons, an increase of 11 per cent over 1939. The new supply of lead made available for consumption in 1940 is calculated at about 655,000 tons, an increase of 58 per cent over that of 1939.

See MISSOURI.

H. C. PARMELEE.

**LEAGUE OF NATIONS.** The normal diplomatic work of the League of Nations was almost completely interrupted by the war during 1940 though its technical activities continued to a considerable extent. The wide-spread system of conference, negotiation, and co-operation built up since the first World War could not function in a world in flames. The spread of violence had led to the occupation by Germany of seven Member States, Poland, Holland, Belgium, Luxemburg, Denmark, Norway, and France, the absorption by Russia of three other Member States, Lithuania, Latvia, and Estonia, the mutilation of two others, Finland and Rumania, the fighting of a desperate war by the British Empire Members and Greece, and the threat of war to many others. By the end of the year, meetings had become almost impossible; the seat of the League at Geneva was largely cut off; and the seats of two associated agencies, the World

Court (q.v.) at The Hague and the Institute of Intellectual Co-operation at Paris, had been occupied. All this led to serious reductions in membership, budget, and staff, and a change in the Secretary-Generalship. Despite this, however, the League remained in being and in full constitutional emergency operation; a reduced staff continued on duty in Geneva; and a group of economic and financial and several opium officials were transferred to Princeton and Washington respectively in response to warm American invitations. Similarly some 60 officials of the International Labor Office (q.v.) were transferred to Montreal and the officers of the World Court to Switzerland.

Barely half a dozen meetings were held in 1940. Early in February the Experts' Committee on Economic, Financial, and Social Questions met at The Hague to give new and promising form to the League's technical and non-political work. In May the Opium Advisory Committee, Central Board, and Supervisory Committee met in Geneva to consider the world drug situation. In February and October the Supervisory Commission met at The Hague and Lisbon respectively, to take the steps necessary for the League's administration in war-time and to fix the budget for 1941 at 10,659,711 Swiss francs, one-third the pre-war figure. The Fiscal Committee also held two sessions, one of them of experts from the States of the Americas in Mexico City. For the first time in 20 years no meeting was held of either Assembly or Council.

The membership of the League continued to feel the effects of the world crisis. On July 11 Rumania notified her withdrawal; on June 1 and July 11 Chile and Venezuela respectively completed theirs. Lithuania, Latvia, and Estonia had been taken over by Russia, herself expelled from the League in December, 1939, on account of the Finnish invasion.

The permanent staff in the Secretariat was also vitally affected. Mobilization, suspension of meetings, and reduced funds led to progressive reductions totalling 599 officials out of around 700 within a year. On July 25, M. Joseph Avenol, Secretary-General for the previous seven years, submitted his resignation, which was accepted as of August 31 by Mr. Costa du Rels of Bolivia, Acting President of the Council, and Mr. Carl J. Hambro of Norway, Acting President of the Assembly. Mr. Sean Lester succeeded as Acting Secretary-General, after years of service as Irish Free State Delegate in Geneva, League High Commissioner in Danzig, and Deputy Secretary-General.

Parts of the technical staff were sent on missions to the United States. On June 1 a nation-wide committee of eminent Americans had been formed under the chairmanship of President-Emeritus Mary E. Woolley of Mt. Holyoke "to help preserve the non-political activities of the League . . . which must go on, even in time of war, if the extremity of human suffering is to be averted." President Roosevelt greeted the committee warmly, pointing out that "it has been the continuous policy of this government for many years to co-operate in the world-wide technical and humanitarian activities of the League," which he described as "not only worthy but definitely essential."

On June 11, three educational institutions—Princeton University, the Institute of Advanced Study (q.v.), and the Rockefeller Institute for Medical Research—anxious that the work of the Economic and Financial Section be not interrupted or its personnel dispersed in the war, invited the

Section to Princeton "for such period as may prove to be desirable." The group of experts arrived in the summer and by the year's end were actively engaged in maintaining the League's economic and financial service, continuing certain special studies, and preparing for the postwar situation. Shortly after, several other officials associated with the League's highly successful anti-drug work arrived in Washington.

The scientific and analytical publications continued to appear, despite the war. Particularly in the economic and financial field with the issue of the *Monthly Bulletin of Statistics*, *Monetary Review*, *Statistical Year-Book*, and a special volume on *Raw Materials*. The Epidemiological reports were issued as usual, as also the *Armaments Year-Book*, which has appeared regularly for many years.

For Opium Advisory Committee, see NARCOTIC DRUG CONTROL. See INTERNATIONAL LABOR ORGANIZATION.

ARTHUR SWEETSER.

**LEATHER.** The movement of hides and skins was considerably curtailed in international trade during 1940. Leather is a critical material that is essential in national defense. Studies on the use of leather in modern warfare show that more than 500 articles of military equipment are made entirely or partly of leather. Many nations involved in war in 1940 reported difficulty in getting the heavy leathers necessary for army usage, and many nations at peace could not afford to import leather or relied on domestic supplies. Export of heavy hides from Argentina to Europe was restricted by the blockade, but, to the United States, was not reduced in spite of increased shipping costs.

While prices in United States leather markets opened the year in a steady position at sound price levels, the markets dropped precipitously late in May when the world situation caused widespread pessimism. Demand for leather and shoes lagged, inventories were cut, and cautious policies were the rule among manufacturers and retailers. Late in August, price trends and activity in the leather markets advanced sharply. Domestic hide prices advanced, and by December were 4 to 5 cents higher than those prevailing during the summer. An even sharper advance occurred in the Argentina market, with steers quoting at 14.7 cents in December, 1940, a rise from 8 cents in August. Argentina hides have not glutted United States markets as the European blockade has curtailed the killing of Argentine cattle—leather being a by-product of beef cattle. American imports of calf and kid skins from Europe have been largely cut off; goat, kid, and reptile skins from China and India, curtailed; and sheep and lamb skins from New Zealand, restricted. An increased amount of sheep, calf, kid, and lamb skins has been coming to the United States from Latin America, but most of it is not top-grade. United States imports during 1940 were valued at \$50,188,383 (\$47,056,066 in 1939). United States production of hides was slightly over the 25 million cattle hides tanned in 1939 and prices closed a cent to a cent and a half below the January, 1940, price of 15 cents per square foot.

The armament programs stimulated the demand for leather, both directly because of increased government orders and indirectly because of increased consumer requirements. Increased demand for footwear may not result in a proportionate increase in the demand for leather if substitutes are used.

Blockades may force some European countries to develop substitutes, higher leather prices may encourage others. In the United States every 5,000,000 pairs of army service shoes require a million hides of the best selection available. Large government orders of army shoes in the last few months of 1940 shortened the supply and increased the price of army shoe leathers. Reports are that leather prices in 1941 will probably level off slightly above present prices, but the industry is well able to provide the 20 to 25 million hides necessary for civilian usage plus approximately 2 million hides needed for the defense program.

Technological developments of the year include additional flexibility in heavier weight leathers and increased durability in lighter weights; new grains for calfskin, better grain finishes in kidskin, and a more flexible and "less crackable" patent leather. But the greatest strides have probably been made in color—"faster," more varied, richer, more even colors in leather are being developed.

See SHOE INDUSTRY.

JOHN F. W. ANDERSON.

**LEBANON, Republic of.** See SYRIA AND LEBANON.

**LEEWARD ISLANDS, British.** A British West Indian federation consisting of the four presidencies shown in the accompanying table.

Presidency (Capital)	Sq mi	Population*
Antigua (St. John) . . . . .	171	35,123
Barbuda and Redonda . . . . .	63	1,000
Montserrat (Plymouth) . . . . .	32½	13,670
St. Kitts-Nevis (Basseterre) . . . . .	152	37,569
Nevis . . . . .	50	13,966
Anguilla . . . . .	34	5,717
Virgin Islands* (Road Town) . . . . .	67	6,364
Leeward Islands (St. John) . . . . .	422½	92,726

\* Estimate of December 31, 1938. \* Includes Sombbrero.

The approximate populations of the principal towns on Dec. 31, 1938, were as follows: St. John, 10,000; Basseterre, 8000; Plymouth, 2000; Charles-town, 1200; Road Town, 400.

**Production and Trade.** Chief products: sugar, limes, oranges, lemons, grapefruit, bananas, cocoa, and tomatoes. Trade (1938): imports, £733,645; exports, £576,886 (sugar, £376,348; cotton, £81,723; limes and lime products, £26,678; molasses, £16,955). Shipping entered and cleared the ports in 1938 totaled 6,478,040 tons. The foregoing figures of trade include those of Dominica which was transferred from the Leeward Islands to the Windward Islands on Jan. 1, 1940.

**Government.** Finance, including Dominica (1938): revenue, £337,547; expenditure, £331,891; public debt (net), £304,751. There is one governor, an executive council, and a general legislative council for the whole colony. Antigua, Montserrat, and St. Kitts-Nevis have their own local executive and legislative councils; the Virgin Islands has a local executive council. Governor and Commander-in-Chief, Sir G. J. Lethem (appointed December, 1935). See ANTIGUA, BRITISH WEST INDIES.

**LEGISLATION.** See UNITED STATES; the articles on the States and foreign countries; LABOR LEGISLATION; TAXATION, ETC.

**LEOPOLD III.** See BELGIUM under History.

**LEPROSY.** See BIOLOGICAL CHEMISTRY.

**LEWIS, JOHN L.** See CONGRESS OF INDUSTRIAL ORGANIZATIONS; ELECTIONS, U.S. NATIONAL; LABOR CONDITIONS under Union Movements.

**LIAONING.** See *CHINA* under *Area and Population*.

**LIBERIA.** A Negro republic on the west coast of Africa. Area, about 43,000 square miles; population, estimated at from 1,000,000 to 2,500,000. Only about 60,000, including some 12,000 Afro-Americans, residing mainly along the coast, may be considered civilized. There were about 289 American citizens in Liberia on Jan. 1, 1940. Capital, Monrovia (pop. about 10,000). English is the official language. Afro-Americans are Protestant Christians. The indigenous tribes are mainly pagans or Mohammedans, with some Christian converts. There are two colleges at Monrovia (one government and one Methodist), a vocational school at Kakata, and 70 government and 80 mission grade schools, with about 10,000 pupils.

**Production.** Rubber, produced on the Firestone Company's 1,000,000-acre concession, is the chief export crop. Output in 1939, about 4750 long tons from 67,000 acres. Native coffee, cacao, cotton, piassava fiber, palm oil and kernels, kola nuts, rice, oil seeds, iron, copper, and gold are produced in small quantities. There are rich undeveloped forest, mineral, and agricultural resources.

**Foreign Trade.** Merchandise imports in 1939 totaled 2,003,000 Liberian dollars; exports, \$2,714,000. Trade is mainly with the United States and United Kingdom. The chief exports are rubber, palm kernels, piassava, and coffee; chief imports, textiles, metal goods, machinery, chemicals, and petroleum products.

**Finance.** Estimated budget receipts and expenditures for the calendar year 1940 balanced at 675,000 Liberian dollars, with operating expenses put at \$525,000 and amortization of the American loan at \$150,200. For the year ended Sept. 30, 1939, revenue, including the balance carried forward, was \$1,069,701; expenditures, \$1,081,142. Public debt on Sept. 30, 1939: \$1,793,936 (funded, \$1,512,000; unfunded, \$281,936). The Liberian dollar (\$) was pegged at \$4.80 to the pound sterling.

**Communications.** There are no railways; 234 miles of roads (1940), with one bus line from Monrovia to the interior; a number of navigable rivers; and air connections at Monrovia to Dakar, Senegal, and Pointe-Noire, French Equatorial Africa. During 1939, 536 ships of 1,390,535 registered tons entered Liberian ports.

**Government.** The Constitution is modeled on that of the United States. Suffrage is restricted to Negroes owning land. The True Whig party, dominated by a small oligarchy of Afro-American families at Monrovia, has controlled all branches of the government since 1878. President in 1940, Edwin Barclay, inaugurated Jan. 6, 1936, for an eight-year term.

**History.** Carrying out its budget-balancing policy, the government reduced all appropriations except those for the war department in the 1940 budget. All salaries over \$1300 per annum were reduced from 10 to 20 per cent. To permit continuance of the road construction program, designed to open up remote sections of the interior for the first time, the corvée labor system was resumed. It had been abandoned following charges of slavery and forced labor lodged against the Liberian Government by an international commission and by the U.S. State Department in 1931 (see *YEAR BOOK*, 1931, p. 463). In January the government leased 200 acres of land on the Farmington River for construction and operation of a hydro-

electric plant by the Firestone Company, the lease running for 86 years. Power from the plant was to be used in processing latex and for the company's plantation transportation system. The U.S. Senate on Nov. 26, 1940, ratified the conciliation treaty signed with Liberia on Aug. 21, 1939.

**LIBRARY PROGRESS.** In a year which witnessed the destruction of political and intellectual freedom in Europe, librarians with others in educational fields turned their thoughts to the defense of freedom in America and library implications of the national emergency, while at the same time not neglecting regular library activities and long-time goals. In numerous ways librarians, believing that it is more important now than ever before to make democracy work as well as to overcome the habit of taking inherited rights and privileges for granted, have given impetus and assistance to library activity to increase the general understanding and appreciation of democracy. After discussions with representatives of the Advisory Commission to the Council of National Defense and other officials, a committee was created by the Library of Congress, the Library Service Division of the United States Office of Education, the American Library Association, and the Special Libraries Association to make a survey of the research resources of libraries on subjects directly related to national defense.

A study of statistics for libraries in cities of 25,000 to 70,000 population from 1929 to 1939, termed "the most turbulent decade of our history," showed that the highest library expenditure per capita in 1929 was \$1.66, as compared with \$1.44 for 1939, and the lowest was 42 cents in 1929, compared with 46 cents for 1939. Of the libraries included, all but six report a larger operating expense in 1939 than 1929, and all but four report an increase in the total amount expended for salaries of the library staff. Circulation figures indicate an even greater increase. One library reports a circulation in 1939 over three times as large as that for 1929. Others show gains of lesser volume, but all indicate a substantial increase in the use of public library resources. Complete statistics for United States libraries were published during the year in the *A.L.A. Bulletin*: For high school, college, teachers college, and university libraries (February) and for public libraries (April). For additional library statistics see 1939 *YEAR BOOK*, *Library Progress*, which gives the latest compilations available.

After exploratory visits to Washington by its representatives, the A.L.A. Federal Relations Committee was forced to conclude, as were the officers of the National Education Association, that no progress could be made on the Harrison-Thomas bill (see 1939 *YEAR BOOK*, *Library Progress*) for federal aid to education and libraries in the 1940 congressional session due to economy measures. The outlook for the future is still thought to be encouraging.

Due to the establishment of some 150 large regional and county libraries during the past two years public library service has greatly increased. This number is significant compared to only 300 such units established during the 38 preceding years. Present-day organized citizen support of programs for complete, state-wide library service with local, State, and Federal funds, promise much for the future. There are more than 30,000 members of public library boards in the United States and Canada, most of whom are enthusiastic proponents of the library idea. Fourteen States now

have State library trustee organizations. There are 150 Friends of the Library groups in 38 States, District of Columbia, Hawaii, and three Canadian provinces. In many citizen organizations such as the General Federation of Women's Clubs, the National Congress of Parents and Teachers, and the American Legion Auxiliary, library improvement is a part of the regular program. There are numerous other groups which give important, if not continuous, support to libraries. Definite library recommendations were also made at the White House Conference on Children in Democracy held in Washington, D.C. in January.

**State Aid.** During the year the movement in behalf of State aid for libraries continued to progress with the following results: Arkansas, Louisiana, Ohio, Pennsylvania, and Vermont made or renewed appropriations ranging from \$25,000 to \$200,760 a biennium. New Hampshire received the continuation of funds for one regional book automobile service, which was begun on an experimental basis. Michigan continued work begun under a \$500,000 grant which was repealed in 1939. Provincial grants in British Columbia were increased in 1939 from \$1000 to \$5000, and Nova Scotia provided \$1 for every \$3 appropriated by local agencies for regional libraries. Legislative action toward providing or strengthening official State leadership was taken in Alabama, Florida, Idaho, Kentucky, Mississippi, Pennsylvania, South Dakota, Texas, Alaska, and Nova Scotia. Several States, including Colorado, Kansas, New Mexico, and Tennessee, have organized campaigns under way and others were planned for legislative action in 1941 when 43 State legislatures will be in session. During the past year, 49 counties in 16 States were added to the list of 451 counties appropriating at least \$1000 for rural service. This is slow but definite progress compared to the total of more than 3000 counties in the United States. Georgia, Tennessee, and Virginia appropriated amounts from \$60,000 to \$150,000 (proportionate amounts to be raised locally) for the purchase of school library books during the biennium.

**Special Services and Activities.** Many libraries are using or experimenting with some of the new developments of audio-visual materials and scientific aids to learning—as dioramas, slides, film slides, theatrical slides, documentary films, microfilms, radio transcriptions, talking books, radio-visual devices, and facsimile broadcasting. A film, emphasizing the social value of the library, is also being produced by the American Film Center with the co-operation of an A.L.A. committee.

A list of some 50 studies and surveys were noted during the year by the A.L.A. in a list of "Studies and Experiments Outside the Library Field Which Have Implications for Libraries." Surveys were made of the University of Florida Library, University of Indiana Library, Texas State Library, and of library personnel and training agencies in Michigan and Tennessee.

There are many examples of special library services during the present emergency. Eastern libraries have given pleasure and aid to European refugee children through books which assist in adjusting them to new situations and environments. Canadian libraries, especially, are assisting with the gathering of books and magazines for those in war service, with the establishing of special rooms for service men, and with the aiding of refugee and patriotic services. Several Eastern libraries joined in compiling a list and furnishing the books

for the use of the Western Hemisphere Encampment of Girl Scouts, attended by scouts from Canada, Newfoundland, the United States, Central and South America. Libraries also aided The American Merchant Marine Library Association in the collecting of books and magazines for the recreation and education of seamen, coastguardsmen, and lighthouse keepers. The collecting of books for replenishment of libraries which were destroyed in the war areas of China was continued by libraries.

With the world-wide celebration during the year of the 500th anniversary of Gutenberg's invention of movable type, libraries throughout the country illustrated historical, literary, and mechanical aspects of printing, displayed special book collections and rare treasures, held meetings and lectures, and gave radio broadcasts.

**Adult Education.** The A.L.A. Adult Education Board has begun studies and research regarding a broader and better implemented concept of adult education in respect to: The qualitative value of the library's educational services to users; application of psychology to certain problems of service; new emphasis on the educational function of libraries in the curricula of library schools and in "in-service" training programs; simpler reading materials, audio-visual materials, particularly educational films; and the library as a community center for many kinds of informal education. The Board sponsored the publication of several articles in professional periodicals, books, and pamphlets, among which were *Books for Adults*, *Experiments in Educational Service for Adults*, and *Education for the Asking*.

**Library Training and Personnel.** An increasing number of library schools, libraries, State library extension agencies, and groups of librarians held "in-service" training institutes, conferences, and clinics. This was due in part to the mounting demand for opportunities of improving the professional competence of librarians already in service. Since 1935 the program of the A.L.A. Board of Education for Librarianship has been materially aided by the Carnegie Corporation of New York. Most of the grants have been made for special work, studies, surveys, publications, and conferences now completed. During the year the A.L.A. Committee on Fellowships and Scholarships awarded six grants-in-aid for advanced study in librarianship from a fund allocated to it by the Corporation. Striving to increase the opportunities for preparation for library service, the Board secured permission to include a number of organizations in a revised list of fellowships, scholarships, grants-in-aid, and loan funds open to librarians and prospective librarians. Twenty-four educational foundations or associations, or agencies administering grants-in-aid; 15 local library clubs or State library associations and 15 accredited library schools or their alumni organizations are included. During the year, the A.L.A. Board on Salaries, Staff, and Tenure and its sub-committees worked on several projects. One of these—the preparation of a model scheme of service—was completed, and another—classification and pay plans for institutions of higher education—has received considerable attention jointly from the Board and its sub-committee on Budgets, Compensation, and Schemes of Service, which was appointed by the Association of College and Reference Libraries.

**Gifts, Grants, and Buildings.** Many gifts and grants from individuals and foundations, which

were received during the year, have materially aided libraries and their services. Material for research will be made available as a result of Rockefeller Foundation grants to Brown University, Providence, Rhode Island and the New York Public Library for modern facilities for microfilm copying. The Foundation is subsidizing the filming of 35 foreign newspapers currently received at Harvard University. The recently opened Hispanic Foundation at the Library of Congress was the recipient of a grant to aid in the preparation of a catalogue and the development of bibliographical services. An appropriation of \$30,000 was also made to the American Library Association by the Foundation for studies covering the general fields of relations with Latin American countries.

In 1940-41 the Carnegie Corporation of New York completes its three-year grants to a number of Teachers College libraries for the development of their book collections. Grants for special projects were also made by the Corporation to the American Library Association, the Library of Congress, and several other libraries, and a grant of \$17,000 was provided to care for Emergency Library Activities dealing with National Defense. An endowment grant of \$100,000 was also made to Emory University Library School.

During the year gifts of unusually valuable private book collections were made. The W. T. H. Howe collection of over 3000 rare books of English and American literature was presented to the New York Public Library by Dr. Albert A. Berg. Harvard University received from the heirs of the late William Augustus White an important collection of rare books, and from Philip Hofer a collection of illustrated or finely printed books dating from the 15th to the 20th century. The late Governor, Henry Horner of Illinois, gave his Lincoln library to the Illinois State Historical Library. The College of the City of New York received from the widow of Prof. Israel Davidson 7500 volumes of Hebrew medieval literature, regarded as the finest existing collection in that field. The Wagner College Library has received the library of the poet, Edwin Markham. Dr. Archibald Henderson's collection of materials dealing with the life and works of George Bernard Shaw is to go to the University of North Carolina Library.

Among the gifts received for library buildings were a \$250,000 bequest from the will of the late Mrs. Norman Mayer to the City of New Orleans for a public library; \$150,000 anonymous gift to Davidson College; \$150,000 for a memorial library for Manhattanville College of the Sacred Heart from the late Mrs. Brady-Macallay; a trust fund of approximately \$125,000 for a new branch library and an additional sum of at least \$50,000 to the Denver Public Library from the late Frederick R. Ross.

Libraries in all parts of the country were presented with gifts and bequests of money for the purchase of books and other purposes. Among those receiving large gifts were Marshfield, Wisconsin, Public Library; Shelton, Washington, Public Library; Houston, Texas, Public Library; Harvard University; Monticello College; John Carter Brown Library, Brown University; George Washington University.

The construction and repair of libraries and additions to buildings were numerous. The Central Building of the Brooklyn Public Library, begun in 1912 and rebuilt in 1938-39 at a total cost of

about \$5,000,000, is now in use; the \$2,000,000 Toledo Public Library, constructed with the aid of the Public Works Administration, was opened to the public in the fall of 1940; and a 16-story building has been constructed with PWA aid for Hunter College in New York City, two floors of which house the library with facilities for 325,000 books and 1600 readers.

During the year work was begun on three large libraries—the District of Columbia Public Library, of which the first unit will cost approximately \$1,000,000; the Virginia State Library at Richmond, which will cost nearly \$2,000,000, and the \$800,000 building for the Joint University Libraries (Vanderbilt, Peabody, and Scarritt) at Nashville, Tennessee.

Under construction is a \$500,000 building in New Orleans to house the libraries of Tulane University, Newcomb College, and Howard Memorial Library, which have been merged under one director.

Among the libraries completed in the fall of 1939 and in 1940 are Rockford College Library, Rockford, Illinois; Southwestern Louisiana Institute Library, Lafayette; Northeast Center, Louisiana State University, Monroe; Skidmore College, Saratoga Springs, New York; University of Wichita Library, Wichita, Kansas; Montana School of Mines Library, Butte; Concord, New Hampshire, Public Library; Kirkwood and University City, Missouri, Public libraries; Toms River, New Jersey, Public Library; Twin Falls, Idaho, Public Library; Palo Alto, California, Children's Library; Newtonville Branch Library, Newton, Massachusetts; Park Place Branch Library, Houston, Texas; Southwestern Branch Library, Washington, D.C.; a wing of the Thomas Jefferson Memorial Junior High School; the rebuilding and furnishing of the second floor of the Reis Library, Allegheny College, which houses several fine collections, the latest gift being Ida M. Tarbell's Lincoln collection; and the addition of the David A. Howe Reference Halls to the James V. Brown Library, Williamsport, Pa.

Publications. The A.L.A. publishes the following professional periodicals: *The A.L.A. Bulletin*, a monthly which includes news issues, annual reports, conference proceedings, and the yearly handbook; the *Booklist*, a semi-monthly guide to the selection and purchase of current books; the *Subscription Books Bulletin*, a quarterly which presents critical estimates of subscription books and sets sold currently by canvassing agents; the *Journal of Documentary Reproduction*, a quarterly review of the application of photography and allied techniques to library, museum, and archival service; the new quarterly journal, *College and Research Libraries*, the official organ of the Association of College and Reference Libraries; and the new *Hospital Book Guide*, a quarterly sponsored jointly by the American Hospital Association and the American Library Association.

Among the various books and pamphlets published by the A.L.A. during the year for libraries and in the interest of library progress and education generally are: Adams' *The Junior College Library Program*; a *Study of Library Services in Relation to Instructional Procedures, Catalogers and Classifiers Yearbook, No. 8*, McDiarmid's *The Library Survey*, Rue's *Subject Index to Books for Intermediate Grades*, *Subject Index to Children's Plays*, Horton's *Buying List of Books for Small Libraries*, 6th ed., *Replacement List of Pic-*

tion, *Books for Tired Eyes*, 3d ed., *Booklist Books*, 1939, *Books for Adult Beginners*, Branscomb's *Teaching with Books* (published jointly with the Association of American Colleges), Shaw's *List of Books for College Libraries*, 1931-38, *Manual on the Use of State Publications, Archives and Libraries* 1940, *Floor and Floor Coverings*, Swain's *Notes Used on Catalog Cards*, and Eastman's *Portrait of a Librarian*, William Howard Brett, 4th in the series on *American Library Pioneers*.

Among the pamphlets and book lists published by the A.L.A. to assist libraries in meeting the needs of students and schools participating in the government training program for defense occupations are: *Industrial Training for National Defense*, *Aeronautic Training for National Defense*, *Engineering Defense Training*, *Elementary Books for Industrial Training*, *Our American Democracy*, and *Democracy: a Reading List*.

Additional 1940 publications in the library field, other than those issued by the A.L.A., include: Thomas R. Adam, *The Worker's Road to Learning* (American Association for Adult Education); Anne Thaxter Eaton, *Reading With Children* (Viking Press); Carleton Bruns Joeckel and Leon Carnovsky, *A Metropolitan Library in Action; a Survey of the Chicago Public Library* (Univ. of Chicago Press); Frank Kingdon, *John Cotton Dana* (Newark, N.J., The Public Library and Museum); Elbert Enrow, *Reader's Guide to Prose Fiction* (Appleton-Century); Louis R. Wilson, *The Practice of Book Selection* (Univ. of Chicago Press); Paul Lazarsfeld, *Radio and the Printed Page* (Duell).

See EDUCATION, U.S. OFFICE OF; PHOTOGRAPHY under *Microphotography*. For statistics on college and university libraries, see table of UNIVERSITIES AND COLLEGES.

MILDRED OTHMER PETERSON.

**LIBYA.** An Italian colony in North Africa. Area, 679,358 square miles; population (Jan. 1, 1939), 888,401, including 793,225 natives (763,179 Moslems and 30,046 Jews), 89,098 Italians, and 6078 other Europeans. Chief towns (with Jan. 1, 1939, populations): Tripoli (108,240), Bengasi (64,641), Misurata (45,097), Homs (34,940), and Derna (21,547). Ghadames, Sinauen, Mizda, Murzuk, and Ghat are important caravan stations in the interior. Capital, Tripoli.

**Production and Trade.** Chief products: Barley, dates, olives, oranges, lemons, almonds, vegetables, salt, sponges, fish, and tobacco. Livestock (1938): 820,323 sheep, 726,006 goats, 69,670 cattle, 91,782 camels, 55,676 donkeys, mules, and horses. Trade (1938): Imports, 882,057,532 lire; exports, 108,961,545 lire (lira averaged \$0.0526 for 1938; \$0.0520 for 1939). During 1938, 5545 ships entered Libyan ports, landing 696,890 tons of freight and 127,458 passengers.

**Government.** Budget estimates (1939-40): Revenue and expenditure balanced at 600,115,000 lire. The colony consists of four provinces (Tripoli, Misurata, Bengasi, and Derna) and the military territory in the south with the capital at Hun, having jurisdiction over the regions in the southern part of the four provinces. On Jan. 9, 1939, by a decree, the four provinces were incorporated in the national territory of Italy; the territory of Libyan Sahara was not included in the decree. Governor General, Marshal Rodolfo Graziani (appointed on July 6, 1940, to succeed Marshal Italo

Balbo who was killed in an airplane accident during June, 1940).

**History.** Following Italy's entrance into the European War on June 10, 1940, Libya became the base of the attempted Italian invasion of Egypt. Many of the Libyan cities and ports were devastated by British naval and air attacks, particularly during the successful Allied offensive in December which drove the Italians back upon their base at Tobruk. See EUROPEAN WAR; ITALY under *History*.

**LIECHTENSTEIN.** An independent principality. Area, 65 square miles; population (1938 estimate), 12,000. Capital, Vaduz. Corn, wine, fruit, wood, marble are the chief products. Main industries: Cotton spinning and weaving, leather goods, pottery, and livestock raising. Liechtenstein belongs to the Swiss Customs Union; Swiss currency is used. Budget estimates (1940): Balanced at 2,500,000 francs. Public debt (Dec. 31, 1939): 5,600,000 francs (franc averaged \$0.2253 for 1939). Reigning Prince, Francis Joseph II (succeeded Aug. 25, 1938); Administrator, Dr. Joseph Hoop (appointed Aug. 4, 1928).

**LIE DETECTORS.** See COURTS under *Admissibility*.

**LIFE SAVING.** See COAST GUARD, U.S.; RED CROSS.

**LIGHTHOUSES.** See COAST GUARD, U.S.

**LIGHTING.** See ELECTRICAL ILLUMINATION.

**LIPPE.** See GERMANY under *Area and Population*.

**LIQUOR PRODUCTION.** See ALCOHOLIC LIQUORS.

**LITERATURE, English and American.** Book production in the United States increased during 1940 to a total of 11,328 titles, as compared with 10,640 in 1939, both figures including new editions. New books numbered 9515 in 1940, 9015 in 1939. The increase was well distributed among the classifications, with notable increases occurring in Technical Books, in Religion, and in Poetry and Drama. History showed a marked increase in new books, oddly accompanied by a decrease in new editions. Fiction still leads all classifications, and showed an increase in 1940, reversing a recent trend.

Book production in England was maintained surprisingly well, though distribution was greatly hampered. Bookbuying in the cities decreased, but was made up for by increased buying in the provinces. Cheap reprints and new books sold well, as did books on politics and war.

**Biography.** The autobiographies were unusual in number and interest, as: Hans Zinsser's *As I Remember Him*; John Buchan's *Pilgrim's Way*; Abraham Flexner's *I Remember*; vol. ii of Nicholas Murray Butler's *Across the Busy Years*; *Hugh Young*; H. L. Mencken's *Happy Days*; Benjamin Gitlow's *I Confess*, as an ex-communist; George B. Gilbert's *Forty Years a Country Preacher*; Katherine Brush's *This Is on Me*; Ely Culbertson's *The Strange Lives of One Man*; W. E. B. Du Bois' *Dusk of Dawn*; Wanda Gag's *Growing Pains*; E. F. Benson's *Final Edition*; Langston Hughes' *The Big Sea*; Ernest Poole's *The Bridge: My Own Story*; Guy Pène du Bois' *Artists Say the Silliest Things*.

Biographies of literary figures included: *Shelley*, by Newman Ivey White; *Trelawney*, by Margaret Armstrong; *Horace Walpole*, by R. W. Ketton-Cremer; *Christopher Marlowe*, by F. S. Boas; *Margaret Fuller*, by Mason Wade; *James*

*Joyce*, by Herbert Gorman; *The Spanish Adventures of Washington Irving*, by Claude G. Bowers; *Elbert Hubbard*, by David Arnold Balch; *Roger Fry*, by Virginia Woolf; *Jonathan Edwards*, by Ola Elizabeth Winslow; *Here Lies Richard Brinsley Sheridan*, by Kenelm Foss; *Period Piece*, about Ella Wheeler Wilcox, by Jenny Ballou; *Testament of Friendship*, about Winifred Holtby, by Vera Brittain; *Letters to Mary*, about Helen Hayes, by Catherine Hayes Brown; *Romantic Rebel*, about George Sand, by Felizia Seyd; *Aretino*, by Thomas Caldecott Chubb.

About political figures were: *Calvin Coolidge*, by Claude M. Fuess; *Benjamin N. Cardozo*, by George S. Hellman; *Ethan Allen*, by Stewart H. Holbrook; *A Spanish Tudor* (Mary I), by Edward B. Hitchcock; *George Villiers*, by Hugh Ross Williamson; *Archbishop Laud*, by H. R. Trevor-Roper; *John Pym*, by S. Reed Brett; *The Stranger in the House* (George IV's wife), by Howard Coxe; *Allenby*, by Gen. Sir Archibald Wavell; *Grand Inquisitor* (Cardinal Ximenez), by Walter Starkie; *Stalin*, by Eugene Lyons; *Masaryk*, by Paul Selver; *I Built a Temple for Peace*, about Beneš, by Edward B. Hitchcock; *A Man Named Grant*, by Helen Todd.

Other biographies were: Allan Nevins' *John D. Rockefeller*; Willard Connelly's *The Reign of Beau Brummell*; Parker Morell's *Lillian Russell*. See Music under Bibliography.

**Criticism and the History of Literature.** Historical works included: Van Wyck Brooks' *New England: Indian Summer*; Basil Willey's *The Eighteenth Century Background*; Frances Winwar's *Oscar Wilde and the Yellow Nineties*; E. Allison Peers' *A History of the Romantic Movement in Spain*; Oliver Gramling's *AP: the Story of News*.

Among general works: *How to Read a Book*, by Mortimer J. Adler; *What is Literature?* by Charles du Bos; *Of Sacred and Profane Love*, by Sacheverell Sitwell; *The Arts and the Art of Criticism*, by Theodore Meyer Greene; *Pleasures and Speculations*, by Walter de la Mare; *Essays and Addresses*, by Herbert Grierson.

About poetry: Arthur H. Nethercot's *The Road to Tryermaine* (Coleridge's *Christabel*); *Letters on Poetry from W. B. Yeats to Dorothy Wellesley*; Robert Lathrop Sharp's *From Donne to Dryden*; C. B. Tinker and H. F. Lowry's *The Poetry of Matthew Arnold*; B. Ifor Evans' *Tradition and Romanticism*.

About drama: Hazelton Spencer's *The Art and Life of William Shakespeare*; Gilbert Murray's *Aeschylus*; Maurice Colbourne's *The Real Bernard Shaw*; John Mason Brown's *Broadway in Review*; Douglas Gilbert's *American Vaudeville*.

About fiction: Carl van Doren's *The American Novel*; Ernest J. Simmons' *Dostoevski*.

**Drama.** Robert E. Sherwood's powerful *There Shall Be No Night* and Clare Boothe's who-dun-it? *Margin for Error* were anti-Nazi. The American Robert Ardrey's *Thunder Rock* was a sensation in England. Maxwell Anderson's *Eleven Verse Plays* covered 11 years' work. He also published *Journey to Jerusalem. Three Plays*, by William Saroyan, included *My Heart's in the Highlands*, *The Time of Your Life*, and *Love's Old Sweet Song*. Sean O'Casey published the anti-bourgeois *The Star Turns Red* and a comedy, *Purple Dust*. Others were: Howard Lindsay and Russel Crouse's *Life with Father* from the books by Clarence Day; James Thurber and Elliott Nu-

gent's *The Male Animal*; Elmer Rice's *Two on an Island*; Clifford Odets' *Night Music*; James Bridie's *Susannah and the Elders and Other Plays*. See also article on DRAMA.

**Economics.** Thurman W. Arnold's *The Bottlenecks of Business* advocated trust-busting. *A Program for Progress*, by John Strachey, told how to solve unemployment. Harry Scherman advocated return to the gold standard in *The Real Danger in Our Gold*. Stuart Chase's *Idle Money—Idle Men* showed need of balancing investment and savings. John Maynard Keynes told *How to Pay for the War*. Morris L. Ernst thought corporations *Too Big*. Robert Hunter's *Revolution: Why, How, When?* ascribed it to monetary causes. Henry Pratt Fairchild's *Economics for the Millions* was anti-capitalistic, while Carl Snyder thought *Capitalism the Creator*. A left-wing history was Louis M. Hacker's *The Triumph of American Capitalism*. Others included: Robert R. Brooks' *As Steel Goes . . .*, about labor developments; Elsbeth E. Freudenthal's *The Aviation Business*; Joseph Rosenfarb's *The National Labor Policy*; Elmer C. Bratt's *The Unbalanced World*.

**Essays.** Arising from war experience were: Janet Flanner's *An American in Paris*; Mollie Panter-Downes' *Letter from England*; E. M. Delafield's *The Provincial Lady in War Time*; Elmer Davis' *Not to Mention the War*. Mark Twain in *Eruption* was edited by Bernard de Voto, who also published *Minority Report*. Stuart Cloete's *Yesterday Is Dead* was largely political, as was Lancelot Hogben's *Dangerous Thoughts*. Harvey Cushing wrote about *The Medical Career*, and Harold J. Laski about *The Danger of Being a Gentleman*. T. E. Lawrence's last work was called *Oriental Assembly*. Alan Devoe's *Down to Earth* was nature studies.

**History.** In colonial and early American history appeared: Vol. iv, *Zones of International Friction 1748-1754*, of *The British Empire before the American Revolution*, by Lawrence Henry Gipson; *Competition for Empire 1740-1763*, by Walter L. Dorn; *Our Rising Empire 1763-1803*, by Arthur Burr Darling. Other works in American history included: *I Rode with Stonewall*, by Henry Kyd Douglas; *The New England Mind* (the 17th century), by Perry Miller; *Such Was Saratoga*, by Hugh Bradley; *Perish by the Sword*, about American fighting in Russia 1918-20, by R. Ernest Dupuy; *Entertaining a Nation*, about Long Branch, N.J., by Reynolds A. Sweetland and Joseph Sugarman, Jr.; *Since Yesterday*, about the 1930's, by Frederick Lewis Allen; *Torchbearer of the Revolution*, about Nathaniel Bacon, by Thomas Jefferson Wertenbaker; *The President Makers 1896-1919*, by Matthew Josephson; *The American Impact on Great Britain 1898-1914*, by Richard Heathcote Heindel; *The Course of American Democratic Thought*, since 1815, by Ralph Henry Gabriel; *The Delaware*, by Harry Emerson Wildes; *The Illinois*, by James Gray; *The Arkansas*, by Clyde Brion Davis; *The Bloody Mohawk*, by T. Wood Clarke; *The Wabash*, by William E. Wilson; the last five about rivers, and not least, *The Dictionary of American History*, in five volumes, of which James Truslow Adams was editor in chief, and R. V. Coleman the managing editor.

About non-American countries: James Truslow Adams' *Empire on the Seven Seas*, the British Empire since 1784; Agnes Mure Mackenzie's *The*

*Kingdom of Scotland*; Milton Waldman's *Some English Dictators*; D. W. Brogan's *France under the Republic 1870-1939*; Frank Herbert Brabant's *The Beginning of the Third Republic in France*; Frederick T. Birchall's *The Storm Breaks*, events between the wars; Stuart Ramsay Tompkins' *Russia through the Ages*; Hendrik Willem van Loon's *The Story of the Pacific*; J. F. C. Fuller's *Decisive Battles*; J. Hampden Jackson's *Finland*; Harold Lamb's *The March of the Barbarians*, about the Mongols; Alma Luise Olsen's *Scandinavia*; Sir Percy Sykes' *A History of Afghanistan*; Edmund Wilson's *To the Finland Station*, a history of Communism to the Russian Revolution.

**Juvenile.** Samples from the numberless juveniles were: Elizabeth Enright's *The Sea Is All Around*; Laura Ingalls Wilder's *The Long Winter*; Josephine Daskam Bacon's *The Door in the Closet*; Armine von Tempski's *Pamela's Paradise Ranch*; Elizabeth Janet Gray's *The Fair Adventure*; Noel Streatfield's thriller *The Secret of the Lodge*; Enys Tregarthen's *Piskey Folk*, Cornwall fairies; Dorothy Cottrell's *Wilderness Orphan*, a kangaroo; Isabel Proudfoot's *River Boy*, about Mark Twain; Douglas C. McMurtrie's *Wings for Words*; Mildred Cram's *Kingdom of Innocents*; Kathleen Coyle's *Brittany Summer*.

**Novels.** Ernest Hemingway's *For Whom the Bell Tolls* was about the Spanish Civil War, and sold extraordinarily, as did Jan Struther's *Mrs. Miniver*, much lighter stuff. Present and recent troubles made their mark on R. C. Hutchinson's *The Fire and the Wood*, about the Nazis; H. G. Wells' *Babes in the Darkling Wood*, us; Rose Macaulay's *And No Man's Wit*, again Spain; Storm Jameson's *Europe To Let*; Peter Fleming's *The Flying Visit*, of Hitler to England. Hendrik Willem van Loon described Nazi invasion of America, writing in 1960, in *Invasion*. Albert Halper advocated American isolationism in *Sons of the Fathers*.

The usual fine crop of historical novels included: Kenneth Roberts' *Oliver Wiswell*, a Tory in the American Revolution, which was also the time of Robert Graves' *Sergeant Lamb's America*; F. Van Wyck Mason's *Stars on the Sea*, and Inglis Fletcher's *Raleigh's Eden*. Willa Cather's *Sapphira and the Slave Girl* studied pre-Civil War society. Hugh Walpole's *The Bright Pavilions* told of the Herries family in Elizabeth's days. John Masefield's *Basilissa* was about the Empress Theodora. *The Power and the Glory*, by Phyllis Bentley, was about the English Civil War; *Quietly My Captain Waits*, by Evelyn Eaton, was about the French in Acadia, and Maurice Hindus' *Sons and Fathers* about the Russian Revolution.

*If It Prove Fair Weather*, by Isabel Patterson, and *The Voyage*, by Charles Morgan, dissected love. L. H. Myers' *The Pool of Vishnu* preached high ethics. Sinclair Lewis' *Bethel Merriday* was an actress. Charles Nordhoff and James Norman Hall's *No More Gas* described a Tahitian family. Pearl Buck's *Other Gods* showed the troubles of a "hero." Richard Wright's *Native Son* exposed a Negro murderer. Angela Thirkell's *Before Lunch* and Elizabeth's *Mr. Skeffington* were popular light novels. Ralph Bates' *The Fields of Paradise* were found in Mexico. C. S. Forester's *To the Indies* was based on Columbus' third voyage.

Fantasies included: T. H. White's *The Ill-Made Knight*, about Lancelot; Helen Simpson's *Maid No More*; Lord Dunsany's *The Story of Nora Sheehy*; Robert Nathan's *Portrait of Jenny*. Hu-

morous novels included *But Who Wakes the Bugler?* by Peter de Vries, and *Let the People Sing*, by J. B. Priestley. Regional works: *The Hamlet*, by William Faulkner, poor whites in Mississippi; Erskine Caldwell's *Trouble in July*, a Georgia lynching; Walter D. Edmonds' *Chad Hanna*, New York State; *Trees of Heaven*, by Jesse Stuart, Kentucky mountaineers.

Among notable first novels: Carson McCullers' *The Heart Is a Lonely Hunter*; Walter Van Tilburg Clark's *The Ox-Bow Incident*; Stephen Longstreet's *Decade*; Joy Davidman's *Anyia*. Also important were: *You Can't Go Home Again*, by Thomas Wolfe; *Love in the Sun*, by Leo Walmsley; *The Pilgrim Hawk*, by Glenway Wescott; Harlow Estes' prize *Hildreth*; Branch Cabell's *Hamlet Had an Uncle*; Upton Sinclair's *World's End*, the first Great War; William McFee's *Watch Below*, a tramp steamer; Dan Wickenden's *Walk Like a Mortal*, an adolescent boy.

**Poetry.** *The Collected Poems of A. E. Housman* included a few new things. Louis MacNeice published *Autumn Journal* and *The Last Ditch*, the latter among the English books showing the marks of the war, such as: *Kensington Gardens in Wartime*, by Humbert Wolfe; *The Sober War*, by G. Rostrevor Hamilton; *Lament and Triumph*, by George Barker, and the anonymous anthology *Fear No More*. Edna St. Vincent Millay's *Make Bright the Arrows* was also topical. T. S. Eliot despaired in *East Coker*, and Raymond E. F. Larsson bade the world *Weep and Prepare*. Noteworthy were: W. B. Yeats' *Last Poems*; Edith Sitwell's *Poems New and Old*; W. H. Auden's *Another Time*; Kimball Flaccus' *The White Stranger*; F. R. Higgins' *The Gap of Brightness*; Edward Davison's *Collected Poems 1917-1939*; William Rose Benét's *With Wings as Eagles*, about fliers; Alice Duer Miller's *The White Cliffs*; Robert Nathan's *A Winter Tide*; George Abbe's *Wait for These Things*; Eugene Jolas' *Planets and Angels*. Notable anthologies were John Hayward's *Love's Helicon* and Lord David Cecil's *Oxford Book of Christian Verse*.

**Politics.** The after-war world was frequently discussed, as in: W. Ifor Jennings' *A Federation for Western Europe*, including a constitution; Lord Davies' *A Federated Europe*; R. W. G. Mackay's *Federal Europe*; Leonard Woolf's *The War for Peace*, for revival of the League of Nations; Alfred Bingham's *The United States of Europe*. Charles A. Beard, in *A Foreign Policy for America*, and Anne Morrow Lindbergh, in *The Wave of the Future*, advocated isolationism for the United States, while Raymond Leslie Buell, in *Isolated America*, and John Chamberlain, in *The American Stakes*, opposed that policy. Presidential powers were discussed in Harold J. Laski's *The American Presidency*; Edward S. Corwin's *The President*, and Pendleton Herring's *Presidential Leadership*. Mr. Herring also published *Politics of Democracy*, similar in subject-matter to Eleanor Roosevelt's *The Moral Basis of Democracy*; J. T. Salter's *The Pattern of Politics*, and Ralph Barton Perry's *Shall Not Perish from the Earth*, all concerned with the means of preserving democracy.

About American relations in our hemisphere were: *Canada: America's Problem*, by John MacCormac, and *The All-American Front*, by Duncan Aikman. H. G. Wells, in *The Rights of Man*, and Norman Angell, in *For What Do We Fight?* discussed war aims. War causes occupied Walter

Millis, in *Why Europe Fights*; Geoffrey T. Garratt in *What Has Happened to Europe*; Arthur Berriedale Keith in *The Causes of the War*; Neville Henderson in *Failure of a Mission*; E. H. Carr in *The Twenty Years' Crisis*; Bernard O. Mosley in *Europe Downstream*.

About Germany were: Otto D. Tolischus' *They Wanted War*; William D. Bayles' *Caesars in Goose Step*; the anonymous *Letters from the Corsican* (to Hitler); while Oswald Garrison Villard's *Within Germany* and Erika and Klaus Mann's *The Other Germany* emphasized anti-Nazi elements. James T. Shotwell's *What Germany Forgot* defended the Treaty of Versailles, and, with Francis Deák, Mr. Shotwell published *Turkey at the Straits*. Stephen Leacock, in *The British Empire*, and Albert Viton, in *Great Britain*, defended, while Malcolm Muggeridge, in *The Sun Never Sets*, and Robert Westerby, in *Voice from England*, attacked the empire. John F. Kennedy's *Why England Slept* explained her delays. Few good words for Russia could be found in Max Eastman's *Stalin's Russia and the Crisis in Socialism*, or Freda Uteley's *The Dream We Lost*, or Henry C. Wolfe's *The Imperial Soviets*. Donal O'Sullivan attacked De Valera in *The Irish Free State and Its Senate*. A. J. Barnouw explained *The Dutch*. John Corbin advocated republicanism instead of democracy in *Two Frontiers of Freedom*. Martin Moore's *Fourth Shore* told about Italy in Libya. Robert A. Smith discussed *Our Future in Asia*. Jay Franklin's 1940 was concerned with party politics in an election year.

Religion. Influenced by contemporary events were: William Ralph Inge's *The Fall of the Idols*; Reinhold Niebuhr's *Why the Christian Church is Not Pacifist*; and J. Middleton Murry's *The Betrayal of Christ by the Churches*. Historical were: *Anno Domini*, by Kenneth Scott Latourette; *The Search for the Real Jesus*, by Chester Charlton McCown; vol. iii of *Zeus*, by Arthur Bernard Cook; *Stoic, Christian, and Humanist*, by Gilbert Murray. William Ernest Hocking discussed reconciliation in *Living Religions and a World Faith*. Harris Franklin Rall's *Christianity: an Inquiry into Its Nature and Truth* won a prize. Others were: A. C. Bradley's *Ideals of Religion*; D. R. Davies' *The Two Humanities*; and *A Companion to the Bible*, edited by T. W. Manson.

Short Stories. Important volumes of short stories included: *The Mixture as Before*, by W. Somerset Maugham; *Pal Joey*, by John O'Hara; *Fables for Our Time*, by James Thurber; *Doctor Dogbody's Leg*, by James Norman Hall; *When the Whippoorwill*, by Marjorie Kinnan Rawlings; *The Crazy Hunter*, by Kay Boyle; *Figures in a Landscape*, by Paul Horgan; *Country Growth*, by August Derleth.

Sociology. A number of books were concerned with the crisis. Waldo Frank's *Chart for Rough Waters* preached the necessity of religion, and Lewis Mumford's *Faith for Living* would derive it from family, land, and discipline. T. S. Eliot wrote about *The Idea of a Christian Society* somewhat evasively, but H. G. Wells offered a program for the future in *The New World Order*. Ernest Sutherland Bates' *American Faith* surveyed religion, politics, and economics historically. Graham Wallas' *Men and Ideas* was hitherto uncollected papers. Emil Lederer's *State of the Masses* showed what makes fascism. Robert Graves and Alan Hodge's *The Long Week-End* studied England between wars. J. Russell Smith and M. Ogden

Phillips' *North America* revealed the weight of the continent in the world. Roger Burlingame's *Engines of Democracy* was about technica.

Field studies included: Charles Morrow Wilson's *Corn Bread and Creek Water*, about rural poverty; Katharine du Pre Lumpkin's *The South in Progress*; the Federal Writers' Project's *The Negro in Virginia*; Phil Stong's *Hawkeyes*, about Iowans; Leslie A. Gould's *American Youth Today*; Benjamin Appel's *The People Talk*, based on interviews all over America.

Louis Adamic discussed immigrants in *From Many Lands*. D. V. Glass wrote about *Population*. *Modern Marriage* was edited by Moses Jung. Oliver La Farge described and defended American Indians in *As Long as the Grass Shall Grow*. Martin Gumpert's *Heil Hunger! Health under Hitler* was based on German official reports. Paul de Kruif preached *Health is Wealth*. Emory S. Bogardus' *The Development of Social Thought* was historical, and Charles Hart Page's *Class and American Sociology* surveyed the concept of class among sociologists. Cecil Roth wrote about *The Jewish Contribution to Civilization*. David L. Cohn wrote an American social history, *The Good Old Days*, from Sears, Roebuck catalogues. Hughes Mearns wrote about *The Creative Adult*. Grace G. Leybourne and Kenneth White's *Education and the Birth-Rate* showed the effects of the decrease in England.

Travel. Around-the-world travelers included: Jerome Weidman with *Letter of Credit*; Lancelot Hogben as *Author in Transit*, and Jerome Beatty, who found *Americans All Over*. About Asia were: Hassoldt Davis' *The Land of the Eye*; Nicol Smith's *Burma Road*; Suydam Cutting's *The Fire Ox and Other Years*; Osbert Sitwell's *Escape with Me*; Graham Peck's *Through China's Wall*; Philip Steegman's *India Ink*. Freya Stark told of one *Winter in Arabia*. About Africa: Osa Johnson's *I Married Adventure*; Sacheverell Sitwell's *Mauretania*. Carleton Beals' *The Great Circle* included Africa, Europe, and Mexico. Edna Moser published *The Mexican Touch*; Erna Fergusson *Our Southwest*; Barrett Willoughby *Alaska Holiday*.

About the United States: Jonathan Daniels' *A Southerner Discovers New England*; Wyndham Lewis' *America, I Presume*; Ben Lucien Burman's *Big River to Cross*, the Mississippi; Federal Writers' Project guides to *Arizona*; *Florida*; *Georgia*; *The Mississippi Gulf Coast*; *Virginia*; *Maryland*; *New Mexico*; *Ohio*; *Oregon*; *Texas*; *New York*; *Puerto Rico*.

Gertrude Stein published *Paris France*, and Sean O'Faolain *An Irish Journey*.

War. Reports upon events included: Hamilton Fish Armstrong's *Chronology of Failure* (France); Alexander Werth's *The Last Days of Paris*; Gordon Waterfield's *What Happened to France*; W. Somerset Maugham's *France at War*; John Langdon-Davies' *Finland: the First Total War*; H. B. Elliston's *Finland Fights*; Julien Bryan's *Siege* (of Warsaw); *My Name is Million*, by an anonymous Englishwoman in Poland; *Europe in the Spring*, by Clare Boothe; *Twin Stars of China*, by Evans Fordyce Carlson; *The Battle of the River Plate*, by Lord Strabolgi; *In the Wake of the Raiders*, by A. D. Divine. Technical were: *Dynamic Defence*, by Liddell Hart, reviewing war methods so far; *Air Power*, by Al Williams; *Fighting Planes of the World*, by Bernard A. Law; *The German Army*, by Herbert Rosinski;

*Armies with Wings*, by James L. H. Peck; *New Ways of War*, by Tom Wintringham; *M-Day and What It Means to You*, by Leo M. Cherne; *An Atlas History of the Second Great War*, by J. F. Horrabin. Edward Taylor's *The Strategy of Terror* described the psychological front.

#### LITHOGRAPHY. See PRINTS.

**LITHUANIA.** A former Baltic republic, which proclaimed its independence from Russia on Feb. 16, 1918, and was reannexed by the Soviet Union Aug. 3, 1940, as a constituent republic. Kaunas was the provisional capital of Lithuania prior to Aug. 15, 1940, when Vilna was proclaimed capital of the Lithuanian Soviet Republic. Actual transfer of the government was scheduled to take place before May 1, 1941.

**Area and Population.** Including the Vilna territory acquired from the Soviet Union Oct. 10, 1939, and excluding Memel Territory, ceded to Germany Mar. 22, 1939, Lithuania had an area of 22,964 square miles and an estimated population of 2,879,070 on Dec. 31, 1939. The newly annexed Vilna territory comprised 2570 square miles with 457,500 inhabitants. The lost Memel Territory had an area of 1099 square miles and a population of 153,793, including 38,927 in the port city of Memel. Excluding both Memel and Vilna territories, births in 1939 numbered 54,184 and deaths 32,983. Estimated populations of the chief cities on Jan. 1, 1939, were: Vilna (Vilnius), 208,900; Kaunas, 152,365; Šiauliai (Shavli), 31,299; Panevėžys (Ponewiež), 26,508.

**Education and Religion.** About 15 per cent of the adult population was illiterate in 1939. Educational statistics for 1938-39 were: Primary, 2335 schools with 298,429 pupils; secondary, 83 schools with 19,539 pupils; normal, 5 schools with 605 students; special, 147 schools with 11,198 students; university, 1 (at Kaunas) with 3041 students in 1938. In January, 1940, the University of Vilna was established; it included certain faculties transferred from Kaunas. Roman Catholics formed 80.5 per cent of the population at the 1923 census; Protestants, 9.5; Jews, 7.3; Greek Orthodox, 2.5.

**Production.** About 77 per cent of the population in 1939 was engaged in agriculture and 10 per cent in commerce, industry, and transportation. Yields of the chief crops in 1939 were (in metric tons): Wheat, 251,200; barley, 246,700; rye, 653,400; oats, 401,700; potatoes (1938), 2,118,231; flax fiber (1938), 25,784. Livestock on June 30, 1939, included 1,103,550 cattle, 1,223,600 sheep, 1,117,080 swine, and 520,710 horses. Forests, mostly pine, cover 2,645,000 acres. Industrial establishments (1938) numbered 1441, with 40,818 employees and an output valued at 480,000,000 lits, chiefly derived from foodstuffs, textiles, lumber, paper and pulp, footwear and clothing, metals, chemicals, and leather.

**Foreign Trade.** Imports in 1939 declined to 169,400,000 lits (223,700,000 in 1938) and exports to 203,200,000 lits (233,200,000 in 1938). Germany furnished 34 per cent of the 1939 imports; Great Britain, 22 per cent; the Netherlands, 5.3 per cent. Of the 1939 exports, Great Britain took 40.5 per cent; Germany, 33.5 per cent. Butter, grain, bacon, lard, and other cured and salted meats were the chief exports.

**Finance.** Actual 1939 budget returns were: Rev-

enues, 361,780,000 lits; expenditures, 356,550,000 lits. The public debt on Jan. 1, 1940, totaled 134,146,600 lits (domestic, 65,231,200; foreign, 68,915,400). The lit exchanged practically at par (\$0.1693) during 1936-38 and at \$0.1674 in 1939.

**Transportation.** Lithuania at the beginning of 1940 had about 1680 miles of railway line; 20,272 miles of roads and highways; and nearly 1600 miles of waterways. Effective Jan. 21, 1940, internal and foreign schedules and routes of the railways were drastically revised in accordance with an agreement reached at Kaunas late in 1939 by Lithuanian, Estonian, German, Latvian, and Russian delegates. Motor busses in 1939 carried 3,019,400 passengers. Memel was Lithuania's only port. After its cession to the Reich, Germany on May 20, 1939, agreed to grant Lithuania a free port zone in Memel harbor.

**Government.** The democratic system established by the Constitution of Aug. 6, 1922, collapsed on Dec. 17, 1926, when the conservative Nationalist Union party established a single-party dictatorship, headed by President Antanas Smetona, who was elected by parliament in emergency session Dec. 19, 1926, following the coup d'état. He was re-elected by a board of electors Dec. 11, 1932 and Nov. 14, 1938. The Nationalist Union adopted fascism as its ruling principle Dec. 16, 1933. A new Constitution promulgated Feb. 12, 1938, was drawn up by a parliament (*Seimas*) chosen entirely from members of the Nationalist Union. It vested wide executive powers in a President, elected by parliament for seven years, and his Council of Ministers. Members of parliament were elected for five years from a one-party list by universal, secret suffrage. Representatives of two outlawed opposition parties, the Christian Democrats and Agrarian Socialists, gained representation in the new cabinet formed by Premier Antanas Merkys (Nationalist Union) on Nov. 21, 1939, as a result of the crisis precipitated by the conclusion of the Soviet-Lithuanian mutual assistance pact of Oct. 10, 1939 (see YEAR BOOK, 1939, p. 443).

#### HISTORY

The Soviet-Lithuanian mutual assistance pact of Oct. 10, 1939, under which Soviet garrisons and air bases were established in Lithuania covering the German frontier, paved the way for the bloodless annihilation of Lithuanian independence and for the republic's incorporation in the Soviet Union on Aug. 3, 1940. This program was carried out by the same methods and at the same time as the extinction of the other two Baltic States, Estonia and Latvia.

**Soviet-Lithuanian Tension.** On February 26, the 22d anniversary of Lithuania's independence, President Smetona expressed anxiety over the republic's future and affirmed its determination to remain free and independent. Despite the obligations imposed by the Soviet-Lithuanian mutual assistance pact, Lithuania joined Estonia and Latvia in affirming its "absolute neutrality" at the Baltic Entente conference held in Riga, Latvia, March 16. At the end of May, when the collapse of French resistance to German arms was imminent, Moscow indicated its desire to strengthen its position in the Baltic States. On May 29 the Soviet Government charged that "persons enjoying the protection of Lithuanian Government organs" had kidnapped a number of Red Army soldiers from units stationed in Lithuania and sought to obtain military information from them.

**The Russian Ultimatum.** The Lithuanian authorities early in June arrested 64 persons in Vilna in connection with these charges. They also forced the evacuation to other districts of various persons living near the newly established Soviet bases. These steps failed to satisfy the Soviet Government. On June 7 Premier Merkys was summoned to Moscow and on June 10 he was joined by Foreign Minister Juozas Urbys. Apparently they balked at the Soviet demands for on June 14 an ultimatum was served upon Lithuania demanding the admittance of additional Soviet troops, the establishment of a new government in Kaunas that would co-operate with the Soviet Union, and the arrest and trial of the Lithuanian Minister of Interior and a subordinate official in connection with the alleged shooting of a Russian soldier by Lithuanian police. The ultimatum charged Lithuania with concluding a secret military treaty with Estonia and Latvia in violation of the spirit of the Soviet-Lithuanian mutual assistance pact.

On the night of June 14 the Merkys Government resigned, planning to turn over its authority to a cabinet headed by Gen. Stasys Rastikis, former commander of the Lithuanian army. However the Soviet Government rejected General Rastikis. With the Soviet ultimatum due to expire at 10 a.m. on June 15, no time was left for the formation of a new government. One hour before the time limit expired, Juozas Urbys, Foreign Minister in the Merkys Cabinet, announced Lithuania's acceptance of Moscow's terms. At 3 p.m. the same day four Soviet columns crossed the Lithuanian frontier and before nightfall occupied the cities of Vilna, Kaunas, Siauliai, Panevėžys, and Rossieny. Previous to their arrival in Kaunas President Smetona and various officials of the deposed Merkys Government fled across the German-Lithuanian border into East Prussia. The President's functions were taken over by ex-Premier Merkys pending the completion of a new government.

**Leftist Government Formed.** While Soviet tanks and troops poured into the country and Soviet bombing planes circled over the capital, V. G. Dekanozov of the Soviet Foreign Office supervised the selection of a pro-Soviet government in Kaunas. Justas Paleckis, journalist and member of the People's Socialist party, was named Acting President and Premier on June 17. His cabinet included Prof. Vincas Kreve-Mickievicius as Deputy Premier, Foreign Minister and Acting Minister of Education; Gen. Vincas Vitkauskas, army commander-in-chief, as Minister of War; and Matas Mickis as Minister of Interior and Agriculture. The former Minister of Finance, Ernestas Galvanauskas, was retained in office. All the Ministers were either Leftists or non-partisan.

The composition of the Paleckis Government and a radio statement by ex-Foreign Minister Merkys on June 17 served to allay some of the apprehension aroused by these events. Merkys declared that the Soviet reinforcements should be welcomed as an additional protection inasmuch as they would leave the cultural, economic, and political status of the republic unchanged. It soon became obvious, however, that this provision of the Soviet-Lithuanian mutual assistance pact was to be disregarded. Under the guidance of the Soviet Foreign Office representative in Kaunas, the government and some workers organizations launched a propaganda campaign for union with the U.S.S.R. All Communist prisoners were freed and many Lithuanians who had been in exile in the Soviet Union for years re-

turned to direct pro-Soviet demonstrations. The government announced plans to confiscate large estates without compensation. On July 5 it denounced the concordat with the Vatican and confiscated the properties of all politicians who fled when the Russians took over.

**The Elections.** At the same time elections for a new parliament were fixed for July 14-15. As in Estonia and Latvia, a Working Peoples' Bloc under Communist control was formed to nominate candidates, and no other nominees were allowed to appear on the ballot. The platform of the Working Peoples' Bloc called for permanent alliance with the Soviet Union, social and economic reforms, and freedom of the workers in "thought, press, and conscience." On the eve of the election, more than a hundred persons suspected of sympathizing with the former regime were arrested. They included former Ministers, high state officials, party leaders, army officers, writers, and clergymen. The voting was orderly under the watchful eyes of the Red Army, except for anti-Jewish riots in Vilna, but many blank ballots scattered about the polling places in Kaunas indicated opposition to the one-party pro-Soviet ticket. Nevertheless the official election figures purported to show that 1,386,569 persons, or 95.51 per cent of all registered voters, cast ballots and that 99.19 per cent of these favored the ticket of the Working Peoples' Bloc.

**Union with Russia.** The elections were followed immediately by organized demonstrations and a press campaign for union with Russia. When the newly elected parliament assembled on July 21, it adopted unanimously resolutions for union with the U.S.S.R. and for the establishment of a soviet regime and constitution. Soon afterward a delegation departed for Moscow with a formal petition for incorporation. This was accepted by the Soviet Supreme Council on August 3, when Lithuania became the 14th constituent republic of the Soviet Union. The newly elected parliament, called into special session on August 24-25, unanimously approved incorporation in the U.S.S.R. and adopted a soviet constitution. Premier Paleckis was appointed president of the Praesidium of the Lithuanian Supreme Soviet. Deputy Gedvilas became president of the Council of People's Commissars (Premier).

**Sovietization.** The sovietization of Lithuania was well under way before formal incorporation in the U.S.S.R. took place. On July 22 the Lithuanian parliament adopted legislation for the nationalization of land, banks, industries, waterways, and all large enterprises. All farms and estates of more than 74 acres were placed in a pool from which plots of land were allotted to landless peasants and farm laborers. One-eighth of Lithuania's arable lands were slated for redistribution in this manner in time for the fall plantings. It was indicated that this was a temporary measure and that collectivization of agriculture on the Russian model would follow. The process of communization was systematically extended from the political and economic to the cultural field. On August 13 the legality of religious marriages was abolished in favor of civil ceremonies and a system of divorce through the courts was introduced in overwhelmingly Roman Catholic Lithuania.

By the end of July the Stalinist form of Communism produced in Lithuania, Estonia, and Latvia the familiar characteristics of the Russian system. Under the direction of the OGPU (Russian secret police) the drive against anti-Soviet elements was

intensified and extended. Ex-Premier Merkys and ex-Foreign Minister Urbys were among the prominent Lithuanians reported imprisoned or deported to Russia. The controlled press was filled with warnings and denunciations of sabotage, "capitalist wrecking," the slaughter of livestock by "kulaks" and widespread hoarding of foodstuffs and goods.

Drastic punishment was imposed to check the deterioration of discipline among the workers, economic disorganization and decline of production, a growing goods scarcity and a declining standard of living. Severe measures were taken against workers who drove "specialists" from the factories and against farm laborers who crowded to the cities in search of an easier life under the new regime. Anti-Soviet officers were weeded out of the Lithuanian armed forces, which were then incorporated in the Red Army. The properties of Lithuanian diplomatic representatives abroad who refused to return on orders from Kaunas were confiscated.

**Repercussions Abroad.** In Berlin, Rome, and other capitals under Axis influence, the protesting Lithuanian diplomatic and consular representatives were forced to turn over their buildings and office records to Soviet officials through the intervention of the Axis governments. However the United States Government announced on July 23 that it would refuse to recognize the legality of Russia's absorption of Estonia, Latvia, and Lithuania and would continue to recognize the Ministers appointed by the ousted anti-Soviet governments. Great Britain followed a similar policy without formally stating her position. In October the British Government requisitioned a number of merchant ships owned by citizens of the Baltic States and claimed by the Soviet Government. The Polish Government-in-Exile, which had protested Russia's transfer of the Vilna territory to Lithuania in 1939, again reiterated its claim to this region when Lithuania was absorbed by Russia.

Germany professed disinterest in the Soviet occupation of the Baltic States, but speeded the resettlement in the Reich of some 31,000 German "co-racials" living in Lithuania.

See ESTONIA, LATVIA, and UNION OF SOVIET SOCIALIST REPUBLICS under *History*; LEAGUE OF NATIONS; REPARATIONS and WAR DEBTS.

**LIVESTOCK.** Reports on the feedcrops and livestock situation in the United States at the close of 1940 indicated abundant supplies of feed stuffs despite a reduction in the total acreage of the four principal grain crops harvested by about 10 per cent below the 1928-32 average. The total supply of feed grains was about 2 per cent above that of 1939 and 12 per cent above the 1928-32 average while the number of grain consuming animal units was estimated to be 5 per cent below this average and over 3 per cent less than during the preceding year. Supplies of wheat millfeeds and related by-products were similar to 1939 levels while stocks of high protein feeds were some 5 per cent higher in 1940 due mainly to increased production of cottonseed and linseed cake. Total hay production was about 3 per cent above the 1939 level. The condition of fall pastures was considerably better than a year earlier with only the Western Corn Belt showing a generally low condition.

The ratios of feed prices to livestock prices which were generally unfavorable for livestock producers during most of 1940 showed considerable improvement in the closing months of the year. With increasing domestic demand for meat ani-

mals, the outlook, according to the U.S. Department of Agriculture, pointed to further improvement along this line in 1941 unless feed production should be unusually low.

The numbers of hogs and sheep in the United States at the beginning of 1940 were essentially the same as in 1934 preceding the severe drought, while cattle numbers were still somewhat below the pre-drought level. However striking shifts in livestock population have occurred in recent years partially due to natural phenomena, particularly drought, but also to the reaction of economic forces. Hogs have increased generally east of the Mississippi River and in all of the Southern and far Western States while numbers in the Western Corn Belt States have materially declined. The Range States show a marked decrease in numbers of cattle and sheep. Greatest increases in cattle numbers have occurred in Iowa and the Eastern Corn Belt States, with gains registered throughout the East and in the Pacific Coast States. Iowa, Missouri, Kentucky, Texas, Oklahoma, and California, show greatest gains in sheep numbers. The stimulus to livestock production in certain areas through use of acres taken out of crops promises to have a far reaching effect on the agricultural enterprise of many States.

The pronounced upswing in swine production of 1938 and 1939 was halted in 1940. The downswing began with a decline of 8 per cent in the spring pig crop followed by a 12 per cent reduction in the fall crop, bringing the 1940 total to approximately 77,000,000 head, 10 per cent below the record crop of 1939. Estimates by the U.S. Department of Agriculture further indicated that the number of sows to farrow in the spring of 1941 would be some 14 per cent below that of 1940. Marketings of hogs in the last quarter of 1940 were considerably larger than a year earlier despite the smaller spring crop with prices holding quite steady in the face of extremely heavy receipts. Slaughter of hogs during October and November was the largest on record for those months. Total Federal inspected slaughter of hogs in 1940 was 50,397,861 head, nearly 22 per cent greater than in 1939. Indications were that the hog supplies throughout 1941 would be materially smaller than in 1940. On Jan. 1, 1941, cold storage stocks of pork totaled 655,517,000 lb., about 200 million pounds above the 1936-40 average for that date. Holdings of lard and rendered pork fat totaled 293,777,000 lb. compared with the 1936-40 average of 104,349,000 lb. Hog prices, which were extremely low at the beginning of the year, remained below the 1939 level except for a brief period in mid-summer and during the closing weeks of the year. Prices received by farmers in mid-December averaged \$5.59 per 100 lb. compared with \$5.03 a year earlier.

The total number of cattle in the United States on Jan. 1, 1940, was slightly over 68,000,000 head, a gain of about 2 million head over the previous year, with indications of a similar gain during 1940. Marketings of cattle and calves during the year were generally above 1938 and 1939 levels. Cattle and calves slaughtered under Federal inspection totaled 9,756,130 and 5,358,695 head respectively, about 3 and 2 per cent larger than in 1939. The Jan. 1, 1941, stocks of frozen and cured beef totaled about 106 million pounds, some 7 million pounds above the 1936-40 average.

The July-November movement of stocker and feeder cattle into the Corn Belt exceeded the 1939 level in every month except November. Indications

at the close of the year were that the number fed in the Corn Belt would be 11 per cent higher than a year earlier, and that the total number of cattle on feed during the 1940-41 season would be somewhat above the 1939-40 level with increased feeding operations in several of the western States. Late reports from the Range States showed generally good supplies of winter grass and forage with cattle going into the winter in the best condition in several years. Market prices for slaughter cattle showed a marked upward trend throughout 1940. Prices received by farmers for beef cattle in mid-December were the highest for that season since 1929 and 10 per cent higher than a year earlier.

The 1940 lamb crop of about 32,700,000 head was the largest on record and 3 per cent larger than that of 1939, with Texas accounting for the major part of the increase. Total Federal inspected slaughter of sheep and lambs in 1940 was 17,351,157 head, less than 1 per cent above that of 1939. Movements of feeder lambs into the Corn Belt from July through November were of record proportions with evidence that the total numbers of lambs fed during the 1940-41 season would be 6 per cent larger than a year earlier. Feeding operations outside the Corn Belt were about 3 per cent higher. Prices of slaughter lambs in 1940 were generally above the 1939 level with mid-December prices on the farm averaging \$7.88 per 100 lb. or 50 cents higher than a year earlier. Improvement in the domestic demand for meat during the last half of the year gave less support to lamb prices than to prices of other livestock. December stocks of frozen lamb and mutton exceeded 5 million pounds, about 4 per cent above the preceding 5 year average.

Meat consumption in the United States during 1939 totaled 17.2 billion pounds, equivalent to 131 lb. per capita, while that of 1940 was nearly 17 per cent above this previous record high. Commensurate with this increase in consumption, the meat-packing industry paid about \$100,000,000 more for livestock in 1940 than in 1939.

marked stimulus to horse and mule production in this country.

**International Conditions.** Fragmentary information from Europe permits only a general appraisal of the livestock and meat situation there during 1940. In 27 European Countries, exclusive of the Soviet Union, at the beginning of the present war, total numbers of hogs, cattle, and sheep reached 82,300,000; 110,768,000, and 128,751,000 respectively, increases of 3, 7, and 8 per cent over 1931-35 averages. During the World War (1914-1918) numbers of hogs, cattle, and sheep, respectively, declined approximately 8, 2, and 2 per cent during the first year of the conflict and 29.3, 7.5, and 13.1 per cent for the entire period which suggests the possible effect of the present war on European livestock populations. Data on livestock numbers during 1940 were not generally available but known shortage of feed supplies pointed to heavier-than-normal slaughter in most areas.

Except in Belgium and France, pork supplies in Continental Europe at the end of 1940 appeared to be above normal. Rationing of meat at that time was fairly common in most of the countries. Both Germany and Italy were obtaining substantial quantities of live hogs, pork, and lard from countries in the Danube Basin under 1940 agreements. All meat and livestock exports of Denmark and neighboring countries, much of which formerly went to Great Britain, were going to Germany. In September, 1940, the Italian Government placed the buying and selling of beef cattle for civilian consumption under government control and indicated that hogs would be handled similarly. All meats were strictly rationed.

With imports from Continental Europe cut off, the United Kingdom was rationing bacon and hams at about one-half normal consumption, consistent with domestic supplies plus imports of Empire products. Domestic production of hogs along with poultry was sharply curtailed as the volume of imported feedstuffs declined. Production of cattle and sheep was less affected because of fairly abundant forage supplies. Since January, 1940, all livestock

The downward trend in numbers of horses and mules on farms and the low price of work stock in relation to that of all farm products persisted, while the number of tractors on farms continued to increase. Horses and mules on farms in 1920, 1930, and 1940 numbered approximately 26, 19, and 15 millions respectively. There was little evidence that European War conditions would provide any

marketed in the United Kingdom must be sold to the Government at fixed prices, consistent with farm costs. A British-Canadian agreement of January, 1940, providing for the export to Great Britain of 4,480,000 lb. of Canadian bacon and ham weekly was replaced by a new agreement of November, 1940, which provided for British purchases of not less than 8,185,000 lb. weekly. The stimulus

of exports plus corn-hog price ratios favorable to hog production resulted in a 40 per cent increase in hog marketing during 1940 over 1939. Other classes of Canadian livestock showed slight gains during the year.

Argentine beef exports were up sharply during the first four months of 1940. Shipments were curtailed later, however, so that the year's total was estimated to be 30 per cent below 1939. Large quantities of beef purchased by Great Britain remained undelivered at the close of the year due to inadequate shipping facilities. Other meat-surplus producing countries of South America were confronted with similar export conditions. General efforts to further trade relations between the United States and the South American Republics did not materially affect livestock products during 1940.

**Foreign Trade.** Total imports of animals and animal products by the United States continued to exceed exports by a wide margin. According to data released by the U.S. Department of Commerce both imports and exports for 1940 were below the 1939 level. During 1940 the total value of export items, both edible and inedible, not including fish, fur, and wool was \$84,202,664 as compared with \$94,351,467 for 1939. The value of import items was \$134,696,186 in 1940 and \$157,299,067 in 1939. Exports of meat products, including edible fats and oils, were valued at \$34,810,979 against imports of \$17,950,387. The largest single export item, lard, was in limited demand in the late months of 1940 with Cuba and Mexico the principal buyers. Exports during the year totaled 201,313,796 lb., about 13 per cent of the total lard production in inspected plants. This quantity was 27 per cent below the 1939 level and a troublesome surplus continued to mount. Other pork exports were 28 per cent lower in volume and 41 per cent lower in value than a year earlier. Hides and skins led all other items in import value accounting for over one-third of the total. Cattle imported for slaughter, mainly from Canada and Mexico, had a total value of \$16,588,676, nearly 4 million dollars below that of the previous year. Imports of canned beef, mainly from Argentina, Uruguay, and Brazil, dropped 20 per cent below the 1939 level of 8½ million dollars. Pork imports which exceeded 10 million dollars in 1939 were of negligible proportions in 1940. See also DAIRYING; LEATHER; VETERINARY MEDICINE.

E. C. ELTING.

**LIVING COSTS AND STANDARDS.** According to year-end comment by Isador Lubin, U.S. Commissioner of Labor Statistics (Associated Press, Dec. 28, 1940), the cost of living in the United States has not yet been seriously affected by those events of the past year which might be expected to disturb American economy—the European war, increased production for export, and the large volume of orders placed for national defense. Comparing the index of the Bureau of Labor Statistics for Nov. 15, 1940, with the level for August, 1939, Commissioner Lubin reported an increase over the 16-month period of only 1.5 per cent. Wholesale prices rose more sharply, averaging (for almost 900 products) 6 per cent more than in August, 1939. The fact that living costs have not kept pace with the rise in wholesale prices was attributed partly to “the natural lag in the movement of goods from wholesale to retail markets,” but also to “the vigorous resistance with which retailers have been opposing price advances.” Taking all

factors into account, he said, “It seems probable that living costs, as a whole, will advance slightly during the next few months, but there is nothing in the current market situation to suggest that this increase will amount to more than 2 or 3 per cent in the spring of 1941.”

These conclusions were borne out by those of independent fact-finding groups. The National Industrial Conference Board, comparing November, 1939, with November, 1940, reported an increase of only one-half of one per cent. A survey made by the United Press, covering the first year of the war, indicated that the cost of living in the United States rose “less than 5 per cent” during that period. The International Labor Organization reported that every one of the 40 countries for which it has official reports, experienced a rise in living costs during the year, the rise in many cases being substantial despite war-time efforts at price controls.

A rise in the cost of living may, of course, be sustained without impairment of the standard of living, provided it is accompanied by a rise in wages and family income. In 1939, for example, the average wage or salary received by employees in the United States was \$1329, as compared with \$1294 in 1938 and \$1472 in 1929. While the income in 1939 was thus well below that of 1929, when the reduction in the cost of living is considered the worker was able to buy considerably more with his earnings than in the earlier year. For the trend in earnings in 1940, see LABOR CONDITIONS, under *Wages*.

Table 1 on page 420 shows the Cost of Living index, as compiled quarterly by the Bureau of Labor Statistics, through the year 1940. It will be noted that the index is based on the years 1935–39 instead of 1923–25 as formerly (see previous YEAR BOOKS). The list of items has been revised also to represent more adequately the changed consumption habits of the Nation. The new list includes 198 goods and services, in addition to rents, the most important additions being automobiles, gasoline, fuel oil, electric refrigerators, radios, dry cleaning, and beauty-shop services. Much larger weight was given to electrical appliances than in the old list because of their increased use. The survey now covers 33 cities. (For prices of essentials, see BUSINESS REVIEW under *Commodity Prices* and articles on various products.)

Some indication of the variations in the cost of living for different sections of the country may be had from Table 2, which presents a dollar-and-cents estimate of the amount required to maintain a four-person manual worker's family in each of 31 large cities. The estimates make use of the “basic maintenance” budget devised by the Division of Social Research of the Works Progress Administration in 1935 and revised in part in 1939. They were prepared by applying to the maintenance budget the Bureau of Labor Statistics indexes of living costs (see Table 1) for all items other than food. The food-cost budget was computed in terms of the “adequate diet at minimum cost” of the U.S. Bureau of Home Economics, a somewhat more varied diet than that originally used in the maintenance budget. The figures in the “total” column include fuel, light, furniture, household equipment, and miscellaneous items, in addition to the three major items detailed.

The Citizens Bureau of Governmental Research with eleven collaborating agencies made a special study of costs in New York State, pricing 580 items in each of 14 localities. Comparing the re-

sults with those of the Bureau of Labor Statistics for other parts of the country, it was concluded

that city living costs in New York State were 15 per cent above the average in other parts of the country.

**Family Expenditures.** The Bureau of Labor Statistics released during the year a series of reports analyzing the findings of a comprehensive survey of money disbursements by 14,469 families in 42 cities (see YEAR BOOK, 1939, for summary). It will be recalled that the average income of these families was approximately \$1500 and the results were tabulated for ten income levels, ranging from \$500-\$600 for the lowest group to \$3000-and-over.

Although food was the largest item, accounting for 33.5 per cent of total current expense, more than a quarter of these 14,469 families did not spend enough to secure the "low-cost good diet" described by the Bureau of Home Economics. The amount spent per adult-male equivalent rose from \$94 at the lowest income level to \$229 at the highest. It is of interest that, although few families budget their expenditures in advance, most families have a weekly food budget. Weekly expenditures remain remarkably constant between seasons despite the plenty of cheap fresh foods at certain seasons.

**Housing,** including fuel, light, and refrigeration, accounted for one-fourth of the annual expenditure. Two-fifths of the families lived in one-family detached houses, a fourth in apartments, and the rest in semi-detached, row, or two-family houses. Most of them had a bathroom, hot water, electric lights, and gas or electricity for cooking. Two-thirds had central heating and ice, but less than one-third had telephones. Thirty per cent were home owners. The total money expense of home owners was less than that of renters of heated

apartments unless return from investment is included. The home owners had almost twice as much space for the same expenditure.

Clothing expense, the third main item on the budget, averaged 10.6 per cent of the total, ranging from \$49 for the lowest income to \$471 for the highest (7.5 to 14 per cent). High points on the curves for women's clothing were almost half again as high as those for men's. Women at home spent much less for clothing than employed women, even less than employed men. For both men and women the peaks in expenditure are in the early years of maturity.

After the three main requirements—food, shelter, and clothing—have been paid for, less than one-third of the income is left. Travel and transportation, which falls variously into the luxury or the essential category, consumed almost as much money as clothing, largely as a result of automobile ownership. Two out of every five families studied owned cars, the majority having been purchased second-hand. The proportion of car owners is greater in the West than in the East and is relatively small in metropolitan areas like New York and Chicago.

Housefurnishing and operations varied from \$30 to \$90 per year according to income. Full-time domestic service was found to be very rare even at the highest consumption levels; such as was reported occurred largely in Southern cities and not necessarily for the entire year. Part-time service was a rapidly expanding item reported by as many as a fourth of the families in the highest consumption level, average payments being about \$6 per month. Even at the lowest level, laundry was sent out by 15 per cent of the families. From expenditures on furniture it was concluded that once in 20 years is the average frequency for these families to make replacements or additions to their furnishings, once the household has been established.

Expenditures for medical care ranged from \$7 to \$25 per person according to income, but the percentage of income so spent was close to 4 per cent for all levels. These actually reported expenditures were far below all estimates as to the amount of service needed to meet real needs, even on a basis of group care. Personal care took 2 per cent of income and gifts 1.6 per cent.

Despite such obvious inadequacies, Americans now have a higher standard of living than ever before, according to a study made by Dr. Bernhard Ostrolenk, economist at New York City College. In the decade between 1929 and 1939, when population increased 7 per cent, he found that consumption increased as follows for important items: Milk, 9 per cent; fruits and vegetables, 33; butter, 46; canned corn, 51; overcoats, 22; suits, 33; residential electrical power, 120; electric refrigerators, 114; vacuum cleaners, 13, and washing machines, 26. Out of 50 items, decreases were found only for sugar, wheat, and silk consumption, railroad travel, and residential construction.

**Budget Studies.** The following table presents an estimate of the cost of a "health and decency" standard of living for families at different income levels, as prepared by the Heller Committee for Research in Social Economics, University of California. Costs were computed on the basis of San Francisco price levels for March, 1940. The California State sales tax has been omitted.

Against this estimated cost of "health and decency" it is of interest to weigh the actual income of American families. According to a Study of

TABLE 3—ESTIMATES OF ANNUAL BUDGET

	Executive (Family of 4)	Clerk (Family of 5)	Wage Earner (Family of 5)
Total Cost	\$6,453.40	\$2,860.53	\$2,184.25

Medical Care	275.00	75.00	75.00

\* And Savings. \* Life

Consumer Purchases recently made by the National Resources Committee, 4 million families have an average income of only \$312. Another 8 million have an average income of \$758, and another 7 million receive an average of \$1224. The families in the two lower groups, earning under \$800 a year, constitute 41.7 per cent of all American families.

**Wartime Living Standards.** The two major factors determining a people's living standard in normal times—average family income measured against prices of essential goods—is complicated in wartime by a third—the curtailment of available supplies of essential goods. The extent to which the well-being of the peoples in Europe has been reduced by lack of supplies may be judged from the following rationing table, quoted from the London Times of Sept. 25, 1940.

TABLE 4—RATIONING IN EUROPE

[In ounces per person per week]

	Bread	Meat	Sugar	Fats	Coffee

Netherlands	71	"	9	4½	1½
Belgium	56	"	7½	13½	3

\* Supplies usually not equal to official rations

Not shown in the above table are Great Britain and Italy. In the former country bread was unrationed (according to the New York Times, Oct. 20, 1940) but butter and fats were limited to 8 oz. per week, sugar to 8 oz., meat to 32, tea to 2, bacon and ham to 4. Coffee was unrationed. In Italy, coffee was available only for army and hospital use and meat was eaten only three days a week. Bread was limited to 24½ oz. (the lowest ration in Europe), butter and fats to 7, sugar to 4½. In the Soviet Union an acute shortage of foodstuffs was reported early in the year. Meat, potatoes, dairy products, and sugar were among a number of products sold only in limited quantity. Food shortages in Spain resulted in a decree (effective December 1) by which the population was divided into three classes. Consumption of bread was cut down among the more well-to-do in order to provide greater quantities for the poor.

W. L. White reported for the North American Newspaper Alliance (Jan. 7, 1941) his findings with regard to the food situation in Britain and Germany. He reported, for example, that while sugar was rationed in both countries, in England cakes, tarts, and candy were plentiful, in Germany cakes and tarts were non-existent and candy was limited to a quarter of a lb. a month per person.

Butter and bacon also were rationed in both countries. Britain, however, had other fats in abundance, whereas in Germany the absence of fats constitutes a serious dietary deficiency. Fish, unrationed in both countries, is plentiful in Britain but is limited by lack of supply to about two meals per month in Germany. Of vegetables, Germany has only potatoes, cabbages, and turnips in plenty. This correspondent concluded that the standard of living in Germany was barely adequate to sustain reasonable health, whereas that in Britain had far to go before reaching so low a level.

Accounts of food shortages in Europe focused attention on the availability of food supplies in the United States. The Bureau of Agricultural Economics made a survey on the basis of the July crop report, and concluded that supplies would be comparable with those of recent favorable years and were, therefore, completely adequate for domestic consumption. Larger amounts of some commodities were expected to be available for export. See DAIRYING; LIVESTOCK.

Steps were actively taken by the Government to forestall any adverse war effect on American living standards. The National Defense Advisory Commission (q.v.) included a "representative of consumers," whose duties were to watch price trends in consumer goods, to take action if prices tended to skyrocket, to protect standards of living, and work toward their general improvement. Miss Harriet Elliott of the University of North Carolina was appointed to the post and immediately sought the co-operation of consumer and other groups. She announced that, in case of unduly rising prices, her first attack would be through publicity and, if that failed, legal action would be taken through the Department of Justice.

One effort made in Europe to offset the effect of a belligerent status on living standards was the extension of family allowance systems to families of mobilized men. Allowances to the families of British soldiers were considerably higher in 1940 than in 1914, having been increased to 39 shillings per week for the lowest paid soldier with four children. Additional allowances up to 2 lb. per week were available in cases of hardship. Many British employers voluntarily provided supplements to family allowances, equal usually (in the case of men with dependents) to the excess of previous earnings over the service pay and allowances.

**LOMBOK.** See NETHERLANDS INDIES under *Area and Population*.

**LONDON.** See EUROPEAN WAR; GREAT BRITAIN under *Area and Population*.

**LOTTERIES.** See NEW MEXICO.

**LOUISIANA.** Area, 48,506 square miles, including 3097 square miles of water. Population, Apr. 1, 1940 (census), 2,363,880, 1930, 2,101,593. New Orleans, the chief city (1940), 494,537; Baton Rouge, the capital, 34,719. The State's urban population (dwellers in places of 2500 or more) rising to 980,439 (1940), became 41.5 per cent of all the inhabitants.

**Agriculture.** Louisiana harvested, in 1940, about 4,155,000 acres of the principal crops. Cotton, the leading crop, occupied 1,126,000 acres and produced 455,000 bales, estimated as worth \$21,612,000 to the growers. Corn, on 1,508,000 acres, yielded 24,128,000 bu. (about \$15,924,000); rice, 451,000 acres, 18,040,000 bu. (\$12,989,000); sugar cane, 259,000

acres, 3,335,000 tons (\$9,171,000); sweet potatoes, 86,000 acres, 4,988,000 bu. (\$3,741,000); tame hay, 354,000 acres, 438,000 tons (\$4,073,000); potatoes, 40,000 acres, 2,280,000 bu. (\$1,824,000).

**Mineral Production.** Louisiana's annual production of native minerals, as reckoned in 1940 by the U.S. Bureau of Mines, totaled \$172,306,761 for 1938. Petroleum made up more than five-eighths of this; natural gas and gasoline derived therefrom, three-tenths; sulphur, much of the remainder. The output of petroleum declined to some 93,869,000 bbl. for 1939, from 95,208,000 bbl. (value, \$110,100,000) for 1938; but the output of 1940 exceeded that of either of the two years previous. The decrease of production had been, essentially, in the Rodessa field where the output of 1939 declined by some 3,000,000 bbl.; a rise of about 1,800,000 bbl. in the yearly production of the coastal district largely offset this and was followed in 1940 by a rise of more than 10,000,000 bbl. in the same area. The Eola field and about a dozen others of less prominence were discovered in the coastal district during 1939. The "gross" production of natural gas was reported, for 1939, as 402,751 million cubic feet. The less inclusive total of gas produced and consumed attained 283,899 million cubic feet, for 1938; this total's value at points of consumption was \$47,991,000. Gasoline taken from natural gas totaled about 92,100,000 gal. (1939), as against 95,634,000 gal. (value, \$3,026,000), for 1938. The production of sulphur attained 422,600 long tons (value, about \$6,750,000) for 1939, as against 294,235 tons for 1938.

**Education.** Louisiana's inhabitants of school age (from 6 years to 18) were stated for the academic year 1939-40 as 382,711 whites and 236,764 Negroes. The year's enrollments in public schools totaled 294,457 white and 172,279 Negro; they included 212,022 white and 157,522 Negro in elementary, and 82,435 white and 14,757 Negro in high school. The year's expenditure for public-school education totaled \$14,137,113. There were 10,714 white and 4120 Negro teachers.

**History.** The inauguration, as Governor, of Sam Houston Jones, a lawyer of Lake Charles, marked the close of 12 years of the rule of Huey Long and his political heirs. The Federal and State courts had convicted some of the conspicuous members of the Long succession and were to convict yet others. But until the election of 1940 it remained to be seen whether the people of the State would stand by the discredited political system. Jones, elected on his declared intention to hunt down and clear out every trace of predecessors' corruption, deprived Long's successors of their last hopes that the popular infatuation strikingly evident at the time of Huey Long's assassination might still work in their favor.

Gov. Earl K. Long, brother of the gifted and invincible Huey, fought hard to be re-elected. He had succeeded Governor Leche on the latter's resignation in June, 1939, at the beginning of the regime's breakdown. He had not been involved in the conspicuous revelations that followed. He had not had time, however, to win the people's trust, and he lacked the persuasiveness and fighting ability of his brother; yet he bore the magic name and was familiar with the political technique. Owing to the lack of any opposition to the Democratic party, the Democratic primary, held in January, virtually bestowed election, in the choice of the State officers. Long, the keynote of whose campaign was the declaration of his own unquestioned

honesty, was but one of five candidates among whom the voters were called to choose on January 16. He obtained the highest vote, but he did not get a sufficient total under the State's election laws. It thus became necessary to hold a second, or run-off primary. In the original primary Jones had run second, by a small plurality over James A. Noe, a wealthy oil man who had formerly held office under the Long machine. Noe's candidacy had cut into the vote that Earl K. Long had hoped to obtain; and now Noe called upon his own following to vote for Jones in the run-off. On February 20, despite a big vote for Long in New Orleans, still under the domination of Mayor Maestri, Jones won by a majority of about 20,000. A general election some weeks later gave effect to the result of the primaries; Jones became Governor (May 14). Another primary (September 10), making nominations for Congress, did away with the majority of the old regime's United States Representatives.

A special session of the Legislature, summoned by Long, met shortly before the February primary and complied with Long's wishes by enacting several vote-getting appropriations—\$1,000,000 for assistance to the needy aged, another \$1,000,000 for free lunches in schools, and a sum to reimburse beekeepers for their losses through operations to exterminate the white-winged beetle. Later efforts of Long, to call another special session after his defeat, failed, due to the fact that many of the Senators absented themselves, preventing a quorum.

Ex-Governor Leche, whose income was reported to have soared to about \$282,000 for 1939, was convicted (June 1) in a Federal District Court at New Orleans, on two counts of using the mails to defraud; he was sentenced to prison for ten years, five for each count. He was held to have, while Governor, ordered the Highway Department to buy trucks at excessive prices and to have received \$31,000 from the seller. The seller of the trucks and former Chairman Abernathy of the Highway Commission, both brought to trial with Leche, pleaded guilty. James A. Noe, former Longite and recent supporter of Jones in the campaign for Governor, was indicted (October 3) on a charge of evasion of Federal taxation of income derived in 1935 from an oil company.

**Election.** In the National election (November 5) Louisiana, despite some antagonism to features of the Federal agricultural policy, gave about the usual overwhelming Democratic vote for President—Roosevelt (Dem.) 319,751, Willkie (Rep.) 52,446; a delegation of 8 Democrats was as usual elected to the U.S. House of Representatives, but the substitution of new nominees for survivors of the Long regime left only three incumbents among the eight.

**Officers.** Louisiana's chief officers, serving after May 14, 1940, were: Governor, Sam Houston Jones (Dem.); Lieutenant Governor, Marc M. Mouton; Secretary of State, James A. Gremillion; Treasurer, A. P. Tugwell; Auditor, L. B. Baynard; Attorney General, Eugene Stanley; Superintendent of Education, John E. Cox.

**LUTHERAN CHURCH.** Events of the year 1940 served to make the Lutheran Church more conscious than ever of its world-wide scope. With the Lutheran Churches of Europe engulfed in the disasters of war, American Lutherans have had to assume tremendous responsibility. The American Section of the Executive Committee of the Lutheran World Convention had hardly closed a campaign to raise funds for relief in Finland and France for help to German and Finnish missions cut off from home support and for aid to refugees from Europe to this country, when subsequent developments of the war in Europe made necessary another appeal for funds to maintain 47 foreign mission fields that have been "orphaned" by the war. These are fields of Danish, Dutch, Finnish, German, Norwegian, and Swedish Lutherans and are found in Africa, China, India, Japan, New Guinea, and the Near East. In Canada, current conditions brought about the formation of the Canadian Lutheran Commission, composed of representatives from the Canadian portions of the American Lutheran Church, the Augustana Synod, the Norwegian Lutheran Church, and the United Lutheran Church. At its biennial convention in 1940, the American Lutheran Conference (a federation of five bodies) took action to call all American Lutherans to a conference to consider their responsibility to world Lutheranism; plans for this are now in process.

As a link between Lutherans in different countries, the Lutheran World Convention (American Section) sponsored for the first time in 1940 a regular series of Lutheran broadcasts by short wave to Denmark, Finland, Germany, Norway, Sweden, and South America. These programs carried not only a religious service but a message of courage from American Lutherans to their distressed brothers in the faith. Another potent agent in international Lutheran good will is the Lutheran Hour of the Missouri Lutheran Synod which in 1940 went out over 177 stations in the western hemisphere; 15 of these are in Spanish American countries and use Spanish language transcriptions.

Many of the American Lutheran bodies held general conventions in 1940. In addition to the annual meetings of many smaller bodies, three large ones (American Lutheran Church, Norwegian Lutheran Church, United Lutheran Church) and two federations (American Lutheran Conference and Synodical Conference) held biennial conventions. Important actions taken include: Approval of an agreement on the doctrine of inspiration by the American Lutheran Church and the United Lutheran Church; recognition of certain rights of the conscientious objector by the Augustana Synod and by the United Lutheran Church; acceptance of the Lutheran Icelandic Synod into membership of the United Lutheran Church; approval by many bodies of the protest made by the presidents of the American Lutheran Church and the United Lutheran Church against President Roosevelt's appointment of an ambassador to the Vatican; disapproval by some bodies of the practice of holding "novenas" in Lutheran congregations; action by the Augustana Synod to join the World Council of Churches.

The National Lutheran Council, a common service agency for two-thirds of the Lutherans of America, is leading in various fields of welfare work. It has a commission working on the selection of suitable men for recommendation to chaplaincies in the U.S. Army and training camps. Its

ever growing refugee service now has divisional bureaus in 24 different cities and has dealt with nearly 1100 cases. Its department of welfare, organized in 1939, expanded and entered upon a program of co-ordination of welfare activities in all Lutheran bodies. In keeping with the trend toward better trained social workers and toward higher standards of work, the department inaugurated a placement service for qualified Lutheran welfare workers.

Summarized statistically, the various Lutheran bodies in the United States and Canada have 12,863 ministers, 15,836 organized congregations, 4,910,300 baptized and 3,433,765 confirmed members, 21,920 congregational schools with 1,852,226 pupils. Expenditures in 1939 for local congregational purposes amounted to \$41,254,657 and for the work of the church at large, \$10,277,803.

**LUXEMBURG.** A grand duchy bounded by Germany, France, and Belgium and occupied by German troops on May 10, 1940. Area, 999 square miles; population (1938 estimate), 301,000, most of whom profess the Roman Catholic faith. The inhabitants speak a Germanic dialect; French is their secondary language. Chief towns: Luxembourg (capital), 57,740 inhabitants; Esch-Alzette, chief mining center, 27,517; Differdange, 15,945; Dudelange, 13,572. Births in 1938 numbered 4490; deaths, 3811. There is no illiteracy.

**Production, Trade, etc.** Agriculture supports some 32 per cent of the population. Yields of the chief crops in 1939 were (in metric tons): Wheat, 27,000; barley, 3400; rye, 12,400; oats, 45,000; potatoes, 285,600 (1938). Mining and metallurgical industries are important, production figures for 1939 (in metric tons) being: Pig iron and ferroalloys, 1,776,000; steel ingots and castings, 1,824,000; iron ore, 5,140,632 (1938). Statistics of trade are included in those of Belgium as a result of the Belgo-Luxembourg customs union established May 1, 1922. In 1939 there were 2558 miles of highway; the 318 miles of railway line open to traffic reported receipts of 128,400,000 Luxembourg francs (about \$5,400,000).

**Government.** Budget revenue for 1939 was estimated at 355,229,716 francs; expenditure, 353,439,719; public debt, on Nov. 15, 1938, 762,535,122 francs (Luxembourg franc equalled 1.25 Belgian francs). Previous to the German invasion, executive power and the right to organize the government rested with the Grand Duchess Charlotte, who succeeded to the throne on Jan. 9, 1919. Legislative power was vested jointly in the Grand Duchess and the Chamber of Deputies (lower chamber) of 55 members (comprising in 1940, 25 Catholic-Conservatives, 18 Socialists, 6 Radical-Liberals, and 6 others), elected for a term of six years by universal suffrage. The Council of State (upper house) of 15 members was appointed for life by the sovereign. Premier in 1940, Pierre Dupong (Catholic-Conservative).

**History.** Luxembourg was occupied by German troops on May 10, 1940, in connection with the offensive launched against the Allied forces on the Western Front through Belgium and the Netherlands (see EUROPEAN WAR).

The invasion was not unexpected, despite the repeated assurances of the German Government that it would respect Luxembourg's neutrality. On April 3 the Luxembourg Government announced plans for the evacuation of the capital in case of an emergency. When it came, Grand Duchess Charlotte, the Prince Consort, and their children fled to

Paris, as did members of the Luxembourg Government. No resistance was offered by the small defense force, consisting of only 300 regulars, 250 gendarmes, and about 125 members of the voluntary militia. The invaders were aided in establishing rapid control by some 30,000 Germans living in the Grand Duchy, who had been organized in Nazi groups.

On the day of the invasion, the Berlin Government gave an official explanation of its action in a memorandum submitted to Luxembourg authorities. It declared that Britain and France were prepared to attack the Reich through Belgium and the Netherlands with the aid of the latter countries and that "the offensive . . . will also include the territory of the State of Luxembourg." It continued:

The German Government, therefore, is obliged also to extend the military operations they have undertaken to ward off this attack to the territory of Luxembourg.

The German Government expects the government of the Grand Duchy of Luxembourg will appreciate the situation created by the sole fault of Germany's opponents and will take the necessary measures for insuring that the population of Luxembourg will put no obstacles in the way of German action.

The German Government for their part desire to assure the government of the Grand Duchy of Luxembourg that Germany does not intend, either now or in the future, by these measures to impair the integrity and political independence of the Grand Duchy.

On May 30 the Luxembourg Legation in Paris announced the formation of a Luxembourg legion to fight with the Allied armies. All subjects of the duchy of military age residing in France were called to the colors. With the collapse of French resistance, the Grand Duchess and members of her government fled to Lisbon. From Portugal the Grand Duchess went to London late in August and on October 4 arrived in New York. With her family, which had preceded her to the United States, she moved in mid-November to an estate near Montreal, Canada, where a provisional government was established. The U.S. Government as well as the Allied governments continued to recognize this provisional regime as the legal government of Luxembourg. Credentials of a new Luxembourg Minister to Washington were accepted by President Roosevelt Nov. 8, 1940.

Of some 80,000 Luxemburgers who fled to France upon the German invasion, practically all were reported to have returned by mid-August. On July 25 the German military commander in control of Luxembourg since May 10 was replaced by a civil administrator responsible to the military commander of occupied Belgium and Northern France. The civil administrator was Dr. Gustav Simon, former provincial governor and Nazi *gauleiter* of the neighboring Coblenz-Trier district in Germany. He undertook the incorporation and permanent assimilation of Luxembourg in the Reich.

On August 6 German police marched into the Grand Duchy to take over all police functions, and on the same day Dr. Simon made German the official language of the government and the schools and ruled that the press and all publications must use German exclusively. All French schools were closed. The Constitution of Luxembourg was declared void by Dr. Simon on August 14, the terms "Grand Duchy" and "State of Luxembourg" were prohibited in official documents, and all Luxembourg officials were declared obligated to render loyalty to the government appointed by the German civil administration. This provoked a formal protest from Grand Duchess Charlotte. On August 15 Luxembourg was incorporated within the German

customs area, thus terminating the Belgian-Luxemburg customs union of 1922. The reichsmark currency was introduced August 26, replacing military scrip, and on the following day German foreign-exchange control and related legislation was made effective.

Dr. Simon proclaimed a "new order" for Luxembourg within the framework of the Great German Reich at the first public mass meeting of the "folk German movement of Luxembourg" on September 29. The anti-Jewish legislation in effect in the Reich was introduced into Luxembourg by decree September 7. On October 23 Dr. Simon decreed the dissolution of the Luxembourg Parliament and Council of State. Despite these measures, backed by an active propaganda and police drive, the bulk of the Luxemburgers were reported unreconciled to German rule.

See GERMANY under *History*; LEAGUE OF NATIONS.

**LYNCHING.** The National Association for the Advancement of Colored People announced, in a press release dated Dec. 31, 1940, that five persons were lynched during the year 1940, as compared with a total of four in 1939. Two of the lynchings took place in Georgia, two in Alabama, and one in Tennessee. The cases were described as follows.

Ike Gaston, a barber shop proprietor and the only white man on the list, was beaten to death by a vigilante mob in Atlanta, Ga., on March 7; he was said to have been drunk and to have beaten his wife on numerous occasions. O'Dee Henderson, a 24-year-old steel worker who had been arrested following an altercation with a white man, was shot inside a police station at Fairfield, Ala., May 8. Elbert Williams of Brownsville, Tenn., was found in a river swamp (June 20) the day after he had gone with a group of Negro citizens to the City Hall to secure information about registering to vote. Jesse Thornton was shot to death in Luverne, Ala., June 22, by a mob led by police officials, one of whom he had failed to address as "Mister." Austin Callaway, a 16-year-old boy charged with attempting to attack a white woman, was taken from jail in La Grange, Ga., by several masked men, carried about 8 miles from town, and shot, September 8.

The total of five cases was cited also in the report issued by the Tuskegee Institute. A conference was held late in the year by officials of the Tuskegee Institute, the National Association for the Advancement of Colored People, and the Association of Southern Women for the Prevention of Lynching to compare methods of investigation. A basic method of co-operation was worked out to prevent the issuance of different sets of lynching figures in the future.

**Anti-Lynching Bill.** The Gavagan Anti-Lynching Bill was approved by the House of Representatives in January, 1940, by a vote of 252 to 131. The measure was also voted out by the Senate Judiciary Committee on April 8 (12 to 4), but it was not called for consideration by the Senate prior to the close of the year. The measure sought to penalize any State or local official who failed to make "all diligent effort" to protect persons in his custody or who failed to apprehend or prosecute members of a mob guilty of lynching. The penalty proposed was a fine up to \$5000, imprisonment up to five years, or both. The State subdivision in which a lynching occurred would also be made liable to damages of \$2000 to \$10,000 for each victim.

The House considered the measure for three days, during which time a provision excluding violence in connection with labor disputes was struck out. Passage in the House was attributed by some commentators to the desire of both Democrats and Republicans to win Negro votes in the national election. The Senate's failure to consider the bill (announced by Senator Barkley on October 8) resulted from the threat of a filibuster by Southern senators under the leadership of Senator Connally of Texas. Opponents of the measure argued that the bill was an invasion of State rights and that passage would merely serve to stir racial issues. Senator Wagner, a proponent, argued that 73 lynchings had occurred in the United States in the past six years. See MISSISSIPPI.

**MACAO.** A Portuguese colony in South China. Total area, including the nearby islands of Taipa and Colôane, eight square miles; population (1936 census), 200,000, including 4000 Portuguese. Trade (chiefly transit) is in the hands of the Chinese. Budget estimates for 1939 balanced at 44,937,126 escudos (escudo averaged \$0.0404 for 1939). Governor, Dr. A. T. Barbosa.

**MACHINE DEVELOPMENT.** Engineering changes during 1940 were largely influenced by the war conditions abroad. Much of the machinery and other equipment was designed, or modified, to meet conditions as they arose.

Automobiles for example, were changed but little. Outward appearance was altered to some extent to meet demands of sales departments for something new to talk about, but real changes were few. Neither the fluid fly-wheel nor the more or less automatic transmissions, used to a somewhat larger extent, are entirely new. An attempt was made to put the fluid fly-wheel on the American market about 20 years ago, without success; it did however, make headway in England and was then imported into this country.

Machine tools and similar equipment were but slightly affected by war conditions. The demand, both for regular types of machines, and for machines which are solely used in making arms and munitions, greatly increased, but there have been few fundamental changes in the special machines since the last war. Some machines have been re-designed, and a few entirely new machines have been designed and built, but simple machines play an important part in any emergency of this kind. They have the advantage of being easier to handle by partly trained, or semi-skilled men and women; they are more easily built and cost less to produce, and being more easily built, they can be produced in shops that are not normally in the machine tool field.

The ability to scatter work into many small shops is one of the engineering changes of the period which began as a link in the National Defense program, probably from a survey made by the Ordnance Departments of both Army and Navy which, divided into defense districts, listed plants and plant capacities for many kinds of munitions and supplies. The experience of the last war, with huge plant expansions that became millstones in the postwar days, led to the engineering methods that have now been admirably developed.

One of the best examples of this development is seen in the way in which the Sperry Gyroscope Company increased its output many fold. Realizing that the decentralization of manufacture, the utilization of other plants, could not be accomplished at short notice, this company began the

expansion of facilities before war came or huge orders began to pour in. Selecting parts that could be made by outside plants they picked shops with proper facilities for making them, even while they still had ample facilities in their own plant. These selected shops were supplied with drawings of the best tools and fixtures for the purpose, and were then taught by experienced Sperry men just how the work should be done. These shops together had facilities for producing the intricate castings and for machining them ready for assembly. The complete unit, or the parts that go to make up the unit, can then be shipped to the parent factory for final inspection, assembly, and shipment. At a time when new machine equipment cannot be obtained for months or even years ahead, this method of utilizing idle equipment is an invaluable asset to the machine capacity of the country.

Only those engineers whose duty it is either to procure new machine equipment or to increase greatly the output of war material, can appreciate what this development in engineering management means. The methods also make it possible for new machine tools to be secured in the same way. Lathes, milling machines, automatic screw machines, and machines of other important types can be built in shops whose regular product is of a far different nature; but with co-operation their facilities may be utilized to build much needed machine tool equipment.

Some of the recent developments are of especial interest. Builders of printing presses are now building machine tools and recoil mechanisms. Makers of typesetting machines are building small machine tools, within their capacity. Manufacturers of sewing machines also are adapting parts of their plants to make needed machinery, far different from their usual output, for other manufacturers. All of which means a much better utilization of capacity already in existence, production with much less delay, and with little or no increase in plant capacity.

See ELECTRICAL INDUSTRIES; ELECTRIC LIGHT AND POWER; FARM MACHINERY AND EQUIPMENT; POWER PLANTS.

FRED H. COLVIN.

**MACKENZIE**, District of. See NORTHWEST TERRITORIES.

**MACY FOUNDATION**. See BENEFACTIONS.

**MADAGASCAR**. A French colony in the Indian Ocean. Area, 241,094 square miles; population (1936 census), 3,797,936, including that of the Comoro Islands. Chief towns (1936 populations): Tananarive, the capital (126,515), Majunga (23,684), Tamatave (21,421), Antsirabe (18,215), Tulear (15,180); Fianarantsoa (14,740). Education (Jan. 1, 1939): 1717 schools of all kinds and 221,179 students.

**Production and Trade**. Chief products: maize, rice, coffee, sugar, copra, potatoes, manioc, groundnuts, vanilla, cacao, graphite, mica, phosphates, gold, precious stones, and hides. Cattle breeding is an important industry. The forests contain many valuable woods. Trade (1938): imports, 602,710,000 francs; exports, 819,397,000 francs (franc averaged \$0.0288 for 1938; \$0.0251 for 1939). Shipping (1938): 7364 ships aggregating 4,306,309 tons entered the ports.

**Government**. The budget estimates for 1939 were balanced at 343,660,000 francs. A governor general, assisted by a consultative council, administers the government.

**Comoro Islands**. The islands of Mayotta, Anjouan, Grande Comore, and Mohéli, forming a region under the general government of Madagascar. Area, 800 square miles; population (1936), 128,608. Capital, Zandzi. Chief products: sugar, copra, sisal, and vanilla.

**History**. Resisting both "Free French" and British efforts to change their allegiance, Governor General Leon Cayla and his administration remained loyal to Marshal Pétain's regime at Vichy following the collapse of the French Republic. Except for radio communication with France, the island was cut off from virtually all intercourse with the world by the extension of the British blockade to Madagascar in July. According to statements of the Vichy Government, British troops attempted to land in Madagascar late in July but were barred by the island authorities. Another Vichy statement of September 29 asserted that Governor General Cayla had rejected a British ultimatum calling for repudiation of the Pétain Government and adherence to General Charles de Gaulle's "Free French" movement. See FRANCE under *History*.

**MADEIRA**. An administrative district (Funchal) of Portugal consisting of a group of islands (Madeira, Porto Santo, and three uninhabited islands) in the Atlantic, west of Morocco. Area, 314 square miles; population (1930 census), 211,601. Capital, Funchal (31,352 inhabitants). Chief products: wine, sugar, bananas. Tourists visiting the islands in 1939 totaled 6595 while tourists in transit (on cruise ships, etc.) totaled 98,170. Highways extended 160 miles. See PORTUGAL.

**MADOERA**. See NETHERLANDS INDIES under *Area and Population*.

**MAGAZINES**. See NEWSPAPERS AND MAGAZINES.

**MAGNESIUM**. The aircraft industry was responsible for a greatly increased demand for this metal in 1940. Its use as a war metal was emphasized by the rapid expansion of production facilities. Light alloys of magnesium and other metals are used in aircraft in the form of sand castings, rolled sheet, extruded shapes, tubing, and forgings. Production from brine at Midland, Mich., was augmented by production from sea water in a new plant at Freeport, Texas. The latter went into operation in December, 1940. As a result of this, and increased production at Midland, the output for 1941 was expected to be 30 million lb., compared with 7 million in 1939. The price was 27 cents per lb. in car lots for metal 99.8 per cent pure.

Owing to the war and the consequent exclusion from the United States of imports from Central Europe there was increased production of domestic magnesite, the chief mineral of magnesium. The chief producer was the Northwest Magnesite Co. in the State of Washington. A new 300-ton beneficiation plant using the flotation process was under construction in 1940 and was expected to be in operation about the middle of 1941.

Controversy over patent control of magnesium production and fabrication arose in September, 1940, as a result of assertions by the Department of Justice that German control of patents was restricting domestic production for national defense. This was denied by the industry, which stated that domestic production is under American patents. Licenses granted by patent holders to some 30 companies fabricating magnesium in this country are wholly unrestricted.

According to the U.S. Bureau of Mines, production of primary magnesium in 1940 was 6,250

short tons, the largest output in the history of the domestic industry. Domestic sales of new magnesium equalled production. Official data on world production of magnesium for 1940 were not available, but it is believed that output did not exceed 45,000 short tons, with Germany producing between 18,000 and 21,000 tons. See FERTILIZERS.

H. C. PARMELEE.

#### MAHÉ. See FRENCH INDIA.

**MAINE.** Area, 33,040 square miles; includes water, 3145 square miles. Population by census of April, 1940, 847,226; in 1930, 797,423. Portland had (1940), 73,643; Augusta, the capital, 19,360. Of Maine's 1940 population, 343,057 were urban and 504,169 were rural.

**Agriculture.** Maine harvested, in 1940, about 1,343,000 acres of the principal crops. Three-fourths of this area was in hay, but the greater part of the return from cultivation came from potatoes. Occupying 165,000 acres (largely in Aroostook County), potatoes made 44,055,000 bu., the highest production of any State in the Union, and brought the growers an estimated return of \$17,622,000. This sum fell nearly \$10,000,000 below the reported return for the less abundant potato crop of 1939. Tame hay, on 1,006,000 acres, gave 877,000 tons (about \$7,893,000); oats, on 113,000 acres, 4,520,000 bu. (\$1,808,000); apples, 752,000 bu. (\$714,000).

**History.** Irregularity in the State's accounts came to light early in April through an audit made by a private agency; three high officials were forced to resign, and the position of the Republicans controlling the State government was imperiled for a time. The original disclosure involved the State's comptroller, William A. Runnells, whose office had handled \$35,000 of missing cash. At Governor Barrows' demand Runnells immediately resigned and paid back \$26,420 to the State. Facing prosecution he shot himself twice with a pistol, allegedly by accident, inflicting serious wounds. The progress of the private audit next showed that the State's Auditor, Elbert D. Hayford, and the Deputy Treasurer, Louis H. Winship, had neglected to prevent Runnells from obtaining money by irregular means from the funds of the Highway Department, and these two also resigned at the Governor's demand. The resignation of the State Purchasing Agent and Chairman of Finance, William S. Owen, who had employed Runnells in the financial department in 1932, promptly followed. These three were not accused of having gained by the operations of Runnells. A fifth State officer, Treasurer Belmont A. Smith summoned to resign, pleaded ignorance of the transactions and refused; he declared that changes made in the State's financial organization in 1932 had deprived his office of the means to keep the accounts of the State of Maine in order.

The Legislature had been summoned, just before the disclosure, to meet shortly in special session in order to consider legislation as to unemployment. Barrows took the unusual course of postponing the session, in which the State's Supreme Court sustained his procedure. Thus he was able on May 27 to give the Legislature a more thorough view of the situation: further investigation had raised the total of vanished money to some \$157,000, and search had brought to view considerable sums in safe deposit under the names of members of the Runnells family; the irregularities were found to have extended through many

years. The Legislature held a hearing as to Treasurer Smith's responsibility in the shortages.

The legislative session authorized the State's expenditure for its own defense and State bonds were later issued therefor.

A review of the State government's whole financial condition was made by an outside agency soon after discovery of the Runnells' irregularities. It produced the unexpected information that the assets of the sinking fund's reserve, \$1,817,847, much exceeded the total by the figures of Runnells, but nothing was found to show looting beyond the \$157,000 that had been taken from time to time in relatively small amounts.

At the State primary elections (June 17), Governor Barrows, despite his vigorous handling of the financial scandal, was defeated by former Gov. Ralph O. Brewster for the Republican nomination to the U.S. Senate; the Democrats nominated former Gov. Louis J. Brann.

Members of Jehovah's Witnesses were roughly handled in Sanford for not letting their children salute the flag. Fearing further attack, several of the sect at its headquarters in Kennebunk soon afterward opened fire with shotguns and seriously wounded two men who had approached in the night (June 9). After police had taken away the shooting Witnesses a mob burned down their building; in October their leader was found guilty of assault with intent to kill. Governor Barrows issued (June 15) a proclamation ordering all aliens in the State to be registered for identification as precaution against foreign agents' activities.

**Elections.** At the State's general election (September 9) the Republicans prevailed, electing Sumner Sewall Governor, by 162,719 votes to 92,003 for Fulton J. Redman (Dem.); Ralph O. Brewster (Rep.) was elected to the U.S. Senate, by 150,149, as against 105,740 for Louis J. Brann (Dem.), and three Republicans were chosen United States Representatives. On November 5 the State gave its popular vote to Willkie (Rep.), 163,951, for President, over Roosevelt (Dem.) who received 156,478.

**Officers.** Maine's chief officers, serving in 1940, were: Governor, Lewis O. Barrows (Rep.); Secretary of State, Frederick Robie; Treasurer, Belmont A. Smith; Auditor, Elbert D. Hayford (see *History*, above); Attorney General, Franz U. Burkett; Commissioner of Education, Bertram E. Packard.

**MALACCA.** See BRITISH MALAYA.

**MALARIA.** See BIOLOGICAL CHEMISTRY.

**MALAY STATES.** See BRITISH MALAYA.

**MALDIVE ARCHIPELAGO.** See under CEYLON.

**MALTA.** A British colony in the Mediterranean, consisting of the islands of Malta (95 sq. mi.), Gozo (26 sq. mi.), and Comino (1 sq. mi.). Civil population (Jan. 1, 1939), 268,668. Capital, Valletta. Vital statistics (1938): 8704 births, 5399 deaths, and 1778 marriages. Education (1938-39): 168 schools of all kinds and 34,846 students. Malta is an important naval base for the British Mediterranean Fleet.

**Production and Trade.** Chief products: barley, wheat, potatoes, maize, oranges, figs, honey, grapes, and cotton. Livestock (1939): 34,470 goats, 15,936 sheep, 6707 swine, 4540 cattle, and 8799 horses, mules, and asses. Trade (1939): Imports, \$4,167,465; exports, \$659,812, including re-exports of \$433,756. Shipping (1938): 2512 ships aggregating 4,488,153 tons entered the ports.

**Government.** Budget (1939-40): revenue, £1,499,811; expenditure, £1,420,699. The estimates for 1940-41 indicate a deficit of £750,000. Malta is governed by Letters Patent of Feb. 14, 1939, which provided for a new constitution. There is a council of government consisting of 5 ex-officio members, 3 official members, 2 unofficial members nominated by the governor, and 10 elected members. The governor presides over the council and has a casting vote but no original vote. English and Maltese are the official languages of Malta. Governor (acting) and Commander-in-Chief, Maj.-Gen. W. G. S. Dobbie; Lieutenant Governor, Sir Edward Jackson (appointed Jan. 12, 1940).

**History.** The day after Italy declared war upon Britain and France (June 10, 1940), the Italian air force began incessant attacks upon the strongly fortified British naval base at Valletta. By the end of the year 203 raids had been made upon Malta's capital, with relatively little damage to either civilian or military-naval establishments, according to neutral correspondents. However the arrival of numerous German bombing planes and pilots at the Italian air base at Catania in near-by Sicily at the year-end presaged more difficult times for Malta in 1941. See EUROPEAN WAR.

Preceding or immediately following June 10 the British authorities interned Enrico Mizzi, leader of the pro-Italian faction of the Nationalist party in the Council of Government, and various other potential fifth columnists. Sir Arturo Mercieca, Chief Justice and President of the Court of Appeal, was requested to resign because of his pro-Italian leanings. The bulk of the Maltese people were reported to have enthusiastically supported the British cause. Lord Strickland, an elected member of the Council of Government and former Governor during the Church-State controversy of the early 1930's, died Aug. 22, 1940 (see *NECROLOGY*).

**MAMMALS.** See *ZOOLOGY*.

**MANADO.** See *NETHERLANDS INDIES* under *Area and Population*.

**MANCHOUKUO.** An empire in northeastern Asia established under Japanese protection Mar. 1, 1932; comprising the former Chinese provinces of Fengtien, Kirin, and Heilungkiang in Manchuria, and Jehol in Inner Mongolia. Capital, Hsinking (formerly Chang-chun). Ruler in 1940, Emperor Kangtê, who was enthroned Mar. 1, 1934.

**Area and Population.** Including the South Manchuria Railway Zone under direct Japanese jurisdiction but excluding Kwantung (q.v.), the area of Manchoukuo is estimated by Japanese sources at 503,013 square miles. The population on Dec. 31, 1937, was estimated at 36,949,975, including 35,533,729 Manchoukuoans (predominantly Chinese, with Manchu and Mongol minorities), 931,300 Koreans, 418,300 Japanese, and 66,326 others, mainly Russians. The population of Mukden on Dec. 31, 1938, was 810,465, and of the other chief cities on June 30, 1938: Harbin, 467,483; Hsinking, 360,294; Antung, 210,759; Kirin, 132,272; Yingkow, 159,470. The net immigration of Chinese laborers in 1938 was 291,097; of Korean peasants, 15,850.

**Defense.** The National Mobilization Law of Feb. 26, 1938, empowered the government to draft "man-power and material resources in wartime or in an emergency." On Apr. 6, 1940, it was announced that compulsory military service would be introduced one year later (see *HISTORY*). The

regular Manchoukuoan army, organized and officered mainly by Japanese, numbered about 80,000 in 1939. The navy included 1 destroyer, 15 gunboats, 6 patrol ships, and various smaller craft. In addition, nearly 500,000 picked Japanese troops and a strong air force were concentrated in Manchoukuo.

**Education and Religion.** Education statistics for June, 1939, showed 15,877 primary schools with 1,579,169 pupils; 254 secondary schools, with 60,368 pupils; 14 colleges, with 4372 students; 16 normal schools, with 4045 students; and 65 vocational schools, with 5043 students. According to a Japanese source, there were on Dec. 31, 1937, 1,770,692 Buddhists, 377,337 Taoists, 153,844 Roman Catholics, 132,636 Mohammedans, and 51,393 Protestants. Lamaism was believed to have far more adherents than Buddhism, but no statistics as to their number were available.

**Production.** Agriculture supports about 85 per cent of the population. Yields of the chief crops in 1938 were (in metric tons): Soybeans, 4,612,000; rice, 4,750,000; kaoliang, 4,680,000; millet, 3,134,000; corn, 2,306,000; wheat, 979,000; other cereals, 1,114,000. Livestock in September, 1937, included 1,683,200 cattle, 1,965,900 sheep, 5,335,800 swine, 1,243,000 goats, and 12,800 camels. The wool clip in 1937 was about 7,000,000 lb. Coal and lignite output in 1937 was about 14,100,000 metric tons; iron ore, pig iron, steel, magnesite, gold, lead, and oil shale are the other chief minerals and metals (for latest available figures, 1936, see *YEAR BOOK*, 1938). On Dec. 31, 1938, there were 3900 industrial establishments and business concerns, including 712 manufacturing plants, 186 mining and ceramics concerns, 28 electric and gas industries, and 2062 banking and commercial enterprises.

**Foreign Trade.** Imports in 1939 totaled 1,783,366,000 yuan (1,274,748,000 in 1938); exports, 826,190,000 yuan (725,454,000). Of the 1939 imports, Japan supplied 1,505,011,000 yuan; United States, 87,739,000; China, 64,226,000; Germany, 51,786,000. Japan took 516,792,000 yuan worth of exports in 1939, China, 165,207,000; Germany, 50,358,000. Leading 1939 exports: Soybeans, 206,378,000 yuan; bean cakes, 123,958,000 yuan; coal, 24,059,000 yuan.

**Finance.** Excluding transfers and duplications between different accounts, expenditures in the budget for 1940 were estimated at 1,639,862,000 yuan (1,044,810,000 in 1939). Net revenues for 1940 were estimated at 1,144,962,687 yuan and an additional 506,880,313 yuan were to be borrowed, as compared with net revenues of 634,262,000 yuan and loans of 396,262,000 yuan in the 1939 budget.

The public debt on Dec. 31, 1938, totaled 858,918,000 yuan of which 346,750,000 yuan were borrowed in Japan. The Manchoukuo yuan was pegged to the Japanese yen (1 yuan equals 1 yen) on Oct. 28, 1935. The yen exchanged at \$0.2596 in 1939 and \$0.2344 in 1940.

**Transportation.** The railway mileage of Manchoukuo on Jan. 1, 1940, totaled 6600 miles, of which 3500 miles were constructed during the preceding seven years with Japanese capital. All lines are owned or operated by the South Manchuria Railway Co., which is controlled by the Japanese Government. During 1939 the railways carried 62,160,000 passengers (including troops). Freight carried for the year ended Mar. 31, 1939, totaled about 50,732,000 metric tons. The Tailing-Nancha-Tangyuan connecting link of the railway from

Suihua to the new Japanese city and military base of Chiamussu (Kiamusze) on the Sungari River was opened to traffic May 1, 1940. Roads and highways extended 18,527 miles at the end of 1939; motor highways totaled 2503 miles, or about double the figure for the end of 1938. A network of airlines connects all of the principal Manchurian cities with those of Korea, Japan, and North China.

Normally three-fourths of the foreign trade of Manchoukuo passes through Dairen, chief ocean terminus of the South Manchuria Railway Co. Construction of a great new port at Tatung at the mouth of the Yalu River was begun in 1940. A third rail-sea route between Japan and Manchoukuo via Niigata, Japan, and Rashin, Korea, was opened Feb. 11, 1940, providing a shorter rail service to Hsinking and Chiamussu. Steamer services were maintained over 4222 miles of inland waterways.

**Government.** Under the Constitution of Mar. 1, 1934, as amended July 1, 1937, Manchoukuo is a monarchy in which the Emperor exercises both executive and legislative powers, the latter being subject to the approval of the Legislative Council, an advisory body appointed by the Emperor. There is also a Privy Council of five members; a State Council, or cabinet, of six departments; and a General Affairs Board, attached to the State Council, which supervises budgets and national policies.

Under a protocol signed Sept. 15, 1932, Manchoukuo and Japan agreed "to co-operate in the maintenance of their national security; it being understood that such Japanese forces as may be necessary for this purpose shall be stationed in Manchoukuo." Actually, the government is controlled by the Japanese Ambassador to Manchoukuo, who is also commander-in-chief of the Japanese and Manchoukuoan troops in Manchoukuo and Kwantung (q.v.). Japanese Ambassador and commander-in-chief in 1940, Lieut. Gen. Yoshikiro Umezu (appointed, September, 1939). Prime Minister, Marshal Chang Ching-hui (appointed Mar. 21, 1935).

**History.** The Japanese-Manchoukuoan and Soviet-Outer Mongolian boundary commission that met at Harbin Dec. 9, 1939, to delimit the disputed Manchoukuoan-Outer Mongolian frontier in the Nomonhan district (see *YEAR BOOK*, 1939, p. 457) broke off the negotiations at the end of January, 1940. A series of minor frontier clashes ensued during March, April, and May. However the parleys were resumed at Chita on August 3 and on August 26 the commission announced an agreement for the delimitation of the frontier. This lessened danger of the renewal of the sanguinary fighting of 1939 in the Khalka River sector, but various other parts of the Manchoukuoan-Siberian and Manchoukuoan-Outer Mongolian frontiers remained in controversy. Another source of friction was removed when the Hsinking Government on Jan. 3, 1940, paid the Soviet Government the final installment for its share of the Chinese Eastern Railway, transferred in March, 1935.

The truce enabled Japan to proceed with the strengthening of its military-economic base in Manchuria while simultaneously expanding into French Indo-China and the South Seas. More Japanese and Manchoukuoan funds were poured into Manchurian strategic railways, highways, air bases, and frontier defense systems, all designed

for an eventual struggle with the Soviet Union. On April 6 the Hsinking Government announced that the establishment of a Manchoukuoan conscript army for service under the Japanese commander-in-chief in Manchuria would begin a year later, following an intensive propaganda campaign to prepare the people for this innovation. Youths were to be called for three years' service at the age of 19, with the annual contingent restricted to about 33,000. Japanese officials also continued recruiting White Russians in Manchoukuo, Inner Mongolia, and China proper for eventual service against the Soviet armies.

Japanese investments in Manchoukuo, mainly for industrial developments, amounted to 1,103,713,000 yen in 1939 or an increase of 664,000,000 yen over 1938. In 1940 the rate of development was curtailed by the tightness of the Japanese money market, reflected in the failure of efforts by the South Manchuria Railway Co. to raise the equivalent of \$7,500,000 by debenture flotations. A new arrangement between the railway company and the Manchoukuo Government in December, 1939, exempted the company from its obligation to render an account of its returns from the State Railways to the government. The company, in turn, agreed to make an annual payment of 15,000,000 yen to the government. An acute shortage of foreign exchange was reported at the year end to be curtailing imports of vitally needed articles from countries outside of the yen bloc.

The Manchoukuoan budget for 1940 (see *Finance*) bore an increasing share of the burden of Japan's expansionist policy in northeastern Asia. There were substantial increases in appropriations for the Tatung Institute and the State Foundation University, founded to train administrators and other officials (mostly Japanese) for East Asia; for the Concordia Society, established to promote good will toward Japan and its policies among the Manchurian peoples; and for the Department of Public Peace, which was charged with an increasing share of Japan's local defense problems. Further large sums were appropriated for the settlement in Manchoukuo of Japanese colonists.

Meanwhile the Japanese continued to tighten their grip on the Manchurian economic system. All but a small fraction of the country's economic enterprises were placed under Japanese control through government ownership and management or a licensing system. The government monopoly system, covering opium, petroleum products, salt, and matches was extended on Nov. 1, 1939, to include soybeans, the chief agricultural product. Private monopolies controlling the import and sale of books, newspapers, other periodicals, sheet music, and plywood were established. Prices offered farmers and dealers for soybeans by the Staple Products Monopoly were so low that a sellers' strike was instituted early in 1940. More foreign and native traders and merchants were squeezed out by manipulation of the Trade Control and Exchange Control laws on behalf of Japanese interests. Only two American firms retained branch offices in Manchoukuo in May, 1940. Dividends and profits remitted to Japan from Manchurian enterprises in 1939 were estimated at 300,000,000 yen.

During June and July Emperor Kangtè paid a state visit to Emperor Hirohito in Japan. Wang Ching-wei, head of the new Japanese-controlled Nanking regime, agreed to recognize Japan's pro-

tectorate over Manchoukuo. Early in February it was reported that 200 Japanese had been killed by Chinese guerrillas in attacks northeast of Kirin.

See CHINA and MONGOLIA under *History*.

**MANDATED TERRITORIES.** Following is a list (as of Dec. 31, 1940) of territories conquered from the German and Ottoman empires during the World War and mandated by the League of Nations to various of the Allied Powers under the terms of the Treaty of Versailles.

<i>Mandated Territory*</i>	<i>Mandatory Power</i>	<i>Former Owner</i>
Cameroon, French	France	Germany
Cameroons, British	Great Britain	Germany
Japanese Pacific Islands	Japan	Germany
Nauru	British Empire	Germany
New Guinea, Territory of	Australia	Germany
Palestine	Great Britain	Ottoman Empire
Ruanda-Urundi	Belgium	Germany
Samoa, Western	New Zealand	Germany
South-West Africa	Union of South Africa	Germany
Syria and Lebanon	France	Ottoman Empire
Tanganyika Territory	Great Britain	Germany
Togo, French	France	Germany
Togoland	Great Britain	Germany

\* Iraq, a territory mandated to Great Britain, became an independent State by treaty with the mandatory power on June 30, 1930.

See the separate article on each mandated territory.

**MANGANESE.** Satisfactory progress was made during 1940 in providing the United States with an adequate supply of ores and concentrates, with the result that no apprehension was felt about a shortage that might affect production of munitions. The Metals Reserve Company, a subsidiary of the Reconstruction Finance Corporation, organized to buy strategic metals and minerals, awarded several contracts. One with the Anaconda Copper Mining Company was for 240,000 long tons of high-grade concentrates to be delivered at the rate of 80,000 tons per annum. Anaconda expended one and one-half million dollars in preparation for this production at the Emma mine in the Butte district. Another contract was made with the New-al-Pitt Corporation for an estimated 180,000 long tons of high-grade material from deposits in New Mexico. All of this was supplemented by the prospect of obtaining 135,000 tons a year from Cuba. Intermediate grades were available in Brazil and Chile. Electrolytic manganese was made in small quantity at Knoxville, Tenn.

The Census of Manufactures, 1939, shows the substantial progress made in the manganese industry of the United States in the preceding decade. Compared with 1929 the number of mines was increased from 21 to 34; wage earners from 354 to 494. Wages rose from \$392,362 to \$480,120. Production of merchantable ore rose from 40,762 tons to 47,672 tons, the average manganese content of the natural ore was 36.34 per cent. Of the 1939 production only 7900 tons was of ferro-grade containing a minimum of 48 per cent manganese.

See **CHEMISTRY, INDUSTRIAL**.

H. C. PARMELEE.

**MANITOBA.** A prairie province of Canada. Area, 246,512 square miles; population (June 1, 1939, estimate), 727,000, compared with 711,216 (1936 census). Vital statistics (1939): 13,563 living births, 6157 deaths, 7676 marriages. Chief towns (with 1936 populations): Winnipeg, the capital (215,814), Brandon (16,461), St. Boniface (16,275), Portage la Prairie (6538). Education

(1938): 166,276 students in schools of all kinds.

**Production.** The gross value of agricultural production in 1939 was \$95,052,000. Chief field crops (1939): wheat 63,000,000 bu., oats 34,500,000 bu., barley 28,000,000 bu., rye 2,000,000 bu., flaxseed 525,000 bu., potatoes 100,800 tons, roots 31,850 tons, hay and clover 706,000 tons, alfalfa 132,000 tons, fodder corn 270,000 tons. In 1940 the value of field crops was \$61,957,000 (\$61,358,000 for 1939). Livestock (1939): 787,000 cattle, 315,000 horses, 230,000 sheep, 311,000 swine, 5,951,000 poultry. Fur production (1938-39) was valued at \$1,267,700 (\$989,975 in 1937-38). Forestry output (1939) equaled 65,380 M cu. ft. valued at \$2,299,214. In 1938 the fish catch was worth \$1,811,124.

Mineral production (1939) was valued at \$17,137,930 of which copper (70,458,890 lb.) accounted for \$7,110,711, gold (180,875 fine oz.) \$6,537,003, zinc (40,302,747 lb.) \$1,236,891, silver (1,028,485 fine oz.) \$416,413. Manufacturing (1938): 1072 factories, 23,507 employees, \$48,308,248 net value of products.

**Government.** Finance (1938-39): Revenue and expenditure were estimated to balance at \$16,960,854. The King is represented by a lieutenant governor (appointed by the governor general in council) who is advised by a ministry whose members belong to the legislative assembly of 55 members elected for a five-year term by popular vote of the people. Six senators (appointed for life) and 17 elected commoners represent Manitoba in the Dominion parliament at Ottawa. Lt. Gov. R. F. McWilliams (assumed office Nov. 1, 1940); Premier, John Bracken (Liberal-Progressive).

**History.** On Nov. 4, 1940, Manitoba was placed under the legislative guidance of a coalition government with Premier John Bracken at its head. The cabinet included Conservative, Co-operative Commonwealth Federation, Social Credit, and Liberal-Progressive members. The voters of the province were expected to approve or reject the new government at a provincial general election to be held early in 1941.

**MANNERHEIM LINE.** See **EUROPEAN WAR** under *Finnish Campaign*.

**MANUAL TRAINING.** See **EDUCATION**.

**MANUFACTURES, Census of.** The Bureau of the Census of the U.S. Department of Commerce released on Dec. 29, 1940, the latest of its biennial reports on manufactures in the United States. According to the Bureau's summary, the manufacturing industries of the United States, including the printing and publishing industries, manufactured products in 1939 whose combined value totaled \$56,828,807,223. This was 64 per cent less than the value of products of these industries for 1937 and 16.6 per cent less than for 1929. The wage earners, both full-time and part-time, who were engaged in manufacturing these products totaled 7,887,242 which was 8 per cent less than in 1937 and 5.9 per cent less than in 1929. Although the manufacturing activities of the country did not reach the 1937 or the 1929 levels in 1939, the latter year did rank next to these two years during the past decade. In terms of actual goods produced, 1939 was probably closer to these earlier years than is indicated by the total value of products manufactured or the employment figures, since the level of prices was lower in 1939 than in either of the other two years and technological developments undoubtedly affected to some extent the productivity of labor.

TABLE 1—SUMMARY, BY GROUPS OF INDUSTRIES, FOR 1939

Group	Number of establishments	Salaries personnel <sup>1,2</sup>	Wage earners (average for the year) <sup>1,3</sup>	Salaries <sup>1,4</sup>	Wages <sup>4</sup>	Value of products <sup>4,5</sup>
All groups, total	184,244	1,049,468	7,887,242	\$2,542,040,011	\$9,089,927,984	\$56,828,807,223
1. Food and kindred products	51,454	113,232	824,009	262,187,331	913,981,553	10,603,950,671
2. Tobacco manufactures	765	4,757	87,525	11,355,748	68,439,717	1,322,189,139
3. Textile-mill products and other fiber manufactures	6,293	61,997	1,075,702	149,762,645	902,171,863	3,897,437,872
4. Apparel and other finished products made from fabrics and similar materials	20,365	53,472	758,302	132,455,695	660,609,295	3,358,255,400
5. Lumber and timber basic products	11,520	24,607	360,613	51,908,720	310,381,443	1,122,057,978
6. Furniture and finished lumber products	8,457	32,349	293,820	73,403,617	274,733,251	1,267,724,013
7. Paper and allied products	3,279	31,069	264,715	84,868,716	309,856,579	2,019,568,217
8. Printing, publishing and allied industries	24,879	142,912	324,615	331,673,493	493,643,339	2,578,494,382
9. Chemicals and allied products	9,203	63,109	287,136	165,144,382	356,184,902	3,733,657,723
10. Products of petroleum and coal	989	18,547	105,428	48,106,292	173,710,817	2,953,973,409
11. Rubber products	595	18,636	120,740	44,436,839	161,409,811	902,328,802
12. Leather and leather products	3,508	23,865	327,663	55,195,641	294,289,718	1,389,513,718
13. Stone, clay, and glass products	7,024	32,961	287,522	78,817,363	329,589,927	1,440,151,489
14. Iron and steel and their products, except machinery	8,993	117,116	966,371	297,527,758	1,313,633,202	6,591,530,456
15. Nonferrous metals and their products	5,600	34,562	228,753	86,081,442	299,219,667	2,572,854,496
16. Electrical machinery	2,014	57,528	256,467	139,614,726	335,819,534	1,727,217,631
17. Machinery (except electrical)	9,506	106,686	522,975	258,327,232	748,268,262	3,254,173,950
18. Automobiles and automobile equipment	1,133	46,211	398,963	115,208,037	646,405,891	4,047,872,729
19. Transportation equipment except automobiles	968	28,211	157,096	63,652,023	239,253,940	882,896,840
20. Miscellaneous industries	7,699	37,641	238,827	92,312,311	258,325,273	1,162,958,308

<sup>1</sup> No data for employees of central administrative offices are included.

<sup>2</sup> The 1939 Census of Manufactures questionnaire, for the first time, called for personnel employed in distribution, construction, etc., separately from the manufacturing employees of the plants, and therefore, the data probably are not strictly comparable. Employees of the plants reported as engaged in distribution and construction activities in 1939 are not included in this preliminary report but will be included in the final report.

<sup>3</sup> This is an average of the numbers reported for the several months of the year. In calculating it, equal weight must be given to full-time and part-time wage earners (not reported separately by the manufacturers), and for this reason it exceeds the number that would have been required to perform the work done in the industries if all wage earners had been continuously employed throughout the year. The quotient obtained by dividing the amount of wages by the average number of wage earners should not, therefore, be accepted as representing the average wage received by full-time wage earners. In making comparisons between the figures for 1939 and those for earlier years, the likelihood that the proportion of part-time employment varied from year to year should be taken into account. Also see footnote 2, above.

<sup>4</sup> Profits or losses cannot be calculated from the census figures because no data are collected for certain expense items, such as interest, rent, depreciation, taxes, insurance, and advertising.

<sup>5</sup> The aggregates for cost of materials and value of products include large but indeterminable amounts of duplication due to the use of the products of some industries as material by others. This duplication occurs, as a rule, between different industries, and is not found to any great extent in individual industries.

TABLE 2—SUMMARY FOR 1939, BY INDUSTRIES

[For combined totals for all industries, see table 1]

Group No	Industry	Number of establishments	Salaries personnel	Wage earners (average for the year)	Salaries	Wages	Value of products
13	Abrasive wheels, stones, paper, cloth, and related products	124	1,851	7,734	\$5,443,620	\$10,683,071	\$71,271,168
17	Agricultural machinery (except tractors)	317	5,587	27,806	11,051,197	35,228,807	167,895,292
19	Aircraft and parts, including aircraft engines	125	13,771	48,637	27,976,663	77,488,188	279,496,844
15	Alloying, and rolling and drawing of nonferrous metals (except aluminum)	188	5,363	38,816	13,235,301	56,282,378	445,060,017
15	Aluminum ware, kitchen, hospital, and household (except electrical appliances)	32	888	6,297	2,192,950	7,774,778	37,124,898
15	Aluminum products (including rolling and drawing and extruding), not elsewhere classified	162	2,983	17,249	6,476,896	25,539,148	169,819,269
9	Ammunition	13	687	4,264	1,395,058	4,952,610	29,091,475
3	Artificial leather and oilcloth	36	634	3,976	1,673,592	5,391,326	43,434,067
20	Artists' materials	42	137	397	321,625	464,389	4,070,141
13	Asbestos products (except steam packing and pipe and boiler covering)	79	1,276	9,979	2,960,053	11,578,739	60,774,252
14	Automobile stampings	90	1,242	8,597	3,283,252	11,970,203	47,833,155
18	Automobile trailers (for attachment to passenger cars)	79	177	1,426	367,493	1,501,270	7,941,996
16	Automotive electrical equipment	84	2,855	17,495	6,509,312	24,896,474	109,761,620
1	Baking powder, yeast, and other leavening compounds	47	505	2,335	1,706,273	3,654,208	31,774,637
6	Baskets for fruits and vegetables	153	451	8,048	816,117	4,470,188	14,286,273
16	Batteries, storage and primary (dry and wet)	221	2,365	15,034	5,361,603	19,209,426	117,410,394
3	Battling, padding, and wadding; upholstery filling	124	548	4,504	1,561,789	4,120,350	30,213,085
20	Beauty-shop and barber-shop equipment	72	420	1,986	1,163,672	1,817,595	13,006,333
10	Beehive coke	29	69	685	73,101	701,108	4,781,094
1	Beet sugar	85	1,477	10,410	2,941,734	12,361,317	134,396,017

TABLE 2—SUMMARY FOR 1939, BY INDUSTRIES (Continued)

Group No.	Industry	Number of establishments	Salaried personnel	Wage earners (average for the year)	Salaries	Wages	Value of products
4	Belts (apparel), regardless of material . . . . .	245	453	4,222	\$1,079,482	\$4,066,591	\$19,076,348

TABLE 2—SUMMARY FOR 1939, BY INDUSTRIES (Continued)

Group No.	Industry	Number of establishments	Salaries per person	Wage earners (average for the year)	Salaries	Wages	Value of products
20	Fabricated plastic products, not elsewhere classified	216	2,081	15,094	\$4,936,817	\$17,688,104	\$71,904,067
14	Fabricated structural steel and ornamental metal work, made in plants not operated in connection with rolling mills	1,138	6,601	35,477	16,504,392	47,549,506	284,669,659
20	Feathers, plumes, and artificial flowers	314	530	6,650	1,156,757	4,582,411	18,503,971
3	Felt goods, wool, hair, and jute (except woven felts and hat bodies and hats)	37	354	3,346	850,737	3,856,988	23,573,823
9	Fertilizers	764	2,666	18,744	5,251,099	13,678,397	185,684,328
7	Fiber cans, tubes, and similar products	116	764	6,637	1,819,906	6,962,529	33,345,334
14	Files	22	370	3,205	832,615	3,838,520	11,293,946
4	Finishing of men's and boys' hats of fur felt, wool felt, and straw	151	698	6,909	1,625,612	6,207,422	33,240,221
14	Firearms	23	781	5,001	1,503,622	8,846,317	17,711,651
20	Fire extinguishers, chemical	28	311	995	702,274	1,273,055	9,228,416
9	Fireworks	59	190	1,158	454,757	987,446	4,628,181
9	Fish and other marine oils, cake, and meal	76	230	1,523	749,804	1,307,934	13,622,312
13	Flat glass	37	1,519	16,738	3,711,843	24,008,619	102,389,012
1	Flavoring extracts and flavoring sirups, not elsewhere classified	477	1,344	3,589	4,480,541	3,764,360	139,901,840
1	Food preparations, not elsewhere classified	1,007	2,314	13,120	6,102,670	11,179,273	172,459,397
17	Food-products machinery	379	3,500	13,979	8,873,586	18,936,642	90,840,544
13	Floor and wall tile (except quarry tile)	49	492	5,681	1,022,424	5,931,149	17,658,885
1	Flour and other grain-mill products	2,143	5,548	24,771	12,517,968	28,369,796	649,943,088
12	Footwear (except rubber)	1,070	14,082	218,028	29,416,005	183,657,529	734,673,111
14	Forgings, iron and steel—made in plants not operated in connection with rolling mills	207	2,018	15,372	6,223,167	22,652,054	104,883,196
10	Fuel briquets	32	73	410	140,449	484,719	5,287,282
4	Fur coats and other fur garments, accessories, and trimmings	2,175	2,812	13,094	7,644,694	23,403,321	168,031,656
20	Furs, dressed and dyed	145	550	5,115	2,153,029	9,065,676	22,395,325
14	Galvanizing and other coating—carried on in plants not operated in connection with rolling mills	83	197	1,212	752,859	1,342,647	6,195,640
20	Games and toys (except dolls and children's vehicles)	343	1,736	15,610	4,086,597	12,656,729	55,400,894
8	General commercial (job) printing	9,595	20,298	96,039	48,795,502	132,957,236	515,435,609
16	Generating, distribution, and industrial apparatus, and apparatus for incorporation in manufactured products, not elsewhere classified	491	21,354	70,401	50,074,952	104,083,541	470,462,442
13	Glass containers	77	2,917	25,753	7,064,560	34,181,498	158,271,647
9	Glue and gelatin	80	595	3,039	1,807,407	3,941,588	34,331,639
15	Gold and silver leaf and foil	26	64	563	201,590	469,577	2,108,990
8	Gravure, rotogravure, and rotary photogravure (including preparation of plates)	24	403	2,623	1,442,202	5,436,278	18,614,837
14	Gray-iron and semisteel castings	1,161	5,839	58,430	15,343,487	70,757,944	209,719,754
9	Grease and tallow (except lubricating greases)	310	842	5,201	2,176,287	6,508,509	58,226,218
8	Greeting cards (except hand-painted)	109	1,542	7,522	3,348,337	7,264,165	39,715,439

16	X-ray and therapeutic apparatus and electronic tubes	84	692	1,959	1,815,337	2,744,251	17,945,038

The tables (pp. 431-439) show the results of the census, first by groups of industries and secondly by individual industries in alphabetical order. A separate report was made showing, also, the relative importance of leading industries in terms of employment. Nine industries employed a total of 2,133,890 wage earners out of the total of 7,887,242 employed in all industry. The number of wage earners in each of the nine was as follows: Motor vehicles, bodies, parts, and accessories, 397,537; steel works and rolling mills, 368,904; cotton broad woven goods, 312,249; sawmills, veneer, and cooperage-stock mills, 265,185; footwear, except rubber, 218,028; bakery products except biscuit, crackers, and pretzels, 201,537; woolen and worsted manufactures, 140,022; wholesale meat packing, 119,853; paper and paperboard mills, 110,575.

**MANUFACTURING.** See BUSINESS REVIEW; ELECTRICAL INDUSTRIES; MANUFACTURES, CENSUS OF; the countries under *Manufacturing or Production*; the States under *Manufacturing*.

**MAPLE PRODUCTS.** See SUGAR.

**MAPPING.** See the articles on GEOLOGICAL SURVEY and GEOLOGY.

**MARIANA ISLANDS.** See JAPANESE PACIFIC ISLANDS

**MARIHUANA.** See NARCOTIC DRUGS CONTROL.

**MARITIME COMMISSION, U.S.** See SHIPBUILDING; SHIPPING.

**MARITIME LABOR BOARD.** See SHIPPING.

**MARKETING.** The volume of distribution at both wholesale and retail expanded during 1940, as a result of the national defense program and the consequent increase in national income. When the volume of sales increases, problems of price cutting and regulation of competitive practices tend to become less acute, because there is more business available for all types of distributors, so that interest in such trade problems was less intense. The war produced new problems for wholesalers and retailers, since imports from Europe were largely cut off during the latter part of the year and there was widespread fear that trade with the Far East also might be limited or halted because of new restrictions imposed by the U.S. Government or the extension of the war to that part of the world. The conflict abroad also curtailed foreign markets for many American exports, although a sharp increase in armament shipments to British Empire countries was an offsetting influence.

The gigantic national defense program launched by the U.S. Government affected marketing in a number of respects. First, it made the Government the most important purchaser of a wide range of products. Not only war materials but huge quantities of woolen cloth, cotton goods, shoes, lumber, and other products were purchased by the Federal Government for the armed forces. Separate divisions were set up in the Advisory Commission to the Council of National Defense for purchases and price stabilization, and buying for the armed forces was partially centralized. Furthermore, to meet

the new situation, a large proportion of Government purchases were effected through negotiated contracts, rather than on a competitive bidding basis. In many instances, "escalator clauses" were inserted to protect contractors against unlooked for increases in their costs. It was generally recognized, however, that the procurement organization of the Federal Government would have to be further developed to carry out efficiently the vast program of purchases required for the defense and aid to Britain programs. Early in January, 1941, the Office of Production Management was set up to accomplish this. With the application of priority restrictions expected in the later phases of the armament program, wholesale and retail distributors knew they would be affected in a number of respects, and prepared accordingly. Under a drastic priority system, many distributors will find it impossible to obtain deliveries to maintain their sales volumes in the case of many products. Hence, they sought to expand stocks on hand late in the year.

**Raw Materials Marketing.** The marketing of agricultural products was affected by the loss of European export outlets. This was most notable in the case of raw cotton, exports of which fell to negligible levels comparable to those of the Civil War period. Exports to the continent of Europe practically halted, except for a trickle of shipments to Russia via Vladivostok. Even British Empire countries preferred to obtain cotton outside the United States, in order to conserve their dollar exchange resources for the purchase of war materials here. Because the Government absorbed surplus cotton and other leading agricultural products by taking them over as collateral for loans to farmers, however, prices of farm products remained firm. The Government sought to reduce acreage for such crops further, insofar as this was possible under the Agricultural Adjustment Act, in order to hold down the amount of surplus output which would be turned over to it as security for loans.

In view of the clouded international situation, measures were taken to build up reserves in this country of imported raw materials, particularly those regarded as "strategic" because they play a role in war (see RECONSTRUCTION FINANCE CORPORATION), and the marketing of raw materials was considerably affected by the supervisory role of the Price Stabilization Division of the National Defense Advisory Commission (q.v.).

Trading on the commodity futures exchanges declined sharply. The turnover on all futures exchanges aggregated 2,131,000 contracts, which compared with 2,377,000 contracts in 1939. With strict control of commodity prices by governments here and abroad, there was a tendency to curtail the use of hedging facilities. Furthermore, in the case of imported commodities, the accumulation of large stocks by Government corporations and the belief that a cessation of shipments to this country would make contracts calling for future delivery of limited value to those covering their requirements in this way contributed to the decline in turnover. The futures exchanges made efforts to increase interest in their markets, however, contending that the possibility of the end of the war and relaxation of Government controls made hedging more desirable than ever for conservative manufacturers and merchants.

**Wholesale Trade.** Wholesalers enjoyed a larger volume of sales. The sharp increase in the volume and scope of Government buying produced a new situation for many wholesalers. In the food

industry, for example, a committee was set up to confer with national defense officials to assure jobbers' ability to fulfill the demands of Army posts and cantonments, many of which were being established in out-of-the-way places. As far as possible, wholesalers in each area sought to meet such demands through the use of their existing warehouse and other facilities. Despite the large size of Army and Navy purchases, wholesalers in many instances found they could fill defense orders, although in other cases the Government preferred to deal directly with manufacturers.

Percentage changes in the volume of wholesale trade, month by month, during 1940, as compared with 1939, as reported by the Bureau of the Census on the basis of reports from a varying number of wholesalers, were as follows:

#### WHOLESALE TRADE

[Sales of Wholesalers Reporting to The Bureau of The Census and The National Association of Credit Men. Figures not comparable as number of reporting concerns varies]

Month	1940	Percentage change from 1939
January	\$182,777,000	+10.3
February	189,979,000	+12.1
March	205,256,000	+0.8
April	223,232,000	+11.3
May	220,473,000	+6.8
June	221,460,000	+6.1
July	221,214,000	+10.5
August	217,647,000	+5.7
September	243,779,000	-5.1
October	246,405,000	+10.0
November	214,296,000	+7.0
December	214,821,000	+15.0

**Retail Trade.** Department store sales increased 4.4 per cent during 1940, as compared with the year before, according to the Board of Governors of the Federal Reserve Board.

Changes in sales volume of stores in various Federal Reserve Districts for the year were as follows:

#### DEPARTMENT STORE SALES

[Change in Volume, 1940 as compared with 1939]

Federal Reserve District	Percentage Change (+ Increase)	Federal Reserve District	Percentage Change (+ Increase)
Boston	+3	Chicago	+7
New York	...	St. Louis	+7
Philadelphia	...	Minneapolis	+3
Cleveland	.....	Kansas City	...
Richmond	...	Dallas	...
Atlanta	...	San Francisco	...

Sales of other types of stores over the three years 1938-40 varied as follows:

#### RETAIL SALES

[1929-31 = 100]

Type of Stores	1938	1939	1940
Variety Chain Stores*	99.3	103.5	107.6
Grocery Chain Stores	94.1	102.5	112.5
Rural Merchandise Stores	114.1	127.5	134.6

\* Base, 1935-39 = 100

A breakdown of retail trade by kinds of business is shown in the table on page 441, which was published (Feb. 14, 1941) by the U.S. Department of Commerce as part of the Sixteenth Census of the United States.

While retail trade thus showed a substantial overall increase, there were several special developments incident to the national defense program and the war. Supplies of many types of imported

## UNITED STATES STORES, SALES, PERSONNEL, PAY ROLL AND STOCKS BY KINDS OF BUSINESS: 1939

\* Employees and pay roll include paid executives of corporations but not the number and compensation of proprietors of unincorporated businesses.

<sup>1</sup> Revised to exclude service garages and other automotive service businesses formerly classified as Retail but now included in the Service Census.

merchandise, such as jewelry, wines, and toys, became increasingly difficult to obtain, and retailers sought to substitute domestic products. Sales of luxury goods showed much smaller increases, by and large, than distribution of lower priced products, reflecting the increased taxes on higher incomes, lower stock market prices, and sharp price increases for many imported luxury products. Late in the year, consumers showed a tendency to anticipate purchases of durable consumer goods, fearing price increases, delivery delays, or reduced output of these products because of the defense program.

The Department of Justice launched a comprehensive investigation into the food industry, on the complaint of independent retailers that restraint of trade and monopoly existed in food distribution, particularly in the marketing of fresh fruits and vegetables. Enforcement of re-sale prices in the liquor trade broke down in several communities, particularly New York, and sentiment among liquor retailers for the enforcement of fair trade laws by State regulatory commissions increased. The Department of Justice, however, was critical of State fair trade laws generally, and the Miller-Tydings Act in particular, as bars to free price competition.

Self-service food supermarkets enjoyed further growth, numbering about 8000 by the end of the

year, of which about 5500 were individually owned and the rest operated by chain store enterprises. The independent supermarkets reported they had a total turnover of about \$2,000,000,000 for the year.

See AGRICULTURAL MARKETING SERVICE; SUPERMARKETING ADMINISTRATION. For marketing quotas, see AGRICULTURAL ADJUSTMENT ADMINISTRATION.

**MARTINIQUE.** A French island in the West Indies, between the British islands of Dominica and St. Lucia. Area, 385 square miles; population (Jan. 1, 1938), 255,000. Chief towns: Fort-de-France, the capital (52,051 inhabitants); Le Lamentin (16,303). Chief products: Sugar, cacao, bananas, pineapples, and rum. Education (1938): 32,870 students in schools of all kinds. Trade

(1938): Imports, United States \$6,756,000; exports, United States \$8,918,000. The budget for 1937 balanced at 101,100,000 francs.

**History.** With France's capitulation to Germany in June, 1940, the future status of Martinique became a matter of importance to both the United States and Great Britain as well as to the inhabitants of the island. Upon the French collapse, the aircraft carrier *Béarn*, carrying 100 new American-built military planes in addition to its normal complement of 40 aircraft, took refuge in Fort-de-France harbor. The light cruiser *Emile Bertin* also arrived from France, carrying government gold estimated at \$250,000,000 that had been removed from Paris during the German offensive. Several other French naval vessels, a supply of munitions, and some colonial troops were also in Martinique and near-by Guadeloupe.

To prevent these forces and the gold from falling under Axis control through an acquiescent French Government, the British demanded the demilitarization of the French naval vessels. On July 4 British warships began to patrol the entrance to Fort-de-France harbor and the French naval commander was warned that his ships would be attacked if they left. Washington then intervened with three objectives in view—to prevent an Anglo-French collision in the West Indies, to forestall the conversion of Martinique into an Axis advance base through the co-operation of the Vichy Government, and to prevent British occupation of the island. A strong American naval force was sent to watch developments at Martinique and on July 19 the State Department announced that the American consulate would be reopened at Fort-de-France. Later in the month the Havana Conference (see PAN AMERICANISM) established inter-American machinery for taking over European colonies in the Americas if necessary to prevent Axis control.

Washington's mediatory efforts helped to bring about a working agreement between British and French governmental and naval heads in the Caribbean in August. The French naval vessels in Fort-de-France and Guadeloupe were to be virtually demilitarized. The military force in Martinique was demobilized, with the exception of several thousand local conscripts undergoing military training. The American planes were stored on an open field near Fort-de-France, with vital parts removed. And the gold stock was removed from the *Emile Bertin* and stored in Fort St. Louis in the capital. The status of Martinique was the subject of further discussions between Washington and Vichy later in the year. French proposals to strengthen its defenses were opposed by the United States Government. See FRANCE under *History*.

French officials in Martinique, led by Governor Bressolles and Admiral Robert, commander-in-chief of the French West Indian forces, remained loyal to the Vichy Government despite the sympathy of most of the inhabitants for Gen. Charles de Gaulle's "Free French" movement. Pro-de Gaulle sentiment was encouraged by the virtually complete economic isolation resulting from the British blockade and other factors. Following an investigation of the political situation in Martinique by one of his agents, Marshal Pétain on December 13 appointed Yves Marie Nicol as Governor, succeeding M. Bressolles.

**MARYLAND.** Area, 12,327 square miles; includes water, 2386 square miles. Population (Unit-

ed States Census): April, 1940, 1,821,244; 1930, 1,631,526. Baltimore (1940), 859,100; Annapolis (the capital), 13,069.

**Agriculture.** In 1940 Maryland's harvested area of principal crops totaled 1,679,000 acres. Corn led all crops both in extent and in estimated return to the cultivator. Corn occupied 501,000 acres, made 17,535,000 bu., and by estimate was worth \$12,224,000 to the growers. Wheat, on 388,000 acres, gave 7,566,000 bu. (about \$5,826,000 of return); tame hay, on 422,000 acres, 55,000 tons (\$6,105,000); tobacco, 38,000 acres, 31,920,000 lb. (\$6,544,000); potatoes, 25,200 acres, 2,898,000 bu. (\$1,826,000); sweet potatoes, 9000 acres, 1,485,000 bu., (\$1,188,000); barley, 79,000 acres, 2,172,000 bu. (\$1,129,000); apples, 2,077,000 bu. (\$1,350,000). Farms (1940): 42,110; in area, they averaged 99.7 acres.

**Mineral Production.** Minerals produced from Maryland's soil, as reckoned in 1940 by the U.S. Bureau of Mines, attained \$9,407,723 for 1938. Of this, coal, sand and gravel, cement, and clay products made over nine-tenths. Coal mines yielded 1,281,413 net tons, value \$2,705,000 for 1938; for 1939, 1,468,000 tons. Clay products (exclusive of pottery: 1938, \$1,210,947. Apart from the total of native minerals, furnaces producing pig iron from outside ores, largely foreign, shipped 1,219,611 gross tons in 1938 and 1,805,080 tons in 1939. Production of coke, essentially from outside coal, rose from 1,105,262 net tons (1938) to 1,578,973 tons (1939).

**History.** On February 15 an instance of the old ill-feeling between whites and Negroes arose in one of the State's rural parts. A band of whites broke into the Worcester County (eastern shore) jail and seized two Negro women held there in connection with the murder and robbery of a white farmer, Harvey Pilchard, at his home in Stockton. The captors took the women to the Pilchard house, apparently to make them name the murderers. Five of the State police followed a few hours later and recaptured the women; the mob was dispersed, but one of the police suffered severe injury.

In the National election (November 5) Maryland's vote ran heavily Democratic. Roosevelt (Dem.) got 385,546 votes, to 269,534 for Willkie (Rep.); U.S. Senator G. L. Radcliffe (Dem.) was re-elected, defeating Harry W. Nice (Rep.); Democrats were elected to fill the State's six seats in the House of Representatives. The popular vote adopted five changes in the State constitution and rejected four. The chief of those adopted deprived public officers' salaries of exemption from income tax, and allowed the establishment of "people's courts"; the chief ones rejected would have limited the General Assembly's regular sessions to 90 days and forbidden a Governor's directly succeeding himself.

**Officers.** Maryland's chief officers, serving in 1940, were: Governor, Herbert R. O'Connor (Dem.); Secretary of State, Francis Petrott; Treasurer, Hooper S. Miles; Comptroller, J. Millard Tawes; Attorney General, William C. Walsh.

**MASSONS.** See FREEMASONRY.

**MASSACHUSETTS.** Area, 8266 square miles; includes water, 227 square miles. Population (U.S. Census), April, 1940, 4,316,721 (3,859,476 urban and 457,245 rural); 1930, 4,249,614. Boston (the capital), had (1940) 770,816 inhabitants; Worcester, 193,694; Springfield, 149,554.

**Agriculture.** Farmers harvested, in 1940, 483,100 acres of the principal crops. Tame hay, on

401,000 acres, gave 586,000 bu. estimated as worth \$9,142,000 to the producers; cranberries, a specialty of the southeastern section, on 13,400 acres, yielded 325,000 bbl. (\$4,128,000); tobacco, 6100 acres, 9,281,000 lb. (\$2,438,000); potatoes, 19,000 acres, 3,135,000 bu. (\$2,508,000); corn, 38,000 acres, 1,558,000 bu. (\$1,137,000); apples for market, 2,174,000 bu. (\$2,283,000).

**Education.** Data for the academic year 1939-40 reckoned the number of Massachusetts' inhabitants of school age, by age-groups, thus: 114,754, from 5 years to 7; from 7 to 16, 638,287. The year's enrollments of pupils in public schools numbered 700,305 (a drop of some 17,000 from the year before). Enrollments comprised 410,141 elementary, 107,622 in junior high schools, and 182,542 in high schools. The year's expenditures for public-school education came to \$69,818,825 for support and \$4,586,245 for outlay. Teachers in public schools numbered 25,656; their salaries averaged \$1959 for the year.

**Manufactures.** Yearly production of manufactured goods in Massachusetts totaled \$2,457,599,210 for 1939; \$2,620,788,793 for 1937. Other aggregates for 1939 (each with that for 1937 subjoined): 9006 (8619) establishments employed 459,877 (496,036) persons for wages of \$500,197,872 (\$556,076,897), paid for materials, etc., and contract work \$1,267,375,848 (\$1,364,299,029), and added to material, by manufacture, a value of \$1,190,223,362 (\$1,256,489,764).

**History.** A sequel to the efforts of Governor Saltonstall's incoming administration, in 1939, to correct waste of the State's money came in January, 1940, in a series of decisions of the Superior Court. These reduced by nearly one-half the State's liability on contracts made by Governor Hurley and Commissioner of Education Reardon (thereafter removed), to the amount of \$410,232, for ostensible repair of damage done by the hurricane at the teachers' colleges. The Court also ruled out an architect's claim to a fee of 6 per cent on the amount of the contracts. The Supreme Judicial Court dismissed in May a petition of Attorney General Dever to require a special session of the General Court, for correcting alleged faults in its act of 1939 for redistricting the State; the redistricting act was sustained.

Orders on account of the Federal Government's program to increase the Nation's defenses helped activity in some Massachusetts textile industries and in other lines of production, as the year ran on. Dependency on public aid became less common.

The difficulties of the New Haven Railroad system and of its subsidiary, the Old Colony Railroad, were not permanently settled, but the litigation over the proposal to cease operation of the greater part of the Old Colony's unremunerative passenger service and to drop the line from the New Haven system was temporarily settled; insurance companies that held about \$72,000,000 of the system's securities consented to further operation of the line for a limited time. The State and Governor Saltonstall in person had strenuously opposed abandonment, holding it the carrier's duty to go on operating, even though at a loss, in the public interest.

Boston's City Council adopted for the current fiscal year a budget totaling \$46,245,217; this exceeded that of the previous year by \$630,832 and required putting the rate of the tax on property above \$4 per \$100 of assessed valuation. Greater allowance for a single big item, the removal of

snow, made up the whole rise. Heavy and rising taxation stung taxpayers into activity in some of the other cities. A group in Cambridge brought suit and won in the Supreme Judicial Court, in June, a decision voiding the city's proposed budget as tardily and inadequately drawn; this compelled Cambridge to limit expenditure to the total of the previous year's budget. In Lowell a taxpayers' association sought by petition to submit the municipal budget to a popular referendum. See FIRE PROTECTION; WATER WORKS AND WATER PURIFICATION.

The Shell Union Oil Corp. announced plans to build 85 miles of pipe line connecting Fall River with Boston and Worcester; it designed to use Fall River as a port for landing the product of its refineries in the Gulf States, and oil was to be pumped overland to the big market in the State's two chief cities. In New Bedford the remaining indictments brought against several local officials in 1938 for corrupt conduct were dropped in May after an acquittal of Mayor Carney and three others tried for conspiracy in the granting of contracts to transport WPA workers. The Unemployment Compensation Commission, after an investigation, charged (April 17) that thousands of unwarranted claims to compensation had been paid in Lawrence. The town of Ware, its chief industry having moved south 28 months before, was reported in February to have successfully followed the example of Manchester, N.H.; townsmen had raised money, bought the abandoned manufactory through Ware Industries, Inc., a company created for the purpose, and rented the premises among 17 manufacturers giving employment in the production of hats, shoes, woolen textiles, and woodwork. The town of Natick appropriated for the experiment of putting bumps in the roadway in order to reduce the speed of vehicles on a street much frequented by children. On Cape Cod a great tract in Bourne, Sandwich, Mashpee, and Falmouth towns was made into Camp Edwards, at cost of several millions, to serve for training United States troops. See AQUEDUCTS; BIRTH CONTROL.

**Elections.** The popular vote in the general election (November 5) went to Roosevelt (Dem.), 1,076,522, for President and against Willkie (Rep.), 939,700, in the proportion of about 8 to 7. United States Senator David I. Walsh (Dem.), 1,088,838 votes, was re-elected, defeating Henry Parkman, Jr. (Rep.), 838,122; but Governor Saltonstall (Rep.), 999,864 votes, was re-elected, beating Attorney General Paul A. Dever (Dem.), 992,414, by a margin of a few thousand. Democrats gained a majority in the Governor's Council, a body of sufficient powers to restrict the Governor's action in many respects. Referenda in many localities revealed unexpectedly strong support for proposals to get money for raising old-age pensions to \$40 a month by operating a State lottery.

**Officers.** Massachusetts' chief officers, serving in 1940, were: Governor, Leverett Saltonstall (Rep.); Lieutenant Governor, Horace T. Cahill; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, William E. Hurley; Auditor, Thomas J. Buckley; Attorney General, Paul A. Dever; Commissioner of Education, Walter F. Downey.

**MEDICINE AND SURGERY.** The past year saw no striking new developments in the field of medicine, but rather there was a uniform and orderly advance on many fronts. In particular, additional experiences tended to confirm the importance of previously described advances in the fields of chemotherapy and nutritional research, and to indicate that they may be of even greater importance than at first had been expected. In other fields, positions tentatively established were similarly consolidated. World War II was not without its repercussions in medicine. Interest was revived in military medicine in all of its phases, but perhaps particularly in the treatment of wounds and of compound fractures, and in the use of preserved blood, or plasma, in the treatment of hemorrhage and shock. Furthermore, numerous measures were taken to prepare the profession against any emergency which might arise.

Of general interest to medicine in its sociologic and economic aspects was the indictment filed on Dec. 20, 1938, in the District Court of the United States for the District of Columbia, charging the American Medical Association, three local medical societies, and twenty-one individual defendants with conspiracy to violate Section 3 of the Sherman Anti-Trust Act. This charge was based on the activities of certain units of organized medicine which, it was alleged, constituted a conspiracy to restrain Group Health Association, a non-profit co-operative association of governmental employees in the District of Columbia, "in its business of arranging for the provision of medical care and hospitalization to its members and their dependents on a risk-sharing prepayment basis." As reported in the 1939 **YEAR BOOK**, demurrers to the indictment had been sustained by Mr. Justice Procter, and the request of the Department of Justice that the Supreme Court accept jurisdiction on an appeal (without following the usual course through the Circuit Court of Appeals) had been denied. In the meantime, the Government had appealed the ruling to the United States Court of Appeals for the District of Columbia, and on Mar. 4, 1940, this Court filed its opinion reversing the decision of the District Court and remanding the case to the District Court for a trial on the merits. A petition of the defendants to the Supreme Court of the United States to grant a writ of certiorari to review the decision of the Court of Appeals was opposed by the Government, and was denied by the Supreme Court on June 3. The significance of this action is interpreted by the Editors of the *Journal of the American Medical Association* as follows:

"The fact that the Supreme Court of the United States declined to review the decision of the Court of Appeals at this time, does not mean, as all lawyers know, that the Supreme Court of the United States approved the opinion of the Court of Appeals, but means only that for the present the Supreme Court of the United States is satisfied with the action of the Court of Appeals in sending the case back to the District Court for a trial on its merits. If the result of such a trial should be adverse to the defendants, the question whether the practice of medicine is a trade, within the meaning of the language used in the Sherman Anti-Trust Law, would still be an open question for the Supreme Court of the United States to decide. The Supreme Court of the United States has not yet decided that the practice of medicine in the District of Columbia is a trade within the meaning of the language of the Sherman Anti-Trust Law." (*Jour. Am. Med. Assn.*, 115: 222, 1940.)

On October 17 United States Attorney Curran announced that Justice Morris of Criminal Court No. 2 of the District of Columbia had disqualified himself from sitting on the case by his former connection with the Justice Department, and because of the fact that Justice Letts of Court No. 1 had a heavy assignment for the next few weeks, "I have taken the case off the assignment and it will be set down for trial in the future on a date agreeable to both the Government and the defendants."

Of importance as indicating a new trend in medicine was the publication in April of *The Directory of Medical Specialists Certified by American Boards*, (Columbia University Press, New York). This volume, prepared under the editorial direction of Dr. Paul Titus and Dr. J. Stewart Rodman, contains the names, addresses, and a brief account of the training of some 14,000 specialists who have been certified by the various examining boards for the medical specialties. It makes readily available information concerning specialists in various branches of medicine in any given community. As the importance of certification by the various examining boards gains increasing recognition, it seems that not only may hospital appointments be conditioned by evidence of competency as indicated by certification, but that there may even be developed legal restrictions concerning so-called specialization. Although unquestionably the names of many competent specialists are not included in this directory—since they have not as yet sought certification—the volume does, nevertheless, make available the names of a large group concerning whose training and qualifications as specialists there can be no doubt.

At the present time there are in this country fourteen approved examining boards in the medical specialties, the work of which is co-ordinated by the Advisory Board for the Medical Specialties, organized in 1938, of which Dr. Willard C. Rappleye is the president. The specialties covered are anaesthesiology, dermatology and syphilology, internal medicine, obstetrics and gynecology, ophthalmology, orthopedic surgery, otolaryngology, pathology, pediatrics, psychiatry and neurology, radiology, surgery, urology, plastic surgery, and neurological surgery.

Although the requirements for certification by the different boards vary, they nevertheless have certain basic features, among which are satisfactory moral and ethical standing in the profession, membership in some of the units of organized medicine, limitation of practice to the specialty, an adequate period of postgraduate training (usually a minimum of three years in an approved hospital), and evidence of competency as furnished by written and oral examinations as well as in some instances by observation by the Board of the technical proficiency of the applicant. There is but little question that the specialty boards not only have afforded a great impetus to the improvement of postgraduate medical education in this country, but also that they will insure an improved standard of practice in the various specialties.

**Medical Preparedness.** Events of the past year have indicated that medicine is to play an important role in the National Defense Program. On September 19 an Executive Order was issued by the Council of National Defense, with the approval of the President, establishing as a subordinate body to the Council, a committee to be known as The Health and Medical Committee. The committee consists of Dr. Irvin Abell, Chairman; the Sur-

geon General of the Army; the Surgeon General of the Navy; the Surgeon General of the Public Health Service, and the Chairman of the Division of Medical Sciences of the National Research Council. The duties of the committee are to "advise the Council of National Defense regarding the health and medical aspect of national defense and to co-ordinate health and medical activities affecting the national defense." It was a source of considerable satisfaction to physicians generally that Dr. Abell, former President of the American Medical Association and an outstanding figure in organized medicine, was made chairman of this committee.

Another activity of physicians has been in relation to the Selective Service Act. Throughout the country they have volunteered their services to the local draft boards. The importance of physicians in deciding whether claims for exemption on account of physical disability are just, is too obvious to deserve comment. The profession is proud of the part it will take in the selection of the New Citizens Army.

Many general hospitals and particularly those associated with medical schools, have been asked by the Surgeon General of the Army to organize military hospitals which, in case of emergency, could function promptly. There has been a gratifying response to this appeal, and a number of plans for base hospitals and for evacuation hospitals have been set up. These organizations will be manned by a complete staff including doctors, nurses, technicians, and lay employees.

Considerable attention is being devoted to the public health aspect of mobilization, particularly in regard to communicable diseases, the control of venereal disease, and the detection and prevention of tuberculosis in recruits. It is also apparent that the widespread physical examination of young men from 21 to 35 years of age will be important in at least two aspects—first, in determining the degree of physical fitness of a considerable section of the general population, and second in permitting the early diagnosis and treatment of many remediable conditions.

Certain problems are beginning to arise because of the induction into active service of a large number of physicians in the Medical Reserve Corps. Hospitals are beginning to feel the loss of junior staff members and house officers. Also, in some smaller communities, a considerable burden has been placed on older physicians by the departure of their younger colleagues.

So important does the American Medical Association consider the present crisis that it has announced the forthcoming publication of a new periodical *War Medicine*, which will be devoted to consideration of the various phases of medical service under military conditions. Beginning in January, 1941, this Journal was scheduled to be issued bi-monthly.

**Surgery of Modern Warfare.** Out of the disastrous civil war in Spain came the report of a new method of treatment of compound fractures with results so striking that it seems likely to be adopted by military surgeons in all countries. In a small book by J. Trueta (*Treatment of War Wounds and Fractures With Special Reference to the Closed Method as Used in the War in Spain*, 146 pp. New York, Paul B. Hoeber, Inc., 1940) of the Spanish Republican Army, and Chief Surgeon of the General Hospital of Catalonia, reports are made upon the treatment of 1073 cases, most

of them due to war wounds. The results in this group were considered to be good or satisfactory in 976 cases, and, most interesting of all, there were only 6 deaths. The method had as its chief aim the complete immobilization of the injured extremity in a circular plaster of Paris cast after a preliminary careful debridement of the wound and reduction of the fracture. This simple technique is in striking contrast to the elaborate traction methods of the last world war and the associated irrigation of the wound with chemicals. A method similar in principle to that of Trueta has long been advocated in this country by H. Winnett Orr of Lincoln, Neb., and the late William S. Baer of Baltimore, but it had been used chiefly in the treatment of osteomyelitis, and it remained for Trueta to apply this principle of physiologic rest of the injured extremity to a large series of war wounds. Trueta emphasizes that rest allows the formation of clots in the small veins and capillaries of the injured area, thus preventing the spread of infection, and hastening the healing of the wound. It is his practice to apply the cast directly to the unpadded skin of the extremity and as a rule it is not changed for a period of 10 to 15 days, and only then chiefly because of the offensive odor of the accumulated wound secretions. Dr. Rudolph Matas, the Dean of American Surgeons, visited the Catalonian war zone and had the opportunity of inspecting Trueta's wards. In describing his experience he says: "I had an opportunity to see several plaster encasements removed from arms and thighs after they had been in situ for from 15 to 21 days. The stench of the soiled encasements was nauseating. A magma, or mush, of decomposing pus, wound secretions including sweat and other matter, covered the surface of the wound under the plaster bandage. But after wiping this off with warm water and soap, and when the packs were removed, I was surprised to see the excellent, healthy, pink, well granulated appearance of the wounds, coupled with a very satisfactory condition of the patients—no fever, no pain, good appetite, etc. This was indeed a revelation which I had not anticipated, . . . in fact if there was one essential for the successful treatment of fractures, it was plaster of Paris. By the close of the war, plaster had risen to the level of an apotheosis in surgical esteem." Another American surgeon who saw service with the Republican Army in Spain, Dr. Leo Elosser, has recently written very interestingly of his experiences (*Jour. Am. Med. Assn.* 115: 1848, 1940).

Coller and Farris have recently reviewed the current literature concerning war injuries. (*Surgery, Gynecology & Obstetrics*, 72: 15, 1941). In regard to wounds of the cranium, they point out that the German Army during the Polish campaign often transported those with head wounds to the interior by air in order that they might have the benefit of skilled neurosurgical assistance. It is reported that the British Army has prepared mobile units equipped to do cranial surgery at the front. Both of these reports indicate the necessity for the treatment of those with cranial injuries by surgeons especially trained in this field, and having access to adequate equipment. Concerning thoracic and abdominal wounds, emphasis is again placed upon the importance of early treatment, since the chances of survival vary inversely with the period allowed to elapse before treatment is instituted. It seems probable that air transport will play an increasingly important role in the evacuation of the wounded. Other items of interest are the develop-

ment of light armor for various parts of the body. In the past war, for instance, it was demonstrated that the incidence of cranial wounds could be reduced from 15 per cent to 3 per cent by the use of steel helmets. Since many wounds are caused by small missiles of low velocity, light armor is now being proposed for the chest, for the hands, and for the eyes.

**The Use of Desiccated Blood Plasma.** When whole blood is centrifuged, the solid elements (red blood cells) are separated from the fluid component (plasma). For some time it has been recognized that in certain conditions, such as shock and severe burns, only plasma is lost from the circulatory system; consequently the replacement of plasma by transfusion is more effective than is the administration of whole blood. The recent development of methods by which blood plasma may be concentrated by means of drying from the frozen state, promises to be of very great importance. The "adtevac" process of Hill and Pfeiffer at the Baylor University School of Medicine, apparently offers a reliable and inexpensive method for the desiccation of blood in large quantities. (*Annals of Internal Medicine* 14: 201, 1940.) Dried blood plasma has certain unique advantages. It may be stored practically indefinitely without deterioration, and there is no loss of antibodies or of complement. Because of the small volume of the dried product, it may be transported in large quantities with ease. Since it is prepared from pooled plasma of various types, the agglutinins are absorbed and consequently it may be given without the necessity of typing or cross matching with the blood of the recipient. Finally, since the plasma can be redissolved in small amounts of water, it may be given in as concentrated a form as desired. Because of the concentration it may be administered with greater simplicity and speed than whole blood. The chief uses of concentrated plasma, according to Hill, are first the regulation of blood volume; second, control of plasma protein level, and third, special adjustment of fluid balance where hypertonic effects are essential. Only in instances where red blood cells must be added to the patient's circulation is transfusion of whole blood definitely superior.

Interest in blood substitutes has, of course, been greatly stimulated by the present war. Two groups of English workers, Buttle and his co-workers at Middlesex Hospital, and Aylward and his colleagues in Manchester, have reported experimental studies of the use of concentrated plasma and serum. According to the former, plasma is the most efficacious blood substitute of any of the materials which they have studied. Aylward has been particularly interested in the technique of the drying and concentration of plasma, and is convinced of the superiority, particularly so far as use in war is concerned, of dried plasma over whole plasma. (Buttle et al., *Lancet* 2: 507, 1940.) (Aylward et al., *Brit. Med. Jour.* 2: 4165, 1940.)

The first extensive report of the use of desiccated plasma in shock is that of Hill, Muirhead, Ashworth, and Tigertt (*Jour. Am. Med. Assn.* 1941—in press). They point out that the essential aim of the treatment of shock, regardless of its cause, is the restoration of circulating blood volume since the syndrome is generally agreed to depend upon a diminution of the blood volume in relation to the capacity of the vascular system. Concentrated blood plasma appears to be ideal in this respect since larger amounts of protein can be

more rapidly placed into the circulation than by any other method, and because the hypertonic plasma tends to effect an immediate reversal of the abnormal physiologic changes of shock—that is to say, fluid is returned to the blood stream from tissues into which it had previously been lost. Finally, it seems probable that concentrated plasma directly stimulates the tone of the vascular system and causes a decrease in the permeability of the blood vessels. They report upon the use of concentrated blood plasma in 45 carefully studied cases of shock of various types. Of this number 19 cases were considered to be severe, 16 moderately severe, and 10 mild. The results of treatment in this group were considered to be excellent in 36 cases, fair in 8 cases, but poor in but 1 case.

They also have found concentrated plasma to be of great value in treatment of the shock associated with severe hemorrhage, and point out that the loss of red cells does not reach a critical level until 60 to 75 per cent have escaped from the circulation. It has been their practice, then, in cases of shock associated with hemorrhage, to administer plasma first and then as the blood pressure rises, to give in addition transfusions of whole blood. One point emphasized by these workers is the safety of the method. Previous reports have indicated that reactions to the administration of concentrated plasma might be frequent. The Baylor workers, however, encountered only three febrile reactions in 299 administrations of concentrated plasma. They believe that if the dried material is dissolved in suitably prepared non-pyrogenic water, reactions will be very rare indeed.

Without reporting a series of cases in detail, Hill indicates that concentrated plasma is likely to prove of great use in the treatment of a number of other conditions; among them first, severe burns in which loss of plasma is probably the chief cause of early death; second, in a variety of states characterized by a decrease in the level of the blood proteins; and third, for its hypertonic effect in such conditions as increased intracranial pressure. Among other conditions in which its use is being studied are nephrosis and the toxemias of pregnancy.

It seems likely that the administration of concentrated plasma will come to be a commonly used and effective therapeutic agent quite comparable in its status to the transfusion of whole blood. Although its uses probably will be many, at the present, because of the world war, interest will be centered chiefly in its use in hemorrhage and shock. Preparations are already being made to supply the British Army with a large amount of the material derived from donated blood. It seems not unlikely that it may be found practicable in the stress of military combat to administer adequate amounts of concentrated plasma to the wounded in the field. Certainly it is a method of treatment which may be used at the emergency aid station. It should in many instances prove to be a lifesaving measure.

Flösford, Stokes, and Mudd, of the University of Pennsylvania, who have for some time been interested in the preparation of dried plasma, are carrying on studies similar to Hill's, and in September reported upon a method of desiccation called the "desivac" process which, they say, "is more economical than earlier procedures with vacuum drying on a large scale required, for instance in the preservation of human blood plasma for use as a blood substitute. It is entirely mechanical in operation; the water vapor is removed directly from

the high vacuum space, and is discharged to the atmosphere in the liquid phase. Low temperature condensation or chemical desiccants are not required." (*Jour. Am. Med. Assn.* 115: 1095, 1940.)

The present interest in matters pertaining to the composition of the blood in relation to surgical problems is shown by the fact that a large part of the program of the meeting of the American Surgical Association held this year in St. Louis, Mo., was devoted to a symposium on the fluid and electrolyte needs of the surgical patient. Such subjects as the structure of the blood, blood preservation, sodium chloride metabolism, plasma volume in acute intestinal obstruction, plasma loss in severe dehydration and shock, and hypoproteinemia were discussed.

It may be mentioned in passing that at the present time studies are being carried on by Wangenstein at the University of Minnesota on the use of bovine plasma administered to man. (*Proc. of the Society for Experimental Biology and Medicine* 43: 6161, 1940.) Experiences to date, while favorable, are too limited to allow of prediction as to its ultimate utility. Should the transfusion of bovine plasma prove practicable, it is clear that an unlimited source of plasma will have been found. Such an advance would certainly be one of the very first order.

**Sulfanilamide and Its Derivatives.** Experiences gained during the past year have demonstrated conclusively the importance of the sulfonamide group of drugs in the treatment of infections. Contrary to the usual experience with new therapeutic agents, the early hopes aroused by reports of the use of sulfanilamide have not only proved to be well founded, but rather it is not too much to say that the importance of this new therapeutic agent is only now beginning to be realized. At present it is apparent that the specific action of sulfanilamide and its related compounds in pyogenic infections is clearly as striking as that of quinine in malaria and the arsphenamines in syphilis. A representative opinion is that of Dr. E. K. Marshall, Jr., Professor of Pharmacology in The Johns Hopkins University, in an address published in the *North Carolina Medical Journal*, March, 1940, that "its introduction into medicine is to be ranked with the two great therapeutic discoveries in all medicine—the discovery of anesthesia and that of aseptic surgery."

In previous YEAR BOOKS the story of the discovery of sulfanilamide and of its introduction into clinical medicine has been told, and, in 1938, the related compound, sulfapyridine, was described. This year we report on still another derivative—sulfathiazole—which has been found to be very effective in the treatment of infections caused by the staphylococcus.

Before discussing the new derivative, certain points of interest regarding the mode of action of sulfanilamide are worthy of mention. Among these is the important contribution of Lockwood and Lynch (*Jour. Am. Med. Assn.* 114: 935, 1940) who have shown that the bacteriostatic action of sulfanilamide and sulfapyridine is most marked in culture media completely devoid of peptone. Since peptone is one of the end products of proteolytic changes in tissue resulting from necrosis, these findings help to explain the clinical observation that sulfanilamide is much more effective in the treatment of generalized or of diffuse spreading infections than in the treatment of localized lesions, such as abscesses, which contain necrotic tissue.

Another interesting discovery is that of Harris and Kohn (*Science* 92: 11, 1940) that bacteria grown and subcultured in the presence of sulfonamide drugs might eventually develop strains against which the sulfonamides would have little or no bacteriostatic action. This finding throws light on the clinical observation that in the presence of long continued inadequate treatment with sulfanilamide, the bacteria appear to develop a resistance to the drug.

Among the new uses listed for sulfanilamide was its prophylactic administration prior to operations involving a resection of the bowel. Lockwood and Ravdin (*Surgery* 8: 43, 1940) found that by this means they were able definitely to lower the incidence of postoperative peritonitis. Sulfanilamide has also been recommended in the treatment of chronic undermining, burrowing ulcer of the skin, a dreaded complication sometimes following the drainage of peritoneal abscesses, and in the treatment of patients with severe burns.

Several reports have attested its value in the treatment of chancroid, in which a shorter healing time of the genital ulcer has been found. Among conditions in which its use has been recommended, on an experimental basis, are Hodgkin's Disease, tularemia, and lupus erythematosus. It has also been used experimentally in diphtheria and in subacute bacterial endocarditis.

Other findings of importance are that the cyanosis which frequently appears as a transient manifestation during sulfanilamide therapy, is due to the presence of methemoglobin in the blood, and, it may be mentioned, is of little clinical significance. It has been found that the cyanosis may be counteracted by nicotinic acid (a constituent of the vitamin B complex) and by methylene blue.

A point of practical importance is the recent demonstration that sulfanilamide is satisfactorily absorbed from the rectum. This route of administration may be useful in the presence of nausea and vomiting which sometimes follow oral administration of the drug.

Numerous reports during the year have again emphasized the importance of the toxic phenomena which may be associated with the use of the sulfonamide compounds, and have indicated the necessity for the careful study both by clinical and by laboratory means, of the patients undergoing treatment, since most of the toxic effects disappear if the drug is promptly withdrawn upon their occurrence.

During the past year studies have been made of the use of sulfanilamide in the local treatment of wounds, in contrast to its systemic administration. Preliminary results seem to be quite encouraging. Jensen and his co-workers at the Minneapolis General Hospital have treated thirty-nine cases of compound fractures and two compound dislocations by placing crystalline sulfanilamide in the wounds at the time of debridement and reduction of the fractures. They report that all of these wounds healed without infection. In a similar series of ninety-four compound fractures treated in the same fashion, except that no sulfanilamide was employed, 27 per cent developed infection, and in 5 per cent of the cases amputation was necessary. These authors believe that the increased effectiveness of sulfanilamide used locally may be explained by the fact that a local concentration of the drug from seventy to eighty times greater than that occurring with systemic administration may be obtained. Key and Burford conducted experimental studies which

showed that the local implantation of sulfanilamide in compound fractures had no inhibitory effect upon the healing of the bones. Sulfanilamide has also been used in the local treatment of perineal wounds following resection of the rectum by Mayo and Miller. Herrell and Brown, also of the Mayo Clinic, have reported encouraging results from its local use in infected wounds of the scalp, thorax, and abdomen. Similar studies are currently being carried on in many clinics, and it is probable that within the next year the value of sulfanilamide used locally, as well as its limitations, will be determined. Informal clinical reports from England and from the Continent indicate that there is a considerable interest in the use of sulfanilamide in war wounds, but it is probably too early yet to estimate just how effective this form of treatment will be.

**Sulfathiazole.** During the past year a new derivative of sulfanilamide—sulfathiazole—has been the subject of extensive experimental study and of widespread clinical trial. This compound 2 (para-amino-benzene-sulfonamide) thiazole is a sulfanilamide derivative of hetero-cyclic amines, first prepared by Fosbinder and Walter (*Jour. Am. Chem. Soc.* 61:20, 32, 1939). Similar compounds have been synthesized by Lott and Bergeim. Preliminary experiences indicate that it probably will be an important addition to the sulfonamide series.

It has been found in animal experiments that the acute toxicity of the drug is definitely less than that of sulfapyridine. Its chronic toxicity, on the other hand, is probably about the same as that of sulfapyridine. In clinical use its administration is much less frequently followed by nausea and vomiting than is that of sulfapyridine—a finding of some importance. It is true, however, that such toxic phenomena as drug fever and drug rashes are not uncommon with sulfathiazole therapy, and several instances of a rather peculiar congestion of the conjunctiva and sclera associated with a generalized erythematous skin rash, have been observed. It is, therefore, obvious that its clinical use must be attended by the same rigid precautions as have been found necessary in the administration of sulfanilamide and sulfapyridine.

Sulfathiazole seems to be absorbed more rapidly and excreted more readily than sulfapyridine. Because a smaller fraction of the drug is subject to acetylation in the body, it seems likely that precipitation in the kidneys with the formation of small urinary calculi will occur less commonly than in the case of sulfapyridine. The therapeutic effect of sulfathiazole seems to be about equal to that of sulfapyridine in the treatment of pneumococcal, streptococcal, and meningococcal infections, but it apparently is definitely superior to sulfapyridine in the treatment of infections caused by the staphylococcus. In the present state of our knowledge it appears to be the drug of choice in the treatment of staphylococcal sepsis, staphylococcal pneumonia, and carbuncle. It has also proved to be effective in certain cases of staphylococcal osteomyelitis. In infections of the urinary tract it promises to be of considerable value, according to Carroll, Kappell, and Lewis (*Jour. Am. Med. Assn.* 115: 1350, 1940). It has been found to be effective against the Staphylococcus, Gonococcus, Streptococcus faecalis, Aerobacter aerogenes, and to a less extent against Bacillus proteus and Bacillus pyocyaneus. They report recovery following its use in cases of renal abscesses, carbuncle, furunculosis, osteomyelitis, septicemia, ulcers of the penis, pyelonephritis, im-

petigo, and other infections. Spink and Hanson (*Jour. Am. Med. Assn.* 115:840, 1940) have reported on the use of sulfathiazole in 128 patients suffering from a variety of infections. In 33 cases of pneumococcal pneumonia sulfathiazole appeared to be fully as effective as sulfapyridine. Fifteen consecutive patients with staphylococcal septicemia were successfully treated with sulfathiazole. They also found it to be of value in urinary tract infections. Flippin, Schwartz, and Rose (*Annals of Internal Medicine* 13:2038, 1940) contrasted a series of 100 cases of pneumonia treated with sulfathiazole with a similar number treated with sulfapyridine, and found that although sulfapyridine appeared to reduce the temperature more rapidly than sulfathiazole, the mortality rate was slightly lower in the sulfathiazole series. Furthermore, patients treated with sulfathiazole were less subject to nausea and vomiting.

In summary, then, it may be said that this new sulfanilamide derivative appears to possess certain very definite advantages over both sulfanilamide and sulfapyridine, particularly in the treatment of staphylococcal infections. But, as Dr. Perrin H. Long, one of the outstanding American students of chemotherapy, has said, "the evaluation of these new chemotherapeutic compounds will necessitate extensive experimental and clinical investigation in order to determine their efficiency in the control of infections and their clinical toxic manifestations. Until the time when such data are in hand, it is hoped that enthusiasms do not outrun common sense."

**High Blood Pressure.** Dr. Soma Weiss, of Harvard, has contributed an excellent review of medical progress relating to arterial hypertension (*New England Jour. of Medicine* 223: 939, 1940). Probably the most important development in this field has been the recognition of the importance of decreased blood flow through the kidneys (so called renal ischemia) as a cause of high blood pressure in man. We have previously reported (1937 YEAR BOOK) the fundamental studies of Goldblatt on experimental hypertension in which it was conclusively demonstrated that a persistent elevation of blood pressure could be produced at will in animals by a constriction of the renal arteries by means of a specially devised clamp. It now seems clear that a similar renal ischemia may be brought about in man by a variety of pathologic processes. These Weiss classifies as (1) "congenital malformations" (such as hypoplasia of the renal artery), (2) "Inflammatory vascular diseases" (such as nephritis and renal infections), and (3) "Degenerative vascular diseases" (such as arteriosclerotic occlusive lesions of the renal artery, and diffuse arteriosclerosis of the whole renal arterial system). He states, "... renal ischemia is considered today the most important cause of hypertension." It should be pointed out, however, that high blood pressure is still thought to be caused in many instances by a diffuse vascular disease (arterial and arteriolar sclerosis) without renal ischemia, and that it also may result from non-organic vascular disease associated with several endocrine and nervous disorders.

Although active investigation regarding the mechanism by which renal ischemia produces hypertension is being carried on, no final answer is as yet available. Studies indicate, however, that the ischemic kidney liberates into the blood stream a material which causes arterial constriction and elevation of the blood pressure. Since this phenomenon

occurs in the denervated kidney as well as in the intact one, it appears to have a humoral rather than a nervous basis. Pressor substances derived from the kidney (notably "renin") are being extensively studied, but interpretation of these studies is as yet difficult.

One interesting line of work is that of Williams, Grollman, and Harrison who prepared a kidney extract which contained an anti-pressor substance, which when injected before renin would diminish the pressor effect of the latter, and which would reduce the blood pressure of rats with hypertension due to the removal of renal tissue. In some of the experiments untoward effects followed the fall in blood pressure.

Recently these same workers have treated a small group of hypertensive patients with this renal anti-pressor substance, and in most of the subjects a decline in pressure was observed. (*Jour. Am. Med. Assn.* 115:1169, 1940). Further clinical reports of these workers will be awaited with interest.

**The Role of the Vertebral Veins in the Spread of Cancer.** An important anatomical study was that of Batson of the University of Pennsylvania regarding the function of the vertebral veins, and their part in the spread of metastases (*Annals of Surgery*, 112:138, 1940). Pathologists and clinicians alike in the past have been puzzled by the occurrence of widespread deposits of cancer throughout the body without carcinomatous involvement of lungs, through whose blood vessels it was thought the cancer emboli must have passed in order to reach the periphery. This phenomenon of "paradoxical metastasis" required the assumption that the tumor emboli must be so small as to be able to pass through the capillaries of the lung, or that having lodged there, for some reason they failed to grow. By a series of injection experiments, Batson has shown that the vertebral venous system, a network of thin walled veins lying about the vertebrae and extending from the cranium to the pelvis, may serve as a shunt by means of which blood may flow around the pulmonary circulation. The vertebral veins are poor in valves and have numerous anastomoses with the systemic veins at different levels. Batson believes that the flow of blood through the vertebral veins is relatively slow, but is increased whenever pressure in the caval system rises because of coughing or straining. This route of spread, he thinks, is relatively common in cancer of the breast and prostate, and is also that frequently observed in the metastasis of infectious processes.

**The Co-Existence of Brucella Infection and Hodgkin's Disease.** In the 1938 YEAR BOOK it was reported that Parsons and Poston of the Duke University School of Medicine had isolated the organism of Malta fever, *Brucella melitensis*, from the lymph nodes of patients suffering from Hodgkin's Disease. It was pointed out that these studies opened an interesting new field of investigation into the etiology of this disease, the cause of which is as yet undetermined. In December, Wise and Poston reported (*Jour. Am. Med. Assn.* 115:1976, 1940) the results of a continuation of the study previously mentioned. They stated that in 14 consecutive cases of Hodgkin's Disease they had been able to demonstrate the co-existence of *Brucella* infection as evidenced by the isolation of *Brucella melitensis* from blood or lymph node cultures. At the same time, *Brucella* had been isolated but once from blood or lymph node cultures from a much larger group of patients in the same com-

munity suffering from diseases involving the lymph nodes, other than those with Hodgkin's Disease. The authors pointed out that although their observations suggested the possible etiologic importance of *Brucella* in the Hodgkin's Disease process, they had not as yet been able to produce Hodgkin's Disease in animals by the injection of blood or lymph node suspensions from patients with Hodgkin's Disease, and thus had not been able to fulfill the rigid postulates set down by Koch many years ago as essential in proving the etiologic significance of organisms in disease processes. They state, however, that "although the data in this study had not established an etiologic relationship of *Brucella* to Hodgkin's Disease, it is suggested that the clinical course of Hodgkin's Disease may be significantly influenced by *Brucella* infection."

**Tobacco and Coronary Disease.** An interesting report of the past year was that of English, Willis and Berkson of the Mayo Clinic (*Jour. Am. Med. Assn.* 115:1327, 1940) on the relation of tobacco to coronary disease. This subject is of special importance because of the apparently increasing number of deaths from coronary artery disease in this country, and because of the increasing consumption of tobacco products. In contrasting the records of 1000 male patients over 40 years of age who had coronary disease with 1000 without coronary disease, they found that among the first group 69.8 per cent were smokers, while in the latter group 66.3 per cent were persons who smoked. This represented an increase of only  $3.5 \pm 2.1$  per cent smokers among patients who had coronary disease. However, when the incidence of smokers in the various age groups was compared, it was found that of 187 patients with coronary disease between the ages of 40 to 49, 149 were smokers (79.7 per cent), while among 302 patients without coronary disease only 187 were smokers (61.9 per cent) a difference of  $17.8 \pm 4$  per cent, which is statistically significant.

In another instance when the records of a group of smokers between the ages of 40 and 49 were compared with those of a group of non-smokers, the incidence of coronary disease was found to be 4.8 per cent among the former and 1.8 per cent among the latter. Between the ages of 50 and 59, the relative figures were 6.2 per cent among the smokers and 2.6 per cent among non-smokers. Beyond the age of 60 no noteworthy differences were observed.

Finally, in a group of males between 40 and 49 the incidence of coronary disease among those who were non-smokers, those who smoked moderately, and those who smoked excessively was compared, and it was found that among the non-smokers 1 per cent had coronary disease; among the moderate smokers 4.6 per cent had coronary disease, and among the heavy smokers 5.9 per cent had coronary disease. The authors conclude "from the material comprising this study, it appears that a greater incidence of coronary disease occurs among smokers than among non-smokers in the younger age group—that is, less than the age of 50 years, and perhaps also among those in the age group of 50 to 59. This, however, is not true in the older age groups. Furthermore, the incidence of coronary disease among patients less than 50 years of age was greatest among excessive smokers, was least among non-smokers, and occupied an intermediate position among moderate smokers.

"It is, therefore, probably that the smoking of tobacco has a more profound effect on younger

individuals, owing to the existence of a relatively normal cardiovascular system, influencing perhaps the early development of coronary disease. In the older age groups in which arterial changes are prominent, regardless of extraneous influences such as smoking, the possible harmful effects of tobacco smoke are less evident than the other factors concerned in the production of arteriosclerosis."

The difficulties of interpreting any statistical study are, of course, well recognized, and although the figures presented seem to indicate that coronary disease occurs more frequently among smokers, we are not yet justified in stating that smoking is the cause of coronary disease. Other factors such as heredity, temperament, etc., probably are also important, but the results of the Mayo group at least should give us food for thought.

H. WALTON COCHRAN.

**MELLON INSTITUTE.** The aim of Mellon Institute is the creation of new knowledge by scientific investigation, in accordance with the institution's definite fellowship system. According to this procedure the researches are restricted to major problems of the pure and applied sciences and particularly chemistry—problems that require protracted periods of time for solution by specialists. The Institute was founded by Andrew W. Mellon and Richard B. Mellon in 1913 and is located at 4400 Fifth Avenue, Pittsburgh, Pa.

The industrial research of the Institute is organized on a contract basis, the problem being set by a person, firm, or association interested in its solution, the scientific worker being found and engaged by the Institute, and an industrial fellowship being assigned for a period of at least a year. Each holder of an industrial fellowship is given broad facilities for accomplishing the research entrusted to him and all results belong exclusively to the donor of the fellowship. Only one investigation is conducted on a specific subject at any one time and hence there is no duplication of the research activities of the fellowships in operation. At present there are ninety of these industrial fellowships, which employ 280 scientists and engineers. The projects range from steel and concrete to synthetic organic chemicals, new plastics and textiles, and improvements in foods and other essential commodities.

The Institute is primarily an industrial experiment station, but the nature of its investigational procedure enables broad training of young scientists in research methods and in special subjects of technology. It also recognizes the need of fundamental scientific research as a background and sustains scopeful studies not suggested by industry but planned within the Institute and directed toward the solution of more basic problems than those usually investigated for technologic purposes.

The Institute's department of research in pure chemistry is conducting on a broad scale investigations of cinchona alkaloids and their derivatives in relation to the chemotherapy of pneumonia. During the fiscal year 1939-40 the Institute expended \$1,181,639 in carrying on pure and applied research.

The Institute's board of trustees is constituted of John G. Bowman, President; Edward R. Weid-

lein, Vice-President; Henry A. Phillips, Treasurer; Paul Mellon; Richard K. Mellon; and Alan M. Scaife. Edward R. Weidlein is Director.

**MEMEL.** A German territory on the east coast of the Baltic, created an autonomous district under Lithuanian sovereignty by the Memel Statute of May 8, 1924, and ceded by Lithuania to Germany on Mar. 23, 1939 (see **YEAR BOOK**, 1939, pp. 473-474). Area, 1099 square miles; population on Jan. 1, 1940, 153,793. See **GERMANY**; **LITHUANIA**.

**MENCHIANG GOVERNMENT.** See the article **MONGOLIA** under *Inner Mongolia*.

**MENNONITES.** A religious group founded in Switzerland in 1525 in protest against ecclesiastical rule and rigid liturgy. In the United States the Mennonites first settled at Germantown, Pa., in 1683, ultimately dividing into 17 bodies. For statistics, see **RELIGIOUS ORGANIZATIONS**.

**MENTAL DISEASES AND MENTAL HYGIENE.** See **CHILDREN'S BUREAU**; **PSYCHIATRY**; **PSYCHOLOGY**.

**MERCHANT MARINE.** See **EUROPEAN WAR**; **SHIPBUILDING**; **SHIPPING**.

**MERCURY.** Despite the high demand for this metal in the manufacture of munitions, the United States mines rose to the emergency and produced a quantity ample for current needs. According to the Bureau of Mines domestic production averaged about 3000 flasks (76 lb. each) per month. In October the production of 3600 flasks was double that of January, which is an indication of the rapid response of the industry to meet the emergency, created by the almost total lack of imports from Spain and Italy. Production for the year was in excess of 36,000 flasks. The price rose from \$142 per flask in January to \$200 in June, and tapered off to \$165 in December. The average for the year was \$176.865 compared with \$103.94 for 1939. Exports continued a downward trend in the latter part of the year, and stocks in the hands of producers, consumers, and dealers rose slightly. No imports were recorded after April. **METEOROLOGY.** Callendar has published an important paper on the variations of the amount of carbon dioxide in different air currents. The changes in the amount of carbon dioxide in the air which are often observed during quiet weather are of local origin and are caused by organic or human activities; the variations in the great wind currents have a more fundamental basis which is connected with differences of carbon dioxide in the surface waters of the oceans. Theoretical considerations suggest that this gas should be more abundant in the air of equatorial regions than elsewhere because the carbon dioxide pressure in water varies directly with the temperature so that warming water gives up gas to the air, and owing to organic action carbon dioxide tends to accumulate in deep water which rises to the surface in equatorial regions returning the excess gas to the air. These

theoretical considerations are supported both by observations in the water and in the air. In the upper air there has been little change in the proportion of carbon dioxide observed. Callendar has reviewed all the measurements of carbon dioxide which have been made since 1866. By examining past weather maps in connection with carbon dioxide measurements made during the last century by different authorities, it was found that the carbon dioxide content varied from 290 parts per million in marine air masses to 301 in sub-tropical air masses. Callendar points out that the close agreement obtained by different observers in the latter part of the last century was doubtless the cause of the scarcity of carbon dioxide measurements during the present century. There were almost no measurements made from 1901 until 1932.

The most significant of Callendar's findings is that there has been a secular increase in the amount of carbon dioxide in the air over the past seventy years. The modern measurements taken from 1932 to 1935 show an increase over the measurements made during the last century of about 30 parts per million. Callendar points out that if this increase has occurred throughout the whole atmosphere then the additional mass of carbon dioxide in the air would be 200,000 million tons. In the period between 1900 and 1935 the amount of coal and oil consumed has been very nearly 50,000 million tons, equal to the direct addition of 150,000 million tons of carbon dioxide to the atmosphere. As by far the larger part of this has been produced in the North Temperate zone (where all the observations were made) Callendar believes that the greater increase found in the air might be due to incomplete mixing of the whole atmosphere. For the period from 1866 to 1900 the amount of carbon dioxide produced by the combustion of coal and oil was quite small and the observations do not record a change in the air.

Because of the importance of sea water in regulating the amount of carbon dioxide in the air a considerable part of the gas produced from coal and oil might be expected to have been absorbed by the sea, but the observations indicate that all this extra carbon dioxide has remained in the air. The most probable reason for the failure of the sea to absorb the excess can be traced to the very slow vertical circulation in the oceans; it is only the shallow contact surface which quickly reaches equilibrium with the atmospheric gases and the period required for the whole volume of water in the oceans to pass through the narrow surface zone has been estimated at several thousand years. Moreover the excess carbon dioxide pressure has only reached about 0.00002 atmospheres at present and this is not large enough to force much of the gas into the surface zone. Hence, although the total capacity of the sea to absorb carbon dioxide is very great, it is slow in action and will doubtless take many centuries to stabilize the great eruption of this gas, now about 300 million cu. meters per hour, which has resulted from human activities. There is of course no danger that the amount of carbon dioxide in the air will come to be uncomfortably large, because as soon as the excess pressure in the air becomes appreciable the sea will be able to absorb this gas as fast as it is likely to be produced.

During the past year there were great strides in practical or applied meteorology. This progress was almost entirely due to the increased attention being given to civil and military aviation. In the U.S. Weather Bureau there was greater develop-

ment in many branches of its activities during the past year than in any previous year. The airways weather service was amplified by the addition of observations in blind spots in the network and by increase in upper-air soundings which are essential for general weather forecasting as well as for air transport. Two new districts were established for the administration of this service, bringing the total number of Airways districts to thirteen. Also, wherever possible the airways weather service districts have been made to coincide with the general weather forecast districts. The general forecast and warning service was improved by providing for four weather maps per day in parts of the country where only two maps had been provided previously and by organizing two new forecast districts which can give greater attention to local weather advices. The establishment of these new districts was carrying out the policy of decentralizing the weather forecast and warning services. The two new forecast districts were the Kansas City district, comprising Kansas, Missouri, and Oklahoma, and the Albuquerque district, comprising Arizona, New Mexico, and western Texas. A third district at Boston for the New England States will be fully established early in 1941. Besides the above increases in the two main services the agricultural weather service and the climatological service received modest increases, the latter also benefiting greatly from the enlarged hydrologic program which has been organized through co-operation of the flood control agencies of the Army Corps of Engineers and the Department of Agriculture and which gives much needed reports and planning statistics on rainfall in important river basins.

To meet the growing needs of practical meteorology the Central Office of the Weather Bureau was reorganized. Prior to June, 1940, the administrative headquarters had functioned through divisions based upon projects or types of service, which as distinct meteorological services were to some extent complete and self-sufficient units. As now organized the administration of the Weather Bureau operates under three broad headings: (1) the technical service group, including the divisions of station operations, synoptic reports and forecasts, climatology, and instruments; (2) the scientific services, including research and in-service training; and (3) the staff services group, which comprises budget, supply, personnel management, and business administration.

Not only was the Weather Bureau reorganized internally but the entire Bureau was transferred from the Department of Agriculture, where it had functioned for nearly fifty years, to the Department of Commerce. This transfer was carried out under the provisions of the President's Reorganization Plan No. IV. The purpose of this plan is to bring the Weather Bureau into closer co-ordination with the Civil Aeronautics Administration and with the aeronautical interests of the country which find meteorological service indispensable.

The service in Alaska was improved by the establishment of a first-order station at Anchorage, with pilot balloon observations and first-order stations at Bethel, Ketchikan, and Point Barrow. Forecast centers were established at Fairbanks and Juneau. Sixteen new second-order stations were established in the Territory.

Ship reports from the Atlantic Ocean west of the 35th Meridian were increased from two to four times a day from each ship; the number of reporting ships was increased. Since February, 1940,

two Coast Guard Cutters have been stationed between New York and the Azores for the purpose of making daily weather observations. See COAST GUARD, U.S.

Weather forecast by automatic telephone was put in operation on Nov. 17, 1940, at Boston. Service of this type is now in effect in Baltimore, Boston, Chicago, Detroit, Newark, New York, and Washington. The automatic weather forecast service was inaugurated on Apr. 8, 1939, at New York City; by the end of 1939 this service was begun in Chicago and Newark. This service was begun at the other four cities during 1940. The automatic telephone apparatus giving out the weather forecasts provides for 100,000 calls daily. In New York City on July 30, 1940, there were actually 78,861 calls made by the public for the weather forecast on the automatic telephone.

Five-day forecasts were begun during the year from sixteen districts. These forecasts are based on pressure maps of the Northern Hemisphere, and are the outcome of recent research.

The National Bureau of Standards in co-operation with the Weather Bureau has developed a new ceiling light projector for use in the daytime. Heretofore ceilings (cloud heights) have been determined by a light beam at night time and by means of small balloons of known ascensional rate during the daytime. On account of drifting with the wind the balloon method can seldom be used when the ceiling is over 2000 feet and the observers must estimate the ceiling when above this altitude during the day. The new ceiling projector modulates the beam of light, that is, breaks it up into short evenly spaced pulses of light; this modulated beam of light is reflected by the clouds and is then detected with a photoelectric tube and amplifier, designed to respond only to that component of the total light received from the clouds which has the characteristic pulses introduced into the projected beam. Thus the projected signal light, after reflection, is sorted out from the background light from the cloud. In use, the photoelectric detector scans the base of the cloud until the meter on the amplifier indicates that the modulated beam is being received; the angular setting of the detector then corresponds to the angular elevation of the spot on the cloud. During the daytime with overcast conditions, cloud ceilings as high as 9000 feet have been detected; ceilings up to 4000 feet have been detected with broken clouds.

See EARTHQUAKES; FLOODS; HURRICANES.

**METEORS AND METEORITES.** See ASTRONOMY.

**METHODIST CHURCH.** The year of unification, 1939, was the year when the three united Churches began to know each other; 1940 saw the united church beginning to work together, the year of the first General Conference, the Jurisdictional Conferences, and the organization of the various Boards and Committees for work.

The General Conference, with 776 Delegates, 67 of whom were from overseas, met at Atlantic City on April 24. This was purely a legislative body. The General Conference was followed by six Jurisdictional Conferences, meeting from May 22 to July 9, for the election of Bishops, the appoint-

ment of Committees, and planning the work in their respective territories. Only two Jurisdictions elected Bishops: The Central on June 20 elected the Rev. W. A. C. Hughes, of the Board of Home Missions and Church Extension, and the Rev. L. H. King, Pastor of St. Marks Methodist Church, New York City, the Cathedral of Negro Methodism; and the Western in July elected the Rev. Bruce R. Baxter, President of Willamette University at Salem, Ore. Bishop Hughes, the first Bishop elected in the new Methodist Church, did not perform any Episcopal functions, as he died on July 12, 1940. Bishop Jashwant Rao Chitambar, the first native Bishop of India, died on September 4. At the Jurisdictional Conferences Bishops Edwin Holt Hughes, John L. Nuelsen, Edgar Blake, and Charles L. Mead were retired with honors from the work of the episcopacy.

On December 28, the Central Conference of Southern Asia elected the Rev. Clement D. Rockey, the son of pioneer missionaries and himself a missionary since 1912, and the Rev. Shot K. Mondol, a native of India and Superintendent of the Asansol District and Pastor of the English Church in Asansol, as Central Conference Bishops. The Central Conference of Germany, which in 1936 elected the Rev. F. H. Otto Melle for a term of four years, elected him for a life term in 1940.

The Board of Publication elected Mr. B. A. Whitmore of Nashville and the Rev. F. D. Stone of Chicago as Publishing Agents, and, carrying out the instructions of the General Conference, consolidated the Christian Advocates, elected the Rev. Roy L. Smith of First Methodist Church, Los Angeles, as Editor in Chief with headquarters in Chicago. Assistant Editors and special writers were also elected. The Rev. Ralph Stooddy, 150 Fifth Avenue, New York, was elected Director of "Methodist Information Service."

The Rev. Ralph E. Diffendorfer, with Associate Secretaries and Treasurers in the various departments, was elected Executive Secretary of the Board of Missions and Church Extension with headquarters at 150 Fifth Avenue, New York. This Board was formed by the merging of the Boards of the three Churches and the Woman's Work. This merger probably makes 150 Fifth Avenue the Home Base of more home and foreign missionaries than any other one place.

The Rev. H. W. McPherson, Nashville, Tenn., is Executive Secretary of the Board of Education, and Mr. E. H. Cherrington, 100 Maryland Ave., N.E., Washington, D.C., of the Board of Temperance and Public Morals. The Rev. N. B. Harmon, Jr., 150 Fifth Ave., New York, is the Book Editor and the Rev. W. K. Anderson, Nashville, Tenn., has charge of the Conference Course of Study in the new Church.

The latest complete figures show that there are 59 effective and retired Bishops, 28,500 effective and retired ministers, 850 District Superintendents, 25,000 Pastoral charges with 48,000 preaching places, 45,000 churches, 23,000 parsonages, 2900 schools ranging from Primary school to University, 177 hospitals, and 133 old people's and children's homes. Six million were enrolled in the Sunday Schools and 8,000,000 members were reported.

**MEXICO.** A Federal republic of North America, comprising 28 States, 2 Territories, and the Federal District (City of Mexico and 11 surrounding villages). Capital, Mexico, D. F.

**Area and Population.** Area, 760,290 square miles; population, 19,848,322 (estimated) on June 30, 1940 (16,552,722 at 1930 census). The racial division of the population (1930 census) was: Indians, 4,630,880; whites, 2,444,466; mixed race, 9,040,590. The population of the city of Mexico in 1940 was estimated at 1,754,355 (1,234,000 in 1930). Populations of other towns (1930): Guadalajara, 175,539; Monterrey, 132,577; Puebla, 114,793; Mérida, 95,015; San Luis Potosí, 74,003; León, 69,238; Tampico, 68,126; Veracruz, 67,494; Torreón, 66,001; Aguascalientes, 62,244. U.S. citizens resident in Mexico on Jan. 1, 1940, numbered 13,262. Germans were estimated at 6000-7000; Italians at 4000-5000.

**Defense.** Military service in the active army or National Guard is compulsory. As of Nov. 1, 1940, there were about 62,500 in the active army, 700 in the air force (with about 70 planes), and 63,680 trained reserves. In addition there was a private militia of workers and peasants, estimated to number about 30,000, with some arms and military training. The navy consisted of 6 escort and 10 coastguard patrol vessels. See *History*.

**Education and Religion.** In his message to Congress of Sept. 1, 1940, President Cárdenas said illiteracy had declined from 70 to 45 per cent in the preceding 30 years, and that primary school attendance had increased in the preceding five years from 1,400,000 to 1,800,000. Free secondary education was provided for the first time under the law of Dec. 30, 1939 (see *History*). The Federal appropriation for education in the 1940 budget was 73,800,000 pesos.

Roman Catholicism is professed by over 90 per cent of the population. The 1917 Constitution established State control of all churches. All foreign priests were expelled in 1926. In 1936 all buildings used for religious purposes were nationalized and the number of native priests permitted to officiate was reduced to about 350. In subsequent years a number of State governments permitted many churches to reopen.

**Production.** Agriculture, mining, stock raising, and manufacturing are the chief occupations. The principal crops are (in metric tons, except as noted): Corn, 1,692,666 in 1938; cotton, about 243,000 bales in 1939; wheat, 402,000 in 1938-39; sugar cane, 4,132,260 in 1938; bananas, 546,936 in 1938; henequen, 133,117 in 1938; coffee, 39,023 in 1939; beans, 105,499 in 1938; alfalfa, 1,540,324 in 1938; tomatoes, 80,117 in 1938-39.

Excluding coal and petroleum, the value of mineral production in 1939 was 598,626,000 pesos (557,180,000 in 1938). Oil production in 1939 was 43,200,000 bbl. (37,900,000 in 1938); coal, 628,200 metric tons. Output of other minerals in 1939 was (in metric tons): Silver, 2360; gold, 26,178 kilos (of 2.2 lb.); lead, 219,501; zinc, 134,165; copper, 44,389; antimony, 7872; iron, 141,336; cadmium, 817; molybdenum, 870. The 1935 industrial census showed 7050 manufacturing establishments with an output of at least 10,000 pesos each annually and 204,755 employees. Tourist automobiles entering Mexico from the United States through Nuevo Laredo in 1939 numbered 28,126 (22,614 in 1938). Tourist expenditures in Mexico were estimated at \$2,500,000 monthly early in 1940.

**Foreign Trade.** Imports in 1939 were valued

at 629,708,225 pesos (494,118,125 in 1938); exports, 914,389,882 (838,127,957 in 1938). The increase in 1939 was due partly to depreciation of the peso in terms of the dollar (see under *Finance*). Of the 1939 imports, the United States supplied 66 per cent by value (57.7 in 1938); Germany, 12.7 (18.9); United Kingdom, 2.6 (4.1). Of the exports, the United States purchased 74.2 per cent (67.4 in 1938); United Kingdom, 5.8 (9.4); Germany, 5.6 (7.7). Value of the chief 1939 imports were (in pesos): Passenger automobiles, 45,134,000; trucks, 25,546,000; rayon, yarn, and waste, 14,630,000; copra, 11,952,000; iron machinery parts, 11,874,000. Leading exports were (in pesos): Silver, 177,673,000; gold, 172,513,000; lead, 117,189,000; zinc, 73,080,000; copper, 52,665,000; crude petroleum, 45,220,000; coffee, 33,667,000; henequen, 22,564,000. See *TRADE, FOREIGN*.

**Finance.** Budgeted expenditures for 1941 were 492,000,000 pesos as compared with actual expenditures of 540,172,000 pesos in 1940. During the six-year period ended in December, 1940, governmental expenditures totaled 2,742,646,000 pesos, including 220,000,000 for highways. The debt service for the six-year period consumed 353,400,000 pesos, education 343,800,000; the accumulated deficit, totaling 169,800,000 pesos, was met by borrowing from the Bank of Mexico. The funded debt on July 1, 1937, was 1,133,994,612 pesos. Average exchange rate of the peso, \$0.2212 in 1938, \$0.1931 in 1939. Also see *History*.

**Transportation.** Mexico had 14,252 miles of railway line in 1936. A new line 158 miles long from Mexicali, Lower California, to Punto Penasco, Sonora, was completed in May, 1940. The principal system is that of the National Railways of Mexico, nationalized in 1937 and turned over to the railway workers' union for operation in 1938 (see *History*). Freight carried by the National Railways in 1939 was about 9,254,000 metric tons. Highways extended 56,923 miles in 1939 (see *ROADS AND STREETS*). There were 23 air lines operating over 15,343 miles of route (12,751 miles local and 2592 miles international). A total of 12,275 vessels entered and cleared Mexico's 22 ocean ports in 1937.

**Government.** The Constitution of 1917, as amended in 1929 and 1933, vests executive power in a President elected by direct popular vote for six years and ineligible for re-election. Legislative power rests with an elective Congress of two houses—a Chamber of Deputies of 171 members chosen for three years and a Senate of 58 members renewed every six years. President at the beginning of 1940, Gen. Lázaro Cárdenas, who assumed office Nov. 30, 1934. Predominant political power had been exercised since 1928 by the National Revolutionary party, organized by President Plutarco Elías Calles, and its successor, the Party of the Mexican Revolution (PRM), formed at the direction of President Cárdenas in 1938. For developments in 1940, see *History*.

#### HISTORY

**Avila Camacho Becomes President.** Gen. Manuel Avila Camacho was inaugurated as President on Dec. 1, 1940, bringing to an apparently peaceful conclusion months of bitter and violent political controversy that repeatedly threatened to plunge Mexico into civil war.

The new Chief Executive immediately launched the country upon a more conservative course than that charted by President Cárdenas during the pre-

ceding six eventful and troubled years. Before the end of 1940, Avila Camacho had reversed his predecessor's agrarian policy by vesting title to their land in individual members of the *ejidos*, or agricultural communities, instead of in the *ejidos*. The President explained that one of his reasons for this change was to free agricultural workers from those "who have used the collective system to promote exotic doctrines (i.e. communism) and exercise undue influence over the farmer."

At Avila Camacho's instigation, Congress passed other measures indicating a trend away from the radicalism of the preceding years. The railroads were returned from labor union to government control. Supreme Court judges were made elective for life, apparently to free them from political influence. Nationalized properties of the Roman Catholic and other churches were placed under the jurisdiction of the courts rather than the government, thus offering the Church legal recourse against expropriation. These measures won the approval of many elements previously hostile to the government and abated the danger of civil war.

Still another reversal of the Cárdenas policies was the adoption by the Avila Camacho Government of what promised to be close and friendly collaboration with the United States in the Roosevelt-Hull program of inter-American peace, friendship, and solidarity against overseas military and ideological threats. This new spirit of amity was reflected in the cordial reception given Henry A. Wallace, Vice-President-Elect of the United States, who attended the inaugural ceremonies in Mexico City as President Roosevelt's official representative.

**The Elections.** The chief opponent of General Avila Camacho, candidate of the PRM (government party), was Gen. Juan Andreu Almazán, who had strong conservative support (see *YEAR BOOK*, 1939, p. 481 for background data). The electoral campaign was marked by several attempts to assassinate General Almazán, by sporadic armed clashes between adherents of the rival candidates, and by minor revolutionary outbreaks in some States where anti-government sentiment was strong. Spokesmen for Avila Camacho accused Almazán of fomenting these revolutionary activities. He, in turn, repeatedly warned that he would lead a revolt if the government machine "thwarted the will of the people" at the polls.

Almazán's campaign was aided by a marked conservative trend in public sentiment, evidenced among important groups of workers as well as among business, professional, and other upper class groups. General Avila Camacho, who was more moderate in his views than President Cárdenas or other radical leaders of his party, took a middle-of-the-road position on most of the issues agitating the country.

The voting on July 7 was accompanied by serious disorders, particularly in Mexico City. About 50 persons were killed and more than 400 wounded. Both sides claimed an overwhelming victory, while accusing each other of fraud and irregularities. A significant aspect of the election was that of some 6,500,000 eligible to vote, about 2,500,000 actually went to the polls—a much higher proportion than usual—under the guarantee of a free election given by President Cárdenas.

Few seemed satisfied that the results announced bore any approximate relation to the preferences of the voters. The electoral law provided that the

party representatives first at the polling booths had the right to open and control the polls and guard the ballots until the official count. This led to fights for the control of the different booths and generally to the exclusion of voters opposing the party that gained control. The PRM and the Almazán supporters counted their own ballots and each faction proclaimed the election of its Presidential and Congressional candidates by overwhelming majorities.

**Rump Government Proclaimed.** While tension continued at a high pitch, efforts were made to patch the widening political breach. But Avila Camacho's supporters rejected the Almazanistas' demand for a new, unmanipulated election. Both the Cárdenas Government and the retiring Congress accepted as official the election results announced by Avila Camacho's backers. Then on August 8 Cárdenas officials, declaring the election settled, banned all further political meetings or agitation in the Federal District. This drove the Almazanistas underground. About the same time the Permanent Commission of Congress charged that Almazán was plotting to assassinate Cárdenas and Avila Camacho and overthrow the government.

On August 15 the electoral college of PRM Senators and Deputies, declared elected by the retiring Congress, met in the capital and validated their own election. To prevent an armed coup by Almazán supporters, hundreds of armed peasants loyal to the Cárdenas regime were moved to the capital by motor truck. The Chambers of Congress were heavily guarded by troops and police. The Almazán candidates for Congress met separately in secret session and approved of their own election credentials. A few days later the government began to arrest leading Almazán supporters and there was an immediate exodus from Mexico of his more prominent associates. Almazán himself had previously left on a "vacation" that took him to Cuba, Panama, and the United States.

While he was in the United States, rival congresses were installed in the Mexican capital on September 1. President Cárdenas delivered his annual message to the Avila Camacho Congress, giving it official recognition. The Almazán Deputies and Senators met secretly and three days later proclaimed Almazán as President-elect. On adjourning, they named a permanent commission of six members with full legislative powers during the recess.

On September 2 Almazán announced in New York that he would return to claim the Mexican Presidency "at the proper time." The next day his Congress issued an inflammatory manifesto violently denouncing Cárdenas and his government and urging the Mexican people to sweep them away. Roberto Morales, vice-president of Almazán's permanent Congressional commission, announced in San Antonio, Texas, on September 10 that President Cárdenas had been "impeached and deposed" and that Hector F. López would serve as provisional President until December 1. The PRM Congress in Mexico City on September 12 certified Avila Camacho as President-elect. The election results announced by this Congress were: Avila Camacho, 2,476,641; Almazán, 151,101; Gen. Rafael Sanchez Tapia, 9840.

In a declaration of policy made September 19 Avila Camacho further undermined Almazán's position. He said he would insist upon adequate protection and encouragement of both Mexican and

foreign investors. Describing himself as a good Catholic, he said his government would not be influenced by the Communists or the radical wing of the labor movement under Vicente Lombardo Toledano. An Almazán plot to seize control of the industrial center of Monterrey as a revolutionary base was frustrated on October 1. This was followed on November 12 by United States recognition of Avila Camacho as the legally elected President of Mexico.

These developments ended hope of a successful revolt. A number of prominent Almazán supporters announced their acceptance of the Avila Camacho regime. Bands of rebels active in various isolated parts of the country capitulated to the government or were broken up. General Almazán then returned to Mexico on November 26 and renounced "the honorable position of President, to which the people were good enough to elect me on July 7." His statement removed the last obstacle to Avila Camacho's inauguration on December 1.

**Struggle over Education Law.** Besides the threat of an Almazanista revolt, the Cárdenas Government had faced growing opposition or unrest among the Roman Catholic clergy, labor unions, Communists, Nazis, Fascists, and other groups. The five-year truce between Church and State was partially broken by the decree of Dec. 30, 1939, designed to enforce provisions of the Mexican Constitution pertaining to education.

The decree provided for free education in government schools, based on socialistic principles, with compulsory attendance to the age of 15 years. Private schools were required to have government permits and adhere strictly to government standards. They were forbidden to impart religious instruction or to have any relationship with any religious cult. The private schools were given six months to comply with the new "organic education law." The decree also reorganized and extended the State educational system, providing for pre-school education of children from four to six years of age, six years of primary and three years of secondary schooling, and for further instruction in vocational, normal, technical, professional, and special schools.

General Almazán on February 25 vigorously denounced the provision for socialistic education and demanded repeal of clauses in the 1917 Constitution under which it was issued. General Avila Camacho reluctantly approved the new law but declared during the campaign that he would not allow socialistic education to be rigidly enforced. Nevertheless the clergy played an active role in enlisting support for Almazán's campaign.

**Disputes with Unions.** President Cárdenas found himself involved in serious controversy with the powerful railway and oil workers' unions as a result of the failure of those nationalized industries to pay their way. The National Railways, turned over to the Union of Mexican Railway Workers in 1938, had incurred heavy deficits, while efficiency and discipline declined and accidents increased. On Apr. 9, 1940, President Cárdenas returned control of the National Railways to the Department of Communications and Public Works with instructions to reorganize their administration and to pay 5.64 per cent of the gross earnings to the Federal Government as required by law.

The reorganization plan, calling for reduction of salaries, abolition of unnecessary positions, etc.,

aroused such strenuous objections from the union that President Cárdenas was obliged to intervene. He ordered the union to accept the reorganization plan within 10 days. The union flatly refused and called a national convention to consider the government's ultimatum. However the issue was postponed until after the inauguration of Avila Camacho. He then carried out Cárdenas's reorganization plan.

**Oil Industry's Difficulties.** Very similar was the situation in the oil industry, expropriated from American and other foreign oil companies in 1938 and turned over to the Mexican Oil Monopoly for operation, with the workers exercising a voice in the management. Production in the first quarter of 1940 was lower than when the oil fields were under foreign control, while costs had increased about 50 per cent. The basic pay of the workers had been increased but the limitation of overtime and higher social benefit payments made their actual earnings smaller than before. The European War and the boycott of the ousted oil companies had eliminated the chief markets for Mexican oil abroad and the Monopoly was forced to export it during 1939 at one-half the world market price.

The management of the Monopoly charged that the inefficiency and lack of discipline and co-operation of the oil workers was responsible for rising production costs and the resulting heavy deficit. The workers accused the management of inefficiency and bungling of negotiations for the sale of oil abroad. On February 28 President Cárdenas proposed a 14-point plan for reorganization of the industry, including a reduction of personnel, wage cuts, and elimination of over-time pay. Several hundred workers were dismissed in March, but the union by threatening to strike held up the reorganization program until the elimination of the Italian market in June and an ultimatum from the President forced it on August 7 to accept further economies. The workers then agreed to the dismissal of about 3000 more workers, pay and salary reductions in the higher brackets, etc.

**Friction in CTM.** This friction between the unions and the government was reflected in the mounting opposition within the Mexican Confederation of Labor (CTM) to the leadership of Vicente Lombardo Toledano, CTM secretary-general, who was closely identified with the Cárdenas policies. Many of the railway and oil workers supported Almazán. The Mine Workers' Syndicate resigned from the CTM July 23 and called for the formation of a more conservative labor front. Lombardo Toledano's policies, which closely followed the orthodox Communist party line, also drew the fire of the conservative faction within the government party, headed by ex-President Emilio Portes Gil.

**Communist and Nazi Activities.** The schismatic trend among political and labor groups was evidenced also in the Mexican Communist party. Early in the year the party undertook a thorough purge of elements who "questioned Joseph Stalin's action in waging war against Finland" or who hesitated to condemn Leon Trotsky's criticisms of Stalin. At an extraordinary congress of the party held March 20-24 General Secretary Hernan Laborde and two other leaders were expelled for lack of sufficient zeal by the committee they had named to conduct the purge. While supporting Avila Camacho's candidacy, the party censored President Cárdenas for his "passive" policy toward Almazán and other conservatives.

Leon Trotsky, Stalin's mortal enemy, was assassinated at his Coyoacan refuge late in August. Another attempt had been made on his life and one of his bodyguards had been murdered on May 24. The police accused the Mexican Communist party and Stalin's agents in Mexico of complicity in both of these attacks (see COMMUNISM; NECROLOGY under *Trotsky, Leon*).

In April the Mexican secret police were reported to have uncovered evidence that Communist and Nazi agents were co-operating in seeking to foment disturbances in Mexico that would prevent the United States from intervening in the European conflict. This was followed in May by the expulsion of several North American Communist agitators by the Cárdenas Government and a curb on native Communist agitation. The following month the Cárdenas Government curbed the Nazi propaganda that had been flooding Mexican publications during previous months. The press attaché of the German Legation was declared *persona non grata*, several Nazi magazines were suppressed, and the Mexican press was warned to emphasize Mexico's friendship for the United States and the other democracies. At the same time Lombardo Toledano, reversing his pro-Axis attitude, urged Latin American workers to fight the Rome-Berlin Axis in every possible way.

**Fascists and Falangists.** On July 4 the CTM newspaper *Popular* published a four-page exposé of Italian activities in Mexico. It charged that Italian Fascists were organized for political and military action under orders from Rome, that Italian diplomatic representatives meddled in politics, that pro-Fascist propaganda was being circulated both officially and by secret Fascist organizations, and that Italians and other foreign Fascist groups were working with "Almazanist reactionaries" for the overthrow of the legal government.

Similar charges were made against the Spanish Fascist movement (*Falange Española*), which though officially outlawed was said to be operating underground in Mexico. On the other hand, conservative and anti-Communist elements protested the activities of some Spanish Republican emigres who were charged with spreading Communist ideas or with training to serve as officers of the workers militia. Although many Spanish refugees in Mexico were reported to be dissatisfied and eager to migrate to the United States or elsewhere, the Cárdenas Government offered asylum to some 250,000 more refugees who had been in France since the Franco victory in Spain. An agreement whereby Mexico undertook to accept all these Spaniards without regard to creed or political beliefs and to pay their transportation expenses and upkeep pending their departure from France was signed by the Mexican and French (Vichy) governments late in August. This action was bitterly criticized by conservative Mexicans and even by some radical labor unions.

**Economic Difficulties.** The rapid decline of the peso from 3.60 per dollar previous to the oil expropriation decree of March, 1938, to approximately 6 per dollar in February, 1940, gave added impetus to the welter of conflicting political forces. This depreciation was due to reduced exports and the flight of capital following seizure of the oil properties, increasing imports from the United States after the outbreak of the European war, and talk of a further reduction in silver prices by the United States Government. In mid-February the Bank of Mexico took action to peg

the peso at the 6 per dollar level. The financial position of the government continued difficult, but unfavorable economic factors were offset by improving prices and demand for Mexican minerals, sisal and other raw materials, and by heavy expenditures by United States tourists. A marked business up-turn occurred after Avila Camacho's inauguration.

**Conscription Introduced.** The Cabinet on June 18 approved a bill, later passed by Congress, establishing a more comprehensive system of compulsory military service for males between the ages of 19 and 45. Youths were to serve one year at the age of 19, serve in the first reserve with periodic training for the next 10 years, serve in the second reserve for another 10 years, and finally belong to the National Guard for six years. The private workers' militia was expected to be absorbed into the conscript army. Despite the government's financial straits, arrangements were made for the purchase of arms, munitions, and airplanes in the United States.

**The Oil Controversy.** There were important developments in the dispute between the government and the foreign oil companies whose properties were expropriated in 1938 (see 1938 and 1939 YEAR BOOKS). Legal proceedings to fix the compensation to be paid the companies were carried to completion over their opposition and protests. On January 31 President Cárdenas announced that since the companies refused to co-operate in the appraisal of their properties, the Mexican courts would determine the valuation without appeal as to the amount of compensation.

While two experts appointed by the courts were engaged in appraising the oil properties, the government broke the united front maintained by the United States oil companies in the expropriation controversy. Early in May the Sinclair interests, controlling an estimated 10 to 40 per cent of the American oil holdings in Mexico, agreed to accept \$8,500,000 in settlement of their claims. Of this sum, \$3,000,000 was paid in 1940 and the remainder was due in installments ending in 1942. It was understood that the Sinclair interests also agreed to buy a substantial amount of Mexican oil over a period of years.

On August 20 the two appraisers appointed by the courts, one representing the government and the other the oil companies (without their consent), submitted their reports. The government expert estimated the compensation due all the foreign companies except the Sinclair interests at 170,737,000 pesos (about \$34,546,000 at the current exchange rate). The estimate of the other expert was 181,202,000 pesos (about \$36,258,000). These estimates, which excluded the oil underground, contrasted with the companies' estimate that their losses approximated \$400,000,000, including oil underground. A third expert named by the courts fixed the final valuation at 177,624,000 pesos (about \$35,525,000) on August 29. Of this amount, \$28,432,000 was allotted to the British and Netherlands interests controlling the Aguila holdings, \$5,117,000 to the Standard Oil Company of New Jersey, and the rest to five other American concerns. The court approved this award and signed the deed transferring the properties to the Mexican Government when the companies concerned refused to sign.

Government spokesmen declared the legal controversy closed, since the expropriation law barred any appeal from the court's decision. The govern-

ment also deducted from the sum of the award claims totaling \$23,400,000 advanced against the companies by oil workers for severance pay and other items. This reduced the net amount owing the companies by the government to \$12,125,000. On September 18 the Standard Oil subsidiaries in Mexico filed a petition for an injunction against the award.

**Negotiations with Washington.** On April 3 the United States Government formally intervened in the oil controversy with a note requesting arbitration of all the issues between the Mexican Government and the American companies involved. Secretary Hull's note declared that Mexico's treatment of Americans in many fields was "wholly unjustifiable under any principle of equity or international law." It asserted that these differences "must of necessity be adjusted if the relations between our two countries are to be conducted on a mutually co-operative basis of respect and helpfulness." Mr. Hull requested that an umpire be appointed to fix the amount of unadjusted general American claims against Mexico or that a lump sum payment be negotiated for distribution among claimants by the United States. Once these proposals were accepted, he suggested, other outstanding problems should be discussed, such as Mexican defaults on the foreign and railway debts.

This note produced a violent reaction in Mexico. Virtually all sections of opinion denounced it as a manifestation of "Yankee imperialism." Protest parades were held in many Mexican cities on April 11. This indignation soon subsided, but on May 1 the Mexican Government firmly rejected Secretary Hull's arbitration proposal on the ground that the oil dispute was a domestic one which was nearing solution. His request for settlement of general claims by an umpire was likewise turned down but the note expressed Mexico's willingness to negotiate a "global settlement" of these non-adjudicated claims.

Meanwhile the Mexican Government proceeded with the expropriation of American and other foreign-owned agricultural properties. A decree of March 26 expropriated 1,500,000 acres of land in the State of Chiapas held by three American corporations. The decree held that since the companies' title was not valid they were debarred from compensation. On June 29 the Mexican Government made another \$1,000,000 payment on American-owned lands confiscated since Aug. 30, 1927.

See FASCISM; INDUSTRIAL CHEMISTRY; PAN AMERICANISM.

**MICHIGAN.** Area, 57,980 square miles; includes water (but not the State's part of the Great Lakes), 500 square miles. Population (U. S. Census), April, 1940, 5,256,106 (3,454,867 urban and 1,801,239 rural); 1930, 4,842,325. Detroit (1940), 1,623,452; Grand Rapids, 164,292; Flint, 151,543; Lansing (the capital), 78,753.

**Agriculture.** Michigan harvested, in 1940, about 7,707,000 acres of the principal crops. Corn, leading all in importance, occupied 1,558,000 acres, made 49,856,000 bu., and by estimate returned the producers \$32,406,000. Tame hay, on 2,694,000 acres, gave 4,064,000 tons (about \$25,603,000); potatoes, on 240,000 acres, 20,640,000 bu. (\$12,797,000); oats, 1,287,000 acres, 60,489,000 bu. (\$18,752,000); wheat, 761,000 acres, 17,812,000 bu. (\$13,359,000); dry beans, 567,000 acres, 4,309,000 100-lb. bags (\$12,021,000); sugar beets, 114,000 acres, 1,004,000 tons (estimate for slightly greater crop of 1939,

\$5,774,000). Apples for market gave 5,967,000 bu. (\$5,072,000); cherries, 38,870 tons (about \$2,400,000). Farms (1940): 187,589; their size averaged 96.2 acres.

**Manufacturing.** Yearly production of manufactured goods in Michigan totaled \$4,341,413,139 for 1939; \$5,296,100,960 for 1937. Other totals for 1939 (each with that for 1937 subjoined): 6313 (5614) establishments employed 523,071 (660,676) persons for wages of \$790,740,567 (\$986,840,523), paid for material, etc., and contract work \$2,550,346,742 (\$3,204,437,649), and added to material, by manufacture, a value of \$1,791,066,397 (\$2,091,663,311).

**Mineral Production.** Michigan's yearly production of native minerals, as valued in 1940 by the U. S. Bureau of Mines, sank to \$81,380,602 for 1938, or less than seven-tenths of the total for 1937. Most of the loss resulted from lower shipments of iron ore, at lower prices. The iron-ore production recovered, to 9,159,222 gross tons for 1939, from 6,004,311 tons for 1938; mines' actual shipments of iron ore recovered more sharply, to 11,238,605 tons, from 4,092,902 tons; and shipments' value, to \$37,026,665, from \$13,139,823. In 1940 the corresponding totals rose to some 13,746,000 tons and \$40,769,000.

The yield of petroleum rose to approximately 22,799,000 bbl. for 1939, from 18,745,000 bbl. (value, \$19,300,000) for 1938. A system limiting the production of petroleum by prorating the allowable output of new fields went into effect June 1, 1939. Mines' production of copper, in ore, diminished somewhat to 43,985 short tons (1939) from 46,743 tons (value, \$9,161,628) for 1938. Of portland cement, producers' yearly shipments (fairly near yearly production) rose to 8,327,479 bbl (1939) from 7,192,511 (1938) and in value to \$10,891,978, from \$8,767,859. The yield of natural gas was reported as about 10 per cent higher for 1939 than for 1938; for 1938 the consumed output of natural gas totaled 10,165 million cubic feet, in value at points of consumption, \$6,387,000. Producers' sales of salt recovered to 2,408,872 short tons (1939) from 2,078,612 (1938); in value, to \$6,726,912, from \$6,151,154.

Industries using minerals wholly or partly from outside produced great totals not included in the State's yearly value of production of its own minerals. Of coke, 2,430,688 short tons were made in 1939, as against 1,742,787 in 1938; by value, \$12,408,881 as against \$10,135,722. Furnaces' shipments of pig iron doubled, to 1,138,964 gross tons (1939) from 558,782 tons (1938) and in value to \$18,872,150, from \$9,806,994.

**Education.** Michigan's inhabitants of school age (from 5 years to 19, inclusive) were reckoned, for May, 1939, at 1,389,347, or some 10,000 fewer than a year before. For the academic year 1938-39—the latest covered by data that follow—enrollments in the public schools numbered 967,852; this comprised 535,763 from kindergarten through eighth grade, 398,886 in high school, and 33,203 otherwise classified. The year's expenditure for public-school education totaled \$107,694,541. Teachers in public schools numbered 32,702; their pay averaged \$1599.14 for the year.

**History.** The industries of Michigan, as a whole, passed an unusually productive year, toward the end of which the leading manufacturers of automobiles started to branch out into the production of airplanes and aeronautical engines, in accordance with the effort of the Federal Govern-

ment to increase the Nation's armaments. The State's government, however, still felt the weight of the heavy deficit that the Murphy administration had bequeathed to its successor in 1939; Governor Dickinson resorted to severe (though unequal) retrenchment, to avoid summoning the Legislature in special session and asking it for more money to meet obligations. The dependents on public support became less numerous, and the State's sales tax brought in more revenue as industrial activity increased; but the difficulty of realizing on sums due the State in delinquent taxes on property remained, as the sales of land for taxes in February brought in many cases far less than assessed valuation.

Governor Dickinson was accused during the year of having carried economy to such excess as to risk wrecking the physical condition of some of the State's dependents. An epidemic of poliomyelitis had spread in the Upper Peninsula, and the Governor's accusers charged that the convalescent sufferers lacked the public care needful to restoring nerves and muscles paralysed by the disease. This consideration was said to have contributed to Dickinson's failure to win re-election: and H. E. Van de Walker, 14 years head of the Crippled Children's Commission, resigned in October, after controversy with Dickinson.

**Labor Situation.** The automobile-manufacturing industry, harried for several years by strikes and suspensions of work, complicated with rivalries among unions, enjoyed a year of relative freedom from these troubles. The question what union should prevail as the agent for the 136,000 employees of the General Motors Corporation was apparently settled by an election held on April 18 by the NLRB. While most of these employees were in Michigan, their total was scattered among 11 States. They gave about 90,000 votes for the C.I.O.'s fraction of the disrupted United Automobile Workers of America and about 30,000 for the A.F.L. affiliation, or for neither. The election determined, at least for a time, the agency to have control of the employees' concerns as to labor matters.

The Board of Appeals of the State's Unemployment Compensation Commission decided (April 23) in favor of the claims of some 35,000 employees of the Chrysler Corporation to receive \$1,892,700 in compensation for their idleness in the course of the interruption of work in the Chrysler establishments during the labor troubles in the autumn of 1939.

**Federal Activities in the State.** In April, armed with reports from the Federal Bureau of Investigation, F. John Rogge of the Federal Department of Justice prosecuted infractions of Federal laws on the part of State authorities and others, as he had successfully done in Louisiana. A Federal Grand Jury subsequently spent over six months on inquiries along this line; Frank D. McKay of Grand Rapids, veteran political boss, was indicted in December. Congress passed a bill to permit Michigan to build a bridge across the Straits of Mackinac. The U.S. Secretary of the Interior received from Michigan a deed to 133,405 acres intended to form part of Isle Royale National Park in Lake Superior.

**State Civil Service.** According to a report of the State's Civil Service Commission, published late in January, all employees in 24 of the State government's departments had been removed from the protected status of civil service subsequent to the so-called civil-service ripper act passed in 1939.

While this act was defended by its supporters as a counterthrust to the intrenchment of Democratic officeholders said to have been effected by the civil-service act itself, the revealed result helped renew the agitation for restoring the system. Petitions for the submission of an amendment to the voters at the election during November were circulated and the necessary number of signatures, about 161,000, was obtained. The prospect, later realized, that the popular vote would adopt the amendment, lent particular importance to the year's elections of Governor and legislators. The amendment required the enactment of the requisite civil-service law under penalty of the stoppage of all the State's pay checks on August 1; it made mandatory the creation of a new Civil Service Commission of two Republican and two Democratic members, to be appointed by the Governor, and of a Director of Personnel. It was expected that the commission when created would admit all the existing State employees, except for a few exempted groups, into the protection of the system.

**Detroit.** Under Mayor Jeffries, elected in November, 1939, Detroit underwent at least the opening stages of a purge of official misconduct. The previous Mayor, Richard W. Reading, was held for trial as a receiver of bribes from operators of games of policy and from takers of wagers on horse races; he was one of 137 charged with complicity in the protection of horse-race gambling. Sheriff T. C. Wilcox of Wayne County was removed from office by Governor Dickinson on charges of protecting operators of places of unlawful resort. Duncan C. McCrea, prosecutor of Wayne County, went out by the same exit. McCrea's removal took from his hands the duty of prosecuting the participants in the alleged corruption. The graft indictments as a whole portrayed many officers of the law, great and small, as having sold immunity to bands of bookmakers, lottery men, and traffickers in prostitution. The disclosures spread from a relatively small origin, the suicide of a woman employee of a policy shop in 1939, who was found to have left a memorandum of payments made to members of the police.

The lack of a satisfactory zoning ordinance for safeguarding the development of realty came into note during the year in two ways: it led to a demand that the city do something about areas that were deteriorating and thus losing in ability to pay taxes; in another direction, it stimulated demand for housing projects that might help rid the city of slums.

See AQUEDUCTS; WATER WORKS AND WATER PURIFICATION.

**Elections.** At the general election (November 5) the popular vote for President went to Willkie (Rep.) by 1,039,917, giving him a plurality of almost 7000 votes over Roosevelt (Dem.), who obtained 1,032,991. U.S. Senator A. H. Vandenberg (Rep.) was re-elected, by 1,053,104 to 939,740 for Frank Fitzgerald (Dem.). Governor Dickinson (Rep.), obtaining 945,774 votes, failed of re-election; his opponent, M. D. Van Wagoner (Dem.), running ahead of his party's ticket, with 1,077,065 votes. Majorities in both houses of the Legislature were none the less retained by the Republicans. Eleven Republicans and six Democrats were elected U.S. Representatives.

The voters adopted a thoroughgoing system of civil service for employees of the State, as provided in a proposed constitutional amendment. They rejected a proposal forbidding the Detroit Street

Railways to continue charging, between Detroit and suburban points, low fares that privately owned companies, being taxed as such, were said to be unable to meet.

**Officers.** Michigan's chief officers, serving in 1940, were: Governor, Luren D. Dickinson (Rep.); Lieutenant Governor, office vacant; Secretary of State, Harry F. Kelly; Attorney General, Thomas Read; Treasurer, Miller Duncel; Auditor, Vernon J. Brown; Superintendent of Public Instruction, Eugene B. Elliott.

**MIDWAY ISLANDS.** A group of islands in the North Pacific (28° 12' N.; 177° 22' W.), some 1200 miles to the northwest of Hawaii. Area, 28 square miles; population (1936), 118. The Naval Appropriations Bill of 1939 provided for the construction on the islands of a United States air and submarine base. Since 1935 the islands have been used as a station on Pan American Airways' transpacific route to Manila. They are administered by the U.S. Navy Department.

**MIGRANT WORKERS.** See **FARM SECURITY ADMINISTRATION**; **NEW JERSEY** under *Administrative Matters*.

**MILITARY PROGRESS.** The development of weapons, training of troops, tactics, and general military thought during the year, was influenced in virtually all of the world powers by the successes of the German Army. Profoundly impressed by the power displayed in the conquest and subjugation of Norway, Netherlands, Belgium, and France, military leaders in belligerent as well as neutral countries endeavored to apply to their own needs the weapons and principles which made this possible. As the year drew to a close, British troops in North Africa with smashing blows and lightning movement against the Italians, were demonstrating their acceptance and absorption of the German concept of war. On the surface, and to popular thought, "Blitzkrieg" was a war of modern weapons—airplanes and tanks. Studied military analysis revealed it to be a modern exposition of the old principles of surprise, mass, and exploitation, fundamentally based upon such perfect training and co-ordination of all arms that the way was cleared for the Infantry to clinch the decision and consolidate the gains. Stabilized trench warfare passed from the military mind in 1940, and in its place came a return to the war of movement. Adopting modern means to old, but sound military practice, the German Army in northern Europe blasted its way through the static fixed defenses, and in dynamic action sent its armored divisions through the gap to spread havoc and destruction to the command posts and communications in the rear. Where opposition was encountered, the way was made easier by the devastating attacks of supporting dive bombers. Behind the wave of armored elements came the motorized infantry and the motorized supply elements upon which both depended. Next followed the Infantry, to make the final decision and consolidate the gains. With the Infantry came horse-drawn artillery and horse-drawn supplies. Thus the modern weapons opened the way for the age-proven to conquer and hold, while the

ancient principle of perfect training and co-ordination made it possible.

As showing the German thought on the Blitzkrieg, Lieutenant Colonel Köhn wrote in the *Militär Wochenblatt* (Berlin) of Aug. 2, 1940:

"During the pursuit, the tanks, aviators, and fast troops develop the tactical success into a strategic one. Nevertheless, the Infantry also continues to take part in the pursuit, and it must accomplish great feats, as the present war has shown once more. It presses forward relentlessly and is not afraid to lose temporarily the previously close support of its neighbors in order to prevent the enemy from making a new stand. This necessitates bold and decisive action on the part of the subordinate commanders, who can usually count only upon their respective units and must wage the combat without relying on the assistance of their neighbors. It is perhaps in just this kind of combat that we have shown ourselves strongest during the present war.

"A consideration of the principles will show very plainly that troops had been adequately prepared and trained for combat. In accordance with the missions assigned them, all arms have supported the Infantry so fully that in many cases the ideal of enabling the Infantry to reach the enemy with its strength still unimpaired was almost completely attained. Only thus is it possible to explain the almost incredibly small losses as compared with those occurring during the World War. Nevertheless, it should be stated that the endurance and tenacity shown by the Infantry during the World War and again in the present war, was the decisive factor when it was opposed by an equally tenacious enemy. Therefore, when initial successes were swiftly developed by the command into strategic successes, there occurred through employment of all arms a pursuit of the enemy unparalleled in the history of the world, and the commanders of even the smallest units were glad to assume responsibility. It was this fact that was new to our foes. They call it 'Blitzkrieg' and talk of our secrets. To us this quick success was due to our training, but it cannot cause us to overlook the basic importance of general principles in combating a tenacious and obstinate foe. The great successes obtained by all arms group themselves about the victory of the Infantry, which, as the principal arm, overcame the enemy man to man, and thus triumphed over his technique."

Nevertheless, while the Infantry, through the co-ordination and training of other arms, continues to be the final and decisive factor, general recognition is given to the fact that its success in 1940 was due to the preparation made for it by the airplane and mechanized and motorized troops, and it was to these agencies and to methods of defense against them that military thought turned for development and exploitation.

**United States.** Throughout the year 1940 there was a growing determination by the people of the United States that a strong armed defense was necessary to their security. Public sentiment had been swinging in the preceding years from dependence upon diplomacy, and the still earlier arms limitation agreements, to dependence upon armed strength. Two factors led to this change: First, Europe's demonstration of the destructive power of the airplane and the certainty of the belief that further developments of its powers would greatly weaken the security formerly provided by the Atlantic and the Pacific Oceans; and second, the proof offered by events abroad that neither strict neutrality, non-aggression treaties, nor sedulous inoffensiveness deters nations bent on conquest. The intensity of this trend in the life of the United States mounted through the year. Submitting his recommendations in as large increments as the public mind would accept, President Roosevelt led the third session of the 76th Congress to vote for National Defense and enforcement of neutrality the unprecedented peace-time sum of \$9,114,345,921 in direct appropriations and an additional \$3,991,882,009 in contract authorizations making a total of \$13,106,227,930, not including \$4,586,000,000 (estimated cost) for long-range commitments for naval shipbuilding expansion program in excess of ex-

isting appropriations. Of this figure, \$8,792,145.-145 was for the military activities of the War Department, all of which was in the form of direct appropriations except \$2,979,136,397 in contract authorizations for the fiscal year 1941. The public determination to secure defense, reached even a higher peak in the fall when two far reaching pieces of legislation became laws: On August 27, legislative authority for the President to order into the active military service of the United States for a period of twelve consecutive months each, any, or all members and units of any or all reserve components of the Army of the United States and retired personnel of the Regular Army, with or without their consent; and, on September 16, a universal military service law under the title "Selective Training and Service Act of 1940," which required the registration for military training and service of male citizens between the ages of 21 and 35 years. See DRAFT.

This effort of the United States to build a formidable force from an Army that had stood for years as the seventeenth among the nations of the world, is of vital military importance throughout the world. Such progress as has been made during the short period the new funds have been available, has been due to the soundness of the planning of the War Department General Staff during the years since the World War, particularly in the development of the National Guard and Reserve Officer systems of civilian components. The year saw the number of soldiers on active duty increase from 220,000 to more than 600,000, with 1,400,000 scheduled by the spring of 1941. In January of 1940 there were only five newly organized Infantry Divisions and one inadequately strengthened Cavalry Division in active service in the United States. At the end of the year there were twenty-two divisions in active service.

**Organization and Administration.** The charted picture of the Army was altered considerably. A fundamental change was that separating the geographical Corps Area commands from the Army and Tactical Corps commands. Under the new organization, the commanders of the nine geographical corps areas constitute an organization quite similar to the Service of Supply set up by Gen. John J. Pershing in France. They are relieved of the responsibility for the training and combat efficiency of tactical units. Also constituted during the year was the nucleus of a General Headquarters Staff, with Maj. Gen. Leslie J. McNair as chief of staff. Thus the Chief of Staff of the Army, Gen. George C. Marshall, through his dual capacity as Commanding General of the Field Forces, exercises his direction and supervision of the training of the Field Forces (exclusive of overseas garrisons) through the General Headquarters Staff, to the Army commanders (tactical), Corps Commanders, and commanders of Divisions and troop units. On the other hand, the supply and general house-keeping duties at posts are administered by the War Department through the Corps Area commanders and thence to post commanders. Decision to separate post administration from tactical units is designed to free the latter from the duties of administering and maintaining their military townships and to make them tenants of a post from which they may depart on a moment's notice for operations in the field or as expeditionary forces without disruption either of the tactical units or of the post's administration. Likewise, the commands of the four field Armies, which former-

ly had been given to the senior corps area commander in each of the Army areas, were made separate commands and nine tactical Corps commands were set up. With nine Regular Army (triangular—three regiment, mobile) divisions and eighteen National Guard (square—two brigade, four regiment, heavy) divisions in existence, the typical corps would thus be composed of one triangular division and two square divisions. In practice only the Fourth and Eighth Corps were thus constituted, the others being variously composed, while two triangular divisions, the 5th and 6th, together with the contemplated 2d Cavalry Division became non-corps troops with the Second Army, and the 1st Cavalry Division non-corps troops with the Third Army.

The successful use by the German Army of its Panzer (mechanized) Divisions for surprise and shock, and the opening of a way for its Infantry troops, led the U.S. Army to intensify its development of mechanized warfare by the creation of an Armored Force embracing functions formerly apportioned to both the Cavalry and Infantry. Under the previous arrangement, provided by the National Defense Act, tanks were the responsibility of the Infantry, yet mechanization had been placed under the Cavalry because its missions of reconnaissance, shock, and exploitation were considered Cavalry functions. Under the latter arrangement tanks were assigned to the Cavalry under the nomenclature of combat cars. With the organization of the Armored Force, under Maj. Gen. Adna R. Chaffee, all Infantry and Cavalry activities relating to tanks and combat cars, and their accompanying artillery, were consolidated in a new component of the Army responsible directly to the Chief of Staff and without an intervening chief of branch. Originally one corps, composed of two divisions, was created, while two more divisions were authorized to be formed during the spring of 1941.

In line with the lessons of the war in Europe, increasing emphasis was given to the Air Component. Decision was reached on a program making provision for 60 combat groups for the General Headquarters Air Force. In addition the GHQ Air Force was removed from the jurisdiction of the Chief of the Air Corps, and designated as an element of the field forces to operate under the direct control of General Headquarters. The commanding general of the GHQ Air Force, Delos C. Emmons, was elevated to the rank of lieutenant general, thus making him a co-equal of the commanding generals of the four field armies, and his headquarters was ordered transferred from Langley Field, Va., to Bolling Field, D.C., where he will be close to the General Headquarters operating from the Army War College. This carrying forward of the development of aviation as an integral part of the Army, in the face of some agitation for a separate department of the air, was done with the support of President Roosevelt, who, in a radio speech on May 26, had stated that "the air forces should be a part of the Army and Navy." In that talk, the President said:

"Recent wars, including the current war in Europe, have demonstrated beyond doubt that fighting efficiency depends on unity of control. In sea operations the airplane is just as much an integral part of unity of operations as are the submarine, the destroyer, and the battleship, and in land warfare the airplane is just as much a part of military operations as are the tank corps, the engineers, the artillery, or the infantry itself."

Emerging from this reorganization was the basis of a mobile field Army under the General

Headquarters having directly under its command the I Armored Corps (Maj. Gen. Adna R. Chaffee, commanding), composed of the First and Second Armored Divisions; the GHQ Air Force; a GHQ Reserve composed of heavy artillery, heavy tank, and other elements; and four field Armies organized as follows:

*First Army* (Lieut. Gen. Hugh A. Drum, Commanding)—I Corps, 8th, 9th, and 30th Divisions; II Corps, 28th\*, 29th\*, and 44th Divisions; VI Corps, 1st and 26th\* Divisions; and the 1st, 2d, and 3d Coast Artillery Districts.

*Second Army* (Lieut. Gen. Ben Lear, Commanding)—VII Corps, 27th, 33d\*, and 35th Divisions; and the 5th and 6th Divisions and the 2d Cavalry Divisions.

*Third Army* (Lieut. Gen. Herbert J. Brees, Commanding)—IV Corps, 4th, 31st, and 43d\* Divisions; V Corps, 32d, 34th\*, 37th, and 38th\* Divisions; VIII Corps, 2d, 36th, and 45th Divisions; the 1st Cavalry Division; the 4th Coast Artillery District, and the Harbor Defenses of Galveston.

*Fourth Army* (Lieut. Gen. John L. DeWitt, Commanding)—III Corps, 7th and 40th\* Divisions; IX Corps, 3d and 41st Divisions; 9th Coast Artillery District; and Alaskan command.

The table on page 463 lists by corps areas the major army posts, camps, and stations in the United States with estimated population in round numbers as of June 15, 1941.

Vertical envelopment, through the landing behind the enemy's lines of Infantry troops dropped from airplanes by parachutes, having proved of value under favorable conditions in Europe, the formation of such units was undertaken in the U.S. Army, initially by the organization of the 501st Parachute Battalion at Ft. Benning, Ga. The U.S. Army had demonstrated some years ago the feasibility of landing rifle and machine-gun troops by parachutes, but had not pursued its own innovation.

Looking to the development of a system of protection against aerial invasion, the War Department set up early in the year an Air Defense Command under Maj. Gen. James E. Chaney, Jr. Embracing anti-aircraft units, interceptor-pursuit airplane groups, and an aircraft warning service of signal communications, the new command was established in the New England area to work out organization and methods which eventually will be duplicated in other geographic defensive areas.

Having in mind the experience in Finland and in Albania and in order that it might be prepared for operation under all weather conditions, the U.S. Army also entered upon a program of training troops in northern areas to travel and fight on skis and snow shoes.

Profiting from its experience in the World War, the War Department is basing its plans for expansion of the Army on the replacement center system rather than on the old system of recruit training within the combat unit, or as happened in the World War, the breaking up of existing units to provide personnel for replacement of losses in other units. Under the replacement system all recruits will be given three months basic training in their arm or service in a replacement center. Upon completion of this training they will be sent to operating organizations. Thus the tactical organizations will be freed from the problem of recruit training and enabled to devote their entire energies to training in units above that of the company.

Reviewing the progress of the year, Gen. George C. Marshall, Chief of Staff, of the Army, reported to a nation-wide radio audience on Jan. 7, 1941, as follows:

\* National Guard Division due for induction into Federal Service early in 1941.

"A little more than a year ago the Army had a small garrison in the Philippines, one of medium size in Panama, and a well-developed force in Hawaii. In Puerto Rico there were less than a thousand men, and in Alaska but a few hundred. Here, at home, there was no field army, only scattered regiments of the regular army, incomplete in numbers, in training, and in many vital items of equipment. Behind these troops was a wholly inadequate store of modern munitions, insufficient even for the expansion of the few existing units to full strength. Our reserves of uniforms had been exhausted by issues to the Civilian Conservation Corps. There was so little motor transportation that the larger units could not be given adequate field training, even if assembled.

"Today more than 600,000 men are in active training. Twenty-two divisions are in the field in this country, along with approximately 100 regiments of special troops, such as heavy guns, anti-aircraft artillery, and engineers. These units are organized into Army Corps, and the corps in turn are organized into four field armies.

"That important member of our military team, the Air Corps, has doubled in strength and will soon be trebled. Reinforcements have gone to Hawaii; the troop strength in Panama has more than doubled. Puerto Rico now has a garrison not of 1000 but of 12,000, and the lonely group in Alaska has swelled to 3000.

"Throughout the Caribbean region air fields are being improved and extended. Gasoline and servicing facilities are being installed to provide for any sudden movement of our planes in that area. Next week troops will sail from New York to Newfoundland to garrison our new air base there. Our engineers are on the ground surveying sites in Bermuda, Trinidad, and the other bases recently made available to us by the British government."

**Maneuvers and Field Training.** In contrast with recent years when two weeks in the field for one fourth of the mobile Army in the United States was the extent of the Army's maneuvers, 1940 was a year of continuous field training for most of the field forces. The opening of the year found most of the combat elements, including the new organized triangular divisions, under canvas training in southern areas. This divisional and corps training culminated in the spring in an Army exercise in Louisiana and Texas.

In January, the Third Division engaged in a Joint Exercise with Naval forces, involving its transportation by sea from Ft. Lewis, Wash., to a point near the Presidio of Monterey, Calif., where it effected a landing on the beach, with all its artillery, tanks, and heavy equipment under simulated war conditions and opposition. In the summer each of the Four Armies in the United States held field exercises in which the National Guard units in their areas participated. By fall the bill for the induction of the National Guard was a law and, as housing and health facilities became available, those units entered the Federal service for a continuous state of field training.

**Materiel.** Procurement of materiel and the construction of housing and facilities remained the greatest problems in connection with the expansion program of the Army. An Advisory Committee to the National Defense Council and later an Office of Production Management were created to speed up procurement. For contracts and deliveries to the end of the year, see NATIONAL DEFENSE ADVISORY COMMISSION. Nevertheless, with a large portion of new production as well as considerable amounts of Army materiel being sent to the British, it was difficult to forecast when the United States forces would be completely supplied with modern equipment.

**MILK.** See DAIRYING; SURPLUS MARKETING ADMINISTRATION.

**MINERALOGY.** Among the books dealing with minerals that have appeared during 1940, the most timely if not the most important is "Strategic Mineral Supplies," by G. A. Roush (McGraw Hill, New York and London). The author of this volume is an experienced metallurgist who has served on the Staff Specialist Reserve of the U.S. Army, and can write with authority regarding such matters as the uses, ores, output (both world wide and national), prices, and ore reserves of such materials as are vitally necessary to the defense armament. On the side of gem minerals the most important book of the past year is "Gemstones," by G. F. Herbert Smith (Methuen and Company, Ltd. London). This admirable text, the first edition of which appeared in 1912, has been a standard of popular reference since that year. Dr. Herbert Smith, however has produced in this, the ninth edition, what amounts to a new and very much up-to-date book. The scope of the rewritten text has been widened so that its appeal is no longer confined to that section of the public interested in a popular handbook on gems, but may also be used as an authoritative tool by professional English-speaking gemologists.

What impresses one chiefly is the masterly way in which the great mass of information about gems has been organized so that a given fact or group of facts may be readily found and correlated. The author has accomplished this without in any degree sacrificing the charming lucidity of diction which has characterized his book throughout its eight previous editions. Such terms as "igmerald," synthetic emerald produced by the I. G. Farbenindustrie, and "endoscope," the microscope accessory used to differentiate native from cultured pearls, are fully discussed, and serve to indicate to what an extent gemstones have been brought strictly up to date. The new edition adds about 120 pages over previous ones, but owing to the difference in format and typography, it contains upward of 200,000 words over any previous one. New half tone plates have been added and substituted, and many new and better line cuts explain the letter press.

**New Minerals.** A number of new mineral species have been announced or confirmed during the year 1940. The Kola peninsula, the rocks of which have furnished several new minerals in recent years, has yielded two species new to science: *Lovozersite* a hydrous silicate of zirconium, was

found in black or pink grains in the rocks of Lovozero and was named for the locality, and *Kalisaponite*, a zeolitic mineral related to saponite but with an excess of potash content, was found in the Khibine Tundras region.

*Falkmanite*, a sulphantimonite of lead occurring in needlelike monoclinic crystals, gray in color, is so named in honor of Oscar Carl August Falkner, director of the Boliden mines in Sweden. The Boliden mines were among the several localities where this new mineral was found.

A hydrous tantalate of aluminium and calcium from Tabba Tabba, Western Australia, occurs in small, transparent, colorless hexagonal crystals. It has been named *Simpsonite* in honor of the late Dr. Edward S. Simpson, Government Mineralogist of Western Australia.

*Stiepelmannite*, a basic phosphate of yttrium, ytterbium, and aluminium was found in the mine at Klein Spitzkopje, Southwest Africa. It occurs in small rhombohedral crystals, colorless to pale wine-yellow.

From Madagascar, the home of rare minerals, comes a new tungstate and molybdate of calcium, which has been named *Seyrigite* in honor of the manager Mr. Seyrig of the mine in which it was found. Seyrigite occurs in tetragonal crystals that are translucent and golden yellow in color.

*Salesite*, a copper iodate, from Chuquicamata, Chile, has been found in only one specimen. This piece shows the very rare mineral in bluish-green orthorhombic crystals. It was named in honor of Reno H. Sales, chief geologist of the Anaconda Copper Mining Company. Another copper iodate, this one a hydrated iodate of copper also occurs at Chuquicamata, Chile. *Bellingerite*, named after H. C. Bellinger, Vice-President of the Chile Exploration Co., occurs in green triclinic crystals. *Gratonite*, named in honor of Prof. Louis C. Graton of Harvard University, is a sulpharsenite of lead, occurring in dark lead gray rhombohedral crystals at Cerro de Pasco, Peru.

Two new phosphates from the Fairfield, Utah locality have been added to the long list of rare mineral species from this place: *Montgomeryite* is a hydrous phosphate of calcium and aluminium, occurring as green to colorless monoclinic crystals in varusite nodules, and was named after Arthur Montgomery of New York. Another hydrous phosphate of calcium and aluminium, differing slightly from montgomeryite in composition bears the name of *Overite* in honor of Edward Over of Colorado Springs, Colorado. Overite occurs in

pale green to colorless orthorhombic crystals.

A natural bicarbonate of sodium from Sarles Lake, California has been named *Nahcolite* from its chemical formula ( $\text{NaHCO}_3$ ). It occurs in abundant monoclinic crystals. Although nahcolite has long been known as a mineral occurring under semi-artificial conditions, this is the first instance of an absolutely native sodium bicarbonate.

A new calcium phosphate occurring in clear colorless, rhombohedral crystals was found in a granite pegmatite near North Groton, New Hampshire. It has been named *whitlockite* after the author of this review.

HERBERT P. WHITLOCK.

**MINERALS AND METALS.** For production, see BUSINESS REVIEW and the UNITED STATES, the States, and the countries under *Mineral Production*; also, the separate articles on the following: ALUMINUM, ANTIMONY, ASBESTOS, CADMIUM, CHROMIUM, COAL AND COKE, COPPER, GOLD, IRON AND STEEL, IRON ORE, LEAD, MAGNESIUM, MANGANESE, MERCURY, MOLYBDENUM, NICKEL, PETROLEUM, PLATINUM, POTASH, SILVER, SULPHUR, TIN, TUNGSTEN, ZINC. See CHEMISTRY, INDUSTRIAL; CUSTOMS, BUREAU OF; GEOLOGICAL SURVEY; GEOLOGY; MINERALOGY; MINES, BUREAU OF. For a list and discussion of "strategic metals" see GEOLOGY and RECONSTRUCTION FINANCE CORPORATION.

**MINES, Bureau of.** This Bureau of the U. S. Department of the Interior, was organized in 1910 to conserve the mineral resources of the Nation, to promote safety in the mineral industries, and to conduct investigations leading to the more efficient and more economical mining, preparation, and utilization of minerals.

The Bureau of Mines' technological research and its economic-and-statistical studies, relating to coals, metals, non-metals, petroleum and natural gas, and other resources, have contributed materially during the past 30 years to the orderly economic development of the mineral industries. (The technical investigations are conducted largely at the Bureau's 14 experiment stations located in the more important mineral districts, the efforts at each station being devoted primarily to the solution of mineral problems of the surrounding region.)

As in the emergency of 1917-18, the Bureau of Mines during the past year gave a great deal of attention to the preparations for national defense. Among the Bureau's outstanding achievements in this respect during the fiscal year 1940 were the following:

The exploration of various ore deposits in the United States to determine available sources of such strategic materials as antimony, mercury, chromium, manganese, nickel, tungsten, and tin. Results indicated significant quantities of strategic minerals in three of the deposits and the possibility that in an emergency the country could be self-sufficient as regards antimony and mercury.

The development of methods for the production of high-purity electrolytic chromium from domestic chrome ores.

The development of methods for the recovery of nickel, copper, and platinum metals from complex domestic nickel ores; and for the electrolytic recovery of antimony from antimonial gold ores.

The further improvement of methods developed by the Bureau for the production of high-purity electrolytic manganese; and the study of several series of manganese alloys, made with manganese produced by the Bureau method, which have unique properties.

Laboratory testing of an electrothermal process for producing magnesium metal from magnesite.

The acquisition of special economic and statistical data on minerals of importance to the national defense pro-

gram, also special surveys of secondary metals and aviation gasoline.

The supplying of valuable data to the Advisory Commission to the Council of National Defense, to assist that defense agency in its task of maintaining an available supply of raw materials for industry.

The supplying of valuable data to the Army and Navy Munitions Board to assist in the Government's stock-piling program.

The compilation of data for defense agencies on industrial diamonds, asbestos, graphite, quartz crystals, mica, iodine, and other non-metallic commodities essential to a military program.

The conduction of special surveys on the mineral resources, production and trade of various South American countries to determine new sources of supply for certain minerals which the United States now imports from across the oceans.

The conducting of tests of American coals to find their value as a source of motor fuel and lubricants, and the production, as by-products of the coking of coal, of benzol, toluol, and xylol, essential constituents of explosives.

The expansion of information on demolition explosives.

The application of the newer ore-dressing methods to domestic non-metallic minerals in order that satisfactory grades of such materials, including ceramic clays, graphite, talc, and fluorspar, which are usually imported, may be produced in this country, and the United States therefore may be rendered less dependent on foreign sources.

The production at the Bureau's plant, at Amarillo, Tex., of nearly 9,500,000 cubic feet of salable helium, bringing the total production completed of this lightweight non-inflammable gas to more than 100,000,000 cubic feet during the first 11 years of plant operation. The present plant capacity is about 24,000,000 cubic feet annually. Approximately 85 per cent of the current output is used by the Government.

The promotion of the health and safety of the workers in the mines and allied industries was, as always, a prime function of the Bureau in 1940. Engineers of the Bureau trained members of industries in first-aid and mine-rescue, responded to emergency calls for assistance after mine fires and explosions, and, among other things, inspected mines at the request of mine operators or State officials. During the fiscal year, these engineers trained 93,878 persons in mine rescue and first-aid, bringing the total number of courses completed since the establishment of the Bureau to 1,361,465. They also investigated 18 mine explosions in 12 States, and 28 mine fires in 11 States, during the year assisting in rescue and recovery work in virtually all of them where life was involved.

The Bureau continued its efforts to improve hygienic conditions in the mineral industries in order to maintain health and increase efficiency and morale. Studies pertinent to the safe use of Diesel locomotives underground were undertaken; respirators and gas masks were tested and approved; and, among other health activities, reports were prepared on the use of helium-oxygen mixtures to prevent "ear-block" and on the administration of oxygen during decompression to prevent compressed-air illness.

The Bureau tested many pieces of electrical equipment, submitted by their manufacturers during the year, to determine through investigations and "explosion tests" whether they were safe for use in gassy coal mines. A total of 38 such machines were classified as "permissible" by the Bureau if properly installed and maintained in accordance with standards promulgated by the Bureau. Experts of the Bureau also investigated electrical equipment for the Navy Department, in co-operation with Navy engineers. They also undertook comparative tests of the explosive properties of aviation gasolines and "dope" solvents and thinners with petroleum ether.

Petroleum engineers of the Bureau studied energy relationships to find how the greatest amount

of petroleum can be produced with the least waste of natural energy, oil, and gas. Subsurface and surface samples of oil and gas mixtures were collected from flow systems of wells and analyzed.

During the 1941 fiscal year, the Bureau proposes to continue to devote its major efforts toward the preparations for national defense by furthering its technical research and investigations and its economic studies of matters having a bearing on the country's needs in an emergency. At the same time, because of the continuing need for improvement in safe working conditions and in view of the fact that many new workers will be needed in producing supplies essential to the defense program, the Bureau will devote special attention also to making working conditions safe and hygienic. Training in accident prevention will be stressed by the Bureau so that the mineral industries may retain the improvement they have shown in the past 30 years.

A number of publications of importance to the mineral industries has been published by the Bureau of Mines in the past year, among which is the 1940 annual *Minerals Year Book*, widely recognized as the outstanding publication of its type in the world.

R. R. SAYERS.

**MINES AND MINE SWEEPING.** See NAVAL PROGRESS.

**MINIMUM WAGE.** See under WAGES.

**MINNESOTA.** Area, 84,692 square miles; includes water, 3824 square miles (but not the State's part of Lake Superior). Population (U.S. Census), April, 1940, 2,792,300 (1,390,098 urban and 1,402,202 rural); 1930, 2,563,953. Minneapolis (1940), 492,370; St. Paul (the capital), 287,736; Duluth, 101,065.

**Agriculture.** Farmers in Minnesota harvested, in 1940, 19,114,000 acres of the principal crops. A feature of the year was the further-expanded cultivation of flaxseed, to more than twice the average acreage of the years 1929-38, putting the State much in the lead over other members of the Union as to this crop. Corn, considered the most valuable crop, occupied 4,366,000 acres, made 172,457,000 bu., and gave the producers a return estimated at \$96,576,000. Oats, on 4,524,000 acres, grew 180,795,000 bu. (\$41,583,000); tame hay, on 3,096,000 acres, 4,702,000 tons (\$23,510,000); wheat, 1,622,000 acres, 32,069,000 bu. (\$22,448,000); flaxseed, 1,590,000 acres, 16,695,000 bu. (\$22,037,000); barley, 1,944,000 acres, 57,348,000 bu. (\$20,645,000); potatoes, 250,000 acres, 23,750,000 bu. (\$9,738,000); rye, 331,000 acres, 5,958,000 bu. (\$2,085,000). In 1940 there were 197,351 farms; average size, 165.2 acres.

**Mineral Production.** As stated in 1940 by the U.S. Bureau of Mines, Minnesota's yearly production of native minerals amounted, for 1938, to \$51,425,289. This hardly exceeded one-third of the State's total for the year before: iron ore, in good years, furnishes all but \$10,000,000 or so of Minnesota's mineral production; the mining of iron ore is most sensitive to the ups and downs of industry; and the great industrial slump that started in 1937 took effect on the iron mines mainly in 1938. The mines' production of iron ore recovered, to an annual total of 31,547,701 gross tons for 1939, from 14,449,304 for 1938. The mines' yearly shipments of ore mounted more sharply, to 32,370,241 gross tons (1939) from 14,535,744 (1938); by value, to \$97,113,591, from \$44,361,534. Further advance

made shipments about 47,949,000 tons (value around \$121,758,000) for 1940. Minnesota provided about 64 per cent of the Union's output of iron ore in 1940. The reserves of unmined iron ore were reckoned at 1,208,047,717 gross tons, for May 1, 1939; up to the end of 1939, 1,166,434,188 tons, had been mined in the State. Apart from iron ore above an ore of iron containing also various percentages of manganese was produced in 1939: one grade of this ore attained shipments to the quantity of 469,703 long tons and the value of \$1,213,924.

**Education.** For the academic year 1938-39 (the latest covered by these statistics) Minnesota reported 537,200 enrollments of pupils in public schools; this comprised 382,207 from kindergarten through 8th grade, 144,393 in high school, 7839 special students, and 2761 in junior colleges. The year's expenditure for public-school education included \$45,246,711 for maintenance, \$7,120,201 capital outlay, and \$5,920,882 for service of debt. Teachers numbered 22,166.

**History.** Increased demand for iron, making Minnesota's great mines more active in 1940, rather than improvement in other lines of industry, helped the State's economic situation. The number of dependents on poor-aid and other kinds of public support diminished; likewise, the following of some of the more thoroughgoing liberal leaders. The old Farmer-Labor party, which had committed Minnesota to various liberal proposals long before the era of the New Deal, lost ground, whether on account of social reaction or of the party's having been supplanted by the Federal policies. It suffered a conspicuous setback when Henrik Shipstead after having served for eighteen years as U.S. Senator under the designation of the Farmer-Labor party sought re-election by way of nomination at the September primaries as a Republican candidate. In doing so he abandoned the Farmer-Labor party, a step for which he incurred much antagonism. Despite this he won the Republican nomination from several Republican aspirants of older affiliation with their party.

The State became involved in a dispute of a sort still somewhat novel when the municipal radio station WNYC of New York City sought in May the permission of the Federal Communications Commission to extend the duration of its daily program. This threatened to interfere with the reception of the program sent out in the same frequency by the National Broadcasting Company from station WCCO at Minneapolis. On this account the State intervened in the proceedings over the New York station's application in order to protect its conceived rights with regard to the time that had been accorded to the station in Minneapolis.

In Minneapolis a grand jury that had been summoned late in 1939 issued on Jan. 27, 1940, a report that started efforts to break up the alleged co-operation of the police with certain sorts of unlawful enterprises. Indictments were brought about the same time against members of the police and persons engaged in commercialized gambling, illicit liquor dealing, and prostitution.

**Elections.** At the general election (November 5) the State's popular vote for President gave 644,196 for Roosevelt (Dem.), affording him a margin of 13 to 12 over the vote of 596,274 for Willkie (Rep.). Harold E. Stassen (Rep.), 654,686 votes, was re-elected Governor, defeating Edward Murphy (Dem.), 140,021, and Hjalmar Peterson (Farmer-Labor), 459,609. Henrik Shipstead (Rep.; see above) was re-elected U.S. Senator by

641,049 votes, defeating John E. Regan (Dem.), 248,658, and Elmer A. Benson (Farmer-Labor), 310,875.

**Officers.** Minnesota's chief officers, serving in 1940, were: Governor, Harold E. Stassen (Rep.); Lieutenant Governor, C. Elmer Anderson; Secretary of State, Mike Holm; Treasurer, Julius A. Schmahl; Auditor, Stafford King; Attorney General, J. A. A. Burnquist; Commissioner of Education, John G. Rockwell.

**MINORITIES.** See ARGENTINA, BELGIUM, BRAZIL, BULGARIA, BURMA, CANADA, CZECHOSLOVAKIA, DENMARK, HUNGARY, LUXEMBURG, POLAND, RUMANIA, SLOVAKIA, SOUTH AFRICA, UNION OF SOVIET SOCIALIST REPUBLICS, and YUGOSLAVIA; FASCISM; JEWS; REFUGEES.

**MIQUELON ISLANDS.** See ST. PIERRE AND MIQUELON.

**MISSIONS, Foreign.** See the articles on the CHURCHES

**MISSISSIPPI.** Area, 56,865 square miles; included water, 503 square miles. Population (U.S. Census), April, 1940, 2,183,796 (urban, 432,882; rural, 1,750,914); 1930, 2,009,821. Jackson, the capital, had (1940) 62,107 inhabitants.

**Agriculture.** Mississippi harvested, in 1940, 7,167,000 acres of principal crops. Cotton, though it fell somewhat short of the normal quantity and value, remained by far the leading crop and the chief source of cash for the farmers. On 2,545,000 acres, cotton produced 1,280,000 bales, estimated as worth \$62,080,000 to the growers. Corn, on 2,896,000 acres, gave 40,544,000 bu. (about \$28,381,000); tame hay, on 959,000 acres, 1,223,000 tons (\$12,108,000); sweet potatoes, 69,000 acres, 4,485,000 bu. (\$4,261,000); potatoes, 20,000 acres, 1,240,000 bu. (\$992,000); oats, 118,000 acres, 3,776,000 bu. (\$1,548,000).

**Mineral Production.** The yearly total value of Mississippi's production of its native minerals, as stated in 1940 by the U.S. Bureau of Mines, was \$5,209,457 for 1938. Natural gas contributed over three-fifths of this sum. The quantity of natural gas produced in the State and delivered to consumers rose to 15,233 million cu. ft. for 1939, from 13,656 millions (value, \$3,210,000 at points of consumption), for 1938. The yield of 1939 exceeded that of any earlier year; yet the general view of the production of natural gas in the State was pessimistic. A single remaining field, the Jackson, was producing all the gas; two-thirds of this field's wells had given out in two years, and remaining gas was issuing at a great rate from a few wells, because salt water at depth was driving it out. Mineral interest found another subject to engage it—the possibility of developing a substantial production of petroleum. This prospect had dawned when drillers struck oil in Yazoo County in September, 1939. By the end of that year 107,000 bbl. of petroleum had been taken from Yazoo County's Tinsley field, and nine wells were producing. Production continued in 1940 and was above 15,000 bbl. a day in December.

**History.** The State was little disturbed by political questions in 1940. It cast its usual almost-totally Democratic vote on November 5: Roosevelt (Dem.) for President, 168,267; Willkie (Rep.), 7364. U.S. Senator Theodore G. Bilbo (Dem.) and the seven incumbent Democratic U.S. Representatives, were all re-elected unopposed. There was no election for Governor or other State officers. The primary election (August 27), as usual, predetermined the November result. In the primary Bilbo

won a renomination against former Governor Hugh White by a vote in the approximate ratio of three to two.

Two attempts at lynching Negroes were foiled by the authorities early in January, in unrelated cases. The outgoing Governor, White, sent out a party of the National Guard to check the lynchers in one instance; in the other the intended victim was secretly removed from a jail at Columbia. A dance hall took fire at Natchez on the night of April 23 and 198 Negroes, trapped within, lost their lives; accessible windows had all been nailed up with boards to keep out unwanted guests.

The claims of Mississippi's Choctaw Indians, about 2000 in number, were urged on the Federal Government by Senator Bilbo, and he presented a bill on their behalf. The Choctaws wanted fulfillment of the asserted promise, of 640 acres for each family, in a treaty said to have been made at Dancing Rabbit Creek in 1830.

See LABOR LEGISLATION.

**Officers.** Mississippi's chief officers, serving in 1940, were: Governor, Paul B. Johnson (Dem.); Lieutenant Governor, Dennis Murphree; Secretary of State, Walker Wood; Attorney General, Greek L. Rice; Treasurer, Lewis S. May; Auditor, James M. Causey; Superintendent of Education, J. S. Vandiver.

**MISSOURI.** Area, 69,420 square miles; includes water, 693 square miles. Population (U.S. Census), April, 1940, 3,784,664; 1930, 3,629,367. St. Louis (1940), 816,048; Kansas City, 399,178; Jefferson City (the capital), 24,268. Of the State's population (1940), 1,960,696 were urban, and 1,823,968 were rural.

**Agriculture.** Missouri harvested, in 1940, 12,192,000 acres of the principal crops. Corn, hay, oats, and wheat took up about seven-eighths of this area. Corn, on 3,976,000 acres, produced 119,280,000 bu., estimated as worth \$70,375,000 to the growers. Tame hay, on 3,266,000 acres, made 3,524,000 tons (value, about \$22,906,000); wheat, on 1,714,000 acres, 31,707,000 bu. (\$21,561,000); cotton, 405,000 acres, 380,000 bales (\$18,240,000); oats, 1,800,000 acres, 48,600,000 bu. (\$14,580,000); potatoes, 54,000 acres, 5,616,000 bu. (\$3,426,000); grain sorghums, 240,000 acres, 4,320,000 bu. (\$2,678,000). Farms numbered 256,100 in 1940 and averaged 135.6 acres.

**Manufacturing.** Yearly production of manufactured goods in Missouri totaled \$1,338,056,267 for 1939; \$1,505,383,002 for 1937. Other aggregates for 1939 (each with that for 1937 subjoined): 4796 (4291) establishments employed 178,534 (186,831) persons for wages of \$190,735,831 (\$202,585,847), paid for material, etc., and contract work \$800,094,538 (\$944,894,934), and added to material, by manufacture, a value of \$587,961,729 (\$560,398,068).

**Mineral Production.** Missouri's yearly production of its native minerals, as stated in 1940 by the U.S. Bureau of Mines, attained a total value of \$39,560,739 for 1938; this hardly passed three-fourths of the figure for the year before. Lead furnished over one-fourth of the total of 1938; coal and cement, each one-fourth. The mines' production of lead, in ore, rallied to 156,281 short tons for 1939, from 122,027 for 1938; by value, to \$14,700,000 (for the smelted content), from \$11,226,484. The 1940 output of lead was approximately 171,600 tons; as usual, Missouri mined more lead than any other State of the Union. Zinc, all mined in Missouri's southwestern area, recovered

to a production, in ore, of 15,096 short tons (1939), from 10,226 tons (1938); by value of zinc to be recovered from this ore, to \$1,569,984, from \$981,696. The production of coal attained 3,436,118 short tons for 1938 (value, \$6,814,000). Makers' shipments of portland cement (fairly close to yearly production) increased to 4,702,259 bbl. (1939) from 4,570,389 (1938); by value, to \$7,420,013, from \$6,871,120. The clay products (except pottery and refractories) attained for 1938 \$1,910,630.

**Education.** Missouri's inhabitants of school age (from 6 years to 20) were reckoned, for the academic year 1939-40, at 847,713. The year's enrollments of pupils in public schools numbered 705,037. This comprised 506,173 elementary and 198,864 high-school pupils. The year's expenditure for public-school education totaled \$56,620,150; the main part of this went to pay 26,369 teachers, whose salaries for the year averaged \$1357.

**History.** Missouri enjoyed increasing industrial prosperity during the year, mainly through business created by the war abroad and by the Federal program of defense. In St. Louis appeared a conspicuous instance: the establishment of the Curtiss-Wright Corporation at Lambert Field in that city started in the autumn on building additions intended to multiply its output sixfold before the summer of 1941. A site in Lake City was chosen for another firm's \$15,000,000 factory for small-arm ammunition.

Economic improvement reduced the burden of poor-aid in the State. For April the State's Social Security Commission allotted to this purpose \$315,000, covering 26,410 cases; thereafter the scale diminished.

The Federal work of straightening the more conspicuous bends in the Missouri River progressed; a new channel cutting off the Big Blue Bend, between Clay and Jackson counties, was dug through; Clay County kept the land that the new channel put on the south side of the river, thus becoming the only county in the State to straddle the Missouri. The Army Engineers recommended another cutoff at Liberty Bend, near Courtney. In southeastern Missouri the Farm Security Administration made arrangements to settle in \$500 cottages, at Federal expense, some hundreds of families of homeless "share-croppers" who had drawn attention to their distress when camping by roadsides in January, 1939. Under an apparently eccentric interpretation of its law on unemployment compensation the State paid, in the winter of 1939-40, weekly checks to idle professional baseball players, though some of them, members of the St. Louis and Kansas City teams, earned \$2000 or more by the year. The State opened a cancer hospital at Columbia for the treatment of indigent cases.

The U.S. Social Security Board, holding back grants for a time in October, made Missouri put its social security workers under adequate civil service.

Governor Stark, who had won much approval in 1939 for his part in the overthrow of his one-time political supporter Thomas J. Pendergast, Democratic boss of Kansas City, met with misfortune in an attempt to progress from his expiring term in the Governorship to a seat in the U.S. Senate. As candidate for the Democratic Senatorial nomination, he encountered the opposition not only of the remnants of the Pendergast organization but also of the followers of Senator Clark. Shortly before the enactment of the second Hatch Act, the Sen-

ate's committee on campaign expenditures reported that agents had been collecting contributions for Stark's campaign from employees of the State Government. Stark was beaten in the primary election, and Senator Truman won a Democratic re-nomination.

In St. Louis, a series of sharp condemnations of decisions rendered by State Circuit Judge Thomas J. Rowe, published in the St. Louis *Post-Dispatch*, stirred Rowe to impose fines and imprisonment on this journal's chief editorial writer and its cartoonist. The case became a test of the Constitutional freedom of the press when opposed to the asserted rights of the judiciary. It was appealed until it eventually reached the U.S. Supreme Court, which refused to set aside the sentences.

**Reform in Kansas City.** Bent on doing away immediately with what remained to the Pendergast organization out of the ruin that had followed the exposure and imprisonment of its leader in 1939, the reformists brought about a special popular election for the indirect recall of the eight members of the City Council. They had been elected in 1938; a proposed amendment to the city's charter shortened their four-year terms to two years. The voters adopted it (February 13) by about 95,855 to 17,235; they rejected five proposed amendments from the City Council itself, notably one to put the firemen immediately under the protection of civil service. There followed (April 2) a municipal election that gave the city a reformist mayor, John Gage, and a Council of the same persuasion. It thus became possible for the reform wave to sweep away as many as it would of some 5000 persons in public employ. The new City Council chose a new City Manager, L. P. Cookingham, taking him from a like post in Saginaw; he took office on June 10.

More of the former aides of Pendergast were convicted: Matthew S. Murray, ex-Administrator of the WPA in the State, found guilty of evading Federal income taxes, was condemned to Federal imprisonment for two years; E. Mont Reily, former Governor of Puerto Rico, a Republican adherent of Pendergast, found guilty on a State charge related to speculation in the street-cleaning department, got a sentence of six months in the county jail, which he appealed.

**Elections.** On November 5 the popular vote for President gave Roosevelt (Dem.) 958,476, constituting a plurality of 11 to 10 over Willkie (Rep.), who received 871,009. Harry S. Truman (Dem.) was re-elected U.S. Senator, defeating Manvel H. Davis (Rep.), and ten Democrats and three Republicans were elected U.S. Representatives. The Governorship went to Forrest C. Donnell (Rep.) by a very small plurality over L. E. McDaniel (Dem.), which appeared on the counting of the absentee ballots.

**Officers.** Missouri's chief officers, serving in 1940, were: Governor, Lloyd C. Stark (Dem.); Lieutenant Governor, Frank G. Harris; Secretary of State, Dwight H. Brown; Auditor, Forrest Smith; Treasurer, R. W. Winn; Attorney General, Roy McKittrick; Superintendent of Public Schools, Lloyd W. King.

**MOLDAVIAN SOVIET SOCIALIST REPUBLIC.** See UNION OF SOVIET SOCIALIST REPUBLICS, under *Area and Population and History*.

**MOLLUSKS.** See ZOOLOGY.

**MOLOTOV'S BREADBASKET.** See EUROPEAN WAR under *Finnish Campaign*.

**MOLUCCA ISLANDS.** See NETHERLANDS INDIES under *Area and Population*.

**MOLYBDENUM.** As in the preceding year the United States was the primary world producer of molybdenum in 1940, and Climax Molybdenum Co., Climax, Colo., was by far the leading domestic source. The porphyry copper mines at Bingham, Utah; Chino, N.M., and Miami, Ariz., were substantial producers of molybdenum concentrates as a by-product of copper production. World trade in this important war mineral was seriously disrupted, primarily by the moral embargo on exports imposed by the United States in December, 1939. This proved particularly embarrassing to the by-product producers, although it was a serious handicap to the Climax company. Germany probably obtained molybdenum from Norway.

According to the Bureau of Foreign and Domestic Commerce, exports for 1940 amounted to 12,667,794 lb. of concentrates containing 6,584,714 lb. of molybdenum, valued at \$4,904,000. The bulk of this export was for the United Kingdom. The price of 90 per cent molybdenum concentrates was 45 cents per lb. of  $\text{MoS}_2$ , f.o.b. mine. The principal use was in alloying steel. See COLORADO under *Mineral Production*.

H. C. PARMELEE.

**MONACO.** A Mediterranean principality surrounded on its land sides by the French department of Alpes-Maritimes Area, 370 acres; population (1939), 23,973. Chief towns: Monaco (the capital), La Condamine, Monte Carlo. The tourist traffic and the gambling concession at Monte Carlo were the chief sources of revenue. There is no cultivation as all of the land has been built over. The budget for 1939 showed estimated expenditure of 38,892,921 (franc averaged \$0.0251 for 1939). A ministry assisted by a council of state administers the country under the authority of the Prince. Legislative power rests with the Prince and the national council of 12 members elected by universal suffrage for a four-year term. Ruler, Prince Louis II (succeeded June 26, 1922).

**MONETARY UNITS.** See INTERNATIONAL BANKING AND FINANCE; the countries under *Finance*.

**MONEY, United States Stock of.** The table on page 470 from the 1940 annual report of the Secretary of the U.S. Treasury shows the distribution of the stock of money in the United States on June 30, 1940, with comparisons for previous years.

**MONGOLIA.** An extensive, vaguely defined region of east-central Asia, bordered by the Soviet Union and Tannu Tuva (q.v.) on the north, Manchoukuo on the east, China proper on the south, and Sinkiang (Chinese Turkestan) on the west. It is divided by an irregular east-west line through the Gobi desert into Outer Mongolia, on the north, and Inner Mongolia, on the south.

**Inner Mongolia.** Geographically Inner Mongolia includes the three Chinese provinces of Suiyuan, Ningsia and Chahar, and Jehol and part of Hsining Province in Manchoukuo. Politically the term is now generally used to include only Suiyuan, Ningsia and Chahar. According to 1937 estimates of the Chinese Ministry of Interior, their combined area is 339,068 square miles and the population 7,142,793, all Chinese except for about 1,500,000 Mongols. Agriculture and stock raising are the principal occupations and rye, potatoes, buckwheat, and wheat are the chief crops. Trade is mainly with the Japanese-controlled areas in North China.

Japanese troops during 1937-38 occupied the eastern sector of Inner Mongolia to a point west of Paotow, terminus of the railway from Peiping. In 1938 a semi-autonomous Mongol regime headed by Prince Teh Wang was organized under Japanese auspices, with its capital first at Kweiwha and then at Kalgan. This so-called Menchiang regime controlled an area estimated at roughly 117,500 square miles, with a population of over 2,000,000. The Japanese advisers of the Menchiang Government during 1938-40 elaborated a program for the joint economic development of North China and Inner Mongolia. A separate Japanese-controlled currency and banking systems were established. By Sept. 30, 1940, the Menchiang Bank had issued paper currency to the amount of 83,236,000 Menchiang yuan, compared with 42,593,000 yuan and 30,254,000 yuan on the same dates in 1939 and 1938, respectively.

The Menchiang Government tentatively budgeted ordinary expenditures of 57,000,000 yuan and extraordinary expenditures of 120,000,000 yuan for 1941. However the heavy excess of imports over exports in the first half of 1940 was reported to have seriously impaired the economy and finances of the government, the banks, and the entire region. To remedy this situation, a more severe exchange-control law was put into effect Sept. 1, 1940. Government control of all imports and exports was drastically extended, and trade was restricted almost entirely to official agencies. Direct telephone service between Kalgan and Japan was opened June 1, 1940, and lines were strung to other towns under the Menchiang regime's control.

**Outer Mongolia.** The same Chinese estimate cited above placed the area of Outer Mongolia at 625,946 square miles and the population at 2,077,669. A British estimate gives the population as 540,000, a Japanese estimate as 840,000. Ninety per cent of the inhabitants are Mongols, chiefly nomads, and the rest Russians and Chinese. The capital, Ulan Bator Khoto (Urga), has about 70,000 population; Altanblak, 20,000.

Outer Mongolia is a soviet republic, the independence of which is guaranteed by the Soviet Union under a mutual assistance pact signed Mar. 12, 1936. However the Soviet Union in 1924 recognized the suzerainty of the Chinese Republic over the region. The political and economic system have been reorganized on the soviet model. Ownership of lands, forests, mineral resources, and factories has been collectivized. The foreign and domestic trade is a monopoly of People's Central Co-operative; foreign trade is carried on exclusively with or through the Soviet Union. Soviet instructors are said to have trained and equipped with modern arms a Mongol army of 250,000 men. The government is in the hands of the Mongolian People's Revolutionary Party. The only political party permitted, it had about 12,000 members in 1939 and was controlled by the Comintern. Supreme authority rests in an elective assembly (Great Huruldan), which meets at least once annually and while in recess delegates executive powers to a Little Huruldan of 30 members, which in turn appoints a Premier and executive committee.

Stock-raising, game hunting, agriculture, manufacturing, and mining, in the order named, are the chief occupations. Livestock estimates for 1934 were 1,638,200 horses, 2,068,000 cattle, 12,984,800 sheep, 3,884,000 goats, and 531,900 camels. Meat, milk products, hides and skins, wool, furs, wheat,

<sup>1</sup> The money in circulation includes any paper currency held outside the continental limits of the United States.

<sup>2</sup> Does not include gold other than that held by the Treasury.

<sup>a</sup> Includes \$1,800,000,000 exchange stabilization fund and \$142,778,972 balance of increment resulting from reduction in weight of the gold dollar.

<sup>4</sup> These amounts are not included in the total, since the gold or silver held as security against gold and silver certificates and Treasury notes of 1890

tion, respectively.

This total includes credits with the Treasurer of the United States payable in gold

the redemption fund for Federal Reserve notes in the amount of \$10,862,551.

\* Includes \$9,300,000 lawful money deposited as a reserve for postal savings deposits.  
† The amount of gold and silver certificates and Treasury notes of 1890 should be deducted from this amount before combining with total money held in the Treasury to arrive at the total amount of money in the United States.

NOTE.—A part of the gold and silver included in the stock of money is held as a reserve against other kinds of money, as follows: (1) As a reserve for United States notes and Treasury notes of 1890—gold bullion varying in amount from \$150,000,000 to \$156,039,431 during the years included in the table; (2) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars (these notes are being can-

rye, millet, and coal are the main products. Extensive mineral resources remain undeveloped. State factories, all erected since 1924, produce machinery, washed wool, wool textiles, felt, leather, sheepskin coats, shoes, and electric power.

The first railways in Outer Mongolia—connecting Ulan Bator Khoto with the Nalaiha coal mine 22 miles distant and linking Kiakhta with the Trans-Siberian Railroad at Ulan Ude—were reported to have been completed in 1939. The capital is connected with Ulan Ude by truck road and airline. Steamers ply the Selenga and Orkhon Rivers. However caravans still handle the bulk of internal transport. There is a state banking and monetary system, the unit of currency being the tukrik containing 17 grams of pure silver.

See CHINA under *History* for the trans-Mongolia Chinese supply route, and MANCHOUKUO under *History* for the settlement of the Manchoukuoan-Mongolian boundary dispute.

**MONOPOLIES.** See AMERICAN FEDERATION OF LABOR; JAPAN; MANCHOUKUO; MARKETING; MEDICINE AND SURGERY; RADIO; UNITED STATES under *Investigations and Prosecutions*.

**MONTANA.** Area, 146,997 square miles; includes water, 866 square miles. Population (U.S. Census), April, 1940, 559,456 (urban, 211,535; rural, 347,921); 1930, 537,606. Helena, the capital had (1940) 15,056 inhabitants; Butte, 37,081.

**Agriculture.** Montana's harvest of 1940 included 6,675,000 acres of principal crops. Wheat, on 3,932,000 acres, made 56,070,000 bu. (\$33,081,000, estimated value to the growers). Tame hay, on 1,239,000 acres, produced 1,836,000 tons (\$9,364,000); sugar beets, 85,000 acres, 1,156,000 tons (value of crop of 1939, \$4,309,000); oats, 317,000 acres, 9,034,000 bu. (\$2,530,000); barley, 204,000 acres, 4,692,000 bu. (\$1,736,000); potatoes, 17,000 acres, 2,040,000 bu. (\$1,224,000); corn, 159,000 acres, 2,544,000 bu. (\$1,323,000).

**Mineral Production.** The yearly production of Montana's native minerals, as stated in 1940 by the U.S. Bureau of Mines, totaled \$48,602,547 for 1938. Copper, gold, silver, lead, and zinc made up most of this sum. The rest, some \$20,000,000, represented chiefly natural gas, petroleum, and coal. The output of petroleum rose to 5,951,000 bbl. for 1939, from 4,946,000 bbl. (value, \$5,190,000) for 1938. Natural gas, variously used for fuel, as by metallurgical works and sugar refineries, and saved for the consuming market, was restricted in 1938 to 21,216 million cu. ft. (value at points of consumption, \$6,132,000) delivered to consumers; in 1939 the market for natural gas rallied considerably from these low figures. Coal production increased to some 2,810,000 net tons (1939), from 2,732,050 tons (value, \$4,106,000) for 1938. Aggregate value of copper, gold, silver, zinc, and lead in the material mined yearly rose to \$40,937,870 for 1939 and approximately to \$55,970,800 for 1940. Respective metals' totals for 1940, approximated (each with definite total for 1939 subjoined), follow: copper, 253,200,000 (195,654,000) lb., \$28,611,600 (\$20,348,016); gold, 275,700 (264,173) oz., \$9,649,500 (\$9,246,055); silver, 12,357,000 (9,087,571) oz., \$8,787,200 (\$6,168,533); zinc, 103,500,000 (69,598,000) lb., \$6,727,500 (\$3,619,096); lead, 43,900,000 (33,110,000) lb., \$2,195,000 (\$1,556,170).

**History.** The State's Board of Education held further hearings in January on the disagreement between President Simmons and members of the faculty of the University of Montana, which had become a public issue in 1939. In February it with-

drew its demand, made in 1939, that the professors opposed to Simmons resign and, at the same time, it voted a resolution of confidence in Simmons and warned the faculty that courses disloyal or prejudicial to the University would not be allowed.

One of the several Federal prosecutions of officers of divers States occurred in Montana: Atty. Gen. Harrison J. Freebourn was prosecuted on a charge of evading the Federal tax on his income of 1937 by failing to report the receipt of \$11,000 allegedly received from a firm interested in machines for gaming. This allegation had been aired in the legislative session of 1939, where an effort to impeach Freebourn had failed by two votes.

The State offered bonds in August for the cost of building a projected \$250,000 armory. An effort on the part of the American Association of Composers, Authors, and Publishers, to collect royalties in Montana on the copyrighted products of its members, was opposed in Missoula; the county attorney brought charges of attempted extortion against the officers of the association and sought, without effect, the extradition of Gene Buck, its President, from Arizona. Buck alleged that the Association had not collected a royalty for use of music in Montana in three years. (See INSURANCE.)

**Elections.** On November 5 the popular vote for President gave 145,698 for Roosevelt (Dem.), and 99,579 for Willkie (Rep.). Burton K. Wheeler (Dem.) was re-elected U.S. Senator, defeating E. K. Cheadle (Rep.). Samuel C. Ford (Rep.), for Governor, received 124,435 votes and won from the incumbent, Roy E. Ayers (Dem.), who got 119,453.

**Officers.** Montana's chief officers, serving in 1940, were: Governor, Roy E. Ayers (Dem.); Lieutenant Governor, Hugh R. Adair; Attorney General, Harrison J. Freebourn; Secretary of State, Sam W. Mitchell; Treasurer, Ray N. Shannon; Auditor, John J. Holmes; Superintendent of Public Instruction, Ruth Reardon.

**MOROCCO.** A region of northwestern Africa, divided politically into (1) the French Zone (area, 162,162 sq. miles; population, estimated at 6,500,000 on Dec. 31, 1938), comprising about 85 per cent of the total area and population; (2) the Spanish Zone (area, 8108 sq. miles; population, estimated at 750,000 on Dec. 31, 1938, including about 44,300 Europeans and 12,900 Jews); and (3) Tangier (q.v.), which on Nov. 23, 1940, was incorporated in Spanish Morocco. The 1936 census returns of the French Zone showed 5,875,000 Moslems, 206,500 Europeans and other foreigners, and 161,300 Jews. Populations of the chief cities of the French Zone in 1936 were: Casablanca, 259,000; Marrakech, 191,000; Fez, 144,000; Rahat (capital), 84,000; Meknes, 75,000; Oudjda, 35,000. Estimated populations of the principal towns in the Spanish Zone in 1936 were: Melilla, 64,328; Tetuan (capital), 49,535; Ceuta, 38,945; Alcazar, 30,762; Larache, 29,477. French and Spanish are used as the official and business languages in the French and Spanish Zones, respectively, but the natives speak mainly Moorish-Arabic and the various Ber-

ber dialects. Unless otherwise specified, the following statistics refer to the French Zone only.

**Production.** Agriculture and stock raising are the main occupations. Yields of the chief crops in 1939 were (in metric tons): Wheat, 1,055,000; barley, 2,128,000; oats, 76,000; corn, 217,400 in 1938; olive oil, 8000 in 1938. The wool clip in 1938 was 20,300 metric tons. Livestock in the same year included 10,152,000 sheep, 1,910,000 cattle, 191,000 horses, 775,000 mules and asses, 147,000 camels, and 5,800,000 goats. Output of the chief minerals in 1938 (metal content, in case of ores) was in metric tons: Coal, 123,000; natural phosphates, 1,447,000; manganese ore, 39,000; iron ore, 140,000; lead ore, 17,100; zinc ore, 2,500. Yield of sea fisheries, 1938, 30,300 metric tons, valued at 33,300,000 francs. Industries include flour mills, breweries, cement factories, soap works, sardine and tuna canning plants, Moorish handicraft.

The Spanish Zone raises much the same crops as the French Zone, but in limited quantities. Iron ore (805,000 metric tons in 1938), lead and some antimony are exported. Stock raising and tunny fishing are other occupations.

**Foreign Trade.** For the first six months of 1939, merchandise imports were 1,142,400,000 francs and exports 891,500,000 francs, as compared with imports of 2,184,900,000 francs and exports of 1,512,400,000 francs for the full year 1938. Imports from France in 1938 were 733,000,000 francs, exports to France 676,000,000. Imports into the Spanish Zone in 1938 were equivalent to about 3,300,000 old U.S. gold dollars; exports, \$1,000,000.

**Finance.** The 1939 budget estimates for the French Zone were Receipts, 1,185,054,070 francs; expenditures, 1,184,958,430. The Moroccan franc was unpegged from the French franc after June, 1940, and fluctuated widely in accordance with supply and demand. The 1938 budget for Spanish Morocco balanced at 111,785,245 pesetas.

**Transportation.** French Morocco in 1939 had about 1150 miles of railway line, 3690 miles of highways and roads, and air lines connecting Casablanca with Algiers, Oran, Tunis, Toulouse (France), and Dakar (French West Africa). These air services were interrupted by the military collapse in France in June, 1940, but were resumed on August 20. Casablanca, chief port of French Morocco, was the only port in French North Africa open to ocean traffic as of July 26, 1940. In 1938, 3352 vessels of 5,640,397 tons entered French Moroccan ports. In the Spanish Zone there were about 72 miles of railway and 1400 miles of roads.

**Government.** The Sultan of Morocco, who resides in the French Zone, usually at Rabat, exercises nominal executive authority in both the French and Spanish Zones. But in the French Zone his acts are subject to the approval of the French Resident-General. In the Spanish Zone the Sultan delegates his authority to a Khalifa, named by him from a list of two candidates submitted by the Spanish Government. Actual authority is exercised by the Spanish High Commissioner residing at Tetuan. Sultan in 1940, Sidi Mohammed, proclaimed Nov. 18, 1927. Resident-General and commander-in-chief of the French Zone, Gen. Auguste Nogues. Spanish High Commissioner, Gen. Carlos Asensio.

**History.** French Morocco was shaken and divided even more than the other French North African colonies by the military defeat and capitulation of France to Hitler in June, 1940. The repercussions throughout French North Africa are

described in the article ALGERIA under *History*. In Morocco the agitation to align the colony with Gen. Charles de Gaulle's "Free French" forces was particularly strong. It was repressed after numerous arrests. Many of the de Gaulle partisans in the French air units in Morocco flew their planes to Gibraltar to join the Allies.

This conflict among the French encouraged both the native independence movement and Spain's undisguised ambition to replace France as ruler of all Morocco. General Nogues reorganized his administration and created a territorial guard to maintain order in the interior, while other preparations were made to meet a possible Spanish invasion from Spanish Morocco. See EUROPEAN WAR under *Effects of the Fall of France*; FRANCE under *History*.

**MOTION PICTURES.** Although it was a period of arduous readjustment, 1940 found the screen exceedingly vital. Both in the power and diversity of its offerings, Hollywood demonstrated that it could rise brilliantly to an emergency. Instead of turning entirely to escapist films, as one might have anticipated after the complete drying up of European markets, it tackled significant contemporary material and even experimented with new techniques. In most instances, courage was rewarded at the box office. There was ample proof, meanwhile, that the domestic market could support even high budget productions, if they met with popular approval.

The outstanding films of the year ranged from the starkly realistic adaptation of John Steinbeck's novel, *The Grapes of Wrath*, to the immensely successful screen version of Philip Barry's comedy of manners, *The Philadelphia Story*. Charlie Chaplin's long-awaited satire on the Nazi scheme of things, *The Great Dictator*, and Walt Disney's brave attempt to accompany classical music with animated cartoon program notes were two of the cinematic events of 1940, although both enterprises proved somewhat disappointing. From an artistic standpoint *The Long Voyage Home*, a contemporary re-working of Eugene O'Neill's short sea plays, stood head and shoulders above other offerings.

The same fine craftsmen who made *The Informer* were responsible for the last-named picture. Dudley Nichols contributed a spare and eloquent adaptation of the original dramas and John Ford turned in one of his greatest achievements as a director. Dealing with the sea, in real terms of the sea, *The Long Voyage Home* had striking film artistry, as well as emotional compulsion, as it traced the voyage of a freighter from the Caribbean to this country to pick up a cargo of munitions and through the blockade to embattled England. It had no single hero, but all the members of the freighter's crew were drawn in vivid portraiture. There were no stars in the company, but Thomas Mitchell, Barry Fitzgerald, Mildred Natwick, and the other players were all superb.

*The Grapes of Wrath* was another John Ford masterpiece. Armed with a brilliant script by Nunnally Johnson, the director hewed close to the original story, making a splendid social document as

**A SCENE FROM "THE GREAT DICTATOR"**

Adenoid Hynkel (Charles Chaplin). Dictator of Tomania. and Benzini Napaloni (Jack Oakie). Dictator of Racteria as they

well as a notable film. A starkly realistic treatment gave this account of "Okies," wandering from the dust bowl to California only to find themselves unwanted there, tremendous visual and dramatic impact. At the opposite pole from *The Grapes of Wrath* was *The Philadelphia Story*, a handsome and vastly entertaining translation of the Barry play. With Katharine Hepburn surpassing her stage portrayal of a spoiled heiress on the screen, the film proved actually better than its theatrical prototype.

Curiously enough, the flood of purely escapist films which had been threatened failed to materialize. Partly because intelligent directors and producers had a bigger hand in screen offerings than ever before, partly because audiences showed increasing discrimination, there was a laudable attempt to handle new themes in new ways. Even though it was not entirely satisfying, Walt Disney's experiment with pictorial program notes to great music, in *Fantasia*, represented a courageous and stimulating thrust into the cinematic unknown. *The Great Dictator* may not have come off as an epic burlesque of totalitarian power politics, but it, too, was a product of immense courage in an unsettled period.

Although painstakingly produced and a virtual lexicon of the great actor's comic artistry, *The Great Dictator* lost much of its satirical emphasis due to the swift progression of world events. Two years earlier, when it was first conceived, it would have had far more power. With the Nazis astride the European continent in a successful war of conquest, Chaplin's fun at the expense of the dictatorships was rather forced. In any case, he offered several of his most amusing slap-stick conceits and he had no trouble at all with dialogue, whether straight speech or mocking double-talk.

Other propagandist films which dealt frankly with anti-Nazi themes fared badly for the most part. The best of them was *Pastor Hall*, which dramatized the Nazi persecution of the Reverend Niemöller and had a tragically restrained performance by Wilfrid Lawson. Even when they were bolstered by a melodramatic plot and popular stars, as in the case of *Escape*, most of them were wanting in artistic and entertainment values and had a cold reception from the public.

When the struggle of democracy against totalitarian aggression was employed merely as a vivid background for diverting narratives, the screen was on surer ground. *Foreign Correspondent*, directed in Hollywood by the talented English melodrama-maker, Alfred Hitchcock, was an exciting show, with fugitive over-tones of the new world war. *Arise My Love* traced the romance of a pair of foreign correspondents through to the capitulation of France, with the accent on comedy. The English melodrama, *Night Train*, celebrated the new espionage which preceded the outbreak of actual hostilities in Europe in striking and effective fashion.

In the field of social drama there should be mention of *Primrose Path*, which found the screen studying the effect of poverty on moral degeneration with extraordinary honesty and power. In Gregory La Cava's brilliant direction and the down to earth portrayals of Ginger Rogers and the supporting company, this film was a significant indication that there were those in Hollywood who were anxious to bring the medium into closer relation with the realities of existence. *Dr. Ehrlich's Magic Bullet* dealt sincerely and dramatically with

the struggle of medical science to find a specific for syphilis. A straight documentary or fact-film was Pare Lorentz's brilliant study of the perils of childbirth for the under-privileged, in *The Fight for Life*.

The continued sensational success of *Gone With the Wind* tempted many producers to translate best-sellers. The most successful of these enterprises were *Rebecca*, a vivid but disjointed version of the Daphne du Maurier novel, staged by Hitchcock, and the screen adaptation of *All This and Heaven Too*, with Bette Davis and Charles Boyer in leading roles. Fiction offered far more material to the screen than did the theater. Most of the play translations which turned out well were patterned on rather old stage works, such as *The Letter*, *Waterloo Bridge*, or *They Knew What They Wanted*. Virtually no screen musicals were worthy of chronicling, although such spectacles as *Lillian Russell* showed that Hollywood had not abandoned the form.

Among the films not already listed which contributed to the high standard of the year's offerings were *Of Mice and Men*, a grim version of the Steinbeck book about a pair of bindlestiffs; Disney's second full-length cartoon, *Pinocchio*; a faithful and touching translation of *Our Town* the gay comedy staged by Ernst Lubitsch, *The Shop Around the Corner*; Preston Sturges' bright satire of political corruption, *The Great McGinty*, and the two screen biographies of Edison—*Young Tom Edison*, starring Mickey Rooney, and *Edison, the Man*, starring Spencer Tracy.

One of the biggest money-makers of the year was a reconstruction of wildcat oil operations, *Boom Town*. *Northwest Passage* and *Drums Along the Mohawk* were the best of the historical films, and *The Westerner* was a moderately entertaining horse opera. The small-town family cycles were continued, but showed signs of wearing thin in such a fabricated film as *Andy Hardy Meets Debutante*.

It was a propitious period for directors. They had a rare degree of independence, often combining the functions of producer with their staging activities, and they made the most of it. John Ford, with two masterpieces to his credit, towered above his colleagues, but nearly every notable production of the year had a veteran and knowing director in charge. Among the outstanding players were Katharine Hepburn, Charlie Chaplin, Ginger Rogers, William C. Fields, Bette Davis, James Stewart, Claudette Colbert, Henry Fonda, Thomas Mitchell, Spencer Tracey, Vivien Leigh, Deanna Durbin, and Bing Crosby.

Color was used in a number of offerings, but it had no widespread popularity and its absence rarely militated against the success of a film. It was best when employed unobtrusively in neutral shades. The total number of screen productions for 1940 remained approximately 500.

**France.** The outstanding French importation of the year and one of the finest films exhibited was *The Baker's Wife*. Produced and directed by Marcel Pagnol, it was a splendid account of the economic dislocation which occurred in a Provençal town when the wife of the bread maker eloped with a shepherd. Raimu's performance of the baker was exceptional, although a whole village was brought to life in a series of portrayals. *Hotel du Nord* was another fine French importation.

**Germany.** A number of Nazi-made films came to this country and were distributed in German-

speaking districts. Without exception they were singularly devoid of artistic merit.

Great Britain. In the stunning melodrama, *Night Train*, the British studios continued the great tradition of thrillers started by Alfred Hitchcock. Meanwhile *Pastor Hall* was made in an English studio, although financed by Hollywood.

U.S.S.R. The once great Russian cinema languished for the most part under dictatorial control. Such fine directors as Eisenstein and Pudovkin were conspicuous for their absence.

Awards. The New York Film Critics selected *The Grapes of Wrath* as the outstanding film of the year, and *The Baker's Wife* as the best foreign-language motion picture. Charlie Chaplin's performance in *The Great Dictator* and Katharine Hepburn's portrayal in *The Philadelphia Story* were adjudged the finest jobs of acting. John Ford was adjudged the best director, for *The Grapes of Wrath*, and there was a special award to Walt Disney and Leopold Stokowski for *Fantasia*.

See ART under *Other Developments*; BUSINESS REVIEW; PHOTOGRAPHY; also, MUSIC.

HOWARD BARNES.

**MOTORBOATING.** *Hotsy Totsy III* won the Gold Cup in motorboating, and nothing could be done about it. A saucy little upstart upon whose obtuse wooden hide not scorn nor sneer could cause the least concern, she puffed and fumed and blocked the way until at last she crossed the line in victory. It mattered not to *Totsy* that her victory was questionable, to say the least, for somewhere in the race officials tried to flag her off the course, to make room for speedier craft behind, but *Totsy* could see nothing except victory ahead. And so she won the race.

The occasion was the annual Gold Cup tournament off the shore of Northport, L.I., in August, 1940. The quality of motorboating were all on hand. A spectator fleet of 1200 yachts were strung around like pearls in glistening sun. Some of the finest boats afloat were entered in the race, boats with background, family tree, ancestral glory; and *Hotsy Totsy*, a rude ungainly ne'er-do-well carried off the prize.

One of the flabbergasted losers of the race was *Notre Dame*, the apple of the eyes of Herbert Morrison. Nothing daunted, *Notre Dame* sought to regain her prestige a week later in a race off Red Bank, N.J., but snapped her propeller shaft and was easily outdistanced by 63-year-old Jack Cooper of Kansas City, Mo., who drove a 225-cubic-inch hydroplane called *Tops III*. Nevertheless *Notre Dame* was winner of the three-heat contest in the President's Cup race at Washington, although she lost the one-mile trial on the Potomac to Bill Cantrell's *Why Worry?*

Back home on the Detroit River, however, in more familiar circles, *Notre Dame* electrified the sporting and scientific world by shooting through the water at an average speed of 100.987 miles an hour. It represented an all-time high for the international 12-liter class, in which the *Notre Dame* belonged; and clearly established *Notre Dame* as the greatest boat of the year, notwithstanding *Hotsy Totsy III*.

**MOZAMBIQUE (PORTUGUESE EAST AFRICA).** A colony in East Africa, consisting of two separate administrative divisions: (1) Province of Mozambique (245,773 sq. mi.), comprising seven districts; (2) Manica and Sofala (51,881 sq. mi.), two districts administered by the Mozambique Company under a charter expiring in 1941. Total area, 297,654 square miles; total population (1936), 4,995,750. Chief towns: Lourenço Marques (capital of the Province), 47,390 inhabitants; Beira (capital of Manica and Sofala).

**Production and Trade.** Chief products: sugar, groundnuts, maize, cotton, copra, sisal, and gold. Livestock (1937): 553,531 cattle, 270,833 goats, 85,549 sheep, 72,254 swine. Trade (1939): imports, 402,480,000 escudos; exports, 134,520,000 escudos (escudo averaged \$0.0404 for 1939). The foregoing trade figures are for the whole country. Communications (1938): 13,175 miles of roads, 1043 miles of railways. During the fiscal year ended Mar. 31, 1940, shipping aggregating 3,858,265 gross tons entered the port of Beira. In 1937, 2613 ships aggregating 12,284,691 tons entered the ports of the colony.

**Government.** Budget (1939): revenue and expenditure balanced at 589,383,545 escudos. The Province of Mozambique (the districts of Cape Delgado, Inhambane, Lourenço Marques, Mozambique, Nyasa, Quelimane, and Tete) is administered by a governor general who is represented in each of the seven districts by a governor. Governor General, Dr. J. N. Nunes de Oliveira; Governor of Manica and Sofala, Rear Admiral Luis A. de M. Correia.

**History.** The colony's defense forces received reinforcements of about 1000 troops from Portugal in August as a result of the growing danger of a redistribution of colonial territories among the European belligerents. Financial stringency led to the imposition of a 2 per cent ad valorem export tax on May 8, 1940. A new railway line connecting the Tete district with the Trans-Zambezia Railway and providing an outlet at the port of Beira for mineral products was nearly completed at the end of 1940.

See PORTUGAL and SOUTH AFRICA, UNION OF, under *History*.

**MULTIPLE BIRTHS.** See ZOOLOGY under *Twinning*.

**MUNICIPAL GOVERNMENT.** Rejections and adoptions of the council-manager plan were about equal in number during 1940, but in size of municipalities rejections dominated. By far the worst defeats were in New Jersey where Newark, Bayonne, and Atlantic City gave decisive noes. The State is a stronghold for the straight commission-plan of government, with a few men possessing both legislative and administrative powers and allotting the latter among themselves. Trenton and Cape May went back to the commission plan after having had managers, leaving only five—Asbury Park, Bendix, Clifton, Hackensack, and Teaneck—with city managers. In Massachusetts, Cambridge adopted the manager plan by a large majority after a minor defeat in 1938; but Chicopee and Quincy voted it down for the second time and it was defeated in North Adams, also. In these

four places not only a city or town manager was included in the plan but also election of the council by proportional representation (Plan E). A manager plan without P.R. (Plan D) was adopted by a small majority at Haverhill. A half-dozen plans of city government have been provided by the Massachusetts legislature, so a city or town, instead of framing a charter by a special commission, chooses one of the ready-made plans, thus avoiding 57 varieties of municipal government. Results of other council-manager elections during 1940 were: Adoptions: Bridgton, Jay (rescinded later), Hodgdon, Linneus, and Norridgewock, Me.; Hartford, Randolph, and Vergennes, Vt.; Bloomfield, Conn.; Traverse City, Mich. To retain: Schenectady, N.Y., and Cleveland, Ohio. Defeats: Onondaga County (includes Syracuse), N.Y.; Martinsburg, W.Va.; Raleigh, N.C.; Pontiac and St. Louis Park, Ill.; Mankato, Minn.; Hot Springs, S.D.; Durant, Okla.; Arcadia and Hermosa Beach, Calif.; Lakeview and Silverton, Ore. Abandoned: Hardwick, Vt.; Huron, S.D. (For further details of all the charter elections see monthly issues of *National Municipal Review*.) Votes scheduled for December 7 at Abilene, Texas. At the close of 1940 there were over 500 cities under the council-manager plan.

Attempted abandonment of proportional representation by an amendment to the charter of New York City was defeated on November 5 by a vote of 783,000 to 566,000.

The permissive Civil Service Act of New Jersey was adopted by Atlantic County on November 5 by a vote of 23,028 to 2236, while Sussex County defeated adoption by 4159 to 3953. The act was adopted by six cities or towns, including Asbury Park and Bloomfield, and defeated in three small places. Data supplied by the New Jersey Civil Service Commission show that since the passage of the act in 1910 it has been adopted by 12 of the 21 counties of the State, and 38 cities, boroughs, towns, townships, and villages, and the Newark School District. The city adoptions include Newark, Jersey City, Trenton, Paterson, and Elizabeth.

See WATER WORKS AND WATER PURIFICATION.

**MUNICIPAL OWNERSHIP.** Transfer to New York City in June of two great local passenger transportation systems consummated negotiations that have been in progress for years. On June 1 the city took over subways, elevated, street car, and bus lines of the Brooklyn-Manhattan Transit Co. (BMT). On June 12 it acquired the subway and elevated lines not already acquired of the Interborough Rapid Transit Co. (IRT). Integration of these properties with the Independent Subway System or Eighth Avenue Subway, re-

cently built by the city, and the operation of all by the Board of Transportation unifies the local transit lines of New York City which comprise the largest example of municipal ownership and operation of local transportation facilities in the world. Some of the privately-operated subways were built by the city and leased to the companies. Some of the elevated railway lines have been torn down and removal of most of what remain is imminent.

The Tennessee Valley Authority (TVA) was selling electric power to 106 municipal authorities and co-operative associations at the close of 1940. The largest city to contract with TVA during 1940 was Huntsville, Ala. (See 1939 YEAR BOOK for data on the larger TVA city-customers; also various TVA reports.)

Municipally-owned electric light and power plants in the United States increased from 2100 to 2632 as of Jan. 1, 1938 and Nov. 1, 1940, according to statistics compiled by the Burns & McDonnell Engineering Co., Kansas City, Mo. The Federal Power Commission listed 2035 publicly- and 1314 privately-owned electric utilities in 1940, but excluded places of less than 250 population.

**MUSIC.** *General News:* What with the extension of the war in Europe, the United States figured more and more prominently as a world center of musical activities in 1940. An increasing number of prominent musicians visited the Latin-American republics, and the general trend toward closer cultural relations also had its musical effects. The first North American orchestra to visit South America was the National Broadcasting Company's symphony orchestra (known as the N.B.C. Symphony) under Arturo Toscanini's direction, which gave sixteen highly successful concerts in Brazil, Uruguay, and Argentina between June 12 and July 10. This was followed in August by the All American Youth Orchestra, organized in the spring by Leopold Stokowski with a roster mainly of musicians of both sexes ranging in age from 14 to 24. These were chosen in preliminary auditions held throughout the country by the National Youth Administration (q.v.), which also maintained orchestras of its own in the principal centers, and final auditions held by Mr. Stokowski. They gave five concerts in Brazil, ten in Argentina, three in Uruguay, and one in the Dominican Republic. In a week of concerts in eastern cities before its departure, the orchestra was much praised by the critics, and some hoped that it might be made permanent, but it was disbanded after giving some further home concerts in September. Plans were announced for the organization of a second orchestra of this kind in 1941.

Government support of music through the Work Projects Administration (q.v.) continued throughout the year upon the relatively decentralized basis which had been inaugurated by legislation stipulating that, after Jan. 1, 1940, one fourth of the costs of the various music and other cultural projects must be met locally. It was estimated that, under the new conditions, 10,072 musicians were em-

played in these activities at the beginning of the year, as compared with the former Federal Music Project's peak figure of 15,700.

In New York, the city co-operated with the WPA in providing popular-priced orchestral concerts in large auditoriums under various guest conductors and with prominent soloists. Here the programs were relatively conservative, but WPA orchestras in certain other large cities, especially the Illinois Symphony Orchestra of Chicago under Izler Solomon and others, gave more attention to American and other modern music.

An anticipation of the possibilities of seeing as well as hearing opera by television was provided in New York, March 10, when the first large-scale demonstration of this kind took place in the National Broadcasting Company's studios, where a cast of Metropolitan Opera singers gave Act I of *Pagliacci* in condensed form. The Rockefeller Foundation made a grant of \$20,000 to the New School for Social Research for a two year study of the use of music in motion pictures. Perhaps the most ambitious example thus far of such use was the film *Fantasia*, made by Walt Disney with the collaboration of Leopold Stokowski and the Philadelphia Orchestra and first publicly shown on November 13. (See MOTION PICTURES.)

In an attempt to popularize operatic music in the United States, the National Committee for Music Appreciation placed on sale in September the first of twelve sets of records of familiar works at \$1.75 a set. Twenty-two thousand sets of records of *Carmen* were sold during the first week.

One of the country's most prominent musical societies, the Beethoven Association, voted to dissolve in May after a career of 22 years during which it had given away nearly \$100,000 to educational and musical institutions. The funds had been raised by concerts for which the members, including most of the well-known musicians who lived or appeared in New York, contributed their services.

There were several changes during 1940 in the university field. Daniel Gregory Mason, who continued as MacDowell Professor of Music, resigned as head of the music department of Columbia University, and was succeeded by Douglas Moore. David Stanley Smith retired as dean of the Yale University School of Music at the end of the 1939-40 academic year, after 22 years' service. A separate department of music was formed in Yale College with Bruce Simonds as chairman. In the field of musical journalism, a noteworthy appointment was that of Virgil Thomson, well known as a composer, as music critic of the *New York Herald Tribune*, succeeding the late Lawrence Gilman. An instance of an increasing esteem for music in the American cultural world was the naming of Stephen C. Foster for commemoration in New York University's Hall of Fame. He was the first American musician to be thus honored.

Under the five-year agreement which expired December 31, radio stations paid the American Society of Composers, Authors and Publishers (see under SOCIETIES AND ASSOCIATIONS) \$4,142,200 in 1939 for the use of music which the Society controlled, including much of the popular music which was broadcast. In March, the A.S.C.A.P. offered a new contract which, according to an estimate, would virtually double the annual payment. Most of the radio stations, represented by the National Association of Broadcasters, rejected this, and both sides prepared for battle. The broadcast-

ers organized a new firm, Broadcast Music, Inc., which, it was hoped, would provide new music and arrangements, buy out existing publishers, and provide radio with a source of music of its own, or at least with an instrument for bargaining. In November, the large chains began to drop music controlled by the A.S.C.A.P. from the air, and it was dropped by all except some independent stations by Jan. 1, 1941.

**Artists and Composers.** Hitherto the American Federation of Musicians had not attempted to enlist instrumental concert virtuosi in its ranks, or opposed their enrollment by the American Guild of Musical Artists, which was also an affiliate of the American Federation of Labor. Early in August, however, the new president of the American Federation of Musicians, James C. Petrillo, announced that instrumental artists must join the Federation by Labor Day, or cease to take part in any activities in which Federation members were concerned. This meant that those who did not comply would be barred from appearing in concerts with Federation musicians, including those of all but one of the major orchestras; from making records or musical films, and also from broadcasting.

Conferences between Mr. Petrillo and the president of the Guild, Lawrence Tibbett, noted barytone, failed to reach a compromise, and legal warfare began. On August 29 Justice Ferdinand Pecora, of the New York Supreme Court, granted an application for a temporary injunction restraining Mr. Petrillo from enforcing his demands. Application for a final injunction was made before Justice Aron Steuer, of the Supreme Court, who denied the motion on November 20. The Guild carried the matter up to the Appellate Division, which dismissed the application on Jan. 24, 1941, holding that members of a labor union had the right to refuse to work with non-members in the same field of endeavor. The Guild planned to take the case, which it regarded as involving the freedom of musical culture in America, to the Court of Appeals in Albany. In February, 1941, Mr. Petrillo announced that instrumentalists must join the Federation by Mar. 1, 1941.

Many noted European musicians had come to the United States within the last few years, owing to political conditions in Europe. The intensification of the war brought many more, including Darius Milhaud, who arrived in July and, after conducting the first performance of his *Cortège Funèbre*, for the Columbia Broadcasting System, went to California to join the music faculty of Mills College. Among other well-known European composers now in America, Paul Hindemith devoted most of the year to teaching, becoming a visiting lecturer for the Yale University School of Music in May; Igor Stravinsky, who took out his first citizenship papers, appeared as guest conductor with most of the principal orchestras.

Among the concert artists who made American debuts in 1940 were Marcelle Denya, French soprano; Suzanne Sten, German mezzo-soprano; Magda Tagliafero, French-Brazilian pianist; Antonio Brosa, Spanish violinist, and Edward Kilenyi, Hungarian-American pianist. The youngest artist to make a notable impression in a New York debut was the 9-year-old Andre Mathieu from Montreal, who, on February 3, showed a remarkable talent as a pianist and as a composer. Ignace Jan Paderewski returned from Europe on his 80th birthday, November 6, to live in America, at least during

the period of the war. Owing to his age and health, he planned to make no concert appearances.

**Chamber Music.** The year's most intensive presentation of recently composed American chamber music was held September 9 and 10 on the Yaddo estate at Saratoga Springs, N.Y., where works by 36 composers were heard in four programs. In general, this cross-section of contemporary activity, as compared with its predecessors in this series, showed a trend away from experimentalism, if not from up-to-date idioms.

As before, the most extensive urban series of chamber music was that offered in New York by the New Friends of Music, who devoted their 1939-40 programs to works of Bach, Beethoven, and Brahms. For 1940-41, the list was expanded to include music by modern composers such as Arnold Schönberg, Mark Brunswick, Ernest Bloch, and Bela Bartok, whose sonata for two pianos and percussion instruments had its first American performance November 3. Within the scope of this review, it would be impossible to list all the new works presented in the United States during 1940. Bach's *Musical Offering* had its first New York performance in full in the Bach Circle's concert of January 20, in Hans T. David's arrangement. Haydn's *The Seven Last Words of Christ* was introduced to America by the Primrose Quartet in a New York concert on February 18.

**Choral Music.** Mozart's last Mass, in C minor (K. 427), had its first American concert performance in the concert of the Schola Cantorum of New York (January 9) under the direction of Hugh Ross, who used Alois Schmitt's edition. In its second concert (April 17), this enterprising chorus sang a *Sinfonia Biblica* by Juan José Castro, of Buenos Aires, for the first time in the United States, and a *Pater Noster* by Burle Marx, of Brazil, for the first time anywhere. The New York Oratorio Society, under Albert Stoessel, remained faithful to Bach's Mass in B minor and Handel's *Messiah*, which was sung by innumerable choral groups of all sizes during the Christmas season. A touring group new here, the General Platoff Don Cossack Chorus, completed its first American tour in February.

**Festivals.** The ninth festival of the Elizabeth Sprague Coolidge Foundation in the Library of Congress was held in Washington, April 12 to 14. Works performed for the first time were Ildebrando Pizzetti's *Epithalamium*, for soloists, chorus, and chamber orchestra; Jerzy Fitelberg's sonata for two violins and two pianos; Nicolai Berezowsky's string sextet, Malipiero's *Quattro Vecchi Canzoni* for voice and seven instruments, Roy Harris's quintet for strings, Marcel Grandjany's fantasy-chorale on *Pange Lingua* for harp and organ, David Stanley Smith's eighth quartet, and Frank Bridge's *Divertimento* for wind instruments. The Pizzetti, Fitelberg, and Berezowsky works had been commissioned by Mrs. Coolidge. Joseph Szigeti and Bela Bartok played a program of the latter's music for violin and piano.

The Eastman School of Music held its tenth American Music Festival, April 22 to 26, in Rochester, N.Y., under the general direction of Howard Hanson, who introduced an 18th century work, a sinfonia by Johann Friedrich Peter, in his opening program. Modern works performed for the first time were Edmund Haines's *Symphony in Miniature*, Burrill Phillips's *Concert Piece* for bassoon and strings, Frederick Woltmann's *Incantation*, and, in part, Roy Harris's *Folk-Song Symphony*.

Walter Piston's *The Incredible Flutist* was a novelty in the closing ballet program.

Ifor Jones completed his second season as conductor of the Bach Choir of Bethlehem, Pa., with its 33d Bach Festival, May 17 and 18. Seven cantatas were sung on the first day and, according to custom, the second day was devoted to the Mass in B minor. Other Bach festivals were held at Berea, O., in June, and Carmel, Calif., in July.

The Philadelphia Orchestra again took part with the University of Michigan Choral Union in the 47th festival at Ann Arbor, Mich., May 8 to 11. Eugene Ormandy and Thor Johnson shared the conductorship. Among the principal works presented were Charles Vardell's cantata, *The Inimitable Lovers*, Harl McDonald's Santa Fe Trail symphony, conducted by the composer, and Saint-Saens's opera, *Samson et Delila*, presented in concert form in the closing program.

The eighth annual Berkshire Symphonic Festival, consisting of nine concerts, three more than in the last four summers, was held from August 1 to 17. This was the fifth festival to be given with the participation of the Boston Symphony Orchestra under Serge Koussevitzky's direction and the third in the semi-outdoor auditorium built for this purpose on the Tanglewood Estate in Lenox, Mass. For the first time, an entire program was devoted to a major choral work, Bach's Mass in B minor, with a chorus which had been trained in the allied Berkshire Music Center. Three concerts were devoted to Beethoven and Tchaikovsky (in honor of his birth centenary). The other five programs consisted largely of standard works, but included a few modern compositions, such as Roy Harris's third symphony and Paul Hindemith's *Mathis der Maler* symphony.

The Music Center, with Dr. Koussevitzky as director, opened its first session at Tanglewood early in July. This was in two divisions, one providing advanced training in various fields, while the other gave opportunities to less advanced students and to amateurs to increase their acquaintance with music and its interpretation. In the fall Mrs. Mary Louise Curtis Bok, of Philadelphia, gave the Center \$10,000 to build an opera theater seating 1200 for its opera department.

Two stage performances of opera, Gluck's *Orestes* and Offenbach's *Tales of Hoffmann* were given under Albert Stoessel's direction in the 61st festival at Worcester, Mass., September 30 to October 5. Both were sung in English. Mabel Daniels's *The Song of Jael*, for soprano, chorus, and orchestra, had its first performance, October 3, and the Ninth Symphony was heard in a Beethoven program.

In the South, festivals were held in April at Columbia and Spartanburg, S.C., in August, when *Così fan tutte* was included in a Mozart repertoire, at Asheville, N.C., and in Birmingham, Ala., in October. Handel's *Belshazzar* had what was believed to be its first complete performance in the United States in the May Festival at Pasadena, Calif., under Richard Lert's direction. The International Society for Contemporary Music planned to hold its annual festival in New York in December, but, owing to difficulties of preparation, especially in the matter of obtaining foreign scores, this was postponed until May, 1941.

In Canada, a feature of the fifth annual Montreal Festival was a performance of Debussy's *Pelléas et Mélisande*, June 14, under Wilfred Pelletier's direction, with Raoul Jobin and Marcelle

Denya in the title roles, Mack Harrell as Golaud, and Leon Rother as Arkel.

**Opera.** When the owners of the Metropolitan Opera House in New York, represented by the Metropolitan Opera and Real Estate Company, decided that they could not continue to maintain the property under the existing arrangement, the Metropolitan Opera Association, which produces the operas, offered to buy it for \$1,500,000, subject to a first mortgage of \$470,000, and thus avoid the possibility of having the theater sold for non-operatic purposes.

This proposal was accepted by the Real Estate Company on January 12. A campaign to raise \$1,000,000 for the cash payment of \$500,000 and for various changes and improvements was launched January 27, and passed its goal on May 9. About \$240,000 of this sum was contributed by out of town listeners to the Saturday afternoon opera broadcasts. On May 21, the Association's directors voted to go ahead with the purchase and improvement program, and the title was formally transferred June 28. Thus the theater came to be owned by its producing organization for the first time since 1892. One of the principal changes was the substitution of rows of seats for the former grand tier boxes, and, for the first time in the Metropolitan's history, the parterre boxes, formerly the property of the owners of the house, were placed on public sale.

The Metropolitan's 55th regular season and its fifth under Edward Johnson's general management began Nov. 27, 1939, and continued for the usual 16 weeks, followed by four post-season performances. During the longest spring tour in many years, the company appeared in Baltimore, Boston, Cleveland, Rochester, Houston, New Orleans, and Atlanta. Performances during the regular season in Philadelphia, Newark, and Hartford made an out of town total of 48 performances in a grand total of 171, not counting 14 Sunday night concerts.

Of the 33 operas presented in New York, four less than in 1938-39, 15 were sung in Italian, 11 in German, and 7 in French. In the representation of composers Wagner again had a long lead, with 45 performances of ten works. Verdi and Puccini held second and third places. There were no novelties, but seven operas not heard in the previous season returned to the repertoire. The most distinguished revival was that of Mozart's *Le Nozze di Figaro*, last sung at the Metropolitan in 1918. This was produced February 20 with Ezio Pinza as Figaro and Elisabeth Rethberg, Bidu Sayao, Risé Stevens, and John Brownlee in other leading roles. Ettore Panizza conducted; Herbert Graf had charge of the stage direction, and the sets were designed by Jonel Jorgulesco.

Debussy's *Pelléas et Mélisande*, revived March 7 after six years, made a more mixed impression; the *Pelléas* of Georges Cathelat, who had come from France to sing this role, was praised, but Helen Jepson's *Mélisande* was considered dramatically inadequate. The return of Montemezzi's *L'Amore dei Tre Re*, on December 27, after a lapse of four seasons, was undistinguished, despite Ezio Pinza's laudable Archibaldo. Miss Jepson, Armand Tokatyan, and Richard Bonelli were the other principals with Gennaro Papi conducting. None of the other works restored, Wagner's *Der Fliegende Holländer* with Kirsten Flagstad as Senta and Friedrich Schorr as the Dutchman; Gounod's *Faust*, Puccini's *Madama Butterfly*, and

Ponchielli's *La Gioconda*, had been out of the active list for more than two seasons.

Of the 92 artists who sang solo roles during 1939-40, 16 appeared for the first time in a regular Metropolitan season. Two former members of the organization returned to it: Helen Traubel, American soprano, in two Wagnerian roles, and the veteran Italian barytone, Giuseppe De Luca, who, although 63 years old, proved still to be a master of vocal style.

Eight of the newcomers were Americans. The three new artists who proved most valuable were Jarmila Novotna, whose ability as a singing actress was best illustrated as Violetta and Cherubino; Alexander Kipnis, a basso of Russian origin, who was at his best as Gurnemanz, Hagen, and Marke in the Wagner list and as Baron Ochs in *Der Rosenkavalier*, and Licia Albanese, Italian soprano, who made her debut in the title role of *Madama Butterfly*. Another Italian soprano, Hilde Reggiani, showed moderate vocal attainments as Gilda and Rosina. Walter Olitzki, German barytone, showed ability of a routine sort. Eyvind Laholm, American tenor, sang Siegmund and Tannhäuser early in the season. Single appearances in leading roles were made by Harriet Henders and Jean Dickenson, American sopranos, and Raoul Jobin, French-Canadian tenor. He played a more important part in the following season. Newcomers heard in minor assignments were Annamary Dickey, soprano, and Mack Harrell, barytone, the winners in the 1939 radio auditions; Lodovico Oliviero, tenor, who had sung in the 1937 spring season, and two young Americans, Jean Merrill and Winifred Heidt, who sang only in the Sunday concerts. The death of the company's senior conductor, Artur Bodanzky, on Nov. 23, 1939, threw the whole burden of the Wagner repertoire upon the 28-year-old Erich Leinsdorf, who also conducted *Pelléas et Mélisande*. The other regular conductors were Messrs. Panizza, Papi, and Wilfred Pelletier. George A. Sloan, who had been chairman of the fund-raising committee, was elected president of the Metropolitan Opera Association September 11, succeeding the late Paul D. Cravath.

The season of 1940-41, also 16 weeks long, began with a new production of Verdi's *Un Ballo in Maschera*, last heard in this house in 1916. The action was transferred from Boston to Sweden, the locale of the Scribe play on which the libretto is based, but the names were not correspondingly changed. Jussi Bjoerling, Zinka Milanov, Alexander Sved, Kerstin Thorborg, and Stella Andrevs sang the leading roles, with Mr. Panizza conducting. Saint-Saëns's *Samson et Delila* was reinstated in the repertoire December 6, with René Maison and Risé Stevens as the principals, and Verdi's *Il Trovatore* received a new production December 12, with settings by Harry Horner. Here Ferruccio Calusio, a conductor of the Teatro Colon in Buenos Aires, made his North American debut. The next revivals were of two comic operas by Donizetti, *Don Pasquale*, whose title role provided for the company's admirable new Italian basso buffo, Salvatore Baccaloni, and *La Fille du Régiment*, sung in French with Lily Pons as Marie.

Five American singers made their Metropolitan debuts before the close of the year: Eleanor Steber and Norina Greco, sopranos; Emery Darcy, tenor, and Francesco Valentino and Arthur Kent, barytones. The others, besides Mr. Baccaloni, who made their first appearances in December were Maria Husa, Viennese soprano; Alexander Sved,

Hungarian barytone, and John Dudley, Australian tenor.

The National Orchestral Association of New York added opera to its training program, giving *Pagliacci* December 9 as the first of a series of experimental performances with young American singers.

The Chicago City Opera Company, renamed simply the Chicago Opera Company, was completely reorganized, with Chauncey D. McCormick as chairman of the board, Walter D. Kirk as president, and Henry Weber as artistic director. William Wymetel was made regisseur. The organization of a new chorus of young singers began in the spring and the Ballet Theater, which had made a notable impression in New York in its first season, was engaged for the fall series, in which it offered some all-ballet programs in addition to appearances in the operas. The seven weeks' season opening November 2 with *Aida*. Counting two extra Christmas holiday performances, there were forty presentations of 21 operas—seven operas less than in 1939, but quite enough for this relatively short period.

The revivals were Verdi's *Falstaff*, with John Charles Thomas in the title role; Mozart's *Don Giovanni*, with Ezio Pinza; Strauss's *Salome*, first heard in a special performance with Rose Pauly as its protagonist and Artur Rodzinski conducting, and later under Carl Alwin with Marjorie Lawrence as the Salome; Strauss's *Der Rosenkavalier* and Montemezzi's *L'Amore dei Tre Re*, in which Grace Moore sang Fiora for the first time, with the composer conducting. *Falstaff*, *Martha*, and *Hansel and Gretel* were sung in English. Wagner was represented by one performance of *Tristan und Isolde*, with Kirsten Flagstad, and two of *Die Walkure*. Twenty-two singers were heard with the company for the first time, and two conductors, Maurice Abravanel and Paul Breisch, joined the regular staff, which included Mr. Weber, Angelo Canarutto, Leo Kopp, Carl Alwin, Kurt Adler, Dr. Rodzinski, Mr. Montemezzi, Fritz Reiner, and Edwin McArthur. According to Edward Barry, music critic of the *Chicago Tribune*, the 1940 season was the most stimulating in recent years and marked the beginning of a new operatic era for Chicago.

Ten operas were produced by the San Francisco Opera Association between October 12 and November 3: *Le Nozze di Figaro*, *La Bohème*, *Don Giovanni*, *Un Ballo in Maschera*, *Rigoletto*, and *Aida* in Italian; *Lakmé*, *Carmen*, and *Manon* in French, and *Der Rosenkavalier* in German. Debuts were made by Margit Bokor, Mari Monte, and Verna Osborne, sopranos; Suzanne Sten and Elsa Zebranska, contraltos; Jussi Bojerling, George Stinson, and Francisco Naya, tenors, and John Brownlee and Walter Olitzki, barytones. Gaetano Merola, the general manager, shared the conductorship with Gennaro Papi and Erich Leinsdorf.

In addition to the visiting Metropolitan, Philadelphia was served by two resident organizations, the Philadelphia Opera Company, composed mainly of young singers living in the city or its neighborhood, and the Philadelphia-La Scala Opera Company, with visiting artists. For its 1940-41 season, the former company adopted a policy of performances in English, except for *La Bohème*, and presented Tchaikovsky's *Eugene Onegin* and Smetana's *The Bartered Bride* in the fall, with translated texts.

The St. Louis Opera Association presented Ma-

non, *Rigoletto*, and *Carmen* in April with casts mainly of Metropolitan artists, but canceled its projected fall series. In Los Angeles, the Southern California Opera Association made its debut May 7 with *Faust* under the conductorship of Albert Coates. The principal summer season, as before, was that of the Zoo Opera Company of Cincinnati, which presented 15 works between June 30 and August 10. Fortune Gallo's San Carlo Opera Company again toured extensively.

South America's principal opera season, at the Teatro Colon in Buenos Aires, began May 25 and continued into the latter part of October. Among the works revived or restaged were *La Bohème*, *L'Elisir d'Amore*, and *Alceste*, while Cimarosa's *Le Astuzie femminili* had its local première in August. As usual, the first part of the season was devoted to works in Italian and French, and the later weeks to German opera.

**Orchestras.** For its fiftieth season, the Chicago Symphony Orchestra had commissioned prominent composers of several countries to write for it, and also held a competition for a short work by an American. The unusually large list of works played for the first time during the first twelve weeks of 1940-41 included symphonies by Darius Milhaud (October 17), John Alden Carpenter (October 24), and Igor Stravinsky (November 7); Roy Harris's *American Creed* (October 31), Eric Delamarter's *Fable of the Hapless Folk-Tune* (December 5), Remé Gassman's *Symphonic Overture in G* (December 12), and Nicolai Miaskovsky's *Symphonic Fantasia* (December 26). Messrs. Milhaud and Stravinsky conducted their own works; the others were directed by Frederick A. Stock, now in his 36th year of consecutive service as conductor. One of the novelties of the 49th season, 1939-40, was a symphony by a Russian, Van Muradeli, which was introduced February 15 and repeated in a later pair of concerts. In both seasons, several concerts were led by the associate conductor, Hans Lange.

The Philharmonic-Symphony Society of New York, which exchanged a pair of subscription dates with the Chicago Symphony during its November tour, continued under the regular conductorship of John Barbirolli, whose contract was renewed in February for the next two seasons. Igor Stravinsky was a guest conductor for a week in January and another in April, and Albert Stoessel, conductor of the Oratorio Society, which joined with the orchestra in Bach's *Passion According to St. Matthew*, directed three concerts in March. Dimitri Mitropoulos, the Minneapolis Symphony Orchestra's Greek conductor, began a four weeks' guest engagement December 19.

The year's most extensive novelty was *Moby Dick*, by Bernard Herrmann, a young New York composer, a dramatic cantata for men's chorus, soloists, and orchestra with a text by W. Clark Harrington based on Melville's novel. This was often effective, but sometimes derivative and over-scored.

Other works which had first performances or American premières were John Powell's *A Set of Three* (first time in full, February 18), Leo Weiner's *Divertimento No. 2*, Op. 24 (February 8), Benjamin Britten's violin concerto (March 28) with Antonio Brosa as soloist, Anis Fuleihan's *Symphonic Concertante* for string quartet and orchestra (April 23), Jaromir Weinberger's *Song of the High Seas* (November 9), Alexander Zemlinsky's *Sinfonietta*, and Casella's suite from his

*La Donna Serpente* (December 29). Homer Keller's first symphony, which had won the Henry Hadley Foundation's American composer's prize, was introduced in a special concert November 2.

Under Leon Barzin, the training orchestra of the National Orchestral Association added to the list of novelties in New York Boris Koutzen's *Valley Forge* (February 19) and Walter Piston's violin concerto (March 18, with Ruth Posselt as soloist), both played for the first time, and Henriette Bosmans's *Concertstück* for violin and orchestra (March 18), played for the first time in America. For its 1940-41 series in Carnegie Hall under Fritz Stiedry's direction, the orchestra of the New Friends of Music added modern works to its repertoire, and played Schönberg's *Kammer-symphonie No. 2* for the first time December 15.

Arturo Toscanini continued as conductor of the N.B.C. Symphony Orchestra in its Saturday night radio series, and also took it out of New York for a few concerts in the winter and to Carnegie Hall for performances of Verdi's *Manzoni Requiem* and Beethoven's *Missa Solemnis* in November and December. Other conductors in the radio series were Bernardino Molinari and Bruno Walter, in the winter, and Hans Wilhelm Steinberg in the fall.

Serge Koussevitzky, who began his seventeenth season with the Boston Symphony Orchestra October 11, conducted most of the concerts of the regular series and those of the Berkshire Festival. Guest conductors were Nikolai Malko in January, Tauno Hannikainen, a Finnish leader, in February, Igor Stravinsky, March 29-30, and Désiré Defauw, November 29-30. Works heard for the first time were Edward Burlingame Hill's concertino for strings (April 19); Mario Castelnuovo-Tedesco's *Cipressi* (October 25), and George Foote's *In Praise of Winter* (January 5). Works performed for the first time in the United States were Serge Prokofiev's cello concerto (March 8; soloist, Gregor Piatigorsky), Paul Hindemith's violin concerto (April 19, Richard Burgin), and Darius Milhaud's *Suite Provençale* (December 20) with the composer conducting.

The Boston Symphony continued to be the only non-union major orchestra in the United States, although James C. Petrillo, in August, announced his intention of bringing it into the fold of the American Federation of Musicians. There was no indication from the management, however, of a change of the orchestra's traditional policy in this regard.

Eugene Ormandy, musical director of the Philadelphia Orchestra, who had hitherto ranked as co-conductor with Leopold Stokowski, was re-engaged in November for five years and designated as conductor with full authority. Mr. Stokowski conducted for three weeks in March and three more in November, giving the American première of Dmitri Shostakovich's Sixth Symphony November 29 and the first performance of Schönberg's Violin Concerto December 7, with Louis Krasner as soloist. The work was found rather baffling. Mr. Ormandy conducted the first American performance of Rosario Scalero's *The Divine Forest* December 20. Edwin McArthur and Saul Caston each conducted for a week in March.

For a time, it seemed that the National Symphony Orchestra of Washington, D.C., would end its career with the close of the 1939-40 season, owing to a long deadlock between the orchestra association and the local musicians' union over the

length of the season and the salary scale, the directors feeling that it would not be possible to raise the additional \$27,000 called for by the union's terms. Finally, on April 22, a compromise was reached with the aid of the U.S. Conciliation Service, and the tenth season under Hans Kindler's direction opened November 6.

The Cleveland Orchestra, under Artur Rodzinski as regular conductor and Rudolph Ringwall as associate, began its 23d season October 10. Roy Harris's *Folk-Song Symphony* in seven movements, five of these with a large chorus, had its first complete performance December 26. Arthur Shepherd, long a resident of Cleveland, introduced his second symphony March 7. After the close of the 1939-40 season, which had included five one-composer programs, Franco Ghione resigned his conductorship of the Detroit Symphony Orchestra, which began its next season under the leadership of Victor Kolar, the associate conductor, and Bruno Walter and Tauno Hannikainen as guests. Mr. Kolar gave the first performance of Weinberger's *The Legend of Sleepy Hollow*, November 21. Eugene Goossens, conductor of the Cincinnati Symphony Orchestra, introduced his symphony April 12. Among other novelties were Robert Casadesu's two-piano concerto (February 9), John Ireland's *Concertino Pastorale* (February 23), Bernard Rogers's *The Song of the Nightingale* (March 21), and Anton Bilotti's piano concerto (April 5).

To celebrate its 60th anniversary, the St. Louis Symphony Orchestra offered a \$1000 prize for an American work; this was won by Antoni Van der Woort of Santa Barbara, Calif., whose *Sinfonietta* was played under Vladimir Golschmann's direction November 22. Darius Milhaud's *Fanfare*, dedicated to this orchestra, was introduced in the closing spring concerts. Bela Bartok's divertimento for strings, first played at Basel in May, had its first American performance in St. Louis November 8. Guest conductors were Carlos Chavez, January 26-27, and Sir Thomas Beecham, December 13. The Pittsburgh, Minneapolis, and Kansas City Symphony Orchestras continued under the respective conductorships of Fritz Reiner, Dimitri Mitropoulos, and Karl Krueger. Mr. Reiner introduced Morton Gould's *Stephen Foster Symphony* in January, and a Minneapolis novelty was Frederick Woltmann's *The Coliseum at Night*. Among the new works introduced by the Indianapolis Symphony Orchestra under Fabien Sevitzky were Claude McKay's *To a Liberator*, Frederick Converse's sixth symphony, and Frances McCollin's *Christmas Poem*.

Otto Klemperer, who had been out of action in 1939-40 owing to a serious illness, resigned as conductor of the Los Angeles Philharmonic Orchestra in October. The guest leaders who shared its direction were Albert Coates, in January, March, and April; Leopold Stokowski in February, and Bruno Walter for most of the fall. In January, the orchestra left the Los Angeles Auditorium for the Pantages Theater in Hollywood. Mr. Coates introduced three American works, Charles W. Cadman's *Pennsylvania Symphony*, Elinor Remick Warren's *The Passing of King Arthur*, for orchestra and chorus, and R. Meredith Willson's second symphony, *The Missions of California*. The San Francisco Symphony Orchestra, with Pierre Monteux as its regular conductor, offered 12 pairs of concerts in its regular series, and five concerts and six ballet programs in the series given under the auspices of the city's Art Commission. Messrs.

Stokowski and Chavez made guest appearances. Fortnightly concerts were given from July to September at the San Francisco Fair. Nikolai Sokoloff continued as conductor of the Seattle Symphony Orchestra. Among the new orchestras which made their debuts in 1940 were those organized in Toledo, San Antonio, and Sacramento.

The vogue of outdoor symphony concerts in the summer remained undiminished. As before, the principal series were those held at the Lewisohn Stadium in New York, Robin Hood Dell in Philadelphia, Ravinia Park near Chicago, the Water Gate in Washington, and the Hollywood Bowl near Los Angeles. Each employed several conductors. Several American works, including Roy Harris's *Challenge*, 1940, William Grant Still's *And They Lynched Him to a Tree*, and William Schuman's *This Is Our Day* had their first public performances at the Stadium under Artur Rodzinski and Alexander Smallens. Opera, to a varying extent, figured in all these series, except for Ravinia. Persistent bad weather forced the Dell concerts to close a week earlier than planned. On the other hand, the Hollywood Bowl series was unusually successful from an economic point of view.

In Mexico City, the Orquesta Sinfonica de Mexico gave its usual summer series under Carlos Chavez from June 21 to September 23. Stravinsky, welcomed with great enthusiasm, conducted three pairs of concerts.

Despite exceptional claims on the public purse owing to war conditions, Canadian orchestras did not abate their activities, and a marked increase in the number of subscribers to the concerts of the Toronto Symphony Orchestra was reported at the opening of the 1940-41 season, October 29. The conductor, Sir Ernest McMillan, announced in June that works by German composers living in Germany would be excluded from his programs. Reginald Stewart conducted the annual Promenade series of weekly concerts in Toronto from May to October. Montreal was served by the Montreal Symphony Orchestra under Douglas Clarke and Les Concerts Symphoniques under Wilfred Pelletier and guests. Sir Thomas Beecham made guest appearances in the fall with the Toronto, Montreal, and Vancouver Symphony Orchestras.

Before coming to Canada, Sir Thomas Beecham spent several months in Australia, conducting in Sydney, Melbourne, Brisbane, and other centers. His efforts, following those of Georg Schneevogt earlier in the year, produced substantial progress in the standards of orchestral playing.

**Music in Europe.** After an almost complete halt during the first few weeks of the war, musical activities in Great Britain had revived to a notable extent by the beginning of the year, and the intensity of the London winter season was not very far below its pre-war scale. The British Broadcasting Corporation's orchestra had been divided into smaller groups, but the London Philharmonic and London Symphony Orchestras both presented regular series. The London Philharmonic ran into economic difficulties which threatened its disbandment, and a testimonial concert to impress the public with this fact was held in London July 18. One of those who provided assistance was the well-known popular music leader, Jack Hylton, who undertook the responsibility for a month's tour. Later the C.E.M.A. (Council for the Encouragement of Music and the Arts) took an important step in keeping up the country's major orchestras by guaranteeing ten extra concerts apiece to the

two London organizations, the Hallé Orchestra of Manchester and the Northern and Scottish Philharmonics.

The C.E.M.A. originated with a grant of £25,000 made by the Pilgrim Trust in December, 1939, for the encouragement of music and other cultural activities. This was so well administered that the government agreed to match each private contribution. In November, this organization gave about 400 concerts in rest centers, air raid shelters, and factories. Another source of widespread music was the E.N.S.A. (Entertainments National Service Association), which provided concerts of various kinds for soldiers and sailors and factory workers, and also for interned aliens, and sponsored orchestral programs in provincial centers.

There was no Covent Garden opera season, but the Sadler's Wells Company gave opera in English in London in the winter and spring and returned to London after a provincial tour for a summer season. John Gielgud produced *The Beggar's Opera* in February under the direction of Frederic Austin, who had made some revisions in the score. The London Symphony took part in the annual summer Promenade Concerts under Sir Henry Wood, who had announced that the 1940 season would be his last. The outbreak of intensive air raiding halted it early in September, but the desire to hear music proved to be remarkably persistent, and a skeleton scheme of London concerts was maintained in the fall. The remarkable series of concerts instituted by Myra Hess in London's National Gallery in October, 1939, kept up a daily schedule without a break, offering a varied list recital and ensemble programs with the participation of most of the country's best known artists. During their first year, it was estimated, these concerts had employed nearly 1100 musicians.

Up to the time of the German invasion, Paris had an active musical life. The last novelty produced at the Opéra before the French defeat was Darius Milhaud's *Medée* under Philippe Gaubert's direction, with Marysa Ferrer in the title role. The Opéra-Comique celebrated the 40th anniversary of the première of Charpentier's  *Louise* in February. The Conservatoire Orchestra was conducted by Charles Münch; the Colonne and Lamoureux Orchestras joined forces under Paul Paray, who gave Wagner his first wartime Paris representation, March 9, arousing both favorable and unfavorable demonstrations. Albert Wolff reopened the Pasdeloup Orchestra's schedule early in the winter. One of the season's principal new works was Florent Schmitt's *L'Arbre entre Tous*, for soloists, chorus, and orchestra, introduced in a Conservatoire program early in March. The State Radio gave its hearers a comprehensive supply of music of various kinds.

Under the occupation, the Paris Opéra reopened August 24. In unoccupied France, Marseilles became the principal concert and radio center.

Opera and concerts continued at their normal pace in Italy, although neither La Scala in Milan or the Teatro Reale in Rome staged any premières of much consequence. Guido Pannain's first opera, *L'Intrusa*, based on Maeterlinck's play, and G. Federico Ghedini's *La Pulce d'Oro* were produced in Genoa in February. Lorenzo Filasi's *Mattutino d'Assisi* had a first production in Naples, and Busoni's *Arlecchino* and Richard Strauss's *Friedenstag* had their Italian premières at the Fenice Theater in Venice under Vittorio Gui.

The annual May Festival in Florence, opening

April 20 and continuing into June, began with Rossini's *Semiramide* under Tullio Serafin. Purcell's *Dido and Aeneas* was performed for the first time in Italy May 14, while the only new work staged was Luigi Dallapiccola's *Vol de Nuit*. Other operas performed were *The Magic Flute*, the *Turandots* of Puccini and Busoni, *La Traviata*, *Boris Godunoff* (in the original version), and *Acis and Galatea*. Bach's *Actus Tragicus*, Kodaly's *Psalmus Hungaricus*, Verdi's *Stabat Mater*, Haydn's *Creation*, and *Seven Last Words* were sung in the choral concerts.

The second annual Music Week in Siena in September was devoted to music by members of the Scarlatti family, including Alessandro's opera *Il Trionfo d'Onore*. A little known phase of Domenico's creative talent was represented by a performance of his recently discovered *Stabat Mater* for ten-part chorus and organ.

According to a report from Germany at the beginning of the year, musical life there was continuing with its usual intensity, and concert attendance was said to exceed its pre-war figure. A special court was attached to the concert division of the Reich Music Chamber to decide war questions. It was stipulated that orchestras must not be disbanded, or musicians under contract thrown out of employment, and that if concerts were canceled owing to the depletion of an orchestra for military purposes, artists must receive compensating engagements. New opera theaters were opened in the Sudetenland, Austria, and Upper Silesia. Relatively few novelties were given in the operatic and orchestral fields. Wilhelm Furtwaengler, whose romantic sonata for violin and piano was first played by Georg Kulenkampf and the composer in Bielefeld February 13, was made Commissar of Music for Vienna early in the winter.

The Wagner Festival at Bayreuth, opening July 16, was designated the Bayreuth War Festival and given for soldiers and civilian workers who came as guests of the Strength Through Joy organization. They heard *Der Fliegende Holländer* and the *Ring* cycle. Music in Prague, despite German occupation, continued to be cosmopolitan in character. One event of the 1939-40 season was the re-staging of Gluck's *Orfeo* with modernistic settings.

In Switzerland, Honegger's choral symphony, *Dance of Death*, with text by Paul Claudel, made a notable impression in its première in Basel (March 2) under Paul Sacher's direction. Other new works presented by Basel's enterprising orchestra were Krenek's *Symphonic Piece*, Op. 86, Bela Bartok's divertimento for strings and Willy Burkhard's cantata, *Genug ist nicht Genug*. The Stockholm Opera, in its season of 1939-40, gave the first performances of Erich Korngold's *Kathryn*, Fried Walter's *Queen Elizabeth*, and Gunnar de Frumerie's *Singoalla*. *Fidelio* and three Swedish works were revived. Harald André began his second season as the Stockholm Opera's general manager September 3.

In Russia, Serge Prokofiev's *Semyon Katko*, a folk musical drama with its action in the Ukraine during the civil war, was first performed in Moscow June 23. Other Soviet works prepared for production in 1940 were, according to an article by Dmitri Shostakovich in *Musical America*, I. Dzerzhinsky's *Days of Volochayevsk*, B. Mokrussov's *Chapayev*, and *Toktogul* by V. Vlassov and V. Fere.

Many Finnish musicians fought in the war between Russia and Finland, but casualties among them were relatively small. Music began to revive

in Helsinki during the latter part of the conflict, Arvo Hannikainen gathering what musicians he could for the orchestra. After the war, the Helsinki Orchestra played under Martti Simlaa and other guest leaders during Georg Schneevogt's absence. In the fall, Helsinki's concerts had their best attendance in several years, and the opera was also well patronized. In Spain, musical life continued a gradual revival since the close of the civil struggle.

**NARCOTIC DRUGS CONTROL.** International. During the war year 1940 the international bodies charged with world accountancy of narcotic drugs, and with supervision over the execution of the various opium and drug Conventions, continued their functions in order to ensure the working of the machinery set up to control the manufacture of and domestic trade in narcotic drugs. Due to the application of the international opium Conventions, there continued to be a progressive shrinkage in the volume of trade in opium, coca leaves, and manufactured drugs. The task of supervising and controlling the licensed factories producing drugs for the legitimate trade, in order to prevent serious leakages from legitimate channels of distribution into the illicit traffic, forms the basis of international drug control.

In its Introduction to the Statement of Estimates for 1940, the Drug Supervisory Body expressed the opinion that the importance of the control instituted by the 1931 Convention "is not diminished in war-time; on the contrary, as the experience of the last war showed, it is accentuated by the psychological and other conditions created by a state of war which affect profoundly not merely the nations engaged "in the conflict but many, if not most, other countries."

The Opium Advisory Committee held its Twenty-fifth Session in Geneva, Switzerland, May 13-17, 1940. It devoted its attention particularly to the possible repercussions of the war on national and international supervision of drugs. Summing up the results achieved since the last war (1914-18), the Opium Advisory Committee reached the following conclusions:

1. More than 60 countries parties to the opium conventions are now under obligation to operate national legislation and administrative systems based on uniform principles;
2. The total medical and scientific requirements in drugs are now known and the quantities of drugs manufactured legitimately by some sixty licensed factories have been stabilized at the level of the world's legitimate needs;
3. A dividing line between the legitimate trade and the illicit traffic has thus been drawn and the free passage of the legitimately manufactured narcotics into the illicit traffic has been stopped; the leakages which may occur have been reduced to a police problem;
4. A world system of estimates and statistics based on national returns forms the foundation of an international system of accounts in which are recorded all legitimate operations connected with the production of, trade in, and consumption of narcotics.
5. All the channels of distribution, national as well as international, are supervised.

Against this background of results of nineteen years of sustained and unremitting efforts, the Opium Advisory Committee viewed with concern the possible repercussions of the present international conflict on the subject of its work. It drew the attention of the governments to the fact that recent wars, and particularly the war of 1914-18, resulted in a serious increase of drug addiction and a dangerous extension of the illicit traffic due to the absence of national or international legislation of a repressive character, and to the lack of any adequate system of control. The Opium Advisory Committee, therefore, strongly recommended that governments and international organs functioning under the international opium conventions should take all necessary measures to prevent an increase of drug addiction and a return to conditions such as prevailed during and after the war of 1914-18. It considered essential that these in-

ternational organs should continue to function as fully as possible and that governments should assist them in the accomplishment of their obligations, particularly by furnishing annual reports, reports on seizures of drugs in the illicit traffic, estimates of legitimate needs, statistics, etc.

It was noted that the raw opium seized in the Far East continued to be of Iranian and Chinese origin. This is disquieting to the North American authorities because much of the opium smuggled into the United States is Iranian and is known to come from China.

Smuggling continued southward from North China and Jehol. France, Yugoslavia, and Italy were used as bases for smuggling into the United States during 1939 and the early months of 1940. The Opium Advisory Committee noted that the narcotic drug situation in the Far East is in a progressive state of deterioration notwithstanding the laudable efforts of the National Government of China.

The work of the Opium Advisory Committee concerning the limitation of the production of raw opium reached the advanced stage of a preliminary draft Convention, which has been referred to governments for consideration. The Committee decided that while it is obviously impossible for the time being to summon the proposed conference to consider the limitation of the production of raw opium, the studies aiming at the completion of the text of the preliminary draft Convention should be continued.

One of the principal objectives of the Opium Advisory Committee has been to have governments send more and more precise information on cases of illicit traffic, to weave the first meshes of the net to entangle the traffickers which was given final legal sanction in Article 23 of the 1931 Convention. As the cases of illicit traffic furnish valuable indications on the weak points of the worldwide system of the regulation of legitimate trade, it is clear that, if this system is shaken by the war and hence liable to show rifts, an accurate and speedy notification of these cases appears more than ever desirable and indispensable to the effective application of the 1931 Convention.

**United States.** In common with the sixty-two other signatories of the International Convention of 1931, the United States Government operates under the quota system. Only an amount of drugs equivalent to the estimated legitimate needs of the country is permitted to be imported each year. A system of close control is maintained over manufacturers and distributors, and through the splendid co-operation of our drug manufacturers and distributors, the diversion of legitimate drugs into illicit channels represents only a small portion of the problem. In the field of international control, the system provided by the Convention approaches, in principle, the national system of drug control in the United States.

As a result of the various control measures, the number of drug addicts per thousand of the population in the United States has decreased year by year, and the quantity of drugs abusively consumed by the individual addict in the United States is growing steadily less; in fact there is evidence from many reliable sources that addiction to narcotics in this country has reached its lowest ebb since the enactment of the Harrison Narcotic Act in 1914. This trend of decrease in addiction corresponds closely to the reduction achieved in Canada. Throughout 1939 and increasingly so in 1940,

evidence at times indicated an almost total absence of illicit narcotics in large sections of the country.

In commenting editorially on the "Traffic in Narcotic Drugs" the American Medical Association in its Journal dated Dec. 28, 1940, stated:

"The Journal commends the enlightened and effective administration of the Bureau of Narcotics. A record such as that here reported indicates effective control. (The article summarized accomplishments reported by the U. S. Bureau of Narcotics on "Traffic in Opium and Other Dangerous Drugs" for the year 1939.) The cooperation of the medical profession has been freely and fully rendered, owing no doubt to recognition by the medical profession of the desire of the Bureau to destroy criminal practice without undue interference with the legitimate prescription of narcotic drugs. Complete cooperation with the Bureau by State licensing agencies will do much to further this significant work."

"Contained in this report [Sixth annual report of the Michigan State Board of Health for the fiscal year ended Sept. 30, 1878] is a most interesting contrast of the prevalence of addiction to narcotic drugs in 1877 and at present. In 1877, according to the report, one in every 400 persons in the United States was addicted to opium or one of its derivatives, while in 1922 and 1938, subsequent to enactment of the Harrison Narcotic Act in 1914, the ratio of such addicts to population was respectively 1 in every 1,000 and 1 in every 3,000. In the State of Michigan in 1877 there were 516 narcotic addicts per hundred thousand of population, but in 1938, according to a survey conducted in Michigan by the Bureau of Narcotics in that year, there were only 17 addicts per hundred thousand. In 1877 this country, with a population of 46,000,000, imported 350,000 pounds of raw opium, but during the past few years, since importation of that drug was by law restricted to amounts necessary for medicinal and scientific needs, such imports have averaged only 150,000 pounds yearly for more than 130,000,000 people. In 1877 the average per capita consumption of opium and its derivatives was 53 grains as compared with an average consumption in 1939 of approximately 8 grains per capita. The consumption of opium is no longer greatly out of proportion to medical needs."

Preliminary figures compiled by the Bureau of Narcotics showed that during the last year there was a decrease in the number of persons arrested for violations of the Federal narcotic laws (excluding marihuana); 2216 persons being arrested in 1940 as compared with the final figure of 3295 in 1939. The number of marihuana arrests remained practically constant, 870 persons being arrested for violations of the Marihuana Tax Act in 1940 as compared with the final figure of 864 persons arrested in 1939. Arrests for all offenses therefore were 3086 as compared with 4159 in 1939.

Preliminary figures also show a substantial decrease in the amount of drugs seized. In the internal traffic the Bureau of Narcotics seized approximately 2292 oz. of narcotic drugs in 1940 as compared with 3544 oz. in 1939. The Bureau of Customs seized at ports and borders approximately 2286 oz. in 1940 as compared with 8895 in 1939. Total Federal narcotic seizures, therefore, were approximately 4578 oz. in 1940 as compared with 12,439 in 1939.

In addition, in 1940 there were seized in the illicit traffic 20,960 oz. of bulk marihuana (which includes 3450 oz. seized at ports and borders) and 19,560 marihuana cigarettes (which includes 1243 seized at ports and borders), as compared with final figures showing 17,035 oz. of bulk marihuana and 19,091 cigarettes seized in 1939.

In the carrying on of a program of marihuana eradication throughout the country in co-operation with State, municipal, and other enforcement agencies, marihuana was found growing, and was eradicated from approximately 19,200 acres of land in 1940 as compared with 6506 acres of land in 1939.

For several years the principal narcotic drug of addiction has been heroin, with morphine and

smoking opium next in importance, and it is believed that this relative situation continues. However, such heroin as is commonly encountered in the illicit traffic is generally highly adulterated and that commonly sold is a mixture which usually contains less than 5 per cent heroin. In the amounts used in many cases it does not establish a real tolerance and dependence for the drug.

The apparent shortage in many sections of smuggled drugs has resulted in efforts by peddlers and addicts to divert narcotics from medicinal sources. There was an increase both in the number of robberies and the amounts stolen from pharmacies, wholesale houses, and other sources for legitimate narcotics. Because of the co-operation of the drug trade in affording maximum protection to large concentrations of supplies, the total amount of narcotic drugs thus made available to the illicit traffic was minimized. Considerable attention was devoted by the Bureau of Narcotics to the problem presented by numerous addicts resorting to paregoric, various barbituric acid derivatives, or other so-called exempt preparations for narcotics to satisfy their addiction (Exempt preparations are those containing such a small amount of narcotic drugs as to be conditionally exempted from the usual requirement of the law that narcotic drugs be dispensed on prescriptions only.)

Credit for the downward trend of illicit narcotic trafficking and resultant addiction is given to rigid enforcement of the domestic narcotic laws, and to the effectiveness of present international control under the 1931 Convention to Limit the Manufacture of Narcotic Drugs, sixty-three nations being parties thereto. The situation with respect to the increasing scarcity of smuggled drugs which has been noted in the last two or three years was also accentuated in 1940 by war conditions which have disrupted shipping routes.

**NATIONAL DEFENSE ADVISORY COMMISSION.** To co-ordinate and organize the resources of men and materials for the defense of the United States, President Roosevelt on May 28, 1940, under authority of a statute passed by Congress Aug. 29, 1916 (39 Stat. 649), appointed the Advisory Commission to the Council of National Defense.

The 1916 statute directed the President to appoint a Council of National Defense, composed of the Secretaries of War, Navy, Interior, Agriculture, Commerce, and Labor. The Council, in turn was directed to nominate, and the President appoint "An Advisory Commission consisting of no more than seven persons, each of whom shall have special knowledge of some industry, public utility or the development of some natural resource, or be otherwise specifically qualified, in the opinion of the Council; for the performance of the duties hereinafter provided."

On request of the President, the 76th Congress

appropriated \$10 billion and authorized an additional \$6 billion in contract authorizations to increase the strength of our Army to 1,200,000 men and to provide critical equipment for an additional 800,000 men, and a two-ocean Navy.

The Commission's task, in brief, is to translate this national defense program from appropriations and blueprints into action. It is based on three fundamental questions: What do we need? Where is it? How do we get it? The Commission draws no specifications, signs no contracts. It advises, aids in negotiations, facilitates procurement, by means of the following organization:

**Industrial Materials Division.** The Industrial Materials Division, under Edward R. Stettinius, Jr., former Chairman of United States Steel Corporation, is responsible for insuring a continual supply of raw materials. The Division is building stock piles of strategic and critical materials such as aluminum, tungsten, antimony, etc. It sees that adequate sources of heat, light, and power are available to meet the enormously increased productive capacity of American industry. The procedure of the Division is first to secure from the Army and Navy a statement of requirements. The next step is to check the available supply. Where scarcity exists, the Division undertakes to find means of building the supply, whether by enlarging American production, arranging for increased international purchase or developing substitutes. The work of the Division is broken into three main sub-divisions: Mining and mineral products, agriculture and forest products, and chemical and allied products. The responsibility of the Division carries to the point where materials, such as sheet steel, armor plate, and hides, are cut up for production.

**Production Division.** The job of arranging for production of essential defense items—airplanes, tanks, machine guns, munitions, uniforms—is carried on by the Production Division headed by William S. Knudsen, former President of General Motors Corporation. This production job involves obtaining fullest use of all available manufacturing facilities. Additional facilities are provided where expansion is needed. Plants engaged in manufacture of peacetime items are adapted. Whole new factories are built, some, such as those making munitions, in non-strategic inland areas away from usual industrial areas. Contracts cleared by the Production Division are then awarded by the Army and Navy. Clearance is based on considerations of speed, quality, price, and a recognition of labor standards and of the needs of the civilian consumer.

**Transportation Division.** Watching the Nation's vast network of transportation lines to see that no vital supplies of raw materials are cut off from the factories and that finished products move smoothly to cantonments is the task of the Transportation Division, under Ralph Budd, President of the Chicago, Burlington and Quincy Railroad. The Transportation Division is also charged with responsibility for acquiring special rolling stock for transporting men and military materials. Waterways, pipe lines, airlines, truck lines, and warehousing facilities come under Mr. Budd's jurisdiction and it is up to his Division to see that they are ready to meet any emergency.

**Labor Division.** Making certain that the factories, fields, and mines of the Nation have a sufficient supply of manpower, and that this manpower is trained for the task and not exploited, is the

responsibility of the Labor Division, whose Commissioner is Sidney Hillman, President of the Amalgamated Clothing Workers Union. Thousands of men have enrolled in training courses in vocational schools and in on-the-job apprentice training in plants. Further, the Division has organized a Labor Advisory Board with representatives from the American Federation of Labor, the Congress of Industrial Organizations and the Railroad Brotherhoods. The Division works to avert work stoppages on defense projects.

**Agriculture Division.** The Agriculture Division, under Chester Davis, a member of the Board of Governors of the Federal Reserve System, is vitally interested in maintaining parity between agricultural and industrial prices. One of its main functions is to prevent shortages of farm produce and to find means of utilizing surpluses. It is also concerned with the problem of location of new plants manufacturing defense items, aiming at use of unemployed rural labor where possible.

**Division of Price Stabilization.** To handle the complex problem of price stabilization, this Division, headed by Leon Henderson, member of the Securities and Exchange Commission, watches the effect of the defense program on the Nation's price structure. If prices of materials begin to rise unduly, voluntary agreements with producers are sought. If this fails, recommendations for appropriate governmental actions are made.

**Division of Consumer Protection.** Headed by Miss Harriet Elliott, Dean of Women, Woman's College of the University of North Carolina, the Consumer Division studies all aspects of the defense program affecting consumers. This Division makes recommendations which will balance military and civilian requirements and which will maintain and promote economic well being of the civilian population. The Division protects living standards by co-operating with Federal agencies, civic organizations, industrial and trade associations, and other groups. It promotes activities designed to encourage economic stability through steady flow of goods. In addition to the seven members of the Commission specified in the original statute, the following divisions of the Commission have been created:

**Co-ordinator of Purchasing.** The Co-ordinator of National Defense Purchases was appointed by Executive Order on June 27, 1940, to maintain close contact with defense procurement agencies and the Commission. Donald M. Nelson, as Co-ordinator, studies and makes recommendations on a wide variety of subjects dealing with procurement. Included are methods of financing, profit control, contract forms, specifications, and geographic distribution of purchasing. A Priorities section has been set up to deal with this specific problem. A Small Business Activities office, working through the Federal Reserve System, assists manufacturers and others in dealing with the Government by giving them a central distribution point for information.

**Bureau of Research and Statistics.** The Bureau of Research and Statistics, under Stacy May of the Rockefeller Foundation, serves the Commission by supplying information and conducting research studies upon request. Where possible, requests for information are directed to existing agencies in and out of the Government. The Bureau undertakes special studies only when no other agency can readily supply the desired information.

**Co-ordinator of Defense Housing.** The De-

fense Housing Co-ordinator is Charles F. Palmer, President of the National Association of Housing Officials. Under direction of the Commission he is charged with planning the defense housing program and co-ordinating it with private industry and the appropriate Federal agencies. The Housing Co-ordinator also takes necessary action to avoid housing shortages.

**Division of State and Local Co-operation.** Under Frank Bane, Executive Director of the Council of State Governments, this Division serves as a channel of communication between the Commission and the State Defense Councils, and with local Councils within each State; keeps the State and local Councils informed of the progress of the defense program, particularly with respect to the specific activities in which State and local co-operation are needed; receives from the State and local Councils reports on co-ordination problems resulting from defense activities; and advises the Commission concerning the most effective use of facilities of States and localities in the defense program.

**Other Offices.** In addition to the Advisory Commission, the President, at the recommendation of the Council of National Defense, has created three other offices.

Since 1935 licensing of arms, ammunitions, and implements of war has been required prior to export. This summer certain other materials, chemical products, machine tools, etc., have been placed under licensing requirements. The President has the power to prohibit all exports or requisition materials prepared for export needed for national defense. The administration of such powers are handled by the *Administrator of Export Control*, Lieut. Col. Russell L. Maxwell. His office co-operates with the State Department which handles the licensing of items already on the list.

Nelson Rockefeller was appointed *Co-ordinator of Commercial and Cultural Relations Between the American Republics* to take charge of developing closer relationship between the United States and the nations of Latin America, through the medium of press, radio, motion pictures, and by strengthening the commercial bonds of all of the Pan-American republics. It aims to remove existing sources of cultural friction which may have existed by promoting greater understanding of the cultural backgrounds of Latin America and the United States, each for the other.

The Federal Security Administrator, Paul V. McNutt, has been appointed *Co-ordinator of Health, Welfare, Nutrition, Recreation, and Related Activities* to carry out these responsibilities in co-operation with the National Defense Advisory Commission. The Co-ordinator formulates and executes plans, policies, and programs to provide adequate services of this character during the defense emergency. He co-ordinates the facilities of existing Federal agencies in these fields and maintains a liaison with other agencies, public and private. The Health and Medical Committee, established in September, exercises its functions under the direction of the Co-ordinator.

**Activities of the Commission.** The following is an outline of the activities undertaken by the National Defense Advisory Commission in its first six months.

To meet defense needs the Commission has cleared contracts totalling more than \$10 billion. The Army and Navy have awarded approximately \$9 billion of those contracts to industry, represent-

ing over ¾ of the program. Major contract categories include: \$3.3 billion for ships; \$1.5 billion for construction of factory expansion and for housing; \$1.5 billion for planes and parts; \$600 million for ammunition; \$500 million for guns; \$400 million for trucks and tanks.

These contracts, plus such British and other foreign material orders as have been placed at the present time, call for: 50,000 airplanes; 130,000 engines; 17,000 heavy guns; 25,000 light guns; 13,000 trench mortars; 33 million shells loaded; 9200 tanks; 300,000 machine guns and ammunition; 400,000 automatic rifles and ammunition; 1,300,000 regular rifles and ammunition; 380 navy ships; 200 mercantile ships; 210 camps and cantonments; 40 government factories; clothing and equipment for 1,200,000; the first mass production tank factory in the world; 5 smokeless powder and high explosive plants; 6 shell, bag, and ammunition loading plants; 5 new machine-gun plants; 50,000 new trucks.

Deliveries on these contracts show: Approximately 2400 airplane engines monthly; approximately 700 airplanes monthly, over 100 light tanks monthly; more than 10,000 M1 semi-automatic rifles monthly; one fighting ship for the Navy every 12 days. Contracts will call for about 18,000,000 man hours of labor.

As the Nation's factories go to work on defense, a system of priorities has been set up to minimize the threat of bottlenecks with consequent price rises in materials for defense and civilian needs. A Priorities Board and an Administrator of Priorities have been appointed to handle this question and establish policies. The Board has already approved a system of voluntary preference ratings on national defense contracts. A Commercial Aircraft Priority Committee is co-ordinating production and maintenance of commercial air transport equipment with defense requirements. A Machine Tool Priority Committee is co-ordinating national defense, commercial, and export demands on machine tool industries.

Closely integrated with the priority plan was development of new purchasing policies to prevent defense orders from dislocating our economic structure and causing spiralling prices such as occurred during the last War. New f.o.b. and split-bid buying policies distribute defense orders geographically and to smaller units. Under the f.o.b. buying plan, the government will take delivery on its orders at the factory door. Split-bids enable small manufacturers to bid on as much of a contract as they can fulfill. In a new type of contract the Government shares the risk of emergency plant expansion for defense orders, thus bringing private capital into the defense program. The Commission has also developed a policy of negotiated contracts to speed defense work and make fullest possible use of the Nation's resources.

A Small Business Activities Office has been set up to make use of the facilities of smaller manufacturers and sub-contractors in the defense program, spreading orders even further. This Office maintains close contacts with Army and Navy procurement offices. Through district offices of the Federal Reserve System, information is transmitted to small business throughout the Nation on defense needs. Local Federal Reserve officers are ready to work with manufacturers, give information on government requirements, and arrange financing through local banks, the Federal Reserve System, or the RFC. Manufacturers desiring fur-

ther information should call on their local Federal Reserve officials.

An intensive drive to revitalize the Nation's "ghost towns" is going ahead, along with the development of the Small Business Activities Office. This division will utilize idle labor and plant capacities of shut-down areas in meeting defense needs.

In order to have on hand detailed surveys of the requirements of the defense program in terms of raw materials and productive facilities, the Bureau of Research and Statistics works in close collaboration with the Army and Navy. Thus, when the Commission receives estimates of Army and Navy requirements for a certain product, it can break these down into raw materials such as iron, steel, tungsten, leather, wool, etc. These figures are checked against the available productive facilities. Arrangements are made to augment supplies when and where necessary.

Through surveys of available supplies of raw materials and of requirements of the defense program, the Commission has prevented threatened price rises in such key industries as wood pulp and lumber, steel, copper, and zinc. Representatives of these industries agreed that speculative rises were unjustifiable. A contract has been signed for the delivery of Bolivian tin and negotiations for the construction of domestic tin smelters are in the final stages. Reserve stocks of tin, already in the country or en route to this country, are adequate to meet requirements for the next nine to twelve months. Stock piles of antimony, rubber, manganese, tungsten, chrome ore, etc. are growing. Production of synthetic substitutes for vital materials which we do not produce in this country, such as rubber, has been encouraged. Satisfactory substitutes are now available for two of the strategic materials—coconut shell-char and silk. Domestic output of strategic materials, such as manganese and mercury is being encouraged, and scientists are at work on new processes for the fuller utilization of domestic resources. The Brazilian Government has agreed to increase its exports of manganese. Supplementary supplies of chrome ore will come from Cuba. Congress has authorized a \$25 million increase to TVA to insure adequate supplies of electricity for aluminum production. Large scale expansion in the production of aluminum will provide a sufficient quantity to meet the military requirements of the defense program as well as present civilian needs.

In the field of agricultural and forest materials, plans have been laid for ample supplies of cotton linters for munitions purposes. Arrangements are under way for stock piles and storage of necessary wool for all emergency needs. Surveys have been made of lumber requirements, and plans arranged for utilizing the New England hurricane lumber in defense construction. Lumber for Army cantonments is being received, and construction is up to schedule. A survey has shown domestic supplies of pulp and paper products sufficient for domestic needs and export. Adequate supplies of leather are available. In the field of chemical and allied products, expansion in the output of ammonia and ammonium nitrates for powder production has been arranged. A program for underground storage of high-performance aviation gasoline is under way. Steps have been taken toward protection of storage facilities against attack and sabotage. Arrangements have been made to develop adequate new sources of toluene from pe-

troleum to augment our present supplies of this basic ingredient of TNT, and a new plant is already under way. The Commission's surveys of agricultural production have shown that sufficient supplies are on hand and surpluses exist in many commodities. This has been a factor in the Commission's decision to develop a program of decentralizing industry to make excess agricultural manpower available for defense production.

Surveys in the field of transportation show an adequacy of transportation facilities at present. Some 80,000 miles of roads are being improved to facilitate rapid movement of troops and materials. A co-ordinated warehousing program is being undertaken by the Commission as an adjunct to making full use of transportation facilities. A survey of all warehouses available is being made.

Providing manpower for the Nation's factories, mines, and transportation systems is another function of the Commission. One million men and women have gone back to work in the past two months. Several million more will be needed by next November. To provide manpower for industries, the Commission has set up a three-phase labor supply program. Five and a half million men and women registered through the U.S. Employment Service have been classified as to availability for defense jobs. These registers are available to manufacturers throughout the country.

A program has been developed for training men in industry and for advancing present employees to positions of greater responsibility with the expansion of the defense program. In the vocational training program, over 100,000 enrollees are taking refresher courses and learning new skills. A training program designed to strengthen and expand managerial organizations through increasing responsibility in junior executive and supervisory positions is under way. A detailed program of training skilled craftsmen for America's defense industries through apprenticeship has been formulated. The A.F.L. and the C.I.O. have informed the Commission that they will be responsible for seeing that Negro workers are not discriminated against in national defense employment.

Adequate housing is vital to the defense program so that not a single rivet in a single ship is delayed, because workers cannot find decent housing at reasonable rentals. The Commission has launched a co-ordinated housing program. The first two projects of housing units are completed. Construction is under way on housing projects in 75 additional vital defense centers. Private industry is being encouraged to construct the major portion of the \$700 million housing program. Under the co-ordinated program various Federal agencies will aid private enterprise in this task. The remaining portion designed for temporary needs during the period of emergency, or for families whose income does not permit private enterprise to make a reasonable profit, will be constructed by various Federal agencies.

The Commission has taken action to protect the consumer. For example, evidence was found of speculation in No. 10 size canned foods. Military supplies are usually purchased in a No. 10 size can. Should this condition continue, not only the Army, but institutional buyers of food in large size cans, such as hospitals, schools, restaurants, etc. faced unjustifiable increases in the cost of canned goods. The Defense Commission recommended the Quartermaster General authorize the purchase of canned foods in smaller size cans as

an alternate, tending to bring about more normal relationships between the prices of different sizes.

A program to strengthen the Nation's human defenses by making food market information available to household buyers through market news broadcasts is under way. A price information program, designed to assist consumers in meeting some of their food purchasing problems and help them contribute to the defense program by buying in ways which will tend to stabilize prices, has been initiated. Methods of co-operation between wholesale distributors of consumer goods and the Commission have been discussed at a conference of wholesaling trade representatives. Merchant and distributor leaders of 100 wholesaling groups took part. For Office of Production Management, see DEFENSIVE PREPARATIONS. **NATIONAL LABOR RELATIONS BOARD (NLRB).** Congress enacted the National Labor Relations Act in 1935 in an effort to lessen industrial strife by removing that portion of it which was caused by certain unfair labor practices. To the National Labor Relations Board was given the task of enforcing the prohibition of unfair labor practices by employers and the conduct of secret ballot elections to determine the accredited representatives of their employees. The fifth year of the Board's operations shows that it has been active and vigilant in carrying out the mandate of Congress.

In the last fiscal year the Board had on its docket more than 10,000 cases involving over two and a half million workers. The Board disposed of more than 70 per cent of these cases, involving one and a half million employees, as compared with a total of 62 per cent of such cases disposed of during the preceding year.

The effect of this case work upon the status of industrial peace is most clearly seen by comparing the strike activity in the last fiscal year with that of the fiscal period 1936-37, which is one of comparable business activity. The total number of strikes declined 49 per cent between the two periods; the number of workers involved declined 63 per cent, and man-days of idleness—the most accurate index of unemployment due to strikes—dropped 66 per cent. The number of strikes for recognition and against discrimination—the very causes of industrial strife that Congress had in mind when it enacted the NLRA—declined 62 per cent.

In addition to the sharp decrease in industrial strife the positive effects of the Board's work were discernible in the 880 agreements to bargain arising from the Board cases, and the 600 written trade contracts between labor organizations and employers as a result of such cases.

Evidently working upon the principle that cases disposed of without formal hearings and formal orders are most conducive to future amicable employer-employee relationships, the Board, as in previous years, stressed the informal handling and disposition of cases. Eighty-three per cent of the cases were closed without the necessity of formal action. Forty per cent of these closed cases were disposed of by settlement. Slightly less than half of the cases alleging unfair labor practices closed during the year were removed from the active docket by settlements voluntarily accepted by the parties and by substantial compliance with the Act. Of the cases involving questions concerning representation, nearly 40 per cent of those disposed of were closed by informal determination. Thus, a great number of secret ballot elections were held by consent of all parties without the necessity of formal hearings. Determination of representation questions thus expedited resulted in early collective bargaining.

Entrusted with the protection of the public policy which guarantees to workers the right to self-organization and, upon a showing of a majority representation, the right to bargain collectively with the employer, the Board was given the power to set forth remedies in situations which ran counter to that public policy. During the past fiscal year the record of the remedies applied by the Board disclosed that approximately 31,000 workers were reinstated after discrimination for union membership or after strikes in protest against violations of the Act. Approximately 4800 received back pay awards amounting to \$650,000 for the losses they suffered because of discrimination against them. Other forms of remedy included the posting of 1000 notices by employers agreeing to cease interfering with labor organizations, the disestablishment of 220 company-dominated unions, the agreement to bargain collectively in 880 cases, and the signing of written agreements in 600 instances.

The Board conducted a total of 1192 elections during the year, more than half of these with the consent of all the parties involved. The number of elections represented an increase of 446 over the number conducted during the preceding fiscal year; the number of workers eligible to vote more than doubled over the same period. A keen interest and belief in the election machinery continues, as in preceding years, to be shown by the workers eligible to cast their ballots in these elections. More than 90 per cent of the 590,000 workers eligible to vote cast their ballots; in the preceding year 88 per cent of the eligibles voted.

Stressing as it has informal procedure and disposition of cases, the Board is called upon to issue final orders in only a very small percentage of cases. This is especially true in cases involving questions of unfair labor practices. Thus, during the last fiscal year, the Board had on its docket 6836 unfair labor practice cases. In the same period the Board issued 530 decisions and orders, of which 132 were issued by the Board with the express consent of the employer. The Board's decisions continued to show an increase in the number dismissing the unfair labor practice allegations. Also, the year was marked by a continued and marked increase in compliance with the Board's orders and decisions.

Thus, a delineation of the Board's operations shows a pyramid of cases tapering off from a base of charges and allegations with fewer and fewer

instances in which the Board is called upon to initiate formal action and issue final decisions and orders. At the apex of this record of the Board's work stands the small number of cases in which recourse to the Courts was necessary to resolve contested issues. Sixty-nine decisions were issued in such cases during the year by the Circuit Courts of Appeals and the Supreme Court of the United States. Of these 69 court decisions involving the enforcement or review of Board orders, the Board was sustained in whole or in part in 58 cases, or 84 per cent of the total cases decided, which compares with its record of 74 per cent during the preceding year. No Board order was reversed by the Supreme Court.

In the past fiscal year the Supreme Court accepted nine cases, the Board and the employer seeking review in four cases each, and a union in the remaining case. Two of these cases remained on the Court's docket at the conclusion of the term. The Board's position was fully upheld in each of the seven cases, although in two instances the Board's order was modified slightly.

As in the preceding years the issues ruled upon by the courts were of great importance to an understanding of the Act and afforded guide posts for the future orderly administration of it. In *N.L.R.B. v. Newport News Shipbuilding & Drydock Company* the Supreme Court held that the Board could properly find that only complete disestablishment of a company-dominated organization could eliminate the effects of years of such domination and restore the employees' freedom of choice. It was immaterial, the Court stated, that a majority of the employees had endorsed the organization and that it had worked to the apparent satisfaction of all concerned.

In two cases the Supreme Court sustained the Board's right to control its own election procedure. (*N.L.R.B. v. Falk Corp.*, *N.L.R.B. v. Waterman Steamship Corp.*) In the *Waterman* case the Board's view prevailed that during a union election campaign a ship owner may grant ship passes to all competitors or to none, but that he may not discriminate between them in this matter.

In the *Waterman* case and in *N.L.R.B. v. Bradford Dyeing Association* the Supreme Court ruled upon questions of considerable importance to Federal administrative bodies. Both cases raised issues as to the sufficiency of evidence supporting fact findings of the Board. In the first decision the Court held that a Circuit Court had exceeded its powers and stressed the strict necessity of judicial adherence to the Congressional demarcation of power between administrative agencies and the reviewing courts and admonished the lower court for encroaching upon the exclusive jurisdiction of the Board in its fact finding powers. In addition to a similar treatment of the difference between the powers of a judicial and administrative body in the *Bradford* case, the Supreme Court there ruled that a shift in majority status of a union due to unfair labor practices of the employer did not affect the validity of the Board's order to bargain based upon the original majority status of the union.

In *National Licorice Co. v. N.L.R.B.* and *American Manufacturing Co. v. N.L.R.B.* Board orders setting aside illegal contracts of employment exacted from employees in violation of rights guaranteed to them by the Act were sustained by the Court with slight modification of the notice ordered to be posted.

In the several Circuit Courts of Appeals 63 Board decisions were ruled upon during the fiscal year, an increase of 65 per cent over the 38 decisions rendered in the preceding year. Of these, Board orders were enforced in full in 22 cases and were enforced as modified in 30. In 11 of the cases the Board's orders were set aside. Of these, in two cases new hearings were ordered, in another the decision was subsequently reversed by the Supreme Court, and in the fourth the Court itself vacated its decision.

A multitude of issues were involved in the Board orders reviewed in the Circuit Courts. Some of these were of exceeding importance in giving body to and clarifying the provisions of the Act. For instance, a Board order based upon a discriminatory refusal to hire was upheld in the first Circuit in *N.L.R.B. v. Waumbeec Mills, Inc.* The Circuit Courts, following the view set forth in the Supreme Court *Newport News* decision, have interpreted a Board order of disestablishment to mean complete dissolution of the illegal organization. The requirement that the parties should enter into a signed agreement if bargaining resulted in a meeting of minds on the terms has been enforced in numerous decisions, one Circuit having set aside such an order. This issue was finally resolved by the Supreme Court on Jan. 6, 1941, in *H. J. Heinz v. N.L.R.B.*

In that case the Supreme Court stated:

It is true that the National Labor Relations Act, while requiring the employer to bargain collectively, does not compel him to enter into an agreement. But it does not follow, as petitioner (company) argues, that, having reached an agreement, he can refuse to sign it, because he has never agreed to sign one. He may never have agreed to bargain but the statute requires him to do so. To that extent his freedom is restricted in order to secure the legislative objective of collective bargaining as the means of curtailing labor disputes affecting interstate commerce. The freedom of the employer to refuse to make an agreement relates to its terms in matters of substance and not, once it is reached, to its expression in a signed contract, the absence of which, as experience has shown, tends to frustrate the end sought by the requirement for collective bargaining. A business man who entered into negotiations with another for an agreement having numerous provisions, with the reservation that he would not reduce it to writing or sign it, could hardly be thought to have bargained in good faith. This is even more so in the case of an employer who by his refusal to honor, with his signature, the agreement which he has made with a labor organization, discredits the organization, impairs the bargaining process and tends to frustrate the aim of the statute to secure industrial peace through collective bargaining.

Petitioner's (company's) refusal to sign was a refusal to bargain collectively and an unfair labor practice.

## NATIONAL MEDIATION BOARD. See RAILWAYS.

**NATIONAL PARK SERVICE.** A bureau of the U.S. Department of the Interior, established Aug. 25, 1916. Inclusion of *Kings Canyon National Park, California*, and of *Isle Royale National Park, Michigan*, in the Federal park system administered by the National Park Service were major conservation developments of the year 1940. Within Kings Canyon National Park are numerous High Sierra peaks 12,000 to 14,000 feet high, also outstanding groves of giant Sequoias. This park includes the 4-square mile area established in 1890 as the General Grant National Park. Isle Royale National Park, located in upper Lake Superior, is a roadless wilderness, and contains, in addition to 44-mile-long Isle Royale, a number of near-by islets.

The five following units also were added to the Federal park system in 1940: *Whitman National Monument, Washington*, site of an Indian mission and school established in 1836, the first institution of its kind in the Pacific Northwest; *Appomattox Court House National Historical Monument, Virginia*, scene of the surrender Apr. 9, 1865, of Confederate forces under Gen. Robert E. Lee to the Federal Army under Gen. Ulysses S. Grant; *Manassas National Battlefield Park, Virginia*, site of the Battles of First and Second Manassas, fought July 21, 1861, and Aug. 29-30, 1862, respectively; *Custer Battlefield National Cemetery, Montana*, site of the Battle of the Little Big Horn River of 1876 in which Lieut.-Col. George A. Custer and his command of 226 men were destroyed by Sioux Indians; and *Vanderbilt Mansion National Historic Site*, in Dutchess County, New York, an outstanding example of the type of estate built in the era of expansion that succeeded the War Between the States.

Major boundary adjustments of existing units of the Federal park system resulted in the addition of 187,411 acres of scenic wilderness to Olympic National Park, Washington, and the reduction in size of Grand Canyon National Monument, Arizona, from 272,145 to 201,291 acres, with the eliminated lands being returned to the Public Domain for administration by the Grazing Service of the U.S. Department of the Interior.

From a travel standpoint, the year 1940 was a record one for the National Park Service, approximately sixteen and three-quarter million persons visiting the national parks, national monuments, and allied recreational areas comprising the vast and far-flung Federal park system under its jurisdiction. Two major factors undoubtedly responsible for this heavy travel were the war conditions prevailing overseas and the intensive campaign carried on by the National Park Service to acquaint Americans with the scenic and recreational resources of their own country.

Work was continued by the National Park Service in 1940 on the construction of three national parkways—the Blue Ridge, connecting Shenandoah National Park, Virginia, and Great Smoky Mountains National Park, North Carolina-Tennessee; the Natchez Trace, which will link Natchez, Miss., and Nashville, Tenn.; and the George Washington Memorial Parkway, a projected route between Mount Vernon, Va., and the Great Falls of the Potomac.

Other major projects of the Service were concerned with acquisition of land and the wrecking of undesirable structures in connection with the Jefferson National Expansion Memorial Project, St. Louis, Mo.; supervision of construction of the Thomas Jefferson Memorial in the Nation's Capital; continuation of a Nation-wide Park, Parkway, and Recreational-Area Study being carried on in co-operation with the various States under authority of the Act of Congress of June 23, 1936; and completion of a study of fees charged in parks throughout the Nation and publication of a report on that subject.

Again, during 1940, considerable development work throughout the Federal park system was made possible through funds and manpower furnished by the Civilian Conservation Corps.

At the close of 1940, units in the Federal park system totaled 162, and were classified as follows: national parks, 26 (see table in next column); national historical parks, 4; national monuments,

LOCATION, SIZE, AND TRAVEL RECORDS OF NATIONAL PARKS, 1940

Name of Park	Area in Square Miles	Visitors, Travel Year Ended Sept. 30, 1940

## NATIONAL RAILROAD ADJUSTMENT BOARD. See RAILWAYS.

**NATIONAL RESOURCES PLANNING BOARD.** Under President Roosevelt's Reorganization Plan, effective July 1, 1939, the functions of the National Resources Committee were consolidated with the functions of the Federal Employment Stabilization Office under the name of the National Resources Planning Board in the Executive Office of the President. The functions do not differ radically from those entrusted to the Board's immediate predecessor, the National Resources Committee. The Board is concentrating its current activities on problems of the Post-Defense Period.

The Board has also made large contributions in the field of research toward filling in planning gaps. Its research on "trends of business and employment" includes studies on national income, consumption habits, the structure of our economy, patterns of resource use, housing, etc. The Board through its Advisory Committee on Science has made long-range surveys of population, technological trends, and the Nation's research resources, both public and private. An extensive study of urban problems has been completed by its Committee on Urbanism. Nationwide studies of land and water problems have been made. At the request of the President, and with a view to establishing national policies for the conservation and use of resources, basic surveys have been made of our energy resources, of the relief problem, and of transportation. It has also prepared for the President and

for Congress a program for the development of the national resources and a six-year program of public works as required by the Federal Employment Stabilization Act.

For the Defense Program, the Board has undertaken special studies of Industrial Location, and is co-operating with the Civil Service Commission on the Roster of Scientific and Specialized Personnel. Assistance on planning problems is also being provided to State and Local communities where critical situations have developed due to defense activities.

Through its technical committees the National Resources Planning Board acts as a clearing-house and a correlator for overlapping planning activities. The Board's 10 field offices assist the various regional, State, and local planning endeavors. All of these activities of the Board head up in its advisory function. It reports its findings to the President and the Congress and makes recommendations as to long-range programs for the conservation and full development of our natural and social heritage. It makes suggestions to the President and to administrative establishments as to policy proposals and the planning of national policy. It assists the President, as requested, in developing public policies that are co-ordinated both among the various agencies administering them and with other broad programs of the Administration. See **PLANNING**.

CHARLES W. ELIOT 2ND.

**NATIONAL YOUTH ADMINISTRATION (NYA).** The National Youth Administration was established through Executive Order on June 26, 1935, within the Works Progress Administration; but on July 1, 1939, the First Reorganization Plan placed it under the Federal Security Agency. Since its inception the National Youth Administration has been allocated approximately \$456,000,000 and has employed, on the average, over 500,000 young men and women a year. During the current year, operating on a budget of \$134,659,000, NYA will employ more than a million different young people, more than 500,000 out-of-school youth, and approximately 500,000 students.

The out-of-school work program provides part-time jobs for out-of-school youth who are in need of employment and unable to find it in private industry. A high percentage of the young people employed by the NYA have either had no work experience or merely the experience obtained from jobs calling for little or no skill. NYA work projects are therefore planned by local officials and co-sponsors with two major aims in mind: first, the filling of community needs; and, second, the provision to youth of an opportunity to acquire good work habits and certain skills that are basic to a general occupational field. During the current year increasing emphasis is being placed on mechanical production projects because of the expanded employment opportunities in this field. In view of its importance in providing young people with practical experience that will fit them for jobs in private industry, NYA has been designated as a national defense agency.

During the week ending Dec. 21, 1940, a total of 352,186 youths were employed on the out-of-school work program. Of these 117,139 were employed on non-resident production projects; 97,211 were employed on construction projects, and 105,328 were employed on professional, clerical, and service projects. In a somewhat special category were the 32,-

508 young people who were employed at the 600 NYA resident projects. The young people employed at resident projects live at the job site and provide their own subsistence.

Through the co-operation of the local school system, young people employed on the NYA out-of-school work program have the opportunity of attending related training classes on non-paid time. They study subjects which have a direct bearing on the work they are doing, such as blueprint reading and shop mathematics. In this way they are able to acquire a background in which theory and practical experience are co-ordinated.

The National Youth Administration's student work program provides jobs for financially handicapped students from 16 to 24 years of age. The students are selected for NYA work by the school officials on the basis of need and scholarship. They are assigned to such jobs as the repair of classroom furniture, library and laboratory assistants, research work, and improvement of campuses or school grounds. For this work they receive a regular monthly wage based on the prevailing hourly rate for the type of job they perform. The wage for secondary school students, of whom there were 315,000 employed in November, 1940, varies between a minimum of \$3 and a maximum of \$6 a month. The wage for college students, of whom there were 121,000 employed in November, 1940, runs from \$10 up to \$20 a month, and the wage for graduate students, of whom there were 3100 during the same month, varies from \$10 to \$30 a month. All told, the student work program was employing 439,548 students in November, 1940.

The National Youth Administration pioneered the establishment of junior placement offices which were operated in co-operation with State Employment Services for the purpose of finding jobs in private industry for young people. This function is being carried on by the various State Employment Services in co-operation with the Bureau of Employment Security of the Social Security Board. To assist young people in finding suitable jobs in private industry, the National Youth Administration has published over 100 occupational and industrial studies which outline the job possibilities and training requirements in various lines of work.

**NAVAL PROGRESS.** In a year marked by no great naval battles such as Jutland, Trafalgar, or Lepanto, nor even by clashes of opposing forces as strong as those at Coronel or the Falklands, a great fleet of war-ships was sunk. Scores of other fighting craft were so badly damaged that millions of dollars and hundreds of thousands of man-hours were required to repair them. Included in this vast armada of lost and damaged ships were battleships and carriers, a dozen or more cruisers, destroyers, and submarines by the score, and small craft in untold numbers.

Great Britain, having many more ships and em-

ploying them freely on dangerous missions, was the heaviest single loser. Italy, Germany, and France, however, lost larger proportions of their navies, and Norway had its navy completely wiped out.

Since the beginning of the war Germany had lost a pocket battleship to English cruisers off Montevideo, and had the 26,000-ton battleships *Scharnhorst* and *Gneisenau* damaged by gun-fire off Norway. Italy beached one new battleship and suffered serious damage to two or three others from torpedoes launched from aircraft at the ships at anchor in Taranto. France had four battleships put out of action by British gun-fire and bombs at Oran and Dakar. Great Britain lost the old battleship *Royal Oak* and the old aircraft carrier *Courageous* from submarine attacks in 1939; the demilitarized *Iron Duke* was accounted for by bombing, and the carrier *Glorious* was sunk off Narvik by gun-fire from two German battleships during 1940. Other heavy ships were reported damaged.

The cruiser casualties to the various powers came from collision, grounding, bombs, torpedoes, and gun-fire. Auxiliary cruisers particularly suffered from under-water attacks and gun-fire from heavier opponents.

All belligerents suffered heavy destroyer losses, the British about thirty; the Germans more than half as many, of which perhaps at least ten were sunk by gun-fire at Narvik; the French lost almost as many as the Germans, and the Italians not very many less. The small belligerents having few surface craft other than destroyers suffered their heaviest losses in that type.

Submarines, which were the most effective foe of both naval and merchant shipping, paid heavily for their destructive ventures. Authoritative information of German losses, of this their most important naval weapon, were lacking; but well informed sources placed their losses at about fifty, probably more rather than less. The British also suffered heavily in this type. Italian submarine casualties were also high; but the French lost comparatively few, perhaps because they were less actively employed than were those of the other principal belligerents. By the very nature of their operations, the character of the attacks, and the secrecy surrounding anti-submarine devices and tactics little information was available to the general public as to the methods of destroying submarines.

The absence of fleet actions had stimulated the war of attrition, with results as great. Naval experts everywhere clamored for complete information of each engagement in order to develop counter measures through modification of tactics or changes in material. As might have been expected, one of the chief interests of both experts and laymen was concerned with the relative merits of ships and aircraft. And, as the more thoughtful and perhaps more conservative naval officers, air officers, and lay students had long realized, there was no clear-cut advantage. Aircraft sank ships, anti-aircraft guns from ships brought down planes; but ships continued to ply the seas even in narrow waters, aircraft continued to fly over the water and to attack the ships at favorable opportunity. Aircraft co-operated with surface ships by spying out enemy vessels to be chased or fled from. Ships bombarded airfields within range of their guns to weaken the enemy air opposition and thus to facilitate friendly aircraft activities. There were strong indications that German aircraft frequently ap-

prised their own submarines of the movement of enemy convoys and thus enabled them to gain favorable position for torpedo attack.

In the earlier part of the year dive bombing employed by the Germans was particularly efficacious against naval vessels, but this advantage rapidly diminished as multi-barreled pompom guns were supplied to ships, and improved fire-control facilities were developed. The duels between bombers and anti-aircraft guns at sea as well as on shore forced the horizontal bombing planes to seek higher altitudes to deliver their attacks, with a consequent reduction in accuracy.

It soon developed that bombers in one respect had a certain capacity for inflicting damage that had not hitherto been fully appreciated. Fragmentation from near misses of bombs with instantaneous fuses often inflicted casualties among exposed personnel and damaged imperfectly protected material. Incidentally similar results were experienced from shells exploding in upper works of ships. As a consequence, alterations to improve splinter protection were feverishly inaugurated. Aircraft, however, in order to take full advantage of such fragmentation damage were obliged to determine before loading their bombs whether they would seek to reduce temporarily the fighting efficiency of the ship in such manner, or whether they would strive to damage the target more seriously by using delayed action fuses that, in case of a hit, would cause explosion of the bomb to be delayed until it had penetrated to more vital parts of the ship. In the latter case, there was the disadvantage that if the target proved to be lightly protected the bomb might penetrate the ship doing but slight damage and explode harmlessly in the water outside.

Naval vessels found that operations at high speed and radical maneuvers tended to confuse the bombers, and to interfere seriously with the accuracy of their aim. The bombers, on the other hand, found that high altitude and judicious use of cloud protection rendered them virtually immune to anti-aircraft fire, as when operating against land objectives. Unlike the operations over land at night, however, the mobile targets on the sea were difficult if not impossible to locate, and their relatively small size gave night bombing against ships at sea little hope of success.

Operations of French and English light naval forces in the evacuation of Dunkirk demonstrated that even with a strong air superiority air attacks might not necessarily be completely successful in stopping naval operations. Damage there inflicted by aircraft on ships, both merchant and naval, was enormous. Nonetheless, favored by weather conditions, the naval forces were able to carry out with a high degree of success a most difficult mission with but little support from their own aircraft.

It was fully demonstrated, however, that it would not only be extremely hazardous but impossible for surface vessels to operate for any considerable time within range of shore-based enemy bombers. That fact was borne out in the Allied naval operations off the coast of occupied Norway. Lack of adequate air support for naval vessels against the shore-based planes of the Germans soon forced withdrawal of the French and English ships.

A further change in the composition of naval forces and in equipment of naval vessels that became marked during the year because of air threats was the trend toward special anti-aircraft ships, and the trend toward increased anti-aircraft gun

power in ships of all classes. The U.S. Navy expected to gain the desired ends by extensive use of double purpose guns suitable for use either against planes or light surface craft. The British felt the necessity also for using the special type of ship. For the time being, the *Carlisle* class of cruisers that were rearmed for this special purpose constituted the principal ships of the new type. It was reported, however, that certain destroyers had also been rearmed, and that some ships building were being redesigned with the same end in view. The necessity for a different type of gun and fire control arrangement to oppose dive and horizontal bombings also added to the complications of those who designed or fought men of war.

Even though heavy ships repeatedly showed that they could withstand bombing attacks of considerable power the German air attacks took heavy toll of English ships that came within range of her planes. In the Mediterranean area the English naval ships were more successful in combating the Italian air menace. Naval and air authorities, neutral and belligerent, however, were agreed that support of one's own fighting planes would always constitute a much more effective answer to opposing bombers than would any amount of anti-aircraft fire, splinter protection, speed, or maneuverability. Acceptance of that principle, as well as an offensive spirit calling for great aerial striking power caused the United States to let contracts for eleven aircraft carriers during the year. European nations who were doing their fighting in and over the water in more restricted seas sought similar ends by basing aircraft at strategic points along the coast from which they might send planes to attack enemy ships or to protect their own.

In general, the results of bombing attacks on ships, of which there were many hundred, showed that between the last world war and the present one as the range, mobility, and striking power of aircraft increased, the menace had in considerable degree been met by tactician, gunner, and designer. In the U.S. Navy it was further met by the developments of naval aviation. In that service aviation, surface craft, and submarines had never been dissociated. As a consequence, development of offensive and defensive power of both planes and ships had proceeded hand in hand, so that some of the lessons learned by the belligerents as a result of serious losses in action, had been appreciated by them long before as a result of maneuver on the game board or at sea.

While the developments resulting from the injection of aircraft into naval warfare was spectacular, both because of the nature and the character of the new weapon, and though this new development brought greater changes in design and tactics, the underwater menace was a more serious one. The toll taken by submarines and mines was greater for both men-of-war and merchant ships.

The magnetic mine, briefly described in the 1939 YEAR BOOK, for a time caused heavy losses to Allied navies and shipping; but in time effective sweeping methods were devised, and scientists evolved schemes for rendering the mines inoperative as ships passed over them. It took time, however, to find suitable means to overcome the newly created hazards, and further time to manufacture and install the requisite devices to gain protection. The measures developed under pressure were not always completely successful but they did check the losses that were rapidly becoming alarming. As with all new weapons, those against whom they

were first used quickly seized upon the principle and applied it to their own use.

Other new mine devices of less importance were reported from time to time. Acoustic mines were experimented with, and several appliances were used with varying degrees of success to interfere with minesweeping or to render paravanes ineffectual.

The British, of course, suffered most from mines, because extensive use of ships that must pass in and out of mineable waters was essential to the receipt of food and raw materials and to the maintenance of blockade against the enemy. The mines around their ports were planted largely by submarines and aircraft. It was generally believed that a number of the German and Italian submarine losses were attributable to mines, either those planted by the Allies or, in some cases, to mines previously laid by the Axis powers themselves.

The number of small craft involved in mine-sweeping, the man power required, and the time, energy, and treasure expended by all the belligerents to gain protection from this danger was enormous. Even so, damage from mines continued to be an important cause for losses, and a considerable portion of the war effort was expended in salvaging or repairing ships that had been struck. American ships were forbidden by law and presidential proclamation to enter the European war zone, but one American ship on the other side of the world was sunk when it ran into a mine, evidently laid by a raider, in Australian waters.

The effectiveness of mine fields laid by Italians in the Straits of Sicily was less effective than some authorities had anticipated. Although war operations had brought merchant traffic through those waters to a virtual standstill it was reported on good authority that the English occasionally used the passage. The main bodies of water in the eastern and western Mediterranean are too deep for mining, but nearly all the North Sea and the waters adjacent to the British Isles are well suited to mining tactics.

As in the last war, the submarine was the principal weapon of attrition for the Germans and their chief means for blockading the English. Although initially the tactics employed were less ruthless than in 1917 and 1918 the methods employed soon followed closely the earlier pattern. Progress in this field as in others had been made however; torpedoes were of longer range and carried heavier explosive charges, communication facilities had improved, submarine listening devices were more proficient, and machinery was more reliable. All those advantages accrued to all powers. The Germans had tremendous improvement in operating conditions. After the fall of France there was little chance of hampering their exit from port as was the case in the first World War. They could and did base from Bordeaux to Narvik. Superiority in air power made available to submarines much information that would otherwise have been unobtainable. In addition the Germans had carefully studied all reports of Allied anti-submarine measures of the previous war and they took many corrective measures in planning and conducting their operations.

Notwithstanding the progress in submarine tactics and material, the submarine losses by all belligerents were great. This was primarily because even greater progress had been made in the methods of submarine detection and in the tactics for attacking them. Sound devices operated from surface ships could detect the presence of a submerged

submarine within limited distances, or could similarly locate it on the surface at night. Patrol aircraft gave warning of the presence of submarines on the surface; and under favorable circumstances spotted them at considerable distances below the surface. The waters of the Mediterranean especially favored the aircraft searching for submarines. Some of the aircraft carried special depth bombs for use against the submarines sighted, others led surface craft to attack.

Improvements in acoustic devices, and the use of opposing aircraft made it difficult and hazardous to get in attacks on ships so protected; but limited equipment often prevented such protection being given. The current war found the Allies with far fewer available ships for anti-submarine work than they had in 1918, and screens were often woefully weak or not available, and convoys were unduly large. Moreover, screening vessels were often needed to protect against air attacks as well as against submarine threats. The detection devices were available to only a limited number of ships, and skilled operators were necessary to manipulate them.

As against those handicaps the Allies had the background of much knowledge as to organization and measures for combatting submarines and put them into effect with little delay. While much of the desired equipment was not available, there was a considerable amount of essential material ready at hand, and personnel trained in its use. The depth charges were improved over those used in the last war, and suitable tactics for their employment had been developed. As the results of the year showed, submarines did great damage, but much less than during the high tide of 1917, and they paid heavily for damage inflicted.

In addition to aircraft, mines, and submarines, another weapon of attrition that was used was the high speed (30 to 35 knots) motor torpedo boat. All the belligerents, including the smaller powers, had these vessels in considerable numbers. They were a source of great potential danger, but up to the year's end they had done comparatively little damage. Their very existence in an area, however, made it necessary for the enemy to take strong defensive measures.

All of the foregoing methods for affecting attrition were particularly applicable to the restricted area of the principal naval operations of the current war. The gun remained the primary means of exercising control of the high seas. Superiority in gun power enabled the British Fleet to dominate both ends of the Mediterranean, although Italy occupied a central position where she held great superiority in aircraft, submarines, mines, and motor torpedo boats.

The English with their gun power controlled the Atlantic approaches to Europe. But despite the overwhelming preponderance of that gun power they could not dominate the North Sea and its shores because they had insufficient aircraft to give adequate defense against enemy bombing attacks.

In such gun actions as occurred there were no startling developments, the principal progress noted being in the increased proficiency of damage control over that of Jutland days. All types of newer ships were able to take more punishment whether it came from bomb, gun, mine, or torpedo. This increase in floatability was partly due to design and partly due to improved organization and drill in localizing damage. Ships, in general, were faster, but any increase in gun power over that of two

decades before was about offset by corresponding increase in the defensive qualities of the ships. The added defensive arrangements and the increase in anti-aircraft guns had necessitated larger crews and more complex organizations all along the line.

**Comparative Naval Strength.** The status of the various important navies in combatant types of vessels could only be approximated, and it was quite impossible to bring data completely up to date by the end of the year. Losses were sometimes concealed for considerable periods, or the merits of conflicting claims as to losses could not be analyzed. Moreover, data as to ships building by belligerents cannot be based on official figures. For purposes of comparison, however, the data as of July 1, 1940, is furnished in the table on page 495, and subject to the notes thereunder is about correct. Further information regarding naval activities in the different countries follows.

**Argentina.** This country, with the largest Navy in Latin America, continued to add small craft to its list; the latest additions being a series of nine minesweepers. The last of these, the *Fournier*, was launched in August. Their general characteristics were 550 tons, 11.5 knots, two 4-inch guns, crew of 62. Built in local yards, they were destined to replace sweepers of the M-Class acquired from Germany after the last war. Plans were underway for building larger ships at home, and work was begun on installation of facilities at Rio Santiago for producing 10,000-ton ships. Hitherto the largest ship built in the country, or even in South America, had been the 5000-ton tanker *Figueroa Alcorta*.

The personnel was increased to 1000 officers and 14,500 men. Three United States naval officers were attached to the Navy Department in an advisory capacity. The recently built 6-inch cruiser *La Argentina* engaged in an extensive cruise in the Pacific to train men and prospective officers.

**Australia.** The backbone of the navy were the two 8-inch cruisers *Australia* and *Canberra*. These and most of the other combatant ships, however, were engaged on Empire duties rather than restricting their operations to local waters. Stimulated by occasional mining in adjacent waters by raiders considerable progress was made in building locally a number of minesweepers and other small local defense craft. It was also reliably reported that some destroyer construction had been undertaken. The personnel that consisted of but little over 4000 men at the beginning of the war was considerably increased both for manning Australian ships and for augmenting the Royal Navy.

**Brazil.** The British Government terminated the prewar contracts for six destroyers, similar to the *Hero* class, which were being built in British yards and returned the sums already paid toward their construction. The vessels in question were incorporated into the British navy as they were completed. One of them, the *Javary*, had the same name as a destroyer which was similarly building at commencement of the first World War but was commissioned in the British Navy as the *Hardy*.

Meantime the Brazilians launched a destroyer at Rio de Janeiro, the *Marcidio Dias*, and laid keels for two more. The four remaining minelayers of the C-Class, also locally built, were completed. No progress was made toward building the two cruisers of the ten-year program.

**Canada.** Out of necessary wartime secrecy surrounding details of Canada's war efforts, only general information was available. A \$50,000,000 ship-construction program made rapid progress at

Total—Data are too incomplete to give totals

\* As Japan releases no data officially the information may be incomplete, particularly as to "building and appropriated for"

† Note that this data is of July 1, 1940 before certain units were immobilized by the British, and before the incidents at Oran and Dakar. The ships listed as building have probably had no further work done on them.

\* The deductions for submarine and destroyer losses of Germany and Italy may be incomplete. It is also probable that additional vessels of those classes were building but the number and tonnage is unknown.

† Data available as to Russia are known to be incomplete but figures given are considered to be reliable minimums.

\* Building and appropriated for as far as is known.

fifteen different yards. Sixty-four patrol ships and twenty-nine sweepers were underway as were ten ships of unannounced characteristics building for the British Admiralty. Other craft included lighters, aircraft tenders, rescue boats, supply and salvage boats, etc.

Chile. Naval authorities, recalling violations of the country's neutrality in past wars, put into effect stringent rules regarding the use of national wa-

ters by both merchant ships and men-of-war, irrespective of nationality. Efforts of Italy to obtain orders for the two new cruisers planned, with payment to be in copper and nitrates, was unsuccessful, and later the Minister of National Defense announced a decision to place no order for those vessels during continuance of the present war.

Unconfirmed reports stated that the government had given final approval to plans for a dry dock

capable of accommodating 45,000-ton ships. The dock was to be built at Caleta Membrillo on Valpariso Bay at a cost of \$5,000,000 and completed in four years. Presumably its construction was dependent upon a United States loan.

**Denmark.** At the time this country was invaded by the Germans the navy consisted of two armored coast defense ships, *Peder Skrum* and *Niels Iuel*, about twenty torpedo boats, some twelve submarines, and a few auxiliaries. In addition, the mine-layer *Lindormen* and one or more small submarines were nearing completion. Shortly after the invasion, all naval personnel was disarmed and announcement was made that all crews had been given furlough and that all recruiting had ceased. It was not apparent, however, whether any of the units were manned and operated by German crews.

Aside from the naval ships that came under their control, the Germans found in Denmark a flourishing naval construction industry well adapted to building craft that might be used for transporting men and supplies in an invasion of England.

**Estonia.** Prior to its absorption by Russia this small Baltic power had made some progress toward developing a coastal defense force; the most important units were a mine-laying torpedo boat and two Vickers' built submarines. At the time the country was taken over by the Soviets, three small submarines were under order in Finland and four motor torpedo boats were building at Tallinn.

**France.** At the outbreak of war the French navy had 82,000 men and 4900 officers; some 172 combatant ships were in commission and sixty odd others, principally destroyers and submarines, were building. The personnel was rapidly expanded and numerous small craft for anti-submarine, anti-mine, and other purposes were added to the navy list. Until the invasion of Norway, only routine operations were engaged in and losses received or inflicted were inconsequential. Several ships were engaged in the Norwegian operations, where one destroyer was lost and the cruiser mine layer *Emile Bertin* was damaged.

During invasion of the low countries and collapse of France, intensive coastal operations were engaged in by light forces, particularly in the evacuation of Boulogne and Dunkirk. Some eight destroyers and a submarine were lost and others damaged. In general command of the heterogeneous Allied craft that so effectively evacuated Dunkirk was the French Vice Admiral Abrial.

After the French collapse much confusion existed as to the location, loyalty, and future of the French Navy. The Armistice terms provided that the French fleet should not be used against their former Allies, but the English did not trust the Germans and feared the dire consequences if the French ships fell into German hands. Accordingly, early in July possession was taken of all those in English ports and in Alexandria. These included 3 battleships, 6 cruisers, 8 destroyers, a few submarines, including the 3000 ton *Surcouf*, and numerous small craft. On July 3 a British force appeared off Oran where many important French units were anchored and presented an ultimatum which was refused. In the ensuing action three French battleships were sunk or badly damaged, as were several other ships; some escaped to Toulon where most of the French cruisers, destroyers, and submarines were assembled.

Shortly after this incident an abortive attempt was made to capture Dakar, but the British force which had expected the forces there to join Gen-

eral de Gaulle were driven off after minor damage had been inflicted on each side. Those incidents of course brought tension between the English and the Vichy government.

At the year's end two battleships, a dozen cruisers, and large numbers of destroyers, submarines, and auxiliaries were in French Mediterranean ports, Casablanca, or Dakar. The aircraft carrier *Bearn*, two cruisers, and several auxiliaries were at Martinique. A number of ships that were building were on the ways in occupied France. Rumors were frequently circulated that the Germans were endeavoring to gain possession of the French ships but that Pétain continued a firm refusal.

**Germany.** Although Germany suffered considerable losses during the Norway operations and in connection with the campaign against Allied shipping she ended the year with a navy no smaller than that with which she commenced the war. Throughout the war the U-boats have been active, and in the latter part of the year were particularly vigorous.

In the Norwegian campaign the small German Navy supported by air was employed with great boldness against its far more powerful adversaries. Early in April, almost the entire submarine force was on station to cover the operations. About twenty-five were disposed along the coast of Scotland thence to the Orkneys, Shetlands, and the coast of Norway to give warning of British Fleet and transport movements and to attack such ships. Many others operated off entrances to the various fjords to prevent Allied interruption of German landings. To naval tacticians this mass employment of submarines was noteworthy. The results they achieved were inconsequential. A few merchant ships were torpedoed, but no successful attacks were accomplished against troop ships or combatant vessels. Submarine losses are not definitely known, but were certainly considerable and probably exceeded the number of merchant ships sunk. It was considered as a clear indication of the limitations of submarines in operating against high speed, well escorted ships.

The surface escorts that accompanied convoys to the various ports were effective, and except at Narvik the losses were comparatively light. The British successful feat of taking the 30,000-ton battleship *Warspite* up the narrow fjord in the face of submarine and destroyer opposition was noteworthy. All German naval forces present were destroyed. Meantime an encounter between the world war battle-cruiser *Renown* and the modern battleship *Scharnhorst* supported by the 10,000-ton *Hipper* had quickly resulted in some slight damage to the *Renown* and considerable damage to the *Scharnhorst*, after which the modern ships took advantage of superior speed and broke off the engagement, for the new 11-inch guns were not a match for the older 15-inch.

After occupation of Norway, the low countries, and northern France, the naval forces continued active principally against the enemy sea-borne commerce; submarines in the western approaches to the British Isles, motor torpedo boats in the channel, pocket battleships occasionally in the North Atlantic, and auxiliary cruisers raiding as far away as the South Pacific. Threats by battleships, cruisers, and destroyers based in the German Bight or on Norway, together with air support, prevented any serious English interference with the traffic between occupied Norway and the homeland. Thus developments of a quarter of a century prevented

the British Navy from exercising the same close control of the North Sea that it did in the last war, even though it had become relatively more powerful.

The Germans were prompt to develop naval bases in all occupied areas. Some were for small craft only, but others were suitable for major operations such for instance as Bordeaux which became a major submarine operating base, and Trondheim which was suitable as an advance fleet operating base. All of them combined to add tremendously to the effectiveness of naval forces that might operate in support of a major landing effort from the continent against the British Isles.

**Great Britain.** As in the Napoleonic Wars and the first world war, the strategy of the British Navy in the current war has been to conduct a long range blockade of the enemy, and, if the pressure thus applied could draw the enemy fighting ships to sea, to crush them with overwhelming power. Developments of succeeding decades had forced the blockading forces further and further off shore, but in 1940 as in Nelson's day the advantages accruing to a naval power that controlled the high seas were tremendous. Collapse of France and entry of Italy into the war as an opponent put a terrific strain upon the British Navy but it continued the blockade with a high degree of effectiveness.

In the Narvik operations the British lost heavily, particularly from bombs. By the time their naval forces reached Norwegian waters the enemy had established control of the air, and, although the British vessels were well handled and themselves inflicted considerable damage, they were unable to maintain themselves in Southern Norway without adequate fighter protection against repeated air attacks any more than they could have operated there with inadequate destroyer screens to safeguard them from submarine torpedoes.

For a time, the air opposition in the Narvik area was much less intense and the operations there were correspondingly more successful. When the fall of Dunkirk and the collapse of France occurred, that area too was abandoned. On June 8, the carrier *Glorious*, with all her planes on deck, escorted by two destroyers was surprised by two German battleships as she was evacuating Narvik. The 47-inch guns of the *Glorious* were, of course, no match for those of the heavier ships and she and her escort were at once destroyed. No satisfactory explanation has been made for the hopeless inadequacy of the escort, nor for the reason for the surprise under conditions of ten miles visibility when she might have had warning from an air patrol had one been established.

During the Norwegian operations a particularly historic event occurred when an English submarine was captured. It had struck a mine in the Kattegat which rendered it completely inoperative on the surface. Its commander surrendered to an aircraft that landed alongside. After minesweepers had cleared a path, it was towed into port. This was the first capture of an English warship since 1815 when the U.S.S. *Hornet* captured H.M.S. *Penguin*.

As has been mentioned earlier, the evacuation of Dunkirk in late May, using all manner of ships from cruisers to row boats without suitable air support in face of opposition by mine, submarine, motor torpedo boat, aircraft, and shore batteries, was not only a fine illustration of the efficiency, morale, and discipline of the naval personnel, and

a tribute to the ship builders and designers, but it forcibly demonstrated that aircraft had not gained ascendancy over surface craft as might have been concluded from the Norwegian campaign.

With France out of the war and Italy in, it became necessary for Great Britain to readjust the disposition of its naval forces to prevent serious, perhaps fatal, leaks in its blockade. The Mediterranean force was heavily reinforced. The handicap of continuously operating ships in close proximity to enemy air bases was not so marked in that area, and with their own fleet bases at Alexandria and Gibraltar moderately secure, it became possible gradually to bring increasing pressure on enemy outlying positions without relinquishing the blockade. The major naval base at Malta that had for so many years been Great Britain's key position in the Mediterranean was too close to Italian air centers to be used as a primary base. On the other hand, with the English fleet behind it neither Italian sea nor air power was able to force its capitulation and the English ships continued to use it to a minor extent.

A number of contacts between English and Italian ships occurred and the former were uniformly successful. Early in November a new type of naval engagement occurred. A strong English force including two carriers entered the instep of the Italian boot by night. Torpedo planes supported by fighters were launched from the carriers and attacked naval vessels in the strongly fortified base at Taranto. Conflicting claims were made as to results, but it was certain that one new battleship was severely damaged and sunk in shallow water and that two others were struck by torpedoes. Other indeterminate damage was done. Italian counter air attacks on the ships apparently did no serious damage.

During the latter half of the year the demands on the British Navy to maintain unaided a blockade of such vast proportions, to be ready to overcome enemy surface ships that might put to sea, to safeguard convoys from air and submarine attacks, and to dispose of raiders in distant seas, necessitated strenuous efforts to increase the available light forces.

The problem was all the more difficult because she had entered the war with too few destroyers for major efforts in modern war and the losses in that type had been heavy. In addition, the repair facilities, particularly those along the channel had suffered heavily from the enemy air offensive. President Roosevelt helped the situation when he entered into an arrangement to exchange 50 over-age American destroyers for leases of sites in British territory in the western Atlantic suitable for American air and naval bases. This and other possible American aid, together with Empire building, promised to continue the British, for a time at least, in a favorable naval situation.

**Greece.** In August, as a prelude to the Greek-Italian war, an old minelaying cruiser, the 2100-ton *Helle*, was torpedoed by a submarine, but the Italians disclaimed any responsibility for the act. Profiting by instruction and technical advice from English naval officers the small Greek navy demonstrated an unexpected degree of proficiency in patrolling adjacent waters after the war broke. At least one Italian submarine was sunk by a Greek vessel of similar class, and a destroyer division on one occasion penetrated the Straits of Otranto and raided the Italian held port of Valona in Albania.

The new navy yard at Scaramanga was in full

operation, and two destroyers, the first to be built in Greece, were under construction.

**Ireland.** Probably as a consequence of reports that German submarines were entering the bays of Ireland in perfect safety to recharge batteries and for other purposes, the government of Eire commenced the nucleus of a Navy. Two fishing escort vessels were equipped and commissioned, plans were made for putting several tugs into service, a number of fast motor torpedo boats costing about \$1,000,000 were ordered, and personnel was recruited.

Under the terms of the Anglo-Irish accord of 1938, the ships of the Royal Navy had no right to enter the territorial waters of the Free State. The British rigidly respected this agreement, but made insistent pleas for permission to use Irish ports upon which to base naval vessels for anti-submarine operations. At the year's end, however, such permission had been steadfastly refused.

**Italy.** When Italy entered the war on June 10 she had two powerful new battleships and four older ones that had been recently modernized, seven new 8-inch cruisers that were regarded as among the best afloat, a dozen modern light cruisers, about a hundred destroyers, and even more submarines, all modern, besides a number of older vessels of those types, and about a hundred motor torpedo boats.

The power of this great Navy, however, did not make itself felt. Among the material factors to which the failure may be ascribed were a serious oil shortage, inadequate munitions supply, particularly torpedoes and mines, and a general lack of raw materials to make up losses and deficiencies.

The fleet remained for the most part in port as "a fleet in being" rather than one striving for mastery of the Mediterranean. The English forces at the opposite ends of the sea not only extended their control instead of being driven back to their bases, but they seriously interfered with communications between Italy and the African colonies. Several of their transports and supply ships were reported destroyed, and lack of a sure and steady stream of supplies became a serious handicap for the Army in Libya.

The weak point in Italy's fundamental naval policy gradually became apparent. That policy had influenced the design of ships which were extremely fast. But the high speed was attained at sacrifice of protection. The policy might be characterized of one to raid and run rather than to stand and fight. Such a policy when operating against tougher ships manned by personnel ready to trade heavy blows could not bring control of the sea.

In six months the Italians lost at least 15 combatant ships, with fully as many more badly damaged, without inflicting anything like as serious losses on the enemy. Early in July British and Italian forces met in the southern part of the Ionian Sea. Such fighting as took place was at long range and the Italians outdistanced the British and returned to port. En route the battleships *Cavour* and *Cesare* were attacked by their own aircraft. The aviators, in a separate service in Italy, had probably confused the appearance of these ships with that of one of the English which they closely resembled.

In one engagement the *Sydney* sank the *Barotolomeo Colleoni* as it was running away, and in another the *Ajax* (made famous in the *Graf Spee* engagement) sank three destroyers and damaged

another that she encountered in the eastern approaches to the Straits of Sicily. The Taranto disaster has been mentioned in the account of British activities. The British also claim to have done some damage to naval ships in bombing Naples and Brindisi. At any rate, well credited reports stated that most of the important Italian naval units had been withdrawn to the comparative safety of the ports of Trieste, Fiume, and Pola.

Little had been heard of activities of motor torpedo boat flotillas, and the submarine service from which so much was expected inflicted comparatively little damage in the Mediterranean. Italian announcements that numbers of them were operating in the Atlantic (possibly based at Bordeaux) lacked confirmation.

**Japan.** "The Combined Fleet," Japan's principal fighting force, did not take direct part in the China war but carried on its regular training schedule in home waters and in the mandated islands. The forces in China occupied the Yangtze river and a number of coast ports and maintained a blockade against Chiang Kai-shek. The naval air force gained considerable experience in bombing shore objectives. They operated both from carriers and shore bases.

The Navy established a base on Hainan island but details were lacking. The facilities of the base at Maidzuru were expanded to bring it up to the first rank. Various unconfirmed reports were in circulation regarding improvement of the naval facilities in the Marshall, Caroline, and Mariana Islands.

The reticence as to the building program continued, but public announcements were made from time to time giving the names, but not the types nor characteristics, of ships launched. A large amount of naval work was going on in shipyards, and it had become well established that two of the battleships building were nearing completion, and that a number of others were on the ways. The necessary light units to maintain a well balanced fleet were also under construction.

The record-breaking ten-billion-yen budget for the 1940-41 fiscal year was so divided that it was not possible to get a clear idea of just what proportion would be used for naval purposes, but about 64 per cent was for Army and Navy establishments.

On January 22 the submarine I-63, which went down with 81 officers and men after a collision in Bungo Straits the preceding February, was raised after more than eleven months salvage operations. This mishap to that ship was the first of a series of submarine disasters that befell Japanese, American, British, and French submarines in turn during the first six months of 1938.

**Netherlands.** Before being overrun by Germany the government continued to keep its naval forces, both in home waters and in the East Indies, in fighting trim. At the same time, it pushed forward the construction work in progress on two cruisers, a number of destroyers and submarines, and other minor vessels. Paravanes, motor torpedo boats, and other accessories were ordered from abroad.

When the German invasion came the naval forces had no surface craft to oppose, but for several days numerous contests occurred between ships and aircraft. The naval losses were surprisingly small, about ten of the least valuable ships; just how many of these were from bombing attacks and how many from mines or artillery fire remained

uncertain. The anti-aircraft fire of the ships inflicted considerable damage on the invaders, and valuable assistance was given shore-based forces.

After naval support of the Army could no longer be effective several ships under construction were destroyed, and several others that were building accompanied the fleet to England, either under their own power or under tow. Two cruisers on the ways in the early stages of construction fell into German hands. The ships that reached England continued in the war, operating with the British Navy but with their own crews.

In the East Indies, the Dutch naval forces consisted of two cruisers, a dozen modern destroyers, at least twenty submarines, and several squadrons of naval flying boats, as well as various small craft. That force under general direction of the Dutch Government in London maintained itself in readiness for action, improved its principal base at Surabaya, and developed subsidiary bases at other points in the Dutch possessions.

**Norway.** The Norwegian Admiralty announced that a series of tests as to probabilities of collision with floating mines established that in a calm sea the bow wave would throw the mine clear if it were more than five yards from the stem of the ship, and that in a rough sea the results were irregular. (Note: This referred, of course, to contact mines, not to magnetic mines.)

The Norwegian naval forces on April 9 when the Germans made their unexpected attack were as impotent as the Norwegian Army. While the Germans sustained considerable naval losses during the Norwegian campaign the only damage directly attributable to the Navy was that to a cruiser by gun-fire from the minelayer *Olaf Trygvasson*. The Norwegians, on the other hand, had at least eleven ships sunk and the rest of their Navy captured; virtually all losses being without any show of resistance.

**Portugal.** Slow progress was made on the building program. The new navy yard at Alfeite launched a 1150-ton hydrographic ship. Work was commenced on a small dry dock at Paco de Arcos, six miles from Lisbon. Reports indicated that facilities for submarine operations were being developed in the Cape Verde Islands.

**Spain.** Extensive plans for rehabilitating the Spanish navy seemed unlikely to make much progress in the existing impoverished condition of the country. Some work was accomplished, however, in improving the facilities of the Ferrol navy yard. The naval vessels that survived the war were in poor shape, and remained relatively inactive. Funds were not available for modernizing or repairing them, much less for building new ships.

**Sweden.** The navy was actively engaged in improving its defenses; protective mine fields were planted; reserve supplies of fuel were accumulated, and special provisions were made for protection from mine damage. More than one hundred merchant ships were armed, and the government assisted in providing them with paravanes for protection against mines. The construction program, however, was slowed down because of difficulties in obtaining materials. Supplementary appropriations were made for current and future maneuvers.

**Union of Soviet Socialist Republics (Russia).** Notwithstanding the lack of complete or wholly accurate information, many things suggested that the Soviet's navy was developing and strengthening. In July Admiral Kuznetsov announced that the Navy would add 168 warships to

her fleet during the year; and he stated that 112 ships had been completed in 1939. Those grandiose claims might not have been warranted, but numerous additions to the fleet were made, particularly in the destroyer and submarine classes. More operations at sea than formerly were noted in the Baltic, the Black Sea, the Arctic, and on the eastern coast of Siberia.

Acquisition of naval bases in Finland, Latvia, and Estonia greatly strengthened the Russian naval position in the Baltic; while control of the northern mouth of the Danube, in the territory taken from Rumania, improved her position in the Black Sea. For some years she had been improving the facilities of her Arctic coast, and naval bases of a sort were being slowly developed in the Far East.

**United States.** At the beginning of the year, with the European War relatively quiescent, naval training, expansion, and development was planned to continue along the lines of late 1939. After a substantial reduction in its initial estimates by the Budget Bureau, the Navy Department asked Congress for \$1,078,000,000. This was cut about 113 million by the House in February and another two million by the Senate in April. Before final approval of the bill, German successes in Europe caused the country, the President, and Congress to become alarmed over our own defenses, and the President delivered a special message to Congress on the subject. The Senate recalled the bill and when it next passed, the amount had been increased to \$1,300,000,000. Meantime a bill had been passed authorizing an 11 per cent increase in ships.

As the international situation rapidly became worse, a supplementary appropriation measure carried additional funds, bringing the Navy allotment to \$1,867,451,208 with contract authorization for a further \$311,755,612. After France collapsed, Congress hastily rushed through a bill to increase the Navy by 70 per cent at an estimated ultimate cost of four billion dollars. The aircraft program called for 15,000 naval planes. A bill for 10,000 naval pilots followed closely.

In August, a second supplementary defense bill added over 700 millions and a further 500 millions in contracts was authorized. A third bill provided for another 75 million bringing the total in cash and contract authorization for the year to \$3,460,000,000.

Provision was made for 170,000 men in the Navy and 34,000 in the Marine Corps, a substantial increase in the number of reserves on extended active service, and a large increase in pilot training. Funds were made available for 10,000 serviceable aircraft, for commencing construction of 292 combatant vessels and 57 auxiliary ships and for acquiring and converting other auxiliary ships, for recommissioning decommissioned naval vessels, for establishing new air bases and stations, and for providing additional production facilities, including new plants and extension of existing plants for accelerating immediate production.

The composition of the Navy in under-age combatant vessels as authorized by the aforementioned legislation, and for which funds to commence construction were made available was:

Battleships	.....	1,045,000 tons
Aircraft Carriers	.....	454,500 tons
Cruisers	.....	899,024 tons
Destroyers	.....	478,000 tons
Submarines	.....	172,956 tons
<b>Total...</b>	<b>.....</b>	<b>3,049,480 tons.</b>

The authorized number of aircraft for that fleet was 15,000. It was estimated that to man it would require 461,000 men and 25,000 officers, including 10,000 pilots. The earliest date of completion was estimated to be 1946.

The Navy Department in anticipation of passage of those several successive bills conferred with shipyard representatives and contractors. Tentative agreements were negotiated, and as bills were passed contracts were definitely awarded with but little delay. Plant expansions were provided for, and arrangements were made for acquisition of auxiliary vessels.

Legislation in June gave the President authority to dispose of any naval weapon, ship, boat, aircraft, etc., in the event that the Chief of Naval Operations certified they were not essential to the defenses of the United States. On September third he informed Congress that he had negotiated an agreement with the British Government to secure sites for naval and air bases in British territory in the western hemisphere in exchange for 50 over-age American destroyers. The requisite certification was given by Admiral Stark, Chief of Naval Operations, and the destroyers were taken to Canadian ports where they were turned over to British officers.

A board headed by Rear Admiral Greenslade, a member of the General Board, conferred with British representatives and agreed upon sites for bases in Newfoundland, Bermuda, the Bahamas, the Antilles, and Trinidad. Plans for their development were drawn and arrangements were made to commence construction at once.

The ships and planes of the Navy were maintained in the same general organization as in the recent past with a large portion of the combatant strength operating in the Pacific. In April these units were concentrated in Hawaiian waters for extended maneuvers, including the annual fleet problem. Upon the scheduled date of return to the Pacific Coast announcement was made that the fleet would continue to base indefinitely in Hawaii to facilitate training. At the end of the year it was still operating in that area. The Atlantic Squadron was considerably increased in strength by additions of new ships and old ones recommissioned. With increase in operating strength, its status was raised to that of a force and its name changed to Patrol Force. The organization was along fleet lines to which it might be advanced as the two-ocean navy became a reality.

The rapid increase in the number of operating ships and planes required a commensurate increase in personnel. And the increase in numbers became even greater when determination was made to bring all ships up to 100 per cent complement instead of the 85 per cent which was the normal peacetime allowance of most of them. This required an accelerated recruiting program and a large increase in shore facilities where the men newly inducted in to the Service received initial indoctrination and training. The period of preliminary training was reduced to six weeks, and as the new men joined their ships they were given intensive training to qualify them for the innumerable specialized billets they were to fill.

Difficult as were the problems of developing competent petty officers and skilled technicians, those of providing officers for the existing and building navy were even more acute. Retired and reserve officers were placed on active duty and the Naval Academy was expanded. New air stations

were being built at Corpus Christi, Texas, and at Jacksonville, Florida, to supplement the one at Pensacola, Florida, for training naval aviators. Machinery was set up for obtaining the embryo pilots, and arrangements were perfected for having both the new stations operating to capacity in 1941.

With the large navy in prospect it would no longer be possible to obtain all the line officers necessary to man it from the Naval Academy. Legislation was obtained authorizing permanent commissions in the line of the regular Navy of selected reserve officers and graduates of naval R.O.T.C. units. Examinations were held, and it was expected that the first groups would have their commissions approved early in 1941. As with the enlisted personnel, strenuous training schedules awaited the newly commissioned officers as they joined their ships.

During the year the carrier *Wasp*, the 10,000-ton light cruiser *Helena*, and a number of destroyers, submarines, and motor torpedo boats were commissioned. A great number of destroyers, submarines, and auxiliaries were recommissioned, and a large number of auxiliaries were purchased and converted or were being converted to naval use. Two new battleships were nearing completion, but no other large ships were scheduled for delivery before 1942. After the construction program was in full swing various means of speeding it up were found, and late in December the Secretary of the Navy announced that many of the ships would be completed ahead of scheduled dates, and that normal building time of destroyers particularly was being considerably reduced.

Much progress was made in expanding shore facilities both for new construction and for repairs and other services to the fleet. Activities were most marked in providing air bases from which long range patrol bombers would operate. The largest development of this nature was in the Hawaiian Islands, with outlying advance bases at Midway, Johnston, and Palmyra. Others, outside the continental limits of the United States, were in Alaska, Panama, and Porto Rico. It was expected that the developments of the bases obtained from Great Britain would be rapid.

**NAVY, U.S.** See NATIONAL DEFENSE ADVISORY COMMISSION; NAVAL PROGRESS.

**NAZARENE,** Church of the. A church organized in Los Angeles, Calif., in 1895. With it were subsequently united the Association of Pentecostal Churches in America (founded in 1895), the Holiness Church of Christ, and the Pentecostal Mission. Headquarters, 2923 Troost Avenue, Kansas City, Mo. For statistics, see RELIGIOUS ORGANIZATIONS.

**NAZISM.** See FASCISM.

**NEANDERTAL MAN.** See ANTHROPOLOGY.

**NEBRASKA.** Area, 77,520 square miles; includes water, 712 square miles. Population (U.S. Census), April, 1940, 1,315,834; 1930, 1,377,963. Omaha (1940), 223,844, Lincoln (the capital), 81,984. The whole population of the State diminished (1930-40) by 62,129; the rural group, by 90,170, to 801,686; but the urban population

(dwellers in places of 2500 or more) rose by 28,041, to 514,148.

**Agriculture.** Nebraska harvested, in 1940, 17,322,000 acres of the principal crops. Leading these, corn, on 6,289,000 acres, made 106,913,000 bu., estimated as having a value of \$62,010,000 to the producers. Wheat, on 2,646,000 acres, gave 34,821,000 bu. (value, about \$22,634,000); oats, 1,490,000 acres, 35,760,000 bu. (\$10,013,000); barley, 1,409,000 acres, 22,544,000 bu. (\$8,792,000); tame hay, 1,029,000 acres, 1,366,000 tons (\$8,879,000); potatoes, 81,000 acres, 11,340,000 bu. (\$5,557,000); grain sorghums, 736,000 acres, 7,728,000 bu. (\$3,246,000); sugar beets, 70,000 acres, 910,000 tons (for crop of previous year, 1940, \$3,492,000). Farms numbered 121,062 in 1940 and averaged 391 1/2 acres.

**Education.** For the academic year 1939-40 Nebraska's inhabitants of school age (from 5 years to 21) were reckoned at 369,154. The year's enrollments of pupils in all public schools numbered 276,188: this comprised 191,910 in the elementary group and 84,278 in high school. The year's expenditure for public-school education totaled \$20,427,684. Teachers in public schools numbered 12,759; their year's pay averaged \$1283 for men and \$981 for women in cities and villages and \$518 for men and \$498 for women in rural schools.

**Mineral Production.** Petroleum, found near Falls City in 1939, gave a small but rising yield in 1940. Mineral production (totaling \$4,028,712 for 1938) had previously no conspicuous features.

**History.** The Legislature met in special session early in the year. As the Union's only unicameral legislative body, established in 1937 and still in the initial stage of trial, it continued to draw attention from outside the State. It sat for eleven days, disposed of about twenty bills dealing chiefly with poor-relief, pensions, and unemployment compensation, and kept the cost of running the session down to about \$5000, the members getting no additional pay. This compared favorably with its own previous record, \$103,445 for the regular session of 1937 and \$100,678 for the regular session of 1939; still more favorably with the \$202,593 that the last regular session of the old bicameral Legislature cost in 1935. Comment at the time noted that the unicameral Legislature showed the advantage of fixing responsibility in a single house, that it had successfully done without the secrecy employed in other legislatures' executive sessions and often in their committees' meetings, and that it had brought to the task a higher type of citizens. The *Atlanta Constitution* apprehended, however, that a unicameral Legislature in the hands of a political ring "could wreak great damage," even though the system had brought "astonishing results" in Nebraska.

Nebraska's three State-owned power districts became (August 15) a single organization, forming a \$60,000,000 system of electrical generation. Five years of dispute and litigation had preceded the merger, long sought by the Federal authorities through the Public Works Administration, which had furnished the money for constructing the works. The Platte Valley and Loup River districts were in operation at the time of the merger; the Central Nebraska District was still partly in stage of construction. Its Kingsley Dam was scheduled for completion by November 1. In addition to supplying electricity, the district was to irrigate 220,000 acres of land that had suffered much from drought in recent years. An adverse report on financial practices, made to the WPA, led to D. W. Kings-

ley's retirement (October 8) as head of the Central District. See **FLOODS**.

**Elections.** On November 5 Nebraska's popular vote for President gave Willkie (Rep.) 352,201, constituting a margin of about 88,524 over Roosevelt (Dem.), who got 263,677 votes. Dwight L. Griswold (Rep.) was elected Governor, defeating Terry Carpenter (Dem.). For U.S. Senator, Hugh A. Butler (Rep.) defeated Gov. R. L. Cochran (Dem.) and won the seat actually held by E. R. Burke (Dem.), an opponent of the New Deal, who had failed of renomination in the Democratic primary.

**Officers.** Nebraska's chief officers, serving in 1940, were: Governor, R. L. Cochran (Dem.); Lieutenant Governor, William E. Johnson; Secretary of State, Harry R. Swanson; Auditor, Ray C. Johnson; Treasurer, John Havekost; Attorney General, W. R. Johnson; Superintendent of Public Instruction, Charles W. Taylor.

**NECROLOGY.** The following is a list of notable persons who died during the year 1940.

**Aage,** Prince of Denmark; died in Taza, French Morocco, Feb. 29, 1940, born in Copenhagen, June 10, 1877. He renounced his rights to the Danish throne in 1914. He served in the French Foreign Legion during 1923-31 and again after 1932.

**Abbott, Maude E. S.** Canadian heart specialist; died in Montreal, Can., Sept. 2, 1940, born in 1869, was graduated from Laval Univ. Faculty of Medicine, 1894. An international authority on heart ailments, she served on the staff of McGill University until her retirement in 1935. At her death she was secretary of the International Association of Medical Museums.

**Abbott, Robert Sungstacke,** American editor and publisher; died in Chicago, Feb. 29, 1940; born in Savannah, Ga., Nov. 24, 1870. Educated at Claflin University, Hampton Institute, and Kent Law School. Founder in 1905 and afterwards editor and publisher of *The Chicago Defender*, a weekly devoted to the interests of the Negro race.

**Abercrombie, John W.** American educator; died in Montgomery, Ala., July 2, 1940; born in St. Clair Co., Ala., May 17, 1866. He served as State superintendent of education in Alabama during 1898-1902 and again during 1920-27, as assistant superintendent, 1927-35, and as State supervisor of teacher certification thereafter. He was president of the University of Alabama (1902-11) and was a member of the 63d and 64th Congresses (1913-17) as a delegate at large from Alabama.

**Abertay, 1st Baron, Charles (Goupar) Barrie,** British politician, shipowner, and merchant; died at Tullybelton, Perthshire, Scot., Dec. 6, 1940; born in 1875. He was a member of Parliament from Elgin Burghs (1918); from Banffshire (1918-24); and from Southampton (1931-40).

**Adams, Thomas,** British architect; died in Battle, Sussex, Mar. 24, 1940; born in Edinburgh, Sept. 10, 1871. He was the founder and first president of the Town Planning Institute (1914-15) and subsequently served as president of the Canadian Town Planning Institute (1916) and as director of the Regional Plan of New York (1923-30). He taught at Harvard University and the Massachusetts Institute of Technology and was president of the Institute of Landscape Architects during 1937-39.

**Adler, Cyrus,** American educator, died in Philadelphia, Apr. 7, 1940, born in Van Buren, Ark., Sept. 13, 1863. He was associated with the Smithsonian Institution during 1892-1908 and with the U.S. National Museum (1889-1908); was named president of Dropsie College for Hebrew and Cognate Learning in 1908, and in 1924 became, in addition, president of the Jewish Theological Seminary of America. He was a founder of the American Jewish Committee (1907), and served as its president after 1929, and was a member of the Jewish Publication Society. Although a non-Zionist, he was president of the United Synagogue of America, resigning in 1917 when that organization expressed approval of the Zionist movement. He was a leader in the United Palestine Appeal, and the United Jewish Appeal for Refugees and Overseas Needs, and was one of the editors of the *Jewish Encyclopedia*, and of the *American Jewish Year Book* (1899-1906). Also, he was chairman of the Army and Navy Committee of the Jewish Welfare Board and on Dec. 23, 1939, was invited by President Roosevelt to represent the Jews in a joint peace effort by the religious leaders of the world. An authority on Semitic philosophy, Assyriology, Oriental archaeology, and comparative religions, he wrote a memorandum on the *Wailing Wall* (1930) prepared for the Special Committee of the League of Nations on behalf of the Jewish Agency for Palestine.

**Aglipay, Gregorio.** Filipino bishop; died in Manila, Philippines, Sept. 1, 1940; born in Batac, Ilocos Norte Province, May 9, 1860. In 1889 he was ordained a Roman Catholic priest. Ten years later he was excommunicated for having joined Aguinaldo's rebel forces the previous year. In 1902 he founded the Philippines Independent Church, which he headed until his death. With Aguinaldo, he was defeated by Quezon in the 1935 presidential election.

**Aldrich, Chester Holmes.** American architect; died in Rome, Italy, Dec. 26, 1940; born in Providence, R.I., June 4, 1871. He was educated at Columbia University and the Ecole des Beaux Arts, Paris; and (with W. Adams Delano) founded the firm of Delano and Aldrich, New York, in 1903. Delano and Aldrich were the architects for many famous structures, public and private, including the Japanese Embassy in Washington, the new American Embassy in Paris; the homes of John D. Rockefeller in Pocantico Hills, N.Y., and Col. Charles E. Lindbergh at Hopewell, N.J. In the World War, Mr. Aldrich was director general of civil affairs of the American Red Cross Mission in Italy. He was a trustee of the American Academy in Rome since 1926 and director since 1935.

**Aleshire, Arthur William.** American Democratic Congressman from Ohio (1937-39); born in Luray, Va., Feb. 15, 1900; died in Springfield, O., Mar. 11, 1940.

**Alexander, Sir Henry.** Scottish editor; died in Aberdeen, Apr. 7, 1940; born in 1875. He edited the *Aberdeen Free Press* from 1914 to 1922 and was Lord Provost of Aberdeen during 1932-35.

**Allan, George William.** Canadian lawyer and business executive; died in Victoria, B.C., Can., Dec. 6, 1940; born in Moss Park, Toronto, Ont., Aug. 13, 1860. He was president of the Great-West Life Assurance Co.; and was a member of the House of Commons from South Winnipeg (1917-21).

**Alsberg, O(arl) Lucas.** American biochemist; died in Berkeley, Calif., Nov. 1, 1940, born in New York City, N.Y., Apr. 2, 1877. He was graduated from the College of Physicians and Surgeons at Columbia University (1900), and continued his medical studies at the Universities of Strassburg and Berlin (1900-03). He was chief chemist of the Bureau of Chemistry of the Department of Agriculture from 1912 to 1921, resigning to head the newly established Food Research Institute of the Carnegie Foundation at Stanford University, California. Dr. Alsberg's father, Meinhard, who was also a noted chemist, was the founder of the New York Chemical Society, parent body of the American Chemical Society.

**Amos, Sir Maurice Sheldon.** British jurist; died in Ulverston, Lancashire, Eng., June, 1940; born on June 15, 1872. In public life since 1898, he was adviser to the Egyptian Government, 1919-25, Quain Professor of Comparative Law, London Univ., 1932-37, and chief British member of the International Committee of Experts on Private Aerial Law from 1933 until his death.

**Amyot, John Andrew.** Canadian physician, Deputy Minister of Pensions and National Health (1919-33); died in Ottawa, Feb. 13, 1940; born in Toronto, July 25, 1867. An advocate of modern sanitation methods, he taught at the University of Toronto during 1900-18 and served with the Canadian Expeditionary Forces during the World War as a consultant in sanitation.

**Andersen, Hendrik Christian.** American sculptor; died in Rome, Italy, Dec. 9, 1940; born in Norway, Apr. 17, 1872. He came to the United States as a child, studied art in Boston; and lived in Italy after 1899. Besides sculpture, he was famous as the author of plans for a proposed international city, to be devoted to peace and art. He spent \$150,000 and employed 40 architects, working under Ernest Hebrard of Paris, to make blueprints for the city, which was to be the permanent seat of all governments and in which all internal, financial, commercial, and cultural exchanges were to be transacted—thus assuring world unity and peace.

**Anderson, Abraham A.** American artist; born in Peapack, N.J., in 1847; died in New York, Apr. 27, 1940. His work was mainly of portraits of prominent men, but one of his best known works was a triptych, "Neither do I Condemn Thee." He was active in the founding of the United States forest reserve system.

**Anderson, Harold MacDonald.** American journalist; died in New York City, Dec. 26, 1940; born in Great Barrington, Mass., Aug. 22, 1876. He worked as a reporter on the *Berkshire News* and the *Berkshire Courier*, Great Barrington; corresponded for New York newspapers; and joined the staff of *The Sun* in New York City on June 1, 1894, remaining there, except for an interval of 15 months in 1924-25, until his death. He penned the editorial *Lindbergh Flies Alone*, which was published in *The Sun* May 21, 1927, and attracted nation-wide notice.

**Anderson, John Crawford.** American lawyer, associate justice of the Supreme Court of Alabama from 1904 to 1914, chief justice thereafter; died in Montgomery, Ala., Apr. 27, 1940; born in Greene Co., Ala., Aug. 5, 1863. He dissented from the Court's opinion that the Negroes in the

Scottboro case had received a fair and impartial trial.

**Anderson, Mary.** See NAVARRO, MARY ANDERSON DE.  
**Andreen, Gustav Albert.** American educator and author; died in Chicago, Ill., Oct. 1, 1940; born in Porter, Ind., Mar. 13, 1864. He was president of Augustana Coll., Rock Island, Ill., 1901-35 (Emeritus). Until his death he served as general alumni secretary.

**Andreve, Guillermo.** See SPANISH-AMERICAN LITERATURES under Panama.

**Andrew, John B.** American Civil War veteran, national commander of the Grand Army of the Republic (1939-40); died in Quincy, Ill., June 30, 1940; born in Ohio in 1849.

**Andrews, Charles Freer.** British clergyman; died in Calcutta, Apr. 5, 1940; born in Newcastle-on-Tyne, Feb. 12, 1871. Vice-president of Rabindranath Tagore's Institution in Bengal India, he was an authority on Indian labor and a trusted friend of Mahatma Gandhi. A prolific writer on Indian affairs, he wrote *Mahatma Gandhi, His Own Story and The Rise and Growth of the Congress in India* (1939).

**Arco, Georg von.** German engineer; died in Berlin, May 7, 1940; born in Grossgorschuetz, Aug. 30, 1869. A pioneer in wireless telephony and telegraphy, he invented several improvements for high frequency machines and was director of *Gesellschaft für Drahtlose Telegraphie*, Berlin, and of *Telefunken*.

**Argüello Barreto, Santiago.** See SPANISH-AMERICAN LITERATURES under Nicaragua.

**Arnott, Sir John Alexander.** Irish soldier and publisher; died on July 26, 1940; born on Nov. 16, 1853. He was a major and an honorary lieutenant colonel of the 4th Battalion, Cheshire Regiment until he retired in 1900. At his death he was chairman of *The Irish Times* and justice of the peace of Dublin and Cork Counties.

**Aronson, Louis V.** American inventor; died in Long Branch, N.J., Nov. 2, 1940; born in New York City, N.Y., Dec. 25, 1870. He invented the Ronson cigarette lighter; originated several types of mechanical fireworks, including a time-fuse for airplane bombs, and was a leader in the development of non-poisonous matches, for which last-named work he received a \$10,000 award from the Belgian Government. He founded the Art Metal Works of Newark, N.J., in 1897.

**Ashbrook, William A.** American Congressman; died in Johnstown, O., Jan. 1, 1940, where he was born, July 1, 1867. Publisher and editor of the *Johnstown Independent* from 1885, he served as a Democratic member of Congress (1907-21; 1935-39).

**Auden, Henry William.** Canadian philologist; died in London, Canada, Jan. 26, 1940; born in 1867. From 1903 to 1918 he was principal of Upper Canada College, and from 1919 to 1938 he was professor of Latin at University of Western Ontario, London, Ont. Thereafter he was Professor Emeritus of the Classics.

**Aughinbaugh, William Edmund.** American physician, author, educator, lawyer, and explorer; died in New York City, Dec. 18, 1940; born in Westmoreland Co., Va., Oct. 12, 1871. A graduate of the National Law School, Washington, D.C. (1892), and of Columbia (now George Washington) University (1897), he practiced medicine among lepers in Cuba, Puerto Rico, and Venezuela; visited many countries on medical, economic, and legal missions; entertained William Jennings Bryan in India; was friend of a rajah who had 800 wives and no children; wrote for various magazines, newspapers, and syndicates, and was for a while Professor of Foreign Trade at New York University. He served also on the faculty of Columbia University; founded the Explorers Club; and headed the Manhattan Medical Society as president. His most famous book was *I Swear by Apollo*, an effervescent autobiography published in 1938.

**Ayres, Agnes.** American motion picture actress; died in Hollywood, Dec. 25, 1940; born in Carbondale, Ill., in 1898. She played opposite Rudolph Valentino in *The Sheik* and starred in many other silent photoplays.

**Asafia, Manuel.** Spanish ex-President and writer; died in Montauban, France, Nov. 4, 1940; born in Alcala de los Henares, Castile, Spain, Jan. 10, 1880. He became Minister of War in 1931; was accused and acquitted of complicity in the Socialist and Catalan uprising (1934); and was made Prime Minister in February, 1936. He was elected President (May, 1936) and served through the Civil War until February, 1939, when he fled to France.

**Bailey, Sir Abe.** South African financier and politician; died in Cape Town, South Africa, Aug. 10, 1940; born in Cradock, Cape Colony, Nov. 6, 1864. In 1887 he went to Johannesburg, and became one of the leading mine owners. After the Jameson Raid in 1895 he spent thirteen months in jail for alleged conspiracy in it. He served in the Boer War, 1899-1902, and was a member of the Cape House of Assembly, 1902-05, and the Transvaal Parliament, 1910-24. He held large interests in gold mining and other industries.

**Bailey, Guy Winfred.** American educator; died in Boston, Mass., Oct. 22, 1940; born in Hardwick, Vt., May 7,

1876. Graduating from the Univ. of Vermont in 1900, he studied law, and served in the House of Representatives of Vermont, 1904-08, becoming Secretary of State, 1908-17. He became controller of the Univ. of Vermont in 1917 and was its president from 1920 until his death.

**Baillie, Baris.** American investment banker; died in New York City, N.Y., Nov. 15, 1940; born in Milwaukee, Wis., Sept. 17, 1890. He was chairman of the board and founder of the Tri-Continental Corporation, the country's largest investment management corporation. In 1933 he was appointed a special assistant for fiscal affairs in the Treasury Department; and on Sept. 5, 1939, he became a member of a special advisory committee of three bankers who assisted the Treasury Department in handling the complex financial and economic problems arising from the European War.

**Baker, Asa George.** American publisher; died in Springfield, Mass., Sept. 10, 1940; born in Milwaukee, Wis., Sept. 27, 1866. He began with G. & C. Merriam Co. in 1888 and supervised three editions of the *Merriam Webster Dictionary*. He was president of the firm from 1922 to 1934, and chairman of the board thereafter until his death.

**Baker, James Marion.** American diplomat; died in Lowndesville, S.C., Nov. 21, 1940; born in Lowndesville, Aug. 18, 1861. He was Minister to Siam (1933-37) and Secretary of the U.S. Senate (1913-19).

**Balbo, Italo.** Italian aviator, killed fighting the British over Tobruk, Libya, June 28, 1940, as announced by the Italian Government but denied by the British who said that none of their aircraft was over Tobruk at the time Balbo was killed, born in Quaratesana, Ferrara, June 6, 1896. After service in the World War, he entered politics and by 1922 was a trusted member of the Fascist Party. He became minister of national economy and general of the Black Shirt Militia after Mussolini came into power and subsequently became under-secretary for Air, General of the Air Fleet, and in September, 1929, Air Minister. Under his rule the Italian air force was modernized and reorganized and he promoted mass flights as a demonstration of military strength. He led a squadron of 12 planes from Rome to Rio de Janeiro in 1931, and in 1933 he piloted a mass flight of 24 planes to America, flying from Rome on June 30, arriving in Chicago on July 14 and New York on July 18. They left for home on July 25, reaching Rome on August 12. He was made Air Marshal in recognition of this feat. In November, 1933, Marshal Balbo was appointed Governor of Libya, said to have been more of an exile than a promotion. During his rule many improvements were made in that country. In April, 1937, he was appointed commander in chief of the armed forces of Italian North Africa. He was the founder and former editor of *Corriere Padano* and published his diary in 1922.

**Ball, David H.** American manufacturer; died in Mount Vernon, N.Y., Feb. 3, 1940; born in Baltimore in 1870. Associated with the American Tobacco Co. from 1900, in 1911 he became executive vice-president of P. Lorillard Co. and in 1937 succeeded to the presidency.

**Ball, John.** British golf champion; died in Holywell, Wales, Dec. 2, 1940; born in Hoylake, 1861. He was British amateur champion in 1888, 1890, 1892, 1894, 1899, 1907, 1910, and 1912, and in 1890 he captured the open championship as well.

**Bankhead, William Brockman.** American congressman; died in Washington, D.C., Sept. 15, 1940, born in Moscow, Ala., Apr. 12, 1874. He graduated from the Univ. of Alabama in 1893, and from the law school of Georgetown Univ. in 1895. He served in the Alabama legislature, 1900-01. Elected to the 65th Congress in 1917, he was re-elected to each succeeding Congress, being a member of the 76th Congress at his death. He had the distinction of holding the three most important positions in the House—chairman of the Rules Committee in the 73rd Congress; Majority Leader, 1st session, 74th Congress, and Speaker since June 4, 1936, upon the death of Joseph W. Byrns. Noted for his knowledge of parliamentary law, he was also a skilled orator.

**Barling, Sir (Harry) Gilbert.** British surgeon; died in Birmingham, Aug. 27, 1940; born in Newnham, England, Apr. 30, 1855. Consulting surgeon at Birmingham General Hospital, he was pro-chancellor and late dean of the Medical Faculty at the University of Birmingham and former examiner in surgery at the University of Cambridge.

**Barnes, George Nicoll.** British politician; died in London, Apr. 22, 1940; born in Scotland, Jan. 2, 1859. Active in labor circles from 1892, he served as a Labor Member of Parliament from 1906 to 1922, when he resigned. He was Pensions minister (1916-18), minister without portfolio (1919), a member of the War Cabinet (1917), and minister plenipotentiary at the Paris Peace Conference (1919). In 1926 he wrote *The History of the International Labour Organisation*.

**Barnes, Ralph W(aldo).** American newspaper correspondent; killed in an airplane accident near Danilov Grad, Yugoslavia, Nov. 18, 1940; born in Salem, Ore.,

June 14, 1899. He was educated at Willamette and Harvard Universities; worked for the *Brooklyn Eagle* in 1924; the *New York Evening World* (1925-26); *Paris Herald* (1926-29); and was thereafter assigned to various European capitals as correspondent for the *New York Herald Tribune*. He was in Germany from 1935 to 1939; was with the British Expeditionary Force in France from the beginning of the war until April, 1940, when he was shifted to cover operations of the German army. He was later expelled from Germany on the ground that he had "indulged in false, hateful, and sensational reporting" and had "endangered German interests." He then went to the Balkans and Palestine and to Egypt, where he covered the Italian advance to Sidi Barrani. On the outbreak of the war in Greece he was transferred to that battleground. He met his death in a night-riding British bomber that crashed in Yugoslavia.

**Barrère, Camille.** French diplomat; died in Paris, France, Oct. 9, 1940, born in La Charité-sur-Loire, October, 1851. He was Ambassador to Switzerland, 1894, and to Italy, 1897-1929. In 1922 he was a delegate to the Lausanne Conference. The most noteworthy achievement in his career was the winning over of Italy from the Triple Alliance to the Triple Entente in the World War.

**Barriero, Manuel.** Spanish soldier; died in Vigo, Spain, July 14, 1940; born in 1881. A general of Engineers, he was reputed to have been the first to use heavier-than-air craft for military purposes. He was decorated by Spain, after having been shot down and wounded during the Riff wars in 1903, while piloting a primitive biplane over Comico Mountain.

**Barriga, Juan Agustín.** See SPANISH-AMERICAN LITERATURES under *Chile*.

**Barry, Patrick.** Roman Catholic bishop; died in Jacksonville, Fla., Aug. 12, 1940; born in West Clare, Ireland, 1869. He was ordained a priest in 1895. He was rector of the Cathedral of St. Augustine and vicar general of the St. Augustine Diocese, 1917-21, and was consecrated bishop in 1922.

**Bauer, Bertha.** American educator; died in Cincinnati, O., Sept. 18, 1940; born in Ann Arbor, Mich. She was president of the Cincinnati Conservatory of Music from 1912 to 1930 when she retired as emerita. The conservatory was founded by her aunt, Miss Clara Bauer, in 1876, and is now affiliated with the Univ. of Cincinnati.

**Beck, Martin.** American vaudeville impresario, died in New York City, N.Y., Nov. 16, 1940; born in Bohemia, 1869. He came to America in 1887; played with a group of German actors; and opened his first theater, the Orpheum Concert Hall, in 1889, the nucleus of the Orpheum Circuit, which numbered some 60 theaters headed by Mr. Beck. In 1924 he built the Martin Beck Theater in West 45th Street, New York City.

**Becker, Karl.** German soldier and scientist; died in Berlin, Apr. 8, 1940; born in Speyer, Dec. 14, 1879. A general and a renowned ballistics expert, he headed the Arms and Munition Bureau in the War Ministry. His state funeral was attended by Reichsfuehrer Hitler.

**Beckham, J(ohn) Oreppe Wickliffe.** American lawyer; died in Louisville, Ky., Jan. 9, 1940, born in Wickland, Ky., Aug. 5, 1869. Active in the affairs of his State he was its governor from 1900 to 1907 and in 1915 was elected to the U.S. Senate, serving one term. In 1927 he was defeated for the governorship and in 1937 tried unsuccessfully to obtain the nomination for Senatorship.

**Bedford, Duke of, Herbrand Arthur Russell.** English landowner; died at Woburn Abbey, Bedfordshire, Eng., Aug. 27, 1940; born in London, Feb. 19, 1858. The eleventh to hold the title, he was one of the richest dukes in the United Kingdom. A natural history expert, he was president of the Zoological Society of London, 1899-1936, maintaining a large zoological park on his estate, and financing many world-wide specimen-collecting expeditions. He served in the Egyptian Campaign of 1882, and was aide de camp to King Edward VII and King George V, 1908-20. Rejoining the army, he served throughout the World War. His vast holdings included his family seat at Woburn, estates in Northamptonshire and other parts of England, and large parcels in Bloomsbury and St. Pancras sections in London. The Covent Garden estate in the heart of London was sold by him in 1913 at an estimated price of \$17,500,000.

**Begg, Alexander Swanson.** American educator; died in Boston, Mass., Sept. 26, 1940; born in Council Bluffs, Ia., May 23, 1861. He received his M.D. degree in 1907 from Drake Univ., and taught there until 1913, from 1911 to 1918 and 1919 to 1921 he taught at Harvard Medical School, and was dean of the Graduate School of Medicine, 1917-18. At the Carnegie Inst. he was research associate in 1915-16. During the World War he commanded the base hospitals of the A.E.F. From 1923 until his death, he was dean of the Boston Univ. School of Medicine which he had joined in 1921.

**Behrend, Ernst Richard.** German-American paper manufacturer; died in Erie, Pa., Sept. 22, 1940; born in Coeslin, Germany, Mar. 29, 1869. He came to the United

States in 1896 and was naturalized in 1901. After working for several paper companies he founded the Hammermill Co. in 1898. A pioneer in manufacturing fine writing papers from cellulose fibers in wood, he invented high-speed watermarking, and founded the first all-sulphite process paper mill in the United States.

**Belloso y Sánchez, Mons. Alfonso.** See SPANISH-AMERICAN LITERATURES under *El Salvador*.

**Benjamin, William Everts.** American antiquarian and philanthropist; died in New York, Feb. 24, 1940, where he was born, Feb. 19, 1859. A collector of Americana, he endowed a chair of American History at the Library of Congress and contributed historical papers and photographs to the Congressional Library, Columbia University, and the New York Historical Society.

**Benson, Allan L.** American writer; died in Yonkers, N.Y., Aug. 19, 1940; born in Plainwell, Mich., Nov. 6, 1871. Entering newspaper work in 1890 as a reporter, he was successively assistant managing editor and managing editor on several newspapers until 1907, when he retired from active newspaper work. From 1908 to 1916 he wrote on political and economic subjects for *Pearson's Magazine*. In 1916 he was selected as the Socialist presidential candidate, replacing Debs, but resigned from the party in 1918 due to its stand on World War issues. He was one of the founders of *Reconstruction Magazine* after the war.

**Benson, Edward Frederic.** British writer; died in London, Feb. 29, 1940; born at Wellington College, July 24, 1867, the son of the Archbishop of Canterbury. He worked in Athens for the British Archaeological Society and in Egypt for the Hellenic Society, and in 1893 published his first book *Dodo*, which established him as a writer of fiction. His later works included *As We Were* (1930), *As We Are* (1932), *King Edward VII* (1933), *Queen Victoria* (1935), and *Daughters of Queen Victoria* (1939).

**Bentley, Irene (Mrs. Harry B. Smith).** American actress; died in Allenhurst, N.J., June 3, 1940; born in Baltimore, Md., in 1870. A musical comedy star of the 1890's, she was best known for her roles in *The Belle of New York* (1898), *The Rounders* (1900), *The Girl from Dixie* (1903), etc. She retired in 1910.

**Berg, William H.** American industrialist, president of the Standard Oil Co. of California from 1937; died in Burlingame, Calif., June 26, 1940; born in Tripoli, Ia., Apr. 8, 1882.

**Berry, Sir George A.** British ophthalmologist; died in London, June 18, 1940; born in Glenstriven, Scotland in 1853. He lectured on ophthalmology at Edinburgh University and had served as a Conservative Member of Parliament for the Scottish Universities (1922-31). He wrote several works on diseases of the eye and was a former president of the Ophthalmological Society of the United Kingdom.

**Bert, Sir Matthew Robert.** British naval officer; died, Oct. 13, 1940; born, June 18, 1878. Rising through the grades he served in the World War, and participated in the battle of Jutland. He was Commander in Chief of the America and West Indies Station, 1934-37, becoming a full admiral in 1936. He retired in 1939.

**Besteiro, Julian.** Spanish republican leader; died in Carmona, Sevilla Province, Spain, Sept. 27, 1940; born in 1870. He had been professor of logic and dean of the faculty at Madrid Univ., Minister to the Hague, and Minister of Foreign Affairs. He became president of the Cortes in 1931 and speaker in 1933. He was president general of the Union of Workers and leader of the Socialist Party until 1934. As the last head of the Republican Government he surrendered Madrid to the Nationalists in 1939, and was sentenced to prison, where he died.

**Bielschowsky, Alfred.** German ophthalmologist; died in Brooklyn, N.Y., Jan. 5, 1940; born in German Silesia in 1872. After a noteworthy career in Germany as professor of ophthalmology and chief of the eye clinic of the University of Breslau, Germany, he became associated with the Dartmouth Eye Institute in 1934. After 1937 he became professor of ophthalmology and director of the Institute. He was known as an authority on motor anomalies of the eye.

**Billotte, Gaston.** French general; killed in an automobile accident while commanding a group of armies in the field in May, 1940; born in Sommeval, Aube Dept., Feb. 10, 1875. In the army from 1896, he saw service in the Colonial army; during the World War; and in Poland, and from 1937 to September, 1939, was Military Governor General of Paris.

**Binet-Valmer, Jean.** French novelist; founder of *La Renaissance Latine* (1902) and author of several books including *Le Mendiant magnifique* (1919) and *Le Jardin de l'Impér* (1930); born, 1875; died, 1940.

**Birch, Stephen.** American industrialist and mining engineer; died in New York City, Dec. 29, 1940; born in New York City, Mar. 24, 1872. He was graduated from Columbia School of Mines in 1898; became a mining engineer in Alaska for the Morgan-Guggenheim Syndicate, and later, as director of the syndicate, he developed nu-

merous projects, including copper mines. The Kennecott Copper Co., with Mr. Birch as its head, was formed in 1915 in a merger of several of the syndicate's interests. He was chairman of the board of directors at the time of his death.

**Black, Alexander.** American journalist, Sunday editor of the *New York World* (1905-10), managing editor of "Frank Seaman, Inc." (1910-13), editor, Newspaper Feature Service (1913-26), and art editor of King Features Syndicate (1926-35); died in New York, May 8, 1940; born in Brooklyn, N.Y., Feb. 7, 1859. His reminiscences, *Time and Chance*, appeared in 1937.

**Bland, Pascal Brooke.** American obstetrician and gynecologist; died in Pennsylvania, Oct. 31, 1940; born in Monocacy, Pa., May 9, 1875. He was the author of several textbooks and was Professor of Obstetrics (1925-37) at Jefferson Medical College.

**Blatch, Harriot Stanton.** American woman suffrage leader and lecturer; died in Greenwich, Conn., Nov. 20, 1940; born in Seneca Falls, N.Y., Jan. 20, 1856. She was graduated from Vassar College (1878); and lived in England from 1881 to 1896, where she married William Henry Blatch, an Englishman. Returning to the United States, she led the first woman suffrage parade in New York City (1910); and was unsuccessful Socialist party nominee for Comptroller of New York City (1921). She wrote several books including: *Challenging Years*; *Mobilizing Woman Power*, for which President Theodore Roosevelt wrote an introduction; and *The Life and Letters of Elizabeth Cady Stanton*, her mother.

**Blatchley, Willis.** American naturalist, state geologist of Indiana from 1894 to 1911 when he retired; died in Indianapolis, Ind., May 28, 1940; born in No. Madison, Conn., Oct. 6, 1859. A prolific writer his works include *My Nature Nook* (1931), *South America as I Saw It* (1934), and *The Fishes of Indiana* (1938).

**Bliss, William J. A.** American educator, professor of physics at Johns Hopkins University from 1901 to 1928, died in Baltimore, Md., on Dec. 27, 1940; born in Washington, D.C., Jan. 22, 1867. He was educated at Harvard and Johns Hopkins Universities.

**Bloch, Charles Edward.** American publisher; died in Great Neck, L.I., Sept. 2, 1940; born in Cincinnati, O., 1862. Known as the dean of Jewish publishers in the United States, he was president of the Bloch Publishing Co., and founder and former president of the Free Synagogue of N.Y.

**Block, Rudolph (Bruno Lessing).** American journalist, with the Hearst papers from 1896, he was editor of the comic supplement for twenty years and wrote the column "Vagabondia" from 1928; died in Tucson, Ariz., Apr. 29, 1940; born in New York, Dec. 6, 1870.

**Blood, Sir Bindon.** British army officer; died in London, May 16, 1940; born in Cranaher, Ireland, Nov. 7, 1842. He entered the Royal Engineers in 1860, retiring in 1907 with the rank of lieutenant general. In 1936 he was appointed to the revived position of Chief Royal Engineer, retiring in April, 1940. He wrote *Four Score Years and Ten* (1933).

**Blumer, George Alder.** American alienist; died in Providence, R.I., Apr. 25, 1940; born in Sunderland, England, May 25, 1857. He was associated with the Utica State Hospital from 1889 to 1899 and thereafter was physician-in-chief and superintendent of the Butler Hospital at Providence until he was retired as emeritus in 1922. He was also editor emeritus of the *American Journal of Psychiatry*.

**Bocchini, Arturo.** Italian chief of the secret police and senator; died on Nov. 20, 1940; born in the hills of San Giorgio del Sannio, Campania, Italy, 1880. He became prefect of Bologna (1923); Genoa (1926); and senator and member of the National Fascist Council since 1933.

**Bockus, Charles E.** American industrialist; died in New York, June 29, 1940; born in Dorchester, Mass., July 10, 1868. With the Clinchfield Coal Corporation from 1913, he became president and chairman of the board in 1914. He was also president of the National Coal Association during 1929-34.

**Boix, Joseph Henri Honoré.** See ROSNY, J. H.  
**Bonci, Alessandro.** Italian lyric tenor; died in Italy, August, 1940; born in Cesena, Italy, in 1870. Oscar Hammerstein brought him to the Manhattan Opera House in 1906 as a counter-attraction to Enrico Caruso, who was at that time starring for the Metropolitan Opera Co. After two years Bonci transferred to the Metropolitan while Hammerstein, charging breach of contract, sought in vain to halt his appearance there. Addicted to emotional explosions, Bonci quit the Metropolitan suddenly in 1909 and returned to Italy. He toured the American concert halls during 1910-11, and was with the Chicago Opera Co. in 1920-21. Many critics regarded him as a greater singer than Caruso.

**Book, William F.** American psychologist; died in Long Beach, Calif., May 22, 1940; born in Princeton, Ind., June 10, 1873. Professor of psychology at the University of Montana (1906-12), he became professor of educa-

tional psychology at Indiana University in 1913. During 1913-17 he was director of vocational education there, and after 1917 was professor of psychology and director of the Psychology Laboratory until his retirement in 1934. He taught at the summer sessions at Indiana, Columbia, Wisconsin, and Hawaiian universities and was the author of numerous articles and books on education and psychology, the latest being *Economy and Technique of Learning* (1931).

**Booth, Ballington.** American welfare worker; died in Blue Point, L.I., Oct. 5, 1940; born in Brighouse, Eng., July 28, 1859. He was the son of William Booth, founder of the Salvation Army, after serving as commander in Australia and the United States, he broke with his father in 1896, and formed the Volunteers of America, a religious reform and benevolent organization, which he headed as general in chief and Ordained presbyter.

**Borah, William E.** American Senator, died in Washington, Jan. 19, 1940; born in Fairfield, Ill., June 29, 1865. A lawyer by profession, in 1907 he was elected Senator from Idaho on the Republican ticket and was re-elected thereafter to each succeeding term. Dean of the Senate, he served as a member of the judiciary, labor, and education committees and as chairman of the Indian depredations, the expenditures in the Department of Justice, the Inter-oceanic canals, and the education and labor committees. From 1924 to 1932 he was chairman of the committee on foreign relations. The highlights of his career were: successful opposition to American entrance into the League of Nations and the World Court (1920); the limitation of arms conference in Washington (1922), and his unsuccessful opposition to the repeal of the arms clause of the Neutrality Act (1939). He also waged a long fight against monopolies and advocated the federal licensing of corporations—a measure sponsored jointly with Senator O'Mahony of Wisconsin. Although an isolationist in foreign affairs and an opponent of "entangling alliances," he was a strong believer in world peace and the reduction of armaments. In his domestic policy he was a firm believer in constitutionality, and often found himself against bills with which he was in sympathy but which he felt were unconstitutional, as the anti-lynching bill.

**Bordenave, Enrique.** Paraguayan diplomatist, minister to the United States during 1933-36, died in Asuncion, Jan. 24, 1940, born in Barrero Grande, Oct. 30, 1889.

**Bosch, Carl.** German chemist, chairman of the board of directors of the I. G. Farbenindustrie Aktiengesellschaft; died in Heidelberg, Apr. 26, 1940, born in Cologne, Aug. 27, 1874. In 1931 he shared the Nobel prize in chemistry for his process of large-scale production of ammonia through adaptation of the Haber process in the synthesis of nitrogen and hydrogen.

**Bosley, Mrs. Elizabeth Cromwell.** American turf-woman, died in an auto accident near Baltimore, Md., Dec. 9, 1940, born in 1895. She was a nationally known breeder and trainer of thoroughbreds, and brought out *Chase Me*, which was one of the few unbeaten horses of turf history.

**Bostwick, Lucius Allyn.** American naval officer; died in Washington, Jan. 14, 1940; born in Providence, R.I., Feb. 21, 1869. After graduation from the Naval Academy in 1890 he held various posts and was advanced successively to the grade of rear admiral in 1923. As commander of the battleship division, Battle Fleet 1929-30, he held the rank of vice admiral. He retired Mar. 1, 1933.

**Bothesat, George de.** American aerodynamics expert; died in Boston, Mass., Feb. 1, 1940; born in Bessarabia, Russia in 1884. In 1922 he built for the U. S. Army Air Corps the first helicopter to make sustained hovering flights.

**Bouglé, Célestin.** French sociologist, professor of social economy at the Sorbonne from 1901 and director of l'École Normale Supérieure; died in Paris, Jan. 25, 1940; born in 1870. His latest work was *Bilan de la sociologie française contemporaine* (1935). In 1926 he lectured at Harvard and in 1938 at Columbia University.

**Bourne, Jr., Jonathan.** American ex-senator; died in Washington, D.C., Sept. 2, 1940; born in New Bedford, Mass., Feb. 23, 1855. He was a member of the Oregon House of Representatives in 1885, 1886, and 1892, and served as United States Senator from 1907 to 1913, being the first to be elected by popular vote. He was the author of the parcel-post law.

**Bower, Sir Hamilton.** British soldier and explorer; died in London, Mar. 7, 1940; born, Sept. 1, 1858. In the Army from 1880 to 1912, he was the first European to cross the Tibetan plateau, for which he received the Founder's medal of the Royal Geographical Society.

**Boycott, Arthur St. John.** British riding master; died in Newark, N.J., Oct. 27, 1940; born in Norfolk Co., Eng., 1862. In his youth he lived with an uncle, Capt. Charles C. Boycott, on a farm in County Mayo, Ireland; and the actions of tenant-farmers, involved in a labor dispute with the elder Boycott, resulted in the coining of the word "boycott." St. John Boycott served as master

of the hounds for many wealthy families in the United States.

**Boylan, William A.** American educator, first president of Brooklyn College, Brooklyn, N.Y., (1930-38); died in New York, July 8, 1940; born there, Jan. 6, 1869. He was a graduate of St. Francis Xavier College (1887), had taught in the New York City public schools, and served (1927-30) as associate superintendent of schools.

**Brady, John F.** American Roman Catholic monsignor, died in New York City, Dec. 27, 1940; born in New York City in 1871. Shortly after his graduation therefrom in 1898, he became professor of science at St. Joseph's Seminary, Troy, N.Y., a position he held for 18 years. He was rector of the Church of St. Francis de Sales since 1916 and director of Catholic hospitals of the archdiocese of New York since 1918.

**Brand, Albert B.** American ornithologist; died in Ithaca, N.Y., Mar. 28, 1940, born in New York in 1889. He retired from the business world in 1929 to make a study of birds and subsequently became research associate in the Department of Ornithology at Cornell University and the American Museum of Natural History. He was an authority on the recording of bird calls and had made expeditions to all parts of Canada and the United States.

**Brandenburg, William A.** American educator and lecturer; died on Oct. 29, 1940, born in Clayton Co., Ia., Oct. 10, 1869. He was graduated from Drake University and later was superintendent of schools at Mason City, Ia., and Oklahoma City. After 1913 he was president of Kansas State Teachers College.

**Branly, Edouard.** French physicist, died in Paris, Mar. 24, 1940; born in Amiens, Oct. 23, 1844. Associated with the Institut Catholique for many years, his discovery of the principle of the coherer, one of the first successful devices used as a detector of wireless signals, led to his election to the French Academy of Sciences. In 1903 he shared the Osiris Prize with Mme Curie.

**Brennen, Joseph D.** American character actor, died in Philadelphia, Pa., Dec. 10, 1940, born in New York City, 1858. He became famous as "Simon Legree" in *Uncle Tom's Cabin*, a role he played for several years in a cast headed by Otis Skinner. He appeared also in plays with David Belasco, William Gillette, and David Warfield.

**Brentano, Theodore.** American lawyer; died in Larchmont, N.Y., July 2, 1940; born in Kalamazoo, Mich., Mar. 29, 1854. He was a judge of the Superior Court of Cook Co., Ill., from 1890 to 1921, and served as Envoy Extraordinary and Minister Plenipotentiary to Hungary from 1922 to 1927 when he retired.

**Brittingham, Juan F.** American industrialist; died in Los Angeles, Calif., Oct. 28, 1940; born in St. Louis, Mo., 1859. Visiting Mexico on a vacation in 1883, he turned the trip into a 57-year stay. In Gomez Palacio, in the State of Durango, where he made his home, he founded Mexico's first cottonseed oil mill and soap factory, later building the first glass factory and cement plant at Monterey. He changed his given name from John to Juan and was known throughout Mexico as Don Juan.

**Bronner, Harry.** American financier; died in New York City on Dec. 21, 1940; born thereat in 1868. A graduate of the College of the City of New York, he began his banking career in 1887 with Hallgarten and Co.; became senior partner in the firm and a member of 33 boards of directors; and retired in 1917 from Hallgarten and Co., to become chairman of the board and president of the Missouri Pacific Railroad Co. and a dominant factor in many other corporations. From 1920 to 1930 he was a director of Blair and Co., investment bankers, and of its successor, Bancamerica-Blair Corp. Among the many reorganizations with which he was connected was that of the old Maxwell Motors Corp. As chairman of the reorganization committee of the firm he was instrumental in securing for the reorganized company the services of the late Walter P. Chrysler. The reorganized company later became part of the Chrysler Corp.

**Brookfield, Robert M.** American major general; died in Philadelphia on Dec. 20, 1940; born in 1873. A graduate of West Point (1896), he served in the Spanish-American and World Wars; became a brigadier general in 1926 and a major general three years later.

**Brown, Donald Lamont.** American manufacturer; died in New York, Jan. 29, 1940; born in Berlin, Wis., Nov. 17, 1890. Associated with the aeronautical industry from 1917, in 1930 he was elected president of Pratt & Whitney Aircraft Co., and upon the organization of the United Aircraft Corporation in 1934 he was elected president.

**Brown, James Buckner.** American banker; died in Louisville, Ky., Oct. 24, 1940; born in Lawrenceburg, Ky., 1872. Early in the 1920's he founded and headed the Banco Kentucky Corporation, a \$50,000,000 holding company for several banks, which crashed in November, 1930. He was also publisher for a time of the Louisville *Herald-Post*.

**Bruneau, Arthur Aime.** Canadian jurist; died in Montreal, Que., Can., Dec. 1, 1940; born in St. Anthonase, Que., Mar. 4, 1864. He was a Superior Court Judge

(1908-28) and represented Richelieu Riding, Quebec, in the House of Commons (1892-1908).

**Brush, Matthew Chauncey.** American industrialist; died in New York City, N.Y., Oct. 15, 1940; born in Stillwater, Minn., 1877. Turning to railroad work after graduation from the Massachusetts Inst. of Technology in 1901, he became president of the Boston Elevated Railroad, 1914-15, 1916-18; president of the American International Ship-building Corp., 1918-21, and served as president of the American International Corp., one of the largest investment companies in the United States, from 1923 to 1935.

**Bruny, William Edmund.** American rubber expert; died in New York City, N.Y., Oct. 31, 1940; born in Rosendale, N.Y., 1879. He was with the importing firm of Littlejohn and Co., New York City, since 1905 and in latter years was treasurer and director; he was also a director and former president of the Rubber Trade Association of New York.

**Buchan, Sir John.** See **TWEEDSMUIR, 1st BARON, OF ELSFIELD**.

**Buchanan, Sir George.** British engineer; died in Ditchingham, Norfolk, Apr. 14, 1940; born Apr. 20, 1865. A consulting engineer, a specialist in harbor, dock, and river works and the economics of transport, his services were called for, not only throughout the Empire, but also in Venezuela, Argentina, and Spain. Among his more notable achievements were the Rangoon River Training Works, costing a million pounds sterling, the new port of Basra, and the river improvements on the Tigris and Euphrates. He was the author of several books on ports and rivers.

**Bunau-Varilla, Philippe J.** French engineer; died in Paris, May 18, 1940; born there, July 26, 1859. He served as chief engineer of the French Panama Co. in its unsuccessful attempt to build the Panama Canal in 1885, and in 1893 was Minister Plenipotentiary of the Republic of Panama to the United States; as such he signed the Hay-Bunau-Varilla treaty granting the United States the right to complete the canal and operate it in perpetuity.

**Bundy, Omar.** American soldier; died in Washington, Jan. 21, 1940, born in Newcastle, Ind., June 17, 1861. In the army from 1887, he served with the American Expeditionary Forces in France and was known for his work at Chateau Thierry and Belleau Woods. He retired in 1925 with the rank of major general.

**Burdick, Charles Kellogg.** American legal educator; died in Ithaca, N.Y., June 22, 1940; born in Utica, N.Y., Feb. 7, 1883. He became professor of law at Tulane University in 1909; in 1912 he joined the faculty of the University of Missouri and in 1914 that of Cornell, where he served as acting dean, 1923-24 and 1925-26, and as dean, 1926-36. Active in civic affairs, he was a member of the New York State Commission to Investigate the Administration of Justice (1931-39), chairman of the New York State Law Revision Commission after 1934, and Counsel to Governor Lehman of New York in the Geoghan removal proceedings (1936). He edited *Burdick's Law of Torts* (4th ed., 1926) and *Burdick's Cases on Torts* (4th ed., 1929).

**Burkam, Elsey G.** American journalist, editor, and publisher of the Dayton (Ohio) *Journal* and Dayton *Herald* (1910-35); died in Dayton, Mar. 13, 1940; born in Lawrenceburg, Ind., Dec. 7, 1872.

**Burke, James.** American inventor; died in Erie, Pa., Jan. 21, 1940; born in Ireland, Apr. 7, 1873. He was founder (1890) and president of the Burke Electrical Co., retired in 1931, and was known for his invention of the three-wire generator, the universal motor, and the "teaser" system for electrical printing-press control. He was president of Edison Pioneers, 1936-39.

**Burkhardt, Wilbur N.** American journalist, editor, and vice-president of the *San Francisco News* from 1923; a suicide in San Francisco, June 27, 1940; born in Altoona, Ia., Nov. 11, 1899.

**Burns, James Aloysius.** American Catholic educator; died in South Bend, Ind., Sept. 9, 1940; born in Michigan City, Ind., Feb. 13, 1867. He graduated from the University of Notre Dame in 1888, and was ordained a priest in 1893. He became president of Holy Cross College in 1900, and president of the University of Notre Dame, 1919-22. Named provincial superior of the Congregation of the Holy Cross in 1927 he became assistant superior general in 1938. In 1904 he was one of the founders of the Catholic Education Association.

**Burt, William H.** American general; died in Westwood, Mass., Nov. 21, 1940; born in Provincetown, Mass., 1866. He entered military service as a corporal in the First Vermont Volunteer Infantry in 1898; was commissioned a first lieutenant in 1900 and a brigadier general in the World War. He retired Sept. 30, 1934.

**Burton, Lewis William.** American Protestant Episcopal bishop; died in Lexington, Ky., Oct. 17, 1940; born in Cleveland, O., Nov. 9, 1852. He graduated from Kenyon College in 1873, and from the Philadelphia Divinity

School in 1877. He received the Doctor of Divinity degree from Kenyon College, and the College of the South in 1896. Ordained a priest in 1878, he was consecrated bishop of Lexington, Ky. in 1896, retiring in 1928.

**Burwash, Lashlin Taylor.** Canadian Arctic explorer; died near Coburg, Ont., Dec. 21, 1940; born thereat in 1874. He was graduated from the University of Toronto in 1896; was an engineer for the Dominion government in the Yukon Territory from 1897 to 1912; and chief Arctic investigator for the Canadian government from 1923 to 1932. He made several trips to the Far North and collected much geographical and other scientific data, despite harrowing hardships and obstacles. He was one of the searchers for the ill-fated Franklin expedition of 1845 and after months in the north in 1928, 1929, and 1930 he found sufficient traces to map the route of the lost expedition which, under the leadership of Sir John Franklin, had sought the Northwest Passage. In 1930, with W. E. Gilbert, his pilot, he was the first man to fly over and map by aerial photography the north magnetic pole, to which all compass needles in the Northern Hemisphere point. He was a lieutenant in the Canadian forces in France in the World War and suffered injuries in battle.

**Bush, Lincoln.** American civil engineer; died in East Orange, N.J., Dec. 11, 1940; born in Cook Co., Ill., Dec. 14, 1860. He was graduated from the University of Illinois (1888) and after holding various engineering jobs in the middle west he entered the employ of the Delaware, Lackawanna, and Western Railroad in 1899 as a bridge engineer, progressing to chief engineer, a position he resigned in 1908 to open up a consulting engineer's firm in New York City. He was a colonel in the Quartermaster Corps in the World War and designed and supervised the construction of military terminals at Brooklyn, Port Newark, Boston, Philadelphia, Norfolk, Charleston, and New Orleans, and of 14 warehouses and three arsenals.

**Butler, Jr., James.** American merchant; died in Katonah, N.Y., Oct. 20, 1940; born in 1891. The son of the founder of the Butler grocery chain was killed when a horse he was schooling failed to make a jump. In 1934 he succeeded his father as president of the James Butler Grocery Co. and the Empire City Race Track.

**Butler, Mother Mary Joseph.** American educator, died in Tarrytown, N.Y., Apr. 23, 1940, born in Kilkenny, Ireland, July 22, 1860. A member of the Congregation of the Religious of the Sacred Heart of Mary, she was founder and president (1918-26) of Marymount College. After 1926 she was Superior General of the Order.

**Butler, Smedley D.** American marine officer; died in Philadelphia, June 21, 1940; born in West Chester, Pa., July 30, 1881. Appointed to the United States Marine Corps in 1898, he was promoted through the grades to brigadier general (1921) and major general (1929) and was retired on Oct. 1, 1931. He received Congressional Medals of Honor for his work in Mexico (1914) and in Haiti (1917). Under a leave of absence he acted as Director of the Department of Safety, Philadelphia, 1924-25. In 1932 he was an unsuccessful candidate for the Republican nomination for United States Senator from Pennsylvania.

**Butte, George Charles.** American lawyer; died in Mexico City, Jan. 18, 1940; born in San Francisco, May 9, 1877. Professor of law at the University of Texas from 1914 and dean of the law school during 1923-24, he was Republican candidate for governor of Texas in 1924. He served as attorney general of Puerto Rico from 1925 to 1928 and during that period was acting governor three times. He was vice-governor of the Philippine islands during 1930-32 and associate justice of the Supreme Court there during 1932-36.

**Byrne, Edward J.** Irish Roman Catholic Archbishop of Dublin from 1921 and Primate of Ireland from 1927; died in Dublin, Feb. 9, 1940; born there, May 10, 1872.

**Byrne, John J.** American soldier; died in New York, Apr. 14, 1940; born there, Sept. 13, 1872. He joined the New York National Guard in 1890 and was promoted to brigadier general in 1929 and made chief of coast artillery of the Guard. He was retired as major general in 1935.

**Bywater, Hector Charles.** British naval expert and journalist; died in Richmond, Surrey, Eng., Aug. 17, 1940; born in London, Oct. 21, 1884. He was naval correspondent of the London *Daily Telegraph*, the Navy League in Germany, *Naval and Military Record*, *Fall Mail Gazette*, *Daily Graphic*, *Daily News and Observer*, and the *Baltimore Sun*. He served with the British Naval Intelligence throughout the World War. Author of *Sea Power in the Pacific* (1921); *The Great Pacific War* (1925), and others.

**Calderson, Salvador.** Nicaraguan naturalist; died in San Salvador, El Salvador, Nov. 9, 1940; born in Nicaragua, 1884. He was the author of *Flora of Salvador* and other scientific works.

**Caldwell, Charles Pope.** American lawyer; died in Sunnyside, Queens, L.I., July 31, 1940; born in Bastrop

Co., Tex., June 18, 1875. After receiving the LL.B. degree from the University of Texas in 1898 and from Yale University in 1899, he was admitted to the N.Y. Bar in 1900. He was a member of the 64th to 66th Congresses, 1915-21. In 1926, Mayor Walker of New York City appointed him Associate Justice of the Court of Special Sessions for a ten-year term, after which he resumed his law practice.

**Calfee, John Edward.** American educator; died near Asheville, N.C., Nov. 28, 1940; born in Arcola, Mo., Feb. 7, 1875. He was graduated from Park College, Mo. (1905); was professor of natural science and mathematics, respectively, at Tusculum and Berea Colleges (1907-16); and was president of Asheville Normal Teachers College (1916-37).

**Callahan, Patrick Henry.** American manufacturer, president of the Louisville Varnish Co.; died in Louisville, Ky., Feb. 4, 1940, born in Cleveland, O., Oct. 13, 1866. He was a leader in Catholic affairs and the prohibition and other reform movements. In 1922 he was made a Knight of the Order of St. Gregory by Pope Pius XI.

**Callan, John Guernsey.** American inventor; died at Cambridge, Mass., on Dec. 30, 1940; born at Northfield, Conn., Apr. 7, 1875. He was graduated from Massachusetts Institute of Technology in 1896; was professor of steam and electric engineering at the University of Wisconsin from 1915 to 1920; and professor of industrial management at the Harvard Business School since that time. He held 70 patents on steam turbines and other industrial engines and was responsible for numerous advances in steam engine development.

**Callistos, Bishop.** Greek Orthodox bishop; died in Chicago, Ill., Nov. 28, 1940, born near Patras, Greece, 1875. He came to the United States in 1905 and was head of the San Francisco diocese before becoming Bishop of Chicago in 1931.

**Callow, John Michael.** English metallurgist and mining engineer; died in Redhill, Surrey, Eng., July 27, 1940; born in Northrepps, Norwich, Norfolk, July 7, 1867. Known internationally for his work in metallurgy, he invented the settling tank and traveling belt screen, and originated pneumatic flotation in treating ores, holding 18 patents in all. Coming to the United States in 1890, he worked for various engineering and mining companies, and became president of the General Engineering Co. in 1906, retiring in 1933.

**Calverton, Victor Francis (George Goets).** American writer and lecturer, died in New York City, Nov. 20, 1940, born in Baltimore, Md., June 25, 1900. He was graduated from Johns Hopkins University in 1921 and in 1923 founded the *Modern Quarterly*, a magazine later known as the *Modern Monthly*, which he edited until his death. His many works included *Three Strange Lovers*, 1929; *The Man Inside*, 1936; *Between Two Wars*, 1940; and he was co-author of *Sex in Civilization*, 1929. He took Calverton as a pen name in 1923.

**Camach, Charles Nicoll Bancker.** American physician and educator; died in Altadena, Calif., Sept. 27, 1940; born in Philadelphia, Pa., Aug. 6, 1868. After receiving his medical degree from the University of Pennsylvania in 1895, he took a post-graduate course at Johns Hopkins University Medical School, 1895-97, and became assistant to Sir William Osler there, and later compiled his writings. He taught at the University of Pennsylvania, 1895, Cornell University Medical Coll., 1899-1910, the Coll. of Physicians and Surgeons, Columbia University, 1910-38, and the Polyclinic Hospital Medical School, 1934-36. Serving in the World War, he attained the rank of lieutenant colonel.

**Cameron, Henry George.** Canadian physician; died in Weyburn, Saskatchewan, Can., Aug. 6, 1940; born in Greenock, Scot., in 1895. He was renowned for his discovery of cardiazin, a heart stimulant, in 1926, and was associated for a time with Sir Frederick Banting, a discoverer of insulin.

**Camp, Walter, Jr.** American motion picture executive; died in Westwood, Calif., on Dec. 31, 1940; born in New Haven, Feb. 11, 1891, the son of Walter Camp, famous football coach. He played on the freshman and varsity football teams at Yale University; was graduated in 1913; entered the shipping and banking business and at the time of his retirement in 1935 was president of Inspiration Pictures, Inc., a photoplay concern.

**Campbell, Beatrice Stella (Mrs. Patrick).** British actress, died in Pau, France, Apr. 9, 1940; born in London, Feb. 9, 1865. Her professional debut was made in 1888 and in 1893 she achieved success in the role of Paula Tanqueray in *The Second Mrs. Tanqueray*. Other of her important roles were in *The Notorious Mrs. Ebbsmith* (1895), *The School for Scandal* (1896), *Hamlet* (1897), *Pelleas and Melisande* (1898), *Hedda Gabler* (1907), *Pygmalion* (1914). In 1902 she made her American debut and thereafter made frequent appearances there. After 1914 she was seen mostly in revivals of her early successes. In 1882 she married Patrick Campbell, who died in 1900, and in 1914 she married George Cornwallis-

West. Her memoirs, *My Life and Some Letters* appeared in 1922.

**Cantu, Giuseppe.** Italian admiral and commissioner general for Italy to the New York World's Fair; died in New York City, Oct. 24, 1940; born in Orzinuovi, Italy, May 24, 1873. A graduate of the Royal Naval Academy, he served in the Far East in 1899 and 1900 and in 1903 was appointed aide-de-camp of the Commander of the Royal Italian Navy. He saw active service in the Italian war against Turkey and in China during the Boxer Rebellion. In 1935 he was nominated admiral and president of the Council of the Royal Italian Navy. In December, 1937, he was placed in charge of Italy's exhibit at the New York World's Fair.

**Carpenter, Sir. H. O. Harold.** British metallurgist; died near Swansea, Wales, September, 1940; born on Feb. 6, 1875. He was educated at Oxford, Leipzig, and Manchester Univs. In 1901 he became head of the chemical and metallurgical depts. of the National Physical Laboratory, and was professor of metallurgy at Victoria Univ. 1906-13. A former president of the Institute of Metals and the Institution of Mining and Metallurgy, he was professor of metallurgy in the Royal School of Mines at his death. He received many honors, including the Carnegie gold medal (1905).

**Carpenter, Lewis Van.** American engineer; died in New York, May 10, 1940; born in Wheeling, W. Va., Dec. 25, 1894. In 1929 he became professor of sanitary engineering at the University of West Virginia, and in 1932 was made chairman of the department of civil engineering. He joined the faculty of New York University as professor of sanitary engineering in 1935. Also he was director of the Sanitary Research Laboratory conducted by the University and the City of New York.

**Carson, John Beshaw.** American research engineer; died in New Hope, Pa., Oct. 31, 1940; born in Pittsburgh, Pa., June 28, 1887. He was graduated from Princeton University in 1907; and in 1913 entered the engineering department of the American Telephone and Telegraph Co. and took part in the early radio-telephone experiments. He was responsible for several of the earliest installations of the carrier current system, which permits the transmission of several calls over one circuit. He also developed the mathematical background for the use of metal pipes to guide radio waves. In 1934 he joined the technical staff of the Bell Telephone Laboratories. He was the author of *Electric Circuit Theory and the Operational Calculus* and of a book published in German.

**Casey, Edward Pearce.** American architect; died in New York, Jan. 2, 1940; born in Portland, Me., June 18, 1864. He was architect for the Library of Congress, Washington, during 1892-97 and the winner of the New York City Hall competition in 1893 and the Grant Monument competition in 1902.

**Caulfield, Alfred H. W.** Canadian pathologist; died in Toronto, May 2, 1940; born in Eden, Ont., in 1879. An authority on respiratory diseases, he was consultant for the diseases of the lungs of the Department of Pensions and National Health, and a research member of the Connaught Laboratory of the University of Toronto.

**Cavero, Salvador.** Peruvian politician; first Vice-President of Peru (1908-12); died in Lima, Feb. 19, 1940; born in 1850. He was Peruvian legal adviser in the Tacna-Arica arbitration proceedings in 1923.

**Chamberlain, (Arthur) Neville.** British statesman; died at Highfield Park, Heckfield, Hampshire, Eng., Nov. 9, 1940; born on Mar. 18, 1869. He was the second son of the late Joseph Chamberlain, British imperialist statesman; and a half-brother of Austen Chamberlain, British Foreign Secretary, who engineered the Locarno Treaties in 1925. Neville's mother was Florence, daughter of Timothy Kenrick of Birmingham. He was educated at Rugby and Mason College, Birmingham; and after graduation resided in the Bahama Islands (1890-97). In 1911 he married Annie Vere, daughter of the late Major W. U. Cole; they had one son and one daughter.

A successful manufacturer in Birmingham, Chamberlain was elected to the Birmingham City Council (1911) and became chairman of its Town Planning Committee, in which latter position he attained national fame for his accomplishments in the field of better housing and slum-clearance. A member of the Conservative party, he was Alderman (1914) and Lord Mayor of Birmingham (1915-16); Director-General of National Service (1916-17); Postmaster-General (1922-23); Paymaster-General (1923); Minister of Health for awhile in 1923 and from 1924 to 1929, and again from August to November, 1931. He was also Chancellor of the Exchequer in 1923-24 and in 1931-37. He was chairman of the Unionist Party (1930-31); and was Prime Minister and First Lord of the Treasury from May 28, 1937, to May 9, 1940.

As Minister of Health and in other governmental posts, Mr. Chamberlain was identified with national housing projects, reform of the poor law, and the final legislation which brought the widows' pension law into actual operation. As Chancellor of the Exchequer, he repeatedly ig-

nored the United States war debt in his budget compilations.

When he became Prime Minister, Mr. Chamberlain embarked on a policy of appeasing Hitler, either in the belief that he could thus assure the peace of Europe or as a desperate temporizing device to permit Great Britain to build up her armaments. The German absorption of Austria brought merely perfunctory protests from Downing Street. Hitler's threat to invade Czechoslovakia sent Chamberlain scurrying to Germany (on his first airplane ride, and with his umbrella tucked under his arm), in an effort to conciliate the German Chancellor. In all, Mr. Chamberlain made three airplane flights to Germany (September 15, September 22, and September 30). On the last occasion, Messrs. Chamberlain, Daladier of France, Mussolini of Italy, and Hitler of Germany signed the famous accord in Munich by which Germany was given access to the Sudeten and other predominantly Teutonic areas of Czechoslovakia, thus easing the way to eventual dismemberment of the young republic.

Upon his return to England, Chamberlain said: "This is the second time in our history that there has come back from Germany to Downing Street a peace with honor. I believe it is peace in our time."

When in March, 1939, Hitler took over Czechoslovakia in toto, Mr. Chamberlain declared: "I bitterly regret what has occurred, but do not let us be deflected from our course. Acts of violence and injustice will sooner or later bring their own reward."

Mr. Chamberlain made no further attempts at appeasement, however, and two days after the first German soldier invaded Poland, Great Britain was at war. Mr. Chamberlain fell from power because of public dissatisfaction with the progress of Britain's war effort.

He was buried in Westminster Abbey.

**Chamberlain, Paul Mellen.** American mechanical engineer; died in Keene, N.Y., May 27, 1940; born in Three Oaks, Mich., Feb. 28, 1865. An engineer in private industry from 1890, he taught mechanical engineering at the Michigan Agricultural College (1893-96) and at Lewis Institute, Chicago (1899-1906). Until his retirement in 1917 he was a consulting engineer. He was an authority on timepieces, their history, and their construction.

**Chambers, Frank E.** American merchant; died in Bronxville, N.Y., Apr. 30, 1940, born in Mobile, Ala., Sept. 3, 1850. One of the original partners of Rogers Peet Co., in 1874, he was its president several times and after 1936 was chairman of the board of directors.

**Chandler, Swithin.** American surgeon and diagnostician; died in Stratford, Philadelphia, Pa., Dec. 10, 1940; born in Centreville, Del., 1870. Immediately upon his graduation from the University of Pennsylvania Medical School at the age of 21, he was elected chief surgeon of Delaware Hospital, Wilmington. He was the inventor of several brain surgery instruments and was associate professor of surgery at Temple University from 1918 to 1928. In 1916 he was chief sanitary officer of El Paso, Texas.

**Chandler, Sir William K.** Barbados legislator, member of the legislative council from 1884 and its president in 1912; died in Bridgetown, Barbados, May 24, 1940; born Feb. 19, 1857.

**Chang Shan-Tse.** Chinese painter; died in Chungking, China, Oct. 19, 1940; born in 1878. Known as "the most eminent painter in modern China," he specialized in painting tigers. Fordham University received two paintings, valued at \$5000 each from him in April, 1939. Formerly a major general in the Imperial Court, he joined the revolutionists and became a diplomat for the Republic. In 1937 he was converted to Catholicism, and later he traveled in Europe and the United States, raising funds for the Chinese Government Relief Mission.

**Chapin, Howard Millar.** American librarian; died in Providence, R.I., Sept. 18, 1940; born in Providence, May 11, 1887. Graduating from Brown University in 1908, he was in various businesses until 1912, when he was appointed librarian of the Rhode Island Historical Society, holding this post until his death. He was noted as an authority on Colonial history and heraldry. Author of many books and papers, his best-known work was *Documentary History of Rhode Island* (2 vols.).

**Chase, William Sheafe.** American clergyman; died in Kings Park, L.I., July 16, 1940; born in Amboy, Ill., Jan. 11, 1858. Graduating from Brown University in 1881, he entered the Episcopal Theological School, from which he graduated in 1885. He was honorary canon of the Cathedral of the Incarnation and chaplain of St. Paul's School, Garden City, L.I., 1902-05. When he became rector of Christ Church, Bklyn., N.Y., in 1905, he started national crusades against betting, drinking, war, movies, and Sunday baseball, and all other forms of temptation, and was a leader in a number of reform organizations. He retired in 1932.

**Chilperfield, Burnett Mitchell.** American lawyer; died in Canton, Ill., June 24, 1940; born in Dover, Ill., June

14, 1870. Active in Republican politics, he was a member of the 64th (1915-17) and the 71st-72nd (1929-33) Congresses from Illinois. A member of the Illinois National Guard from 1904 to 1934, he served as judge advocate general of the 3d Army Corps of the Army of Occupation in Germany in 1918-19.

**Chitambar, Jashwant Rao.** Indian Methodist bishop; died in India, Sept. 4, 1940; born in 1875. He was graduated from Lucknow Christian Coll., Allahabad Univ., and the Methodist Theological School in Bareilly, India. From 1916-31 he was president of Lucknow Christian Coll., when he became the first Indian to be elevated to the Methodist episcopacy. Mahatma Gandhi was a close friend, and was the subject of a book by him.

**Christoff, Theodore.** Bulgarian diplomatist; died in Moscow, June 20, 1940; born in Kasanlik, Bulgaria in 1890. In the diplomatic service from 1924, he was minister to Germany (1935-36), to Turkey (1936-39) and to Moscow thereafter. He wrote *Das Heutige Bulgarien* (1931).

**Christopher, Prince of Greece;** died in Athens, Jan. 21, 1940; born in St. Petersburg, Russia, July 29, 1888, the son of King George I of Greece, and Queen Olga. On Feb. 1, 1920, he was married to Mrs. William B. Leeds, widow of a Cleveland tin plate manufacturer. She died in 1923.

**Chrysler, Walter Percy.** American auto manufacturer; died at Great Neck, L.I., Aug. 18, 1940, born in Wamego, Kan., Apr. 2, 1875. Graduating from high school, he became a machinist's apprentice in a railroad shop. At 33 he had risen to superintendent of motive power and machinery of the Chicago Great Western line, and in 1911 was manager of the Pittsburgh works of the American Locomotive Co. Turning to the automobile field he became works manager of the Buick Motor Co., 1912-16, and president and general manager, 1916-19. He was vice-president of General Motors Corp., 1919-20, and resigning, became vice-president of the Willys-Overland Co., 1920-22. Reorganizing the Maxwell Motor Corp. to straighten out its financial difficulties, he again reorganized it in 1925 as the Chrysler Corp., becoming president and chairman of the board. He resigned the presidency in 1935 but remained as chairman of the board until the time of his death.

**Churchill, Allen L.** Former associate editor of *THE NEW INTERNATIONAL ENCYCLOPEDIA* and *THE YEAR BOOK*, died in Flushing, Queens, N.Y., Nov. 15, 1940, born in Houlton, Me., Feb. 26, 1873.

**Clark, Marguerite.** American actress; died in New York City, N.Y., Sept. 25, 1940; born in Avondale, Cincinnati, O., Feb. 22, 1887. She was educated in the Ursuline Convent, Brown Co., O., and made her stage debut in Baltimore in 1900 under Milton Aborn. Appearing with De Wolf Hopper as a child actress at fifteen, she co-starred with him within two years, and starred in several Shubert musical shows, as well as numerous successful plays. In 1914 she was signed by Adolph Zukor of Famous Players for the silent films, and was one of the biggest "box-office" stars in 1917-18. After her marriage to Harry P. Williams, wealthy Louisiana lumber man and plantation owner, in 1918, she retired from the films in 1920. At his death in 1936 she managed his large interests in Louisiana. Included in the long list of successful plays and pictures, were *Prunella*, *Wishing Ring*, *Babes in Toyland*, *Snow White*, *Baby Mine*, *Wild Flower*, *Goose Girl*, *The Crucible*, and *The Seven Sisters*.

**Coefield, John.** American labor leader, president of the United Association of Journeymen Plumbers and Steamfitters and a vice-president of the American Federation of Labor; died in Washington, Feb. 8, 1940; born near Franklin, Pa., in 1870.

**Cogliolo, Pietro.** Italian senator; died in Genoa on Dec. 14, 1940; born in 1858. A university professor and specialist in aeronautical law, he drafted Italy's aviation code in 1923, and was appointed a senator in 1933.

**Coleman, Georgia.** American diving champion, died in Los Angeles, Calif., Sept. 14, 1940, born in 1912. She became world famous in the 1928 Olympic games at Amsterdam, where she won all the diving events, a feat she repeated in the national championships. She won the fancy diving contest in the Olympic games at Los Angeles, 1932, and the Women's Amateur Athletic Union in the same year. Turning professional, she taught swimming and acted in motion pictures. In 1937 she contracted infantile paralysis which affected her limbs and organs of speech, but recovered a year later and resumed teaching.

**Collins, Eddie.** American stage and screen actor; died in Arcadia, Calif., on Sept. 1, 1940, born in Jersey City, N.J., Jan. 30, 1884. He played the role of "Jiggs" in the original stage production of *Bringing Up Father* (1911) and from 1914 to 1930 toured the United States with his own musical comedy company of 20 persons called Mr. and Mrs. Eddie Collins's Big Revue. Walt Disney used him as the model for Dopey in the motion picture *Snow White and the Seven Dwarfs* and he spent practically a whole year in the Disney studio while his facial expres-

sions were being photographed for the eventual amusement of America's millions.

**Collins, Edward Day.** American educator; died in Middlebury, Vt., Jan. 1, 1940; born in Hardwick, Vt., Dec. 17, 1869. Associated with Middlebury College from 1909, he was professor of pedagogy until 1912, acting president during 1918-19 and 1921, provost, 1919-21, and comptroller, 1923-25, when he retired.

**Colquitt, Oscar Branch.** American politician, governor of Texas for two terms (1911-15); died in Dallas, Tex., Mar. 8, 1940; born in Camilla, Ga., Dec. 16, 1861. In May, 1929, he was appointed a member of the U.S. Board of Mediation.

**Combs, Leslie.** American diplomat; died at Belair Farm, near Lexington, Ky., Nov. 18, 1940; born in Little Compton, R.I., July 31, 1852. He was Minister to Guatemala and Honduras during the administration of President Theodore Roosevelt, and Minister to Peru under President Taft.

**Compton, Virginia Bateman (Mrs. Edward).** British actress, died in London, May 4, 1940; born, Jan. 1, 1853. On the stage from 1865, she appeared with the Compton Comedy Co., after her marriage in 1882. She managed the company after the death of her husband, and in September, 1920, opened the Repertory Theatre in Nottingham. She retired in 1925 and devoted her time to the Theatre Girls' Club, founded by her.

**Condon, Frank.** American short-story writer and humorist; died at Beverly Hills, Calif., on Dec. 19, 1940; born at Toledo, Ohio, in 1882. He was a frequent contributor to the *Saturday Evening Post* and *Collier's*, and wrote many scenarios during his 30 years' residence in the vicinity of Hollywood.

**Connolly, Walter.** American actor; died in Beverly Hills, Calif., May 28, 1940, born in Cincinnati, Apr. 8, 1887. On the stage from 1908, he appeared in *The Woman of Bronze* (1920), *Uncle Vanya* (1930), *Six Characters in Search of an Author* (1931), *The Good Fairy* (1931), *The Late Christopher Bean* (1932), and *The Bishop Misbehaves* (1935). He entered motion pictures in 1932 and was seen in such successes as *The Bitter Tea of General Yen*, *Lady for a Day*, *It Happened One Night*, *The Great Victor Herbert* (1939) in which he played the title role, and *Bachelor Mother* (1940). He was considered one of the most versatile actors of stage and screen.

**Cook, Frederick Albert.** American explorer; died in New Rochelle, N.Y., Aug. 5, 1940; born in Callicoon Depot, N.Y., June 10, 1865. Claiming to have discovered the North Pole on Apr. 21, 1908, he was feted by the King of Denmark after he had emerged from the Arctic on Sept. 1, 1909, and was welcomed upon his return to New York and elected president of the Explorers Club. His fame was short lived, for Admiral Peary's claim that he had reached the North Pole on Apr. 6, 1909, was accepted by scientific men, and Cook was discredited and expelled from the Explorers Club. In 1922 he was sentenced to prison for oil swindles, and was released on parole in 1930. On May 17, 1940, President Roosevelt granted him a full pardon, and to his death he sought to vindicate himself.

**Cook, Robert George.** American physician, died on Oct. 25, 1940, born in Canandaigua, N.Y., Aug. 4, 1864. He fostered State legislation to aid the insane of New York and was the head of Brigham Hall, a private mental hospital at Canandaigua, N.Y., from 1908 to 1928.

**Coolidge, Dane.** American author and naturalist; died in Berkeley, Calif., Aug. 8, 1940; born in Natick, Mass., Mar. 24, 1873. He was graduated from Stanford University in 1898, and did post-graduate work in biology at Harvard University, 1898-99. While in college he was field collector of mammals, birds, and reptiles for several learned institutions. He was an expert in Indian lore and a prolific writer of Western stories. Among his biographies and histories were *Texas Cowboys*, 1937; *Arizona Cowboys*, 1938, *California Cowboys*, 1939. Included in his 40-odd novels were *Silver Hat*, 1934; *Snake-Bit Jones*, 1936; *Wally Laughs Easy*, 1939; *Bloody Head*, 1940.

**Cooper, Courtney Ryley.** American writer; died in New York City, N.Y., by suicide, Sept. 29, 1940; born in Kansas City, Mo., Oct. 31, 1886. Educated in public schools, he ran away and joined the circus. A special writer for several newspapers, 1910-13, and a contributor to magazines from 1912 until his death, he is credited with having written more than 500 stories on jungle animal life, circus life, and Rocky Mountain "high country" life. He was press agent for Sells-Floto Circus and Buffalo Bill, 1914-15. In recent years he became interested in crime study, especially in relation to the F.B.I. He wrote several scenarios, including *Wild Cargo* and *Weary River*.

**Cooper, Oswald Bruce.** American type designer; died in Chicago on Dec. 17, 1940; born in Mt. Gilead, O., in 1879. A printer's devil since the age of 14, he attended the Frank Holm School of Illustration in Chicago in 1901, studying under Frederic William Goudy. He later formed the advertising firm of Bertsch and Cooper and became

one of the foremost type designers in the country. He originated the Cooper Black type, also known as the Cooper Bold and designed the Packard type from work which he had done for the Packard Motor Car Co.

**Cope, Sir Arthur.** British portrait painter; died in Cornwall, July 5, 1940; born Nov. 2, 1857. Among his best-known works were portraits of King Edward VII, the German Emperor, King George V, and "Some Sea Officers of the War."

**Copeland, Benjamin.** American Methodist clergyman and poet; died in Buffalo, N.Y., Dec. 1, 1940; born in Clarendon, N.Y., June 14, 1855. He wrote hundreds of verses which were published in magazines and newspapers; composed a coronation hymn for George VI of England and received letters of thanks from the royal family. He was a direct descendant of John Alden and Priscilla Mullins.

**Cortelyou, George Bruce.** American financier; died at Huntington Bay, L.I., Oct. 23, 1940; born in New York, July 26, 1862. After having been a law reporter, 1883-85, and a New York school teacher, 1885-89, he entered public service, becoming secretary to various officials, including the 4th Assistant Postmaster General. Later he served as secretary to Grover Cleveland, William McKinley, and Theodore Roosevelt, who appointed him first Secretary of the Department of Commerce and Labor, 1903-04, Postmaster General, 1905-07, and Secretary of the Treasury, 1907-09. He was president of the Consolidated Gas Co. of New York, 1909-35.

**Cosden, Joshua S.** American oil producer; died aboard a train at Wilcox, Ariz., en route to El Paso, Tex., from Palm Springs, Calif., Nov. 17, 1940; born in Kent Co., Md., July 8, 1882. He organized and headed several of the largest independent oil refineries, owned a seat on the New York Stock Exchange in the early 1920's; entertained the then Prince of Wales at the Cosden estate at Sands Point, L.I., in 1924; and erected the 16-story Cosden Building in Tulsa, Oklahoma, in 1913, at that time the tallest building in the world.

**Coss, John J.** American educator, died in New Orleans, La., Apr. 28, 1940; born in Lima, O., Mar. 24, 1884. Associated with Columbia University from 1912, after 1920, he was executive officer of the department of philosophy, and director of the University's summer session. He was interested in Negro education.

**Cotter, William Timothy.** British Roman Catholic bishop, died in Portsmouth, Eng., Oct. 24, 1940; born in Cloyne, Ireland, 1866. He was bishop of Portsmouth for 30 years.

**Cowie, David Murray.** American pediatrician; died in Ann Arbor, Mich., Jan. 27, 1940; born in Moncton, N.B., Nov. 19, 1872. Associated with the University of Michigan from 1896, he became professor of pediatrics and infectious diseases in 1920. He was associate editor of the *American Journal of Diseases of Children* during 1912-24 and president of the American Pediatric Society in 1923-24.

**Craigavon, 1st Viscount, James Craig.** Irish statesman, died at Glencraig, near Belfast, Northern Ireland, Nov. 24, 1940; born at Craigavon in Down, Jan. 8, 1871. After serving in the Boer war as a lieutenant, he was elected to the British House of Commons (1906) and was successively re-elected until the Ulster government was formed in 1921 with Craigavon as Prime Minister. He was a bitter opponent of union with Southern Ireland.

**Cramer, Stuart.** American manufacturer, died in Charlotte, N.C., July 2, 1940; born in Thomasville, N.C., Mar. 31, 1868. A mill engineer and contractor from 1895 to 1918, during that period he designed or equipped almost all of the South's cotton mills. He became president of Cramerton Mills, Inc., in 1908, and in 1938 became chairman of the board of directors. Also he was head of Mays Mills, and Mayflower Mills. His research in the textile field brought him 60 United States and foreign patents. He was president of the American Cotton Manufacturers Association (1916-17) and of the National Council of American Cotton Manufacturers (1917-18, 1920-27). He wrote *Useful Information for Cotton Manufacturers* (4 vol., 1904-09). Active in Republican politics, he served on state and national committees.

**Cravath, Paul B.** American lawyer; died in Locust Valley, N.Y., July 1, 1940; born in Berlin Heights, O., July 14, 1861. One of the foremost corporation lawyers in the country, he was known for his reorganization work of International Harvester, the Missouri Pacific, Bethlehem Steel, the Metropolitan Street Railway, and the Interborough Rapid Transit Co., and numbered leading industrialists among his clients. At his death he was the senior partner in the firm of Cravath, deGersdorff, Swaine & Wood. His talents were utilized during the World War by the Inter-Allied War Conference in Paris (1917) and the American Mission to the Inter-Allied Council on War Purchases and Finances and he received the Distinguished Service Medal and honors from many foreign governments. A noted art collector and traveller, he was elected president of the board of directors of the Metro-

politan Opera Co., in 1931 and at his death was president of the Metropolitan Opera Association. Also, he was actively interested in the Council on Foreign Relations, Inc., the English Speaking Union, and the Economic Club.

**Crawford, 27th Earl of, David Alexander Edward Lindsay;** Scottish peer; died near Wigan, Mar. 8, 1940; born in 1871. A Conservative Member of Parliament from 1895 to 1913, he served in the Cabinet in 1916 and in 1922, and was Lord Privy Seal from 1916 to 1918, Chancellor of the Duchy of Lancaster during 1919-21, first commissioner of Works in 1921 and 1922, and Minister of Transport in 1922. An expert on art, he wrote *The Evolution of Italian Sculpture* (1910).

**Crawshaw, William H.** American educator; died in Hamilton, N.Y., July 2, 1940; born in Newburgh, N.Y., Nov. 6, 1861. Associated with Colgate University from 1887, he was professor of English literature (1893-1917) and professor of general literature (1917-30), dean (1897-1930), acting president (1897-99, 1907, 1908), and president pro tem., (1908-09). In 1930 he was retired as emeritus. He was associated with the University Cruise Around the World during 1929-31. In 1937 he published *My Colgate Years*.

**Crompton, Bookes E. B.** British electrical engineer; died in Ripon, Feb. 15, 1940; born in Thirsk, May 31, 1845. Founder of Crompton & Co., in 1878, he was an electric light pioneer in Great Britain. He served twice as president of the Institution of Electrical Engineers and was Faraday medallist and James Forrest lecturer. He wrote *Reminiscences* (1928).

**Culpeper, Charles E.** American manufacturer; died in New York, Feb. 2, 1940; born in Rome, Ga., in 1875. Associated with the Coca Cola Co., from 1897, he founded the Coca Cola Bottling Co., of which he was president and chairman of the board. In his will he left his stock in the Coca Cola Co., valued at about \$8,000,000, to the foundation of the Charles E. Culpeper Foundation, a non-sectarian charitable institution.

**Cunningham, William Francis.** American pathologist and author; died in New York City, N.Y., Nov. 19, 1940; born in Norwich, Conn., 1889. He was for many years associated with the Department of Experimental Pathology of the College of Physicians and Surgeons, Columbia University, and was one of the first to experiment with Hodgkin's disease in apes.

**Cureton, Calvin M.** American jurist, chief justice of the Supreme Court of Texas from 1921; died in Austin, Tex., Apr. 8, 1940; born near Walnut Springs, Tex., Sept. 1, 1874.

**Curtin, John J.** American lawyer; died in Brooklyn, N.Y., on Dec. 16, 1940; born in Ireland on Oct. 3, 1878. He came to America with his parents when he was two years old; lived in Manchester, N.H.; was graduated from Manhattan College in 1900 and from the Brooklyn Law School, St. Lawrence University, in 1906. He was identified with much important litigation; succeeded Samuel Untermyer as counsel to the New York Transit Commission in negotiations leading to the unification of New York City's rapid transit system; was special counsel to Gov. Alfred E. Smith and to Mayor James J. Walker, and a counselor of the Democratic National Committee; and was chairman of the State Racing Commission by appointment of Governor Smith and reappointment of Governor Roosevelt. He was a prominent Roman Catholic layman, a Knight of St. Gregory, and counsel to Bishop Thomas E. Molloy of the Brooklyn Diocese.

**Daniels, Arthur Hill.** American educator, professor of philosophy from 1899 and acting president from 1933 at the University of Illinois; emeritus after 1934; died in Urbana, Ill., Apr. 2, 1940; born in East Medway, Mass., Oct. 19, 1865.

**Dargan, Edwin Preston.** American educator; died in Chicago, Ill., Dec. 13, 1940; born in Barboursville, Va., Sept. 7, 1879. He was graduated from the University of Virginia in 1902; taught in the University of Virginia and the University of California; and after 1918 was professor of French Literature at the University of Chicago. He wrote several books on French literary figures, particularly Balzac.

**Darrie, Marvin Lloyd.** American educator; died in Los Angeles, Calif., Jan. 25, 1940; born in Cleveland, O., Feb. 18, 1887. Associated with the University of California at Los Angeles from 1919, he was appointed professor of education in 1927 and dean of Teachers College in 1922.

**D'Arsonval, Jacques Arsene.** French physiologist; died in France in December, 1940; born in 1851. Professor of experimental physiology at the Sorbonne (1894-1932), he was a pioneer in the field of electrotherapy, a medical treatment once known as "arsenovalisation."

**Davidovitch, Ljuba.** Yugoslav politician, died in Belgrade, Feb. 19, 1940, born in Vlasica, Serbia in 1863. A member of the Serbian Radical Party he was elected a deputy in 1901 and in 1919 he was elected president of the newly-founded Democrat party. He was prime minister

of a coalition government from August, 1919, to February, 1920, and again in 1924.

**Davidson, I. F.** American educator; died in New Orleans, La., on Dec. 27, 1940; born in Weymouth, Mass., on Jan. 26, 1875. A graduate of Harvard University (1897), he held various teaching posts and was professor of Latin and Greek at St. Stephen's College (now Bard College) from 1913 to 1918. He was dean of the college from 1918 to 1925 and acting president in 1919.

**Davies, William Henry.** Welsh poet; died in Nailsworth, Gloucestershire, Eng., Sept. 26, 1940; born in Newport, Monmouthshire, Apr. 20, 1871. In his early manhood he spent several years wandering over the United States as a hobo, and lost a foot boarding a train at Renfrew, Ontario. His numerous poems have been widely praised by critics, including George Bernard Shaw, and his *Autobiography of a Super-Tramp*, first published in 1917, has had several republications, the most recent in 1938. In 1913 the Asquith government awarded Davies a small pension from the Civil List, and in 1921 it was increased somewhat.

**D'Avigdor-Goldsmid, Sir Osmond.** British Jewish leader; died in London, Apr. 14, 1940; born in 1877. He served as president of the Anglo-Jewish Association (1921-26), of the Jewish Colonization Association from 1919, and of the Board of Deputies of British Jews (1926-33). He was a recognized leader in the cause of aiding European refugees.

**Davis, Francis B.** American jurist; died in Woodbury, N.J., on Dec. 22, 1940; born in Camden, N.J., in 1878. He was admitted to the bar in 1899; was president judge of the Gloucester County Common Pleas Court (1917-22); State Senator (1923-31); and vice-chancellor of the New Jersey Court of Chancery since 1932. As majority leader of the State Senate, he was Acting Governor for a period in 1937 when Gov. A. Harry Moore was out of the state.

**Davidson, Charles.** British mathematician and authority on earthquakes, about which he wrote several books, including *A History of British Earthquakes*; died in Cambridge, Eng., Apr. 28, 1940; born May 1, 1858.

**Dawes, Rufus Outler.** American industrialist, died in Chicago, Jan. 8, 1940; born in Marietta, O., July 30, 1867. In 1897 he engaged in the organizing and managing of gas and electric companies, subsequently becoming president of the Union Gas & Electric Co. and the Metropolitan Gas & Electric Co. During 1933-34 he was president of the Century of Progress Exposition, Chicago, and after 1934 was president of the Museum of Science and Industry there. He was an adviser on the preparation of the Dawes plan and wrote *Dawes Plan in the Making* (1925).

**Day, George Calvin.** American admiral; died in Washington, D.C., Nov. 3, 1940; born in Bradford, Vt., Nov. 8, 1871. He was graduated from the Naval Academy in 1892; was commander of submarines in the Pacific from 1923 to 1925; and commandant of the 15th Naval District in the Canal Zone, including the Panama Canal, from 1925 to 1927. He was president of the Naval Board of Inspection and Survey at the time of his retirement in 1935. He acquired the rank of rear admiral in 1925.

**Deasy, Luere B.** American jurist, chief justice of the Supreme Court of Maine (1929-30); died in Portland, Me., Mar. 13, 1940; born in Gouldsboro, Me., Feb. 8, 1859.

**De Bower, Herbert F.** American educator, founder of Alexander Hamilton Institute, New York, in 1909, died in New York, Mar. 16, 1940; born in Dane, Wis., in 1874.

**De Kok, Johan Egbert Frederik.** Dutch industrialist; died in The Hague, Netherlands, Oct. 28, 1940; born in 1882. A graduate of the Royal Military Academy (1908) and a former army officer in the Netherlands Indies, De Kok joined the Royal Dutch Shell Co. as an exploitation engineer and worked his way up until he became director general of the company in 1937.

**Dell, Robert.** British journalist; died in New York City, N.Y., July 20, 1940; born in 1865. From 1907 to 1938 he was foreign correspondent for the *Manchester Guardian* in Paris, Berlin, and Geneva and after the World War he was also a regular contributor to the *Nation*. He was expelled from France in May, 1918, following the publication of some critical articles from his pen on the manner in which the French government had discussed indirect Austrian peace moves. He wrote three books; *My Second Country*, published in 1920, was a general discussion of France.

**Demers, Marie Joseph.** Canadian jurist; died in Montreal, Can., July 28, 1940; born in Henryville, Iberville Co., May 31, 1871. He represented St. Johns-Iberville in the House of Commons (1906-11); was Mayor St. Johns (1909); and served as Superior Court Justice for 18 years.

**Deneen, Charles S.** American politician; died in Chicago, Feb. 5, 1940; born in Edwardsville, Ill., May 4, 1863. A leader in Illinois politics, he served as governor

of Illinois during 1905-12 and as senator from that State during 1925-31.

**Denison, Sir Hugh Robert.** Australian newspaper publisher; died in Sydney, Australia, Nov. 23, 1940; born in Forbes, N.S.W., Nov. 11, 1865. Born Hugh Robert Dixon, he was educated in Australia and at University College, London; and assumed the name of Denison by deed poll (1907). He was a member of the Australian Parliament (1901-05); and from 1926 to 1928 served as Commissioner for the Commonwealth of Australia to the United States. He was the head of Associated Newspapers, Ltd., of Sydney, and was knighted in 1923.

**Deschamps, Alphonse E.** Canadian Roman Catholic clergyman, auxiliary bishop of Montreal from 1925; died in Montreal, June 23, 1940; ordained in 1899; born in St. Genevieve, Que., in 1875.

**de Schweinitz, Paul.** American Moravian Bishop; died in Bethlehem, Pa., Feb. 8, 1940; born in Salem, N.C., Mar. 16, 1863. Ordained in 1886, he was secretary of the Missions of the Moravian Church in America from 1898 to 1930. He was consecrated bishop on Mar. 14, 1937.

**Des Graz, Sir Charles Louis.** British diplomat; died in Wimbledon, Eng., Oct. 22, 1940, born on Mar. 2, 1860. He held several diplomatic posts and was appointed minister to Serbia in 1914, a position he held throughout the World War. He continued as Great Britain's representative at Belgrade after the Yugoslav kingdom was formed, retiring in 1920.

**Devereux, Anthony J. A.** American poloist; died at Philadelphia, Pa., on Dec. 18, 1940, born thereat in 1878. He won many riding trophies, including the National Hunt Cup in 1910, played polo with the Philadelphia Fox Hunters from 1902 to 1914, was injured many times in riding mishaps and suffered a stroke when thrown from his mount in Unionville, Pa., in 1920. He was hospitalized continually from 1922 until his death.

**de Vries, Louis.** Dutch actor, died in Nice, France, Mar. 11, 1940. One of the foremost tragedians of the Netherlands, his greatest roles were as Pancras in *Schakels*, Abram Lehmann in *The Lehmann Family*, Shylock in *The Merchant of Venice*, and Marc Antony in *Julius Caesar*.

**Dial, Nathaniel Barksdale.** American ex-senator; died in Washington D.C., Dec. 11, 1940, born in Laurens Co., S.C., Apr. 24, 1862. He studied law at the University of Virginia, was admitted to the bar in 1883, was Mayor of Laurens (1887-91) and again in 1895, he organized and assumed the presidency of several industrial enterprises including banks, power companies, and mills for the manufacture of glass, oil, and cotton. A Democrat, he served as United States Senator for South Carolina from 1918 to 1925.

**Dieterich, William H.** American ex-senator; died in Springfield, Ill., Oct. 12, 1940, born in Cooperstown, Ill., Mar. 31, 1876. He was graduated from Northern Indiana Law School, was Illinois State representative (1917-21); United States Congressman-at-large (1931); and United States Senator from Illinois (1932-38). He was a Democrat.

**Dillard, James Hardy.** American educator, died in Charlottesville, Va., Aug. 2, 1940; born in Nansemond Co., Va., Oct. 24, 1856. He was graduated from Washington and Lee University in 1876, was professor of Latin at Tulane University (1891-1907); president of the Jeanes Foundation for the promotion of Negro rural education from 1907 to 1931, a member of the Southern Education Board since 1908 and the General Education Board since 1917. He was a trustee of the General Theological Seminary (1916-25) and rector of William and Mary College in 1917. Dr. Dillard was the recipient of the Theodore Roosevelt Medal for 1937 for his work in furthering understanding between the white and Negro races.

**Dodd, William Edward.** American historian, died in Round Hill, Va., Feb. 9, 1940; born in Clayton, N.C., Oct. 21, 1869. In 1908 he became professor of American history at the University of Chicago, resigning in 1933 to become American ambassador to Germany. An outspoken critic of Nazi ideology and foreign policy, he found his post uncongenial and resigned on Dec. 28, 1937. An authority on the history of the American South he wrote *Lincoln or Lee* (1928) and *The Old South, Struggle for Democracy* (vol. 1, 1937). During 1924-26 he was joint editor with Ray Stannard Baker of *The Public Papers of Woodrow Wilson*. His autobiographical work, *Ambassador Dodd's Diary 1933-1938*, edited by William E. Dodd, Jr., and Martha Dodd, was published in 1941.

**Dorpfeld, Wilhelm.** German archaeologist, honorary professor of archaeology at Jena university and former director of the German Archaeological Institute at Athens, died at Levkas, Greece, Apr. 26, 1940; born in 1856.

**Douglas, James.** English editor and author; died in Budleigh Salterton, Devonshire, Eng., Sept. 26, 1940; born in Belfast, Ireland, Feb. 9, 1867. He edited the *London Sunday Express* (1920-31).

**Douglass, Leon F.** American inventor; died in Calif.,

Sept. 7, 1940; born in Lincoln, Neb., 1869. While working as manager of a telephone company in Seward, Neb., he patented the first coin telephone (1888); in 1894 he invented the first spring phonograph motor and in 1900 was co-founder with Eldridge Johnson of the Victor Talking Machine Co., of which he became successively vice-president, general manager, and chairman of the board of directors, retiring in 1921. In the World War he devised a magnetic torpedo for use against German submarines. His inventions in connections with color and undersea photography revolutionized previous techniques.

**Dowell, Cassius C.** American Republican Congressman from Iowa from 1915, died in Washington, Feb. 4, 1940, born near Summerset, Ia., Feb. 29, 1864. He was chairman of the House roads committee.

**Dowling, John P., O.P.** Irish clergyman; died in Port of Spain, Trinidad, June 5, 1940; born in Breda, Ireland, June 23, 1860. He joined the Dominican Order in 1881 and was ordained a Roman Catholic priest in 1887. He was appointed superior of the Dominican Fathers in Trinidad in 1905 and in 1909, Archbishop and Metropolitan of Port of Spain.

**Dowling, John Wallace.** British administrator; died in Southern Rhodesia, Aug. 22, 1940, born in Glasgow, Scot., 1876. He was high commissioner for Southern Rhodesia from 1930 to 1934.

**Drossaerts, Arthur Jerome.** American Roman Catholic archbishop; died in Texas, Sept. 8, 1940; born in Breda, Netherlands, Sept. 11, 1862. Ordained a priest in Holland in 1889, he came to the United States two years later and was given a pastorate in Louisiana. In 1918 he was made bishop of San Antonio, Tex., and in 1926, when Pope Pius XI established the archdiocese of Texas, Bishop Drossaerts became Archbishop of San Antonio.

**Drouet, Bessie Clarke.** American spiritualist, died in New York City, N.Y., Aug. 27, 1940, born in Portsmouth, N.H., 1879. A friend of the late Arthur Conan Doyle and the late Sir Oliver Lodge, she was the author of *Station Astral*, a book dealing with psychic methods. She founded and presided over the American Student Foundation from its inception in 1934 until its demise in 1937.

**Dubuch, Lucien.** French journalist and essayist, dramatic critic for *Candide* and author of *Histoire générale illustrée du théâtre* (1931), born in 1882, died in 1940.

**Du Bois, Charles G.** American utility executive, died at New York City on Dec. 23, 1940, born thereat on Mar. 22, 1870. After his graduation from Dartmouth College in 1891, he went to work for the Western Electric Co. in New York City at \$10 a week and, except for a period of 11 years (1907-18) when he was controller of the American Telephone and Telegraph Co., remained with Western Electric through all of his business life, serving as president from 1919 to 1926 and as chairman of the board from 1921 to 1927.

**Duffield, Roy Farrel.** American Protestant Episcopal clergyman; died in Garden City, L.I., on Dec. 22, 1940; born in Block Island, R.I., on July 25, 1877. A graduate of Columbia University (1900) and General Theological Seminary (1903), he held the dual post of canon of the Cathedral of the Incarnation, Garden City, and archdeacon for Queens and Nassau of the Episcopal Diocese of Long Island from 1910 until his retirement in 1933.

**Dugan, Raymond Smith.** American astronomer; died in Bryn Mawr, Pa., Aug. 31, 1940, born in Montague, Mass., May 30, 1878. A graduate of Amherst College, he served as acting director of the observatory of the Syrian Protestant College, Beirut, Syria (1899-1902), assistant in the Astro-Physical Observatory at Heidelberg University (1902-04); instructor in astronomy at Princeton University in 1905, rising to Professor in 1920, a position he occupied at his death. Dr. Dugan's special field of study was that of eclipsing variable stars, commonly known as double stars—measuring changes in their brightness as a means of computing their size, shape, density, mass, orbit, and other information. He was co-author with Professors Henry Norris Russell and John Quincy Stewart of *Astronomy*, a textbook (1926).

**Dunlap, William B.** American General; died in Pittsburgh, Pa., Nov. 23, 1940, born in 1885. He went overseas as a captain in the World War, and rose to be the youngest colonel in the A.E.F. He was awarded the Distinguished Service Medal in July, 1939, President Roosevelt appointed him a brigadier general in the Pennsylvania National Guard. In civilian life, he was a State Representative (1921-23), Director of City Supplies, Pittsburgh (1931-34) and at the time of his death publicity man for the Carnegie-Illinois Steel Corporation.

**Dunn, William F.** American publisher, died in Monticello, Ill., Mar. 18, 1940; born in Sedalia, Mo., June 30, 1872. A newspaperman from 1893, he was associated with the *Chicago Post* from 1897 until his retirement in 1929, and was its president and publisher from 1925.

**Duret, Miguel Lanz.** Mexican editor and lawyer; died in Mexico City, Nov. 21, 1940; born in 1880. He was for 18 years president and general manager of *El Universal*,

Mexico City's leading morning newspaper; and at the time of his death was Professor of International Law at National University of Mexico Law School and a former president of the Mexican bar association.

**Dussaigne, Edmond.** French army officer; died in Lyons, France, Mar. 3, 1940. A former chief of staff of the Air Ministry, he was one of the seventy-one members or associates of the Cagouards indicted in an investigation of an alleged plot to overthrow the French Government in 1937. He was released on bail in June, 1938.

**Dusser de Barenne, Joannes G.** Dutch physiologist; died in Boston, June 9, 1940; born in Brielle, The Netherlands, June 6, 1885. Associated with the University of Utrecht from 1919 to 1930, he was Sterling professor of physiology at Yale University thereafter. He wrote several books on the functions of the central nervous system, and had recently done important research work on the brain.

**Duveen, Charles J.** American decorator; died in Yonkers, N.Y., July 21, 1940; born in Hull, Eng., 1871. A brother of Lord Joseph Duveen, noted British art connoisseur, and in his early life a member of the London firm of Duveen Brothers, Charles J. Duveen emigrated to America and for many years conducted an antique shop in Fifth Ave., and later at 52 East 52d St., New York, under the business name of "Charles of London." One of the greatest authorities on rare and antique furniture, Charles Duveen was also a recognized connoisseur of fine velvets, particularly reds and greens.

**Easterwood, Jr., William Edward.** American capitalist; died in Santa Monica, Calif., Aug. 24, 1940; born in Wills Point, Tex., Nov. 5, 1883. A banker and industrialist in Dallas, Tex., who had served as a captain in the Marines in the World War, Easterwood became national vice-commander of the American Legion in 1933. In 1930, he was financial supporter of the Dieudonne Costes and Maurice Bellonte airplane flight from Paris to New York to Dallas, donating a reward of \$25,000 to the two flyers. He founded several airfields, three of which bear his name.

**Echenique Gandarillas, José Miguel.** See SPANISH-AMERICAN LITERATURES under Chile.

**Edey, Birdsell Otis (Mrs. Frederick Edey).** American feminist; died in New York, Mar. 17, 1940; born in Bellport, L.I., June 25, 1872. Previously active in the woman suffrage movement, she became associated with the Girl Scouts of America in 1919 and served as president of the national council from 1930 to 1935 when she was named national commissioner.

**Egerton, Sir George.** British naval officer; died in Ringwood, Hants., Mar. 30, 1940, born Oct. 17, 1852. In the navy from 1866, he served on the Arctic Expedition (1875-76) and was Second Sea Lord of the Admiralty (1911-12) and Commander-in-Chief at Plymouth during 1913-16.

**Eisen, Gustavus Augustus.** American archaeologist and biologist; died in New York City, N.Y., Oct. 29, 1940; born in Stockholm, Sweden, Aug. 2, 1847. An honor student and graduate of the University of Upsala, Sweden, he received a grant from his alma mater and from the Swedish government to study marine zoology in California in 1873. By pointing out to the U.S. Department of Agriculture that the failure of California fig plantings was due to the fact that all the blossoms of the domestic trees were females, and that pollen from male flowers would have to be carried by a special species of Near-East wasp, if the trees were ever to bear fruit, Eisen was directly responsible for the cultivation of the \$20,000,000 California fig industry. He became an American citizen in 1887; and took part in many archaeological explorations from 1880 to 1915. A friend of Fehim Kouchakji, New York art dealer and owner of the Chalice of Antioch, reputed by many to be the Holy Grail sought by King Arthur's Knights, Dr. Eisen wrote *The Legends of the Holy Grail* (1940) and numerous other scientific works. A long campaign by Dr. Eisen for the conservation of California's Sequoia forests was followed by the establishment of Sequoia National Park in 1890.

**Elliott, Maxine (Jessie Dermot).** American actress, died in Juan Les Pins, France, Mar. 5, 1940; born in Rockland, Me., Feb. 5, 1871. She made her debut in 1890 but not until she appeared in *Her Own Way* in 1903 did she become a "star." On Dec. 30, 1908, she opened the Maxine Elliott Theatre in New York with *The Chaperon*. She appeared frequently on the London stage and enjoyed a success in *Joseph and His Brethren* there in 1913. Her last appearance on the stage was in *Trimmed in Scarlet* in New York in 1920. She was considered one of the most beautiful women of the American stage.

**Espalter, José.** Uruguayan statesman, died in Uruguay, Aug. 30, 1940, born in 1870. A former vice-president of Uruguay, he was president of the Uruguayan Senate at the time of his death. As Minister of Foreign Affairs, Dr. Espalter concluded a barter agreement with Germany (1935) by which the latter was to take 5000 tons of Uruguayan meat in return for German industrial goods.

**Estigarribia, José Félix.** Paraguayan president; died in an airplane accident between Altos and San Bernardino, Paraguay, Sept. 7, 1940; born in Caragatay, Jan. 21,

1888. A graduate of the Asunción Military Academy, he earned a military scholarship to the Ecole de Guerre, France, where he studied from 1924 to 1928, becoming chief of staff of the Paraguayan army immediately thereafter. He was promoted to commander-in-chief in the Chaco War, where he won notable successes; was exiled June 14, 1935; was recalled in 1937 when the government of Col. Rafael Franco toppled; was appointed Minister to the United States, participating in that capacity in the final adjustment of the Chaco dispute. Elected by a large majority, he took office as president of Paraguay on Aug. 15, 1939, a post which he developed into a virtual dictatorship. His foreign policy pivoted on increased friendship with the United States.

**Ettl, John.** American portrait sculptor; died in New York City on Dec. 22, 1940; born in Hungary in 1872. He came to the United States in 1898; received numerous sculptural commissions and invented the Ettl Enlarging Machine for increasing the size of sculptures. It received wide application in the United States and was used to enlarge the statue of Joan of Arc on Riverside Drive, New York City, and the pediment sculptures on the United States Supreme Court Building in Washington. His last completed sculptural work was a portrait bust of Franklin D. Roosevelt.

**Evans, Earle Wood.** American lawyer; died in New York City, July 30, 1940; born near Wellington, Kan., Feb. 20, 1873. A graduate of Garfield University, he was admitted to the Kansas Bar in 1894, identified himself with much important litigation; became a director of several corporations; and was attending a board meeting of the Atchison, Topeka, and Santa Fe Railway in New York City when he died. He was president of the American Bar Association in 1933 and 1934. Advocating stringent methods to rid the legal profession of crooks, he told the Kansas Bar Association in 1933: "The public and the newspapers feel that we ought to be responsible for the crooks, and I don't know but what they are right. Let's clean house. Who else is there who can do it?"

**Eve, Sir Harry Trelawney.** British jurist; died in Farnham, Surrey, Eng., Dec. 10, 1940, born in London, Oct. 13, 1856. A barrister since 1881, he was a member of Parliament from 1904 to 1907, when he was appointed judge of the Chancery Division of the High Court, one of the solemnest tribunals in England. He boasted that he had never visited St. Paul's Cathedral, the British Museum, or the National Gallery.

**Everitt, Byron Forbes.** American auto manufacturer; died in Detroit, Mich., Oct. 5, 1940; born in Ridgetown, Ont., Can., 1872. A carriage-maker by trade, he early became associated with Henry Ford and other automobile manufacturers; and with Walter O. Briggs, William E. Metzger, and Walter Flanders, produced the Maxwell, Flanders-20, Wayne, EMF, Everitt, and Rickenbacker cars.

**Eyde, Samuel.** Norwegian scientist and industrialist; death at Asgardstrand announced June 21, 1940; born in Norway, Oct. 29, 1866. In 1903, with Dr. K. Birkeland, he invented the method of extracting nitrogen from the air and using it in the manufacture of fertilizer and other products. In 1905 he founded the Norsk Hydro-Elektrik Kvelstofactiselskat which for many years dominated the hydroelectric and nitrate industry in Norway. He resigned in 1919. During 1920-23 he was Norwegian minister to Poland.

**Fabiet, Julian.** Argentine admiral, former chief of naval operations; died on Nov. 26, 1940; born in 1882.

**Fagnani, Charles P.** American theologian and educator; died in German-occupied France on Nov. 25, 1940; born in New York City in 1854, the son of Giuseppe Fagnani, portrait painter. He was a teacher in New York City's public schools; was afterward graduated from Union Theological Seminary, where he became an instructor in Hebrew (1892) and Professor of Old Testament Literature (1914-26). He was expelled from Germany in 1921 because of his anti-German stand during the World War.

**Fairbairn, James Valentine.** Australian cabinet minister; died in an airplane accident 8 miles from Canberra, Australia, Aug. 13, 1940; born in Wadhurst, Surrey, Eng., July 28, 1897. He became assistant minister of Defense on Apr. 26, 1939; and air minister and minister of civil aviation on Mar. 14, 1940.

**Faison, Samson Lane.** American general; died in Baltimore, Md., Oct. 17, 1940; born in Faison, N.C., Nov. 29, 1860. A graduate of the U.S. Military Academy (1883), he saw service in the Philippines, and in the World War as commander of 90th Division in France. He became a brigadier general on Aug. 5, 1917.

**Falk, Otto H.** American manufacturer; died in Milwaukee, Wis., May 21, 1940; born there, June 18, 1865. Associated with the Falk financial interests from 1885, he was vice-president of the Falk Co., manufacturers of steel casings, and in 1912 he became receiver of the Allis-Chalmers Co., manufacturers of heavy machinery. He served as president of the latter company during 1913-32 and was chairman of the board thereafter. Mr. Falk served in the Wisconsin National Guard during 1886-1911 and

was a member of the United States Volunteers during the Spanish-American War.

**Falkner, Roland Post.** American statistician and economist; died in New York City, Nov. 27, 1940; born in Bridgeport, Conn., Apr. 14, 1866. He was graduated from the Wharton School of Finance and Economy of the University of Pennsylvania (1885); was editor-in-chief of the *Annals of the American Academy of Political and Social Science* (1890-1900); Commissioner of Education, Puerto Rico (1904-07); Assistant Director of the Census (1911-12); editor and director of research, Alexander Hamilton Institute (1915-26); and chief statistician of the National Industrial Conference Board from 1925 until his death.

**Fantoli, Guadenzio.** Italian engineer; died in Milan, Jan. 16, 1940; born in 1867. Professor of hydraulic engineering at and director of the Milan Polytechnic Institute, after 1928 he was a Senator.

**Farman, Richard.** French aviator; died in Paris, Jan. 31, 1940; born there in 1876. With his brothers, Henri and Maurice, he did much to develop aviation, and on Jan. 13, 1908, he won a \$10,000 prize at Issy for having flown an airplane one kilometer in a prescribed circle.

**Faversham, William.** American actor, died in Bay Shore, L.I., N.Y., Apr. 7, 1940, born in London, England, Feb. 12, 1868. His American debut was made in 1887 and subsequently he became the leading matinee idol of his day. His greatest success was as Jim Carston in *The Squaw Man* in 1905.

**Ferris, Harry Burr.** American anatomist; died in New Haven, Conn., Oct. 12, 1940, born in Old Greenwich, Conn., May 21, 1865. He became a teacher at Yale shortly after his graduation from the university's medical school in 1890, was made a full professor in 1892; and headed the department of anatomy from 1895 until his retirement in 1933.

**Ferry, Désiré.** French politician; died in Paris, Jan. 12, 1940; born in Metz, Oct. 26, 1886. A member of the Chamber of Deputies from 1919, he was minister of marine (1924), minister of public health (1930). After 1933 he was director of *La Liberté*.

**Few, William Preston.** American educator, died in Durham, N.C., Oct. 16, 1940; born in Greenville, S.C., Dec. 29, 1867. A graduate of Wolford College (1889), Dr. Few began to teach English in Trinity College, Durham, N.C., in 1896, was dean of Trinity (1902-10) and president (1910-24). He was instrumental in influencing the decision of the late James B. Duke, tobacco manufacturer, to establish a \$40,000,000 trust fund and assign a large portion of it for the creation of Duke University, with Trinity a part of it. Dr. Few was president of Duke from its beginning in 1924 until his death.

**Findley, Alvin Irwin.** American editor; died in St. Petersburg, Fla., Dec. 12, 1940; born in Monmouth, Ill., June 29, 1859. He was editor-in-chief of *Iron Age* (1910-30).

**Finley, John H.** American educator and editor; died in New York, Mar. 7, 1940, born in Grand Ridge, Ill., Oct. 19, 1863. Educated at Knox College (A.B., 1887) and Johns Hopkins University, he was secretary of the State Charities Aid Association and editor of *Charities Review*, the first publication of its kind (1889-92); president of Knox College (1892-99); editor of *Harper's Weekly* (1899) during which year he aided in founding *World's Work*; professor of politics at Princeton University (1900-03); president of the College of the City of New York (1903-13), during which period he reorganized the College; commissioner of education for the State of New York and president of the University of the State of New York (1913-21) and as such emphasized the value of physical and military training; associate editor of *The New York Times* (1921-37), editor-in-chief of that paper from 1937 to Nov. 16, 1938, and editor emeritus thereafter. He was editor of *Nelson's Encyclopedia* and was the author of *French Schools in War Time* (1917), *A Pilgrim in Palestine* (1918), *The Debt Eternal* (1923), *The Mystery of the Mind's Desire* (1936), and *The Coming of the Scot*, published posthumously in April, 1940. The recipient of numerous honorary degrees and foreign decorations, Dr. Finley was active in many varied fields and was lecturer at the Sorbonne (1910-11), head of the American Red Cross in Palestine and the Near East (1918-19), and director of the Hall of Fame at New York University after 1938.

**Fisher, Herbert A. L.** British educator and historian; died in London, Apr. 17, 1940; born there, Mar. 21, 1865. A member of parliament during 1916-26, he was president of the Board of Education (1916-22) and as such introduced an education bill in August, 1917, urging the adoption of a national system of public education. Lowell Lecturer in 1909, and president of the British Academy (1928-32), after 1923 he was warden of New College, Oxford. An authority on Napoleon, his most important work was *A History of Europe* (3 vol., 1935).

**Fitzgerald, F. Scott.** American novelist; died in Hollywood, Calif., on Dec. 21, 1940; born in St. Paul, Minn., Sept. 24, 1896. He came of an old southern family. His great-grandfather's brother was Francis Scott Key; his

father's aunt was Mrs. Suratt, one of the conspirators hanged for the assassination of Abraham Lincoln. Young Fitzgerald attended Princeton University (1913-17), served as a lieutenant in the army in the World War; worked for an advertising agency in New York City and then, at the age of 23, published a tremendously successful novel called *This Side of Paradise* (1920). It depicted the noisy frivolities and frustrations of American youth in the period immediately following the World War. His other works were: *Flappers and Philosophers*, 1920; *The Beautiful and Damned*, 1921; *Tales of the Jazz Age*, 1922; *The Great Gatsby*, 1925; *All the Sad Young Men*, 1926; *Tender Is the Night*, 1934; *Taps at Reveille*, 1935.

**Fitzgerald, John G.** Canadian bacteriologist, professor of hygiene and preventive medicine and director of the Connaught Laboratories and School of Hygiene from 1913, and dean of the Faculty of Medicine (1932-37) at the University of Toronto; died in Toronto, June 20, 1940, born in Drayton, Ont., Dec. 9, 1882.

**Fleming, Adrian Sebastian.** American general and papermaker; died on Dec. 1, 1940; born in Midway, Ky., Dec. 6, 1872. A graduate of West Point (1895), who had seen service in the Philippines, he became a brigadier general in May, 1918, and commanded artillery units on the Western Front.

**Fleming, Arthur Henry.** American manufacturer and philanthropist; died in Pasadena, Calif., Aug. 11, 1940; born in Halton Co., Ont., Can., Apr. 3, 1856. He came to the United States in 1879 and eventually settled in California, where he became president and principal owner of many lumbering and mining companies. He financed the founding of California Institute of Technology, and donated huge sums for its early upkeep. In 1926 he donated 100,000 francs to the French government for the establishment of a pavilion and park in Compiègne forest as a shrine for the railway car in which the World War Armistice was signed.

**Forbes, Joseph G.** Canadian Roman Catholic clergyman, Archbishop of the Diocese of Ottawa from 1928; born in Ile Perrot, Canada, Aug. 10, 1865; ordained in 1888; died in Ottawa, May 22, 1940.

**Fortin, Miguel A.** See SPANISH-AMERICAN LITERATURES under *El Salvador*.

**Fowler, Alfred.** British astronomer; died in London, June 24, 1940; born in 1868. An authority on research dealing with the stellar, cometic, and solar spectra, he was a member of the British Government Eclipse Expeditions of 1893, 1896, 1900, 1905, and 1914, and for many years he was professor of Astrophysics at the Imperial College in South Kensington. From 1923 to 1934 he was Yarrow research professor of the Royal Society. President of the Royal Astronomical Society (1919-21) and president of the Institute of Physics (1935-37), he was awarded the Valz prize of the Paris Academy of Sciences (1913), the gold medal of the Royal Astronomical Society (1915), the Royal medal of the Royal Society (1918), the Henry Draper Gold Medal of the National Academy of Sciences, Washington (1920), and the Catherine Wolfe Bruce gold medal of the Astronomical Society of the Pacific (1934).

**Fox, John M., S.J.** American Roman Catholic clergyman, president of Holy Cross College, Worcester, Mass., 1929-33; died in Pomfret, Conn., Feb. 15, 1940; ordained in 1913; born in Dorchester, Mass., in 1880.

**Frank, Glenn.** American publicist, editor, and educator; died in an auto accident near Greenleaf, Wis., Sept. 15, 1940; born in Queen City, Mo., Oct. 1, 1887. He was graduated from Northwestern University (1912); was assistant to Dr. Abram W. Harris, president of Northwestern (1912-16); associated with Edward A. Filene, Boston merchant, in research and organization work in the field of social welfare (1916-19); editor, *The Century Magazine* (1919-25); and President of the University of Wisconsin from 1925 until he was removed by Governor LaFollette in 1937 on the ground of maladministration. He was killed, together with his son, while campaigning for the Republican nomination for U.S. Senator.

Dr. Frank's utterances and writings and controversies kept him almost constantly in the public's mind. As editor of *The Century Magazine*, his editorials and philosophical discourses were widely read and led directly to his appointment to the president's chair at Northwestern University. He had frequent tiffs with politicians in Wisconsin, particularly in relation to his unorthodox views on methods of education. He was removed by the Board of Regents on Jan. 7, 1937. His published books included: *The Politics of Industry* (1919); *An American Look at His World* (1923); *Thunder and Dawn* (1932); *America's Hour of Decision* (1934).

**Frank, Karl Georg.** American engineer and inventor; died in North Caldwell, N.J., Dec. 13, 1940; born in Sarstedt, Hanover, Germany, Mar. 5, 1872. He studied under Roentgen at the University of Munich; came to the United States in 1903; was the holder of numerous patents for inventions, mainly in wireless telegraphy; and he was the author of many pamphlets on technical aspects of electricity and optics.

**Fratellini, Paul.** Italian clown; died in Paris, France,

November, 1940; born in Sicily. He was one of three brothers who toured the world as the "Three Fratellinis." They were descendants of a long line of clowns.

Fraser, Spaulding. American lawyer; died in Asheville, N.C., Mar. 7, 1940; born in Brooklyn, N.Y., Oct. 7, 1881. Active in Republican politics, he was corporation counsel of Newark, N.J., from 1915 to 1917. Founder and dean of Mercer Beasley Law School in 1926, he continued as dean upon its merger with Newark University in 1936.

Frederick, Charles. Landgrave of Hesse; died in Kassel, Germany, May 29, 1940; born in Panker, Holstein, May 1, 1868. He saw service in the German Army during the World War and in 1918 was elected King of Finland by the Finnish Parliament but refused the throne.

Frederick William, Prince of Schleswig-Holstein-Glücksburg, killed in action, June, 1940; born in Frankfurt am Main, Dec. 29, 1909.

French, Hollis. American consulting engineer and author; died in Boston, Mass., Nov. 21, 1940; born in Boston, June 26, 1868. A graduate of Massachusetts Institute of Technology, he supervised the construction of many large power plants in New England; was the president of Robert Breck Brigham Hospital, Boston; and wrote books on early American furniture and silver, and a biography of Thatcher Magoun, Boston shipbuilder and sea captain, published in 1934.

Frohman, Daniel. American theatrical producer; died in New York City on Dec. 26, 1940; born in Sandusky, O., on Aug. 22, 1851. A brother of Charles and Gustave Frohman, also prominent figures in the theater, he worked as an office boy on the *New York Tribune* for several years beginning in 1866; was publicity agent for Calender's Original Georgia Minstrels (1874-79); manager of the Fifth Ave. Theater and the Madison Square Theater (1879-85); manager of the Lyceum Theater for many years, beginning in 1885, and president of the New Lyceum Theater Co. from 1902 until his death. He was a founder of the Actors Fund of America and its president from 1906 to 1940.

The actors and actresses who appeared on the stage under Frohman's management included Richard Mansfield, Maude Adams, Herbert Kecey, Henrietta Crossman, James K. Hackett, Georgia Cayvan, Isabel Irving, Henry Miller, Mary Mannering, and Miss Kendala. He was for many years associated with David Belasco, a relationship that began in 1879 at the Madison Square Theater. Frohman was long recognized as the dean of American theatrical producers. His autobiography entitled *Daniel Frohman Presents* was published in 1935. Frohman and Margaret Illington, the actress, were married in 1903. She divorced him on grounds of desertion in 1909 and some years later she married Major Edward Bowes.

Frugoni, Pietro. Italian general, died in Brescia, Italy, Sept. 10, 1940; born in 1850. He commanded the 2d and 5th Italian armies in the World War.

Fu Hsiao-on. Chinese public official; assassinated in Shanghai, China, Oct. 11, 1940; born in Ningpo, 1870. A prominent Chinese banker, he became Japan's puppet mayor of Shanghai on Oct. 10, 1938.

Fuller, Sir George Warburton. Australian statesman; died in Australia, July, 1940; born in Kiama, New South Wales, Jan. 22, 1861. He was premier of New South Wales from 1922 to 1925.

Furness, Viscount, Marmaduke Furness. British shipbuilder and iron and coal operator; died in Cap Ferrat, France, Oct. 7, 1940; born on Oct. 29, 1883. Son of Lord Christopher Furness, English farm laborer who amassed a fortune in the mercantile world, Viscount Furness was chairman of the Furness Shipbuilding Co.; the Cargo Fleet Iron Co.; the South Durham Steel and Iron Co.; Wearside Steel, Coal, and Coke Co.; Broomhill Collieries, Ltd., and was a director of several other large British concerns.

Fynn, Sir Percival. Rhodesian politician; minister of internal affairs from 1935; died in Salisbury, Southern Rhodesia, Apr. 25, 1940; born in Cape Colony in 1872.

Ganfield, William Arthur. American educator; died in Chicago, Ill., Oct. 18, 1940; born in Dubuque Co., Ia., Sept. 3, 1873. Ordained a Presbyterian minister in 1901, he served as president of Centre College, Danville, Ky. (1915-21) and of Carroll College, Waukesha, Wis. (1921-39). He ran for the U.S. Senate in Wisconsin against Robert M. La Follette in 1922 but was defeated.

García, Gñes. See SPANISH-AMERICAN LITERATURES under *Argentina*.

Garland, Hamlin. American writer, died in Hollywood, Calif., Mar. 4, 1940; born in West Salem, Wis., Sept. 14, 1860. Writing from 1890, his works included *Rose of Dutcher's Cooty* (1895), considered his best novel, *Ulysses Grant* (1898), *The Eagle's Heart* (1900), *The Captain of the Gray Horse Troop* (1902), *The Long Trail* (1907), *Boy Life on the Prairie* (1907), and *Other Main Traveled Roads* (1913), but it was not until the publication of *A Son of the Middle Border* (1917), the first volume of a trilogy which was largely autobiographical, that his position in American letters was secured. The second volume, *A Daughter of the Middle Border* (1921) re-

ceived the Pulitzer Prize; the third volume, was *Back Trailers of the Middle Border* (1928). One of the first Americans to write of the soil, his work attracted wide attention for its realistic, or as he preferred, veritist, approach to pioneering farm life. His later works were based largely on the diary he had kept for years and included *Roadside Meetings* (1930), *Companions of the Trail* (1931), *My Friendly Contemporaries* (1932), and *Afternoon Neighbors* (1934). His latest works were two books on psychical research, *Forty Years of Psychic Research* (1936) and *The Mystery of the Buried Crosses* (1939). In 1931 Mr. Garland received the Roosevelt Memorial Association medal for "distinguished service as a social historian."

Garofalo, Attilio. Italian general divisional commander in the World War; died in San Remo, Italy, Nov. 6, 1940; born in 1865.

Garvey, Marcus. Negro adventurer; died in London, June 10, 1940; born in Jamaica, B.W.I., in 1880. He first became known in the United States about 1914 with the formation of the Universal Negro Improvement Association. Subsequently he organized the Black Star Steamship Line and the Black Star Steamship Co. to be manned entirely by Negroes; the African Community League; the Negro Factories Corporation; the Black Cross Nurses, and the Universal African Legion. He set himself up as "Emperor of the Kingdom of Africa," although it was believed that he had never set foot on that continent. In 1922 he was arrested for using the mails to defraud and from 1925 to 1927 he was jailed in the Atlanta penitentiary. He was then deported to Jamaica, and thereafter slowly faded into obscurity. In New York in 1924 he called the Fourth Annual International Congress of Negro peoples of the World.

Garsón, Eugenio. See SPANISH-AMERICAN LITERATURES under *Uruguay*.

Gates, William. American archaeologist; died in Baltimore, Md., Apr. 24, 1940; born in Atlanta, Ga., in 1864. He was associated with Johns Hopkins University as a research associate in Mayan languages and history (1930-38), and was an outstanding authority on Mayan history, language, and culture. In 1931 he published *Outline Dictionary of Maya Glyphs*.

Gatti-Casazza, Giulio. Italian operatic manager; died in Ferrara, Italy, Sept. 2, 1940; born in Udine, Feb. 3, 1869. In 1893 he succeeded his father, Stefano, newly elected member of the Italian parliament, as head of the directors of the *Teatro Comunale di Ferrara*. He became director of the revived *La Scala* Opera House in Milan in 1898 and in that capacity was responsible for some startling innovations, particularly the introduction of German operas there for the first time and the starring of non-Italian singers, notably Chaliapin. There also for the first time he met Arturo Toscanini, musical director of *La Scala*. He was a warm friend of Giuseppe Verdi and always remembered the old master's advice to him in 1898. "The theater is intended to be full and not empty. That's something you must always remember."

He came to New York in 1908, succeeding Heinrich Conried as general manager of the Metropolitan Opera Company, a position he occupied until his retirement on Apr. 27, 1935. His first production here was Verdi's *Aida* on Nov. 16, 1908, with a cast including Emmy Destin, Louise Homer, Enrico Caruso, and Antonio Scotti. Toscanini conducted.

Gatti-Casazza did much to popularize music drama in the United States and encouraged the writing and presentation of American-made operas. In 1910 he produced Frederick S. Converse's *The Pipe of Desire*, the first American opera to be staged at the Metropolitan. Also, about that time he persuaded the directors to conduct an opera-writing contest among American composers, with \$10,000 as the first prize. The prize-winning work, Horatio William Parker's *Mona* was produced at the Metropolitan on Mar. 4, 1912.

The public response was lukewarm, however, and Italian, German, and French operas continued their command of the Metropolitan stage through all of Gatti-Casazza's tenure.

After the first two or three seasons, the Metropolitan began to make a profit, and the balance remained on the right side of the ledger until the 1930-31 season, when falling revenue was followed by drastic cuts in salaries (including the director's, self-imposed) and other expenditures.

In 1910 Mr. Gatti-Casazza married Frances Alda, operatic soprano from New Zealand, who had made her debut at *La Scala*. They were divorced in 1929. Shortly afterward he married Rosina Galli, former première danseuse and ballet mistress of the Metropolitan, who died on Apr. 30, 1940.

Gaunt, Sir Ernest Frederick. British naval officer; died in London, Apr. 20, 1940; born in Melbourne, Australia, Mar. 25, 1865. In the navy from 1878, he was a rear admiral commanding the 1st Battle Squadron at the Battle of Jutland, commander-in-chief in the East Indies (1917-19) and commander-in-chief of the Western Approaches

(1921-22). Promoted to admiral in 1924, he was retired in 1925.

**Gauthier, Joseph Alexandre Georges.** Roman Catholic archbishop; died in Montreal, Can., Aug. 31, 1940; born in Montreal, Oct. 9, 1871. A graduate of Montreal College, he was ordained a priest in 1894; became professor in the Grand Seminary in Montreal (1896); auxiliary bishop of Montreal (1912); archbishop coadjutor (1923) and archbishop (September, 1939). He was noted as a powerful preacher in both the French and English languages.

**Gibbs, George.** American engineer; died in New York, May 20, 1940; born in Chicago, Apr. 19, 1861. A leading authority on railroad engineering, he designed and patented the first practical all-steel railway car, and was chief engineer in charge of the design and construction of the Pennsylvania station in New York (1905-12) and chief engineer for electric traction for the Long Island Railroad after 1912. He was consulting engineer for the Interborough Rapid Transit Co., New York; the Pennsylvania Railroad, being in charge of the electrification of the road between New York and Washington; the Long Island Railroad, and other lines. A past president of the American Institute of Consulting Engineers and president at the Rome session of the International Railway Congress in 1922, he was awarded the Norman medal (1911) and the Wellington prize (1930) of the American Society of Civil Engineers.

**Gibson, Ernest Willard.** American lawyer; died in Washington, June 20, 1940; born in Londonderry, Vt., Dec. 29, 1871. A Republican in politics, he served in the 68th to 73d Congresses (1923-35) from the 2d Vermont District, and in 1933 was appointed to the U.S. Senate to fill a vacancy. He was elected Senator in 1934 and re-elected in 1938. He served on the naval affairs, commerce, civil service, library, and territories committees.

**Gilder, Robert Fletcher.** American journalist and archaeologist, he discovered in 1906 the Nebraska "Loess man," the oldest human remains found in America; died in Omaha, Neb., Mar. 7, 1940; born in Flushing, N.Y., Oct. 6, 1856.

**Gill, Eric.** British sculptor and wood engraver; died in Uxbridge, Eng., Nov. 18, 1940; born in Brighton, 1882. His principal works included a war memorial for Leeds University, which caused a great stir because the subject—the expulsion of the money changers from the temple—depicted them in top hats and frock coats.

**Gilmore, Melvin Randolph.** American ethnobotanist; died in Lincoln, Neb., July 25, 1940; born in Valley, Neb., Mar. 11, 1868. A graduate of Cotner College, Bethany, Neb. (1905), he was curator of the Nebraska Historical Museum (1911-16); curator, North Dakota Historical Society (1916-23); and curator of ethnology at the University of Michigan since 1931. In his studies of the American Indian, he spent much time actually living among the various tribes; and his books on the subject have commanded wide recognition.

**Gilmour, Sir John.** British politician, died in London, Mar. 30, 1940; born May 27, 1876. A Conservative Member of Parliament from 1910, he was Secretary for Scotland (1924-26) and Secretary of State for Scotland (1926-29); Minister of Agriculture and Fisheries (1931) and Home Secretary (1932-35). He was appointed Minister of Shipping in the Chamberlain cabinet in October, 1939, and as such controlled Britain's merchant fleet. He served as rector of Edinburgh University during 1926-29 and was Lord High Commissioner to the General Assembly of the Church of Scotland during 1938-39.

**Glenn, Mrs. John Mark (née Mary Willcox Brown).** American welfare leader; died in New York City, Nov. 3, 1940; born in Baltimore, Md., 1870. She was president of the National Council of the Church Mission Help (1919-37); president of the Family Welfare Association of America (1920-37). In 1915, she was president of the National Conference on Charities and Corrections, an office which her husband, John M. Glenn, held in 1901. She was executive secretary of the Henry Watson Children's Aid Society in Baltimore (1897-1900); and for two years thereafter, general secretary of the Charity Organization Society of Baltimore. Mr. Glenn, who survives, retired in 1931 as general director of the Russell Sage Foundation.

**Goenaga, Florentino.** See SPANISH-AMERICAN LITERATURES under Colombia.

**Goldberg, Sol H.** American inventor of the wrinkled hair pin, from which he made millions of dollars until long hair became scarce as a style among women; died in Chicago, Ill., on June 4, 1940; born in Cincinnati, O., 1887. "Irene Castle cost me \$2,000,000 when she bobbed her hair," he once remarked. However, he continued to make a handsome income manufacturing bobbie pins.

**Goldenweiser, Alexander.** American anthropologist and sociologist; died in Portland, Ore., July 6, 1940; born in Kiev, Russia, Jan. 29, 1880. He came to this country in 1900, studied at Harvard and Columbia Universities; lectured at Columbia (1910-19); and has taught sociology and anthropology at one time or another at Reed College,

Portland, and the universities of Oregon, Wisconsin, Washington, Buffalo, and Leland Stanford. One of his many books, *Early Civilisation* (1922), is a well-thumbed college textbook.

**Goldman, Emma.** American anarchist; died in Toronto, May 14, 1940, born in Kovno, Russia, June 27, 1869. In 1886 she emigrated to the United States. The Haymarket Square Riot in Chicago in 1886 aroused her sympathies and finally led her to support anarchism. After 1889 she was associated with Alexander Berkman and other anarchists in New York, and in 1893-94 she served a year in Blackwell's Island prison, New York, for inciting to riot. Upon her release she lectured in England and Scotland in 1895 and in the United States in 1897, 1899, and 1907-10. She was under suspicion for implication in the assassination of President McKinley in 1901 and after 1906 she co-operated in the publication of *Mother Earth*, an anarchist monthly. In 1919 Miss Goldman was deported to Russia and in the following year expressed a desire to return to the United States but was refused. After 1924 she was allowed to live in Germany on condition that she would abstain from propaganda. Subsequently she fled to England, and in 1926, having obtained British citizenship by marrying a Welsh miner, she went to Canada. In 1931 she went to the south of France to live and in 1934 received permission to visit the United States for ninety days on a lecture tour. During the Spanish Civil War she worked in London and Madrid for the loyalist cause, and finally returned to Canada. She wrote two books dealing with her disillusionment with the Soviet Government: *My Disillusionment in Russia* (1923-24) and *My Further Disillusionment in Russia* (1925). Her autobiography, *Living My Life*, appeared in 1931.

**Goler, George W.** American public health authority; died in Rochester, N.Y., Sept. 18, 1940; born in Brooklyn, N.Y., Aug. 24, 1864. A graduate of the University of Buffalo medical school (1889), he was Rochester Health Officer from 1896 to 1932, in which latter capacity he established the first municipal milk station and the first prenatal clinic in the nation. In 1926 he won a long fight to dose Rochester's water supply with iodine to combat adolescent goiter. The general public did not relish the idea of drinking iodine from household faucets; skepticism bred uneasiness; and in 1932 the issue resulted in Dr. Goler's resignation.

**Gomá y Tomás, Isidro Cardinal.** Spanish Roman Catholic primate; died in Pamplona, Spain, Aug. 22, 1940; born in La Riba, Tarragona province, Aug. 19, 1940. He became bishop of Tarazona in 1927 and archbishop of Toledo and primate of Spain in 1933. Pope Pius XI appointed him cardinal in 1935. During the Spanish Civil War he represented the Vatican as "provisional semi-official representative" to Burgos. He openly denounced governmental interference in ecclesiastical affairs; defied the Spanish Republic; and supported General Franco. He made his escape from Toledo to Pamplona three days before the government forces sacked his cathedral and home and killed some of his priests.

**Gomez, Alejandro.** Salvadoran general; died in El Salvador, Sept. 19, 1940; born in 1870.

**Goodrich, James Putnam.** American ex-governor; died in Winchester, Ind., Aug. 15, 1940; born in Winchester, Feb. 18, 1864. Educated at De Pauw University, Wabash College and the University of Notre Dame, he was admitted to the bar of Indiana in 1886; was active in Republican politics since that time, serving as Governor of Indiana (1917-21). Appointed a member of the Russian Relief Commission (1921), he made four trips to Russia. President Coolidge named him to the St. Lawrence Seaway Commission (1924) and President Hoover appointed him a member of the National Conservation Commission.

**Gordon, John Sloan.** Canadian artist; died in Hamilton, Ont., Can., Oct. 12, 1940; born in Brantford, Ont., 1868. He was the leader of the original impressionist movement in Canadian art. Among his works was the ceiling of the Congressional Library, Washington, D.C.

**Grant, Robert.** American author; died in Boston, May 19, 1940; born there, Jan. 24, 1852. He was chairman of the board of the Boston Water Commission during 1889-93, a judge of the Probate Court and Count of Insolvency for Suffolk Co., Mass., during 1893-1923, an overseer of Harvard University, 1895-1921, and a member of the Sacco-Vanzetti Commission (1927). He was a prolific writer of fiction dealing with marriage and divorce problems and in 1934 published his autobiography, *Fourscore—An Autobiography*.

**Graves, William S.** American army officer; died in Shrewsbury, N.J., Feb. 27, 1940; born in Mt. Calm, Tex., Mar. 27, 1865. In the U.S. Army from 1889, he commanded the American Expeditionary Forces in Siberia (1918-20), was promoted to major general in 1925, and at his retirement in 1928 was commander of the Panama Canal Department.

**Green, Thomas B.** American lecturer; died in Washington, D.C., Jan. 24, 1940; born in Harrisville, Pa., Dec. 27, 1857. Ordained a Protestant Episcopal minister in 1887, he held various pastorates, and was elected Bishop

of Iowa in 1898, which he declined. After 1903 he devoted himself to lecturing, and in 1910 began his interest in international peace. He lectured for the American Peace Society from 1913, and after 1918 was director of the national speakers' bureau of the American Red Cross. A prolific writer, his latest work was *The Man of Tomorrow* (1927).

**Greenway, Walter Burton.** American educator; died in Stanhope, N.J., on Dec. 22, 1940; born in Broylesville, Tenn., Aug. 18, 1876. A graduate of Princeton Theological Seminary, he was ordained a Presbyterian minister in 1900; held several pastorates; and was president of Beaver College for Women in Jenkintown, Pa., from 1928 to 1939.

**Grendal, Vladimir.** Russian general; died on Nov. 16, 1940; born in 1883. He was vice-chief of the Red Army artillery board; and in the Finnish war organized the storming of the Mannerheim line and the seizure of Vi-borg.

**Grenfell, Sir William Thomason.** British missionary, surgeon, and author; died in Charlotte, Vt., Oct. 9, 1940; born in Parkgate, Cheshire, Eng., Feb. 28, 1865. After studying at Oxford and London Hospital, he became a medical missionary among the fishermen of the North Atlantic, cruising for five years with them and sharing their hardships along the stretch between the Bay of Biscay and Iceland. A qualified master-mariner, he went to Labrador in 1892, established his headquarters at St. Anthony, on the northern shore of Newfoundland, and for 43 years was engaged in improving the health and living conditions of the inhabitants of Labrador and nearby regions. He built 5 hospitals, 7 nursing stations, 4 orphanage-boarding schools, co-operative stores, and started industrial, agricultural, and child welfare work along the coasts of Labrador and North Newfoundland. He was surgeon in charge of the hospital steamer *Strathcona II* in which he cruised annually along the Labrador coasts; he built a seamen's institute at St. John's, Newfoundland (1912); and owned and operated many boats, large and small, which carried provisions and medical supplies to the inhabitants of Labrador. Dr. Grenfell was the founder and superintendent of the International Grenfell Association, an organization which raised money and assisted in other ways in fostering the work of the Labrador Medical Mission.

In 1935 ill health forced Dr. Grenfell to retire from Labrador and he spent much of his time thereafter at his home at Charlotte, Vt., overlooking Lake Champlain. However, he still visited and kept in close touch with his Labrador stations and advised the various boards of the Grenfell Associations in New York, Boston, Ottawa, St. Johns, Nfld., and London. He received several honorary degrees from universities, and was the recipient of many decorations and awards for his missionary work. He was knighted in 1927. His wife, Lady Grenfell, died on Dec. 9, 1938. She was the former Anne MacClanahan of Lake Forest, Ill., a graduate of Bryn Mawr. They had two sons and a daughter.

During the World War, Dr. Grenfell went to France as a major in the Harvard Medical Unit.

His publications included *Adrift on an Ice Pan* (1909), *Off the Rocks* (1906), *Down to the Sea* (1911), *Down North on the Labrador* (1911), *Northern Neighbors* (1923), *Adventure of Life* (1912), *Immortality* (1912), *What Life Means to Me* (1910), *Tales of the Labrador* (1916), *Labrador Days* (1921), *Yourself and Your Body* (1925), *Labrador Looks at the Orient* (1928), *Forty Years for Labrador*, his autobiography, 1932, and the *Romance of Labrador*, 1933.

**Grevstad, Nicolay.** American editor; died in Chicago, Feb. 20, 1940; born in Norway, June 2, 1851. He was editor of *Skandinaven* during 1892-1911 and after 1930, and during 1911-15 he was envoy extraordinary and minister plenipotentiary to Paraguay and Uruguay from the United States.

**Groff, Charles G.** American business man; died in Greenwich, Conn., Oct. 24, 1940; born in Edgerton, O., Aug. 26, 1880. A former salesman, newspaperman, and general manager for Air Way Appliance Co. of Toledo, he was president of the Electrolux Corp. since 1933 and chairman of the board of the Servel, Inc., since 1934.

**Gronan, Hans von.** German army officer; died in Potsdam, Feb. 23, 1940; born at Alt-Schadow, Feb. 6, 1850. In the German army from 1869, he commanded the Fourth Reserve Corps in the campaign of August and September, 1914, and the 41st Army from 1915 to 1919.

**Guillaumat, Marie Louis Adolphe.** French general; died in Nantes, May 18, 1940; born in Bourgneuf, Jan. 4, 1863. During the World War he served as Commander of the 2d Army (1916), as commander-in-chief of the Allied forces in the East (1917-18), as military governor of Paris (1918), and as commander of the 5th Army. During 1924-30, with the exception of a few months in 1926 when he was minister of war, he commanded the Allied Forces in the Rhineland, and then retired.

**Guillot, Victor Juan.** See SPANISH-AMERICAN LITERATURES under *Argentina*.

**Guise, Duc de, Jean Pierre Clement Marie.** French pretender; died in Larache, Spanish Morocco, Aug. 25, 1940; born in Paris, France, Sept. 4, 1874. He was the great-grandson of Louis Philippe, only member of the House of Orleans ever to reign as King of France. The Duc de Guise succeeded in his claim by his son, Prince Henri de Guise, Prince of Orleans and Count of Paris.

**Guitart, Justino.** Spanish Roman Catholic clergyman, Bishop of Urgell and co-Prince of Andorra; died in Barcelona, Jan. 31, 1940; born in 1874.

**Gullett, Sir Henry Somer.** Australian cabinet minister; died in an airplane accident 8 miles from Canberra, Australia, Aug. 15, 1940; born in Harston, Victoria, Mar. 26, 1878. He was the official correspondent with the British and French armies in France during the World War in 1914; and became minister of external affairs and minister of information in the cabinet of Prime Minister Menzies in 1939.

**Gulliver, Julia Henrietta.** American educator; died in Eustis, Fla., July 26, 1940; born in Norwich, Conn., July 30, 1856. A graduate of Smith College, she began teaching philosophy and Biblical literature in 1890 at Rockford Female Seminary, predecessor of Rockford College, Illinois. She was president of the college from 1902 to 1919.

**Gunther, Robert Theodore.** British zoologist; died at Oxford, Mar. 9, 1940; born Aug. 23, 1869. In 1924 he became the first curator of the Lewis Evans Collection which became the Oxford Museum for the History of Science in 1935. He was a prolific writer on zoological and archaeological subjects.

**Gusman, David J.** See SPANISH-AMERICAN LITERATURES under *El Salvador*.

**Haddon, Alfred Cort.** British anthropologist; died in Cambridge, Apr. 20, 1940, born in London, May 24, 1855. He was lecturer in ethnology at Cambridge University (1900-09), and at London University (1904-09), and University Reader at Cambridge (1909-26). He made ethnological investigations in Torres Straits, New Guinea, and Sarawak, and was president of the anthropological section of the British Association for the Advancement of Science in 1902 and 1905.

**Hadfield, Sir Robert Abbott.** British metallurgist; died in London, Eng., Sept. 30, 1940; born in Sheffield, Nov. 29, 1858. He inherited Hadfield's, Ltd., one of the largest steel and munitions works in England; invented manganese steel, employed in helmets and armaments during the World War; and discovered a magnetic steel of high permeability, especially suited for use in dynamos and electric motors.

**Haggard, William David.** American surgeon; died in Palm Beach, Fla., Jan. 28, 1940; born in Nashville, Tenn., Sept. 28, 1872. He was professor of surgery and clinical surgery at Vanderbilt University Medical School from 1913, saw service in the World War, and was president both of the American College of Surgeons (1933) and of the American Medical Association (1925).

**Hainari, Tilmä.** Finnish feminist, died in Helsinki, Jan. 23, 1940; born in 1861. A leader in the peace movement and in social and child welfare work, she was president of the National Council of Women in Finland and was a deputy delegate to the League of Nations Assemblies (1927-30).

**Hainisch, Michael.** Austrian politician; died in Gloggnitz, Austria, Feb. 29, 1940, born in Aue, Aug. 15, 1858. A leading advocate of *Anschluss*, he was the first president of the Austrian Republic (1920-28) and was minister of commerce (1929-30). Thereafter he lived in retirement.

**Hamilton, Frederick William.** American educator; died in Boston, May 22, 1940; born in Portland, Me., Mar. 30, 1860. He entered the Universalist ministry in 1889 and after serving in several pastorates was appointed president of Tufts College in 1905. He resigned in 1913.

**Hamilton, James McLellan.** American educator; died in Bozeman, Mont., Sept. 23, 1940; born in Annapolis, Ill., Oct. 1, 1861. He studied at Union Christian College and Harvard University; was Professor of History and Economics at the University of Montana (1901-04) and president of Montana State College (1904-19).

**Hamlin, Clarence Clark.** American publisher and politician; died in Colorado Springs, Col., Oct. 29, 1940; born in Manchester, Ia., Jan. 7, 1868. In 1896, the year he moved to Colorado Springs, he was a delegate to the Republican National Convention, and he was a delegate to every subsequent convention except that of 1940. He bought the *Colorado Springs Evening Telegraph* in 1916 and the *Colorado Springs Gazette* in 1923.

**Hammond, Aubrey.** British artist; died in London, Mar. 19, 1940; born in Folkestone, Sept. 18, 1893. Known principally as a stage designer, he was a pioneer in the development of the modern technique of camouflage.

**Harada, Tasuku.** Japanese Christian educator; died in Kyoto, Japan, Feb. 22, 1940; born Nov. 10, 1863. He was president of Doshisha University in Kyoto from 1907 to 1919 when he was retired as professor emeritus, and during 1920-32 he was professor of Japanese History and Literature at the University of Hawaii. He lectured fre-

quently in America and in 1920 delivered the Lowell Lectures in Boston.

**Harcourt, Bertram E.** American jurist; died in New York City, Dec. 9, 1940; born in Lockport, N.Y., 1881. He worked in a law firm in Medina, N.Y., in 1896; was elected county judge and surrogate in 1925; and Supreme Court Justice in 1939, taking office on Jan. 1, 1940.

**Harden, Sir Arthur.** British biochemist; died in Bourne End, Bucks., June 17, 1940; born in Manchester in 1865. Emeritus professor of biochemistry at London University and late head of the Biochemical Department of Lister Institute, in 1929 he shared the Nobel Chemistry Award for his experimental work in the field of alcoholic fermentation. He was joint editor of the *Biochemical Journal* (1913-37) and in 1935 received the Davy Medal of the Royal Society.

**Harrington, Sir Charles Harrington.** British general; died in Cheltenham, Eng., Oct. 23, 1940; born in Chichester, May 31, 1872. An army officer since 1892, he was chief of staff with the Canadian forces for a time during the World War; commander-in-chief of the Allied forces in Constantinople from 1921 to 1923; and governor and commander-in-chief of Gibraltar from 1933 to 1938.

**Harkness, Edward Stephen.** American financier and philanthropist; died in New York, Jan. 29, 1940; born in Cleveland, Jan. 22, 1874. An inheritor of great wealth from the estate of his father, he was a director of several railroads, including the Southern Pacific and the New York Central. His philanthropies amounted to over \$100,000,000 and included such gifts as \$1,000,000 to the New York Public Library (1923), \$4,000,000 to the Columbia-Presbyterian Medical Center (1924), \$1,131,097 to Yale University (1924), \$1,000,000 to the College of Physicians and Surgeons (1926), \$1,250,000 to Union Theological Seminary (1926), \$1,000,000 to Western Reserve Medical Center, Cleveland (1927), \$1,000,000 to the Near East Relief (1928), \$11,392,000 to Harvard University (1928), \$2,500,000 to Columbia University (1929), \$5,428,821 to Yale University to start the new "quadrangle plan" (1930), \$7,000,000 to Phillips Exeter Academy (1930), \$10,000,000 for the establishment of the Pilgrim Trust for "the benefit of Britain" (1930), \$4,000,000 to Columbia University for a new library (1931), \$2,500,000 to the Columbia-Presbyterian Medical Center for an eye institute (1931), \$1,000,000 to the Department of Surgery, Columbia University (1931), \$3,000,000 to Lawrenceville School, New Jersey (1936), and \$8,000,000 to the Commonwealth Fund (1937). In his will, he left his estate in trust to his wife and on her death one-half of the remainder was to go to the Commonwealth Fund, one-quarter to the Presbyterian Hospital, and the remaining quarter was to be divided among ten institutions.

**Harper, Robert Newton.** American banker; died in Washington, D.C., Sept. 23, 1940; born in Leesburg, Va., Jan. 31, 1861. A pharmacist in Washington, D.C. (1896-1916), he was also founder of the banking firm of Harper and Co., which was merged into the District National Bank with Mr. Harper as president. In recent years he was treasurer of the Democratic Congressional Campaign Committee.

**Harrington, Francis Clark.** American government official, died in New London, Conn., Sept. 30, 1940; born in Bristol, Va., Sept. 10, 1887. He was graduated from West Point in 1909, being No. 2 man of his class, and served in the World War as an instructor of engineers. In 1935 Colonel Harrington received a leave of absence from the army to become assistant administrator of the Works Progress Administration. He succeeded Harry L. Hopkins as WPA administrator in December, 1938. It was Colonel Harrington's boast that he had never voted in his life and that he was completely free from political affiliations.

**Harrison, (William) Preston.** American art patron; died in Los Angeles, June 28, 1940; born in Chicago, Ill., Apr. 12, 1869. Interested in real estate from 1889, he was editor and publisher of the *Chicago Times* (1891-95) and thereafter travelled extensively. In 1918 he founded the Mr. & Mrs. William Preston Harrison Gallery of American Art in Los Angeles and in 1926 established the Gallery of Modern French Art, both later becoming part of the Los Angeles Museum. He was an active supporter of the Los Angeles Museum, the Huntington Library and Art Gallery, and the Art Institute of Chicago.

**Hartwell, John Augustus.** American surgeon; died in Oakdale, L.I., Nov. 30, 1940; born in Sussex, N.J., Sept. 27, 1869. He received his bachelor of philosophy degree (1889) and his medical degree (1892) from Yale University; practiced in New York City; and was president of the New York Academy of Medicine (1929-33) and director of it from 1934 to 1939. In 1939 he was appointed associate director of the American Society for the Control of Cancer.

**Harvey, Sir John Musgrave.** Australian clergyman and jurist; died in Australia, June 13, 1940; born in Hampstead, London, Eng., Dec. 22, 1865. He was acting chief justice of New South Wales (1933-34) and chancellor of the diocese of Sydney (1934).

**Haynes, Frederick J.** American industrialist; died in Detroit, May 3, 1940; born in Cooperstown, N.Y., in 1871. A worker in the automobile industry from its beginning, he joined Dodge Brothers in 1912 and in 1920 was elected president and general manager of the company, becoming chairman of the board of directors in 1925. In 1929 he joined Durant Motors, Inc., as president, and in 1930 returned to the H. H. Franklin Manufacturing Company, for which he had worked in his youth, as vice-president. He retired in 1931.

**Hays, Harold M.** American ear specialist; died in Scarsdale, N.Y., Aug. 20, 1940; born in Rochester, N.Y., Sept. 26, 1880. He was a brother of Arthur Garfield Hays, attorney. A graduate of Columbia University's College of Physicians and Surgeons, he was founder, president, and director of the New York League for the Hard of Hearing.

**Head, Sir Henry.** British neurologist; died near Reading, Eng., Oct. 9, 1940, born on Aug. 4, 1861. Since 1900 a fellow of the Royal College of Physicians, he made notable contributions to the science of neurology. His published works included: *Studies in Neurology*, 2 vols., 1919; and *Aphasia and Kindred Disorders*, 2 vols., 1926.

**Healy, Francis Joseph.** American Roman Catholic clergyman and editor; died in Brooklyn, N.Y., Dec. 10, 1940; born in Worcester, Mass., 1883. A graduate of Holy Cross College and St. John's Seminary, Brooklyn, he was ordained May 19, 1909. Since 1921 he served as editor-in-chief of the *Tablet*, official publication of the Roman Catholic Diocese of Brooklyn.

**Heidenstam, Carl G. V. von.** Swedish poet; died in Stockholm, May 20, 1940; born in Olshammar, July 6, 1859. After studying art, he turned to a literary career, his chief works being *Vallfart och Vandringsar* (1888), *Hans Alienus* (1892), *Karolinerne*, *Dikter* (1895), *Folkungatiden* (1905), *Svenskarna och deras höfdingar* (1909), and *Nya dikter* (1914; 1924) which won him the reputation of being the greatest Swedish lyricist. A member of the Swedish Academy, he received the Nobel prize for literature in 1916 and the Henrik Steffens prize in 1938.

**Heinke, George E.** American Republican Congressman, elected to the 76th Congress from Nebraska on Nov. 8, 1938; died in Morrilton, Ark., Jan. 2, 1940; born near Dunbar, Neb., July 22, 1882.

**Heming, Arthur.** Canadian artist; died in Hamilton, Ont., Can., Oct. 30, 1940; born in Paris, Ont., Jan. 17, 1870. He was noted for his paintings of Canada's north and woodlands, pictures that were done in three tones only—black, white, and yellow—because Mr. Heming was color blind until he reached the age of 60. His work since that time was also widely praised.

**Henke, Alfred.** German aviator, killed while on a test flight, somewhere in Germany, Apr. 22, 1940. On Aug. 10-11, 1938, he piloted the *Brandenburg* in the first non-stop flight from Berlin to New York, also breaking non-stop distance records for the east-west crossing. He made the eastward crossing from New York to Berlin, Aug. 13-14, 1938.

**Hering, Hermann S.** American Christian Science leader and lecturer from 1897; died in Chestnut Hill, Mass., May 14, 1940; born in Philadelphia, Aug. 24, 1864.

**Hernandez Bustos, Benito.** Colombian diplomat, died in an airplane accident near Bucaramanga, Colombia, Feb. 27, 1940. He had served as ambassador to France and Great Britain and had served in several Colombian cabinets.

**Herts, Emanuel.** American lawyer and authority on Abraham Lincoln; died in New York, May 23, 1940; born in Butka, Austria, Sept. 2, 1870. He wrote *Abraham Lincoln—A New Portrait* (1931) and *The Hidden Lincoln* (1938).

**Heyward, DuBose.** American writer; died in Tryon, N.C., June 16, 1940, born in Charleston, S.C., Aug. 31, 1885. His first publication was *Carolana Chansons* (1922), written in collaboration with Hervey Allen. This was followed by *Skylines and Horizons* (1924), and in 1925 his novel *Porgy* brought him to the attention of the critics. With his wife he dramatized the novel and it was produced in New York in 1927. It was also the basis of the opera *Porgy and Bess* written in collaboration with George Gershwin and produced in 1935. Other of Mr. Heyward's works were the novels *Ansel* (1926); *Mambo's Daughters* (1929) dramatized and produced in 1938; *Peter Ashley* (1932); *Lost Morning* (1936), and *Star Spangled Virgin* (1939); also a short story *Half Pint Flask* (1929) and *Jasbo Brown and Selected Poems* (1931). He was regarded as one of the foremost chroniclers of American Negro life.

**Hickey, Thomas F.** American Roman Catholic archbishop; died in Rochester, N.Y., Dec. 10, 1940; born in Rochester, Feb. 4, 1861. Educated at St. Joseph's Theological Seminary, Troy, N.Y., he was ordained a priest on Mar. 5, 1884; served as a curate in Geneva and Moravia, N.Y., and as rector of St. Patrick's Cathedral, Rochester; bishop coadjutor of Buffalo, 1905; and bishop from 1909 to 1928, retiring because of ill health. He has since held the inactive post of Archbishop of Viminacium, conferred on him by Pope Pius XI.

**Hill, Howard O.** American educator; died in Chicago, June 25, 1940; born in St. Louis, Mo., Dec. 20, 1878. A teacher from 1907, he was head of the department of the social sciences at the University of Chicago High School (1917-35), at the College of Arts and Sciences after 1935, and assistant professor after 1924 at the University. A prolific writer, his works include textbooks on social science, literature, and economics.

**Hill, William J. (Billy).** American song writer and author of *The Last Round-up*; died in Boston on Dec. 24, 1940; born there on July 14, 1899. He studied violin at the New England Conservatory of Music as a protégé of Dr. Karl Muck, intending to become a member of the Boston Symphony Orchestra, an ambition which he afterward modified somewhat. At the age of 16 he left home and roamed the country in knockabout style, working at such various jobs as band leader, doorman, dishwasher, timekeeper, and cowboy. In 1936 he told a Congressional committee, inquiring into the operations of the copyright law that he had been living penniless in Greenwich Village, with the gas shut off, the rent unpaid, and maternity hospitals refusing admission to his wife, when *The Last Round-up* brought him fame and luxury. Some of his other musical creations were: *Empty Saddles, Wagon Wheels; There's a Cabin in the Pines; The Old Spinning Wheel; Have You Ever Been Lonely?; They Cut Down the Old Pine Tree; Sleepy Head; and In a Chapel in the Moonlight*. Some of Hill's songs received the praise of Pietro Mascagni, the Italian operatic composer.

**Hiltinger, Alburis C.** American industrial designer; died in Lyons, N.J., July 14, 1940; born in Marathon, N.Y., 1847. He served in the Civil War as a private with the 185th New York Infantry, and in 1874, while working for the old Crump Press Co., of Montclair, N.J., he designed the first successful four-color printing press used in the United States.

**Hinsdale, William Graham.** American physician, educator, and authority on Indian and Eskimo culture; died in Syracuse, N.Y., July 15, 1940; born in Princeton, N.J., 1862. He excavated numerous sites of Indian villages and discovered extensive remains of an ancient New York State Eskimo culture.

**Hobson, John Atkinson.** British economist, died in London, Apr. 1, 1940; born in Derby, July 6, 1858. A leader of the welfare school of economic thought, he was a prolific writer. His works included *Problems of Poverty* (1891), *The Problem of the Unemployed* (1896), *Imperialism* (1902, revised, 1938), *The Science of Wealth* (1911), *Taxation in the New State* (1919), *Problems of a New World* (1921), *Rationalisation and Unemployment* (1930), and *Confessions of an Economic Heretic* (1938).

**Hollander, Jacob H.** American economist; died in Baltimore, July 9, 1940, born there, July 23, 1871. Associated with Johns Hopkins University from 1900, he served as professor of political economy from 1925. Active in government affairs, he was a special commissioner to revise the laws relating to taxation in Porto Rico (1900) and introduced the present revenue system (Hollander law) of the island. He was financial adviser to the Dominican Republic (1908-10) and served as chairman and member of the board of referees in the Cleveland Garment Industry (1921-32). President of the American Economic Association (1921), he was a prolific writer on economic subjects, his later works being *Economic Liberalism* (1925) and *Want and Plenty* (1932).

**Holloway, Mrs. Ella Virginia Houck.** American crusader; died in Baltimore, Md., Nov. 30, 1940; born in 1862. She organized a campaign to have the *Star-Spangled Banner* officially designated as the national anthem, and a bill to that effect was passed by Congress on Mar. 3, 1931.

**Holm, Gustav Frederik.** Danish explorer; died in Copenhagen, Mar. 12, 1940; born there in 1849. A member of the Royal Greenland Commission after 1896 he became distinguished for his explorations, especially of the east coast of Greenland. During his career he discovered 11 hitherto unknown Eskimo communities and five great ice fjords. In 1925 he published *De islandske Kursforshrifters Svalbarde*.

**Holmes, William Trumbull.** American educator; died in New York City, N.Y., July 28, 1940; born in New York City, 1866. A Congressional minister since 1897, he served from 1913 to 1933 as president of Tougaloo College, Miss., an institution for higher education among Negroes.

**Honeycutt, Francis Webster.** American general; died in an airplane accident near Woodbine, Ga., Sept. 20, 1940; born in San Francisco, Calif., May 26, 1883. A graduate of West Point (1904), he advanced through the grades, becoming brigadier general June 1, 1938. He was made commandant of Fort Bragg, N.C., on Sept. 13, 1940.

**Honeywell, Harry.** American aeronaut; died in San Antonio, Tex., Feb. 10, 1940; born in Cleveland, Sept. 19, 1871. A participant in nearly 600 balloon flights, both national and international, he won the National Balloon Races of 1912, 1916, and 1920.

**Hooper, Franklin Henry.** American editor; died near Saranac Lake, N.Y., Aug. 14, 1940; born in Worcester,

Mass., Jan. 28, 1862. After graduating from Harvard University (1883), he joined the staff of the Century Co., publishers, and was afterward editor of the Encyclopaedia Britannica from 1899 to 1938, becoming editor-in-chief in 1932 and editor emeritus in 1938. He was editor of *The World Today* from 1933 to 1938.

**Hopkins, Louis Bertram.** American educator; died in Hanover, N.H., Aug. 10, 1940; born in Hopkinton, N.H., Aug. 11, 1881. Educated at Dartmouth College, he was personnel director of Northwestern University (1922-26) and president of Wabash College since that time. He was a brother of Dr. Ernest Martin Hopkins, president of Dartmouth College.

**Horlick, William.** American manufacturer, chairman of the board of directors and treasurer of the Horlick Malted Milk Co.; died in Racine, Wis., Apr. 1, 1940; born in Chicago, Dec. 12, 1875. He helped finance Admiral Byrd's polar trips, Amelia Earhart's flights, and Amundsen's Arctic ventures.

**Horne, Viscount, Robert Stevenson Horne.** British ex-cabinet minister and financier; died in Surrey, Eng., Sept. 3, 1940; born in Slamannam, Stirlingshire, Scot., Feb. 28, 1871. He was Minister of Labor (1919); President of the Board of Trade (1920-21); Chancellor of the Exchequer (1921-22), and a member of the House of Commons for 17 years. A leading figure in the business world, he was chairman of the Great Western Railway.

**Horner, Henry.** American governor; died in Winnetka, suburb of Chicago, Ill., Oct. 6, 1940; born in Chicago, Nov. 30, 1878. He was the son of Solomon A. Levy and Dilah Horner Levy and took his mother's family name when his parents separated by mutual agreement in 1882. A graduate of the law department of Lake Forest University, he began legal practice with Frank Whitney, whose father had been a friend of Abraham Lincoln. Horner's consuming interest in the life of Abraham Lincoln and the nucleus of his Lincoln library—consisting eventually of some 6000 volumes—date from his association with Whitney. A Democrat, he was elected probate judge of Cook County in 1914; was re-elected four times; and had been on the bench 18 years when he resigned to become Governor in 1932. He polled a vote of 1,930,330 votes in 1932, outdistancing President Roosevelt, who headed the ticket. Governor Horner's plurality was considerably less in 1936, however, due in part, it was believed, to a bitter primary fight between himself and the forces of the Kelly-Nash machine.

**Houston, David Franklin.** American ex-cabinet officer and insurance executive; died in New York City, N.Y., Sept. 2, 1940; born in Monroe, Union Co., N.C., Feb. 17, 1866. He was graduated from South Carolina University (1887); was superintendent of schools at Spartanburg, S.C. (1888); president of the Agricultural and Mechanical College of Texas (1902-05), president of the University of Texas (1905-08); chancellor of Washington University, St. Louis (1908-13), Secretary of Agriculture (1913-20); and Secretary of the Treasury (1920-21). After leaving public life he was associated with the American Telephone and Telegraph Co.; the Bell Telephone Securities Co.; and was president of the Mutual Life Insurance Co. from 1927 to Jan. 1, 1940, when he became chairman of the board of trustees.

As Secretary of Agriculture, Mr. Houston helped to organize the Federal Reserve Bank system, and was one of the creators of the Federal Farm Loan Board. During the 1912 campaign he had been Mr. Wilson's confidential adviser on tariff and currency problems. He succeeded Carter Glass as Secretary of the Treasury in 1920 and in this latter capacity he developed measures for handling the floating debt and for retiring the Victory Loan and he also framed a program for tax revision that included repeal of the excess-profits tax. He was the author of *Eight Years With Wilson's Cabinet*, a two-volume work published in 1926.

**Howe, Frederic Clemson.** American lawyer and economist; died in Oak Bluffs, Mass., Aug. 3, 1940; born in Meadville, Pa., Nov. 21, 1867. After graduating from Allegheny College (1889), he attended Johns Hopkins University, where he first met Woodrow Wilson, then a professor. He held minor political and educational posts in Ohio; was United States Commissioner of Immigration, Port of New York (1914-19); a representative at the Paris Peace Conference (1919), attending as a special expert on the Eastern Mediterranean; and was associated with various liberal movements, including the La Follette presidential campaign of 1924. In July, 1933, he was appointed consumer's counsel of the Agricultural Adjustment Administration; and in February, 1935, he was appointed a special assistant to Henry A. Wallace, Secretary of Agriculture. In 1937 he took an extended leave to act as economic adviser to President Quezon of the Philippines. He was founder of the People's Music League and the Drama League of America; and was the author of many books on economic subjects, including the *Confessions of a Reformer*.

**Hughes, William.** A Canadian soldier and penologist; died in Ottawa, June 1, 1940; born in Durham Co., Ont., June 2, 1863. Prior to the World War he was Inspector

of Penitentiaries; after service overseas, where he became a brigadier general, he was appointed Superintendent of Penitentiaries. He retired in 1932.

**Humphrey, Burt Jay.** American jurist; died at Jamaica Estates, Queens, L.I., Dec. 11, 1940; born in Speedsville, N.Y., Apr. 23, 1866. He was admitted to the bar in Binghamton, N.Y., in 1890, and sometime afterward settled in Jamaica, L.I. A Democrat, he was elected county judge in 1903 and was re-elected four times. He was Supreme Court Justice from 1925 to 1936.

**Hunter-Weston, Sir Aylmer.** British soldier; died in West Kilbride, England, Mar. 18, 1940; born on Sept. 23, 1864. In the army from 1884, he commanded the 29th Division at Gallipoli Peninsula (1915) and the 8th Army Corps (1915-19). He served as a Conservative Member of Parliament from 1916 to 1935.

**Hutchison, Ronald Macdonald.** See TATE, HARRY.  
**Hutton, Maurice.** Canadian educator; died in Toronto, Apr. 5, 1940; born in Manchester, England, in 1856. Associated with the University of Toronto from 1887, he was professor of Greek and principal (1901-28) of University College and was acting president of the University in 1906-7 and in 1925. He retired in 1928.

**Ibuka, Kajinosuke.** Japanese clergyman; died in Japan, June 24, 1940; born there in 1854. Converted to Christianity in 1873, he was one of the founders of the Church of Christ in Japan, the major Protestant group in that country.

**Inculceti, Ion.** Rumanian statesman; died on Nov. 19, 1940; born in Rezeni prov., Lapusna, Bessarabia, 1885. He was president of the autonomous Bessarabian Republic between the Russian revolution in 1917 and the unification of Bessarabia with Rumania in 1918.

**Ingersoll, Raymond Vall.** American lawyer, died in Brooklyn, N.Y., Feb. 24, 1940; born in Corning, N.Y., Apr. 3, 1875. Interested in civic affairs, he had served in many capacities and in 1933 was elected president of the borough of Brooklyn, N.Y., on the Fusion ticket and was re-elected in 1937.

**Ionescu, Nae.** Rumanian educator; died in Bucharest, Mar. 15, 1940, born in 1890. He was professor of logic and metaphysics at Bucharest University, director of the daily *Cuvântul* (*The Word*) and former leader of the Fascist Iron Guard.

**Irias, Julian.** Nicaraguan statesman; died on Nov. 20, 1940; born in 1873. He was President ad interim in 1936 following the resignation of Dr. Juan B. Sacasa, serving until the election of Anastasio Somoza. He was in public life for 40 years.

**Irvine, Benjamin F.** American editor, editor of the *Oregon Daily Journal* (1919-37) and thereafter emeritus; died in Portland, May 1, 1940; born near Seio, Ore., in 1863.

**Jabotinsky, Vladimir.** British Zion Revision leader, author, and soldier; died in Hunter, N.Y., Aug. 3, 1940, born in Odessa, Russia, 1880. He was a delegate from Russia to the Sixth Zionist Congress at Basle in 1903; was active in the World Zionist Organization until he split with its leader, Dr. Chaim Weizmann; and was leader of the New Zionist Organization since its founding in 1935. He headed a Jewish legion of 15,000 soldiers in the British army in the World War and fought in the near East.

**Jacoby, George W.** American neurologist; died in New York City, N.Y., Sept. 11, 1940; born in St. Louis, Mo., Sept. 1856. He was president of the American Neurological Association in 1915 and of the New York Neurological Society from 1888 to 1890.

**Jenkins, Thomas Lincoln.** American general and surgeon; died in Crawford, Me., July 29, 1940; born in Chelsea, Mass., 1867. A graduate of Harvard Medical School, he served in the Spanish-American War and the Mexican Border Campaign before going to France in the World War as senior surgical officer in the A.E.F. He was retired from the Medical Corps in 1930 with the rank of brigadier general.

**Jiménez Mena, Nicolás.** See SPANISH-AMERICAN LITERATURES UNDER ECUADOR.

**Joel, Jack Barnato.** British financier; died in St. Albans, Hertfordshire, Eng., Nov. 13, 1940; born on Sept. 29, 1862. Chairman of the Johannesburg Consolidated Investment Co. and head of several gold and diamond mines in South Africa, he was a famous horse breeder and captured the Epsom Derby in 1911 with *Swanstar*.

**Johnson, Arthur Newhall.** American civil engineer; died in Baltimore, Md., July 11, 1940; born in Lynn, Mass., Nov. 11, 1870. A graduate of Harvard University and a recognized authority on hard-surface road construction, he held official positions at different times in the highway departments of New York, Massachusetts, Maryland, Illinois, and with the U.S. Bureau of Public Roads. He was dean of the University of Maryland College of Engineering from 1920 to 1936 and dean emeritus since that time.

**Johnston, John A.** American army officer; died in Washington, Jan. 5, 1940; born in Allegheny, Pa., Feb. 22, 1858. In the army from 1879, he retired in 1903 with the rank of brigadier general and served as a District of Columbia commissioner during 1903-06. In 1917 he volun-

teered for active war service and commanded the Thirty-Fourth Division in France.

**Jones, Jerome.** American labor leader and editor; died in Atlanta, Ga., Sept. 24, 1940; born in Nashville, Tenn., 1853. He was at one time president of the Georgia Federation of Labor and served as editor of the *Atlanta Journal of Labor* from 1902 until his death.

**Jones, Norman L.** American jurist; died in Jacksonville, Ill., Nov. 15, 1940; born in Patterson, Ill., Sept. 19, 1870. A lawyer since 1896, he served on the bench in various Illinois courts for 25 years; was Supreme Court Justice since 1931 and Chief Justice since June, 1940. He was unsuccessful Democratic candidate for governor in 1924.

**Joseph, Mary, (née Hurley).** American Roman Catholic mother superior and educator; died in Scranton, Pa., Dec. 4, 1940; born in Susquehanna, Pa. She was president of Marywood College, Scranton, Pa., and mother superior of the Sisters of the Immaculate Heart of Mary since 1931.

**Josephson, Walter S.** American manufacturer, founder of the dry ice industry and president of the Dry Ice Corporation of America from 1923 until 1928; died in Hollis, L.I., N.Y., Mar. 7, 1940; born in Roseburg, Ore., in 1889.

**Joslyn, Sarah E. (Mrs. George A.).** American philanthropist; died in Omaha, Neb., Feb. 28, 1940; born in Waitsfield, Vt., Apr. 14, 1851 (?). In 1928 she gave \$4,600,000 to establish the Joslyn Memorial in Omaha, a fine arts building opened in 1931.

**Joyce, Ernest E. M.** British Arctic explorer; died in London, May 2, 1940; born in 1875. He served with Robert F. Scott (1901-04) with Sir Ernest Shackleton (1907-09), and during 1914-17 laid depots for the proposed, but unfulfilled Shackleton expedition across the Antarctic Ocean from Weddell Sea to Ross Sea.

**Kander, Mrs. Simon (née Lissie Black).** American social worker; died in Milwaukee, Wis., July 25, 1940, born in Milwaukee, 1852. She was the author of *The Settlement Cookbook*, first published in 1900, designed to aid poor mothers provide better meals for their families. The book was reprinted 22 times with a total sales-revenue of \$75,000, which Mrs. Kander donated to the Milwaukee Jewish Center, of which she was founder.

**Kantorowicz, Herman.** German lawyer and historian, died in Cambridge, England, Feb. 12, 1940; born in Poznan, Poland, Nov. 18, 1877. A professor at Freiburg University during 1913-17 and at Kiel University during 1929-33, he was dismissed in 1933 upon the accession of the Nazis to power. Thereafter he taught in the United States and in England. At his death he was director of research in law at Cambridge University and lecturer at all Souls College, Oxford. His most important work was *Der Geist der englischen Politik* (1929; Eng. ed., *The Spirit of British Policy*, 1932; Amer. ed., 1933).

**Karn, Frederick James.** British musical educator, conductor, organist, and composer; died in Cranleigh, Surrey, Eng., December, 1940; born in Leatherhead, Surrey, Aug. 29, 1862. He was long principal of the London College of Music.

**Kearton, Cherry.** British naturalist, author, and photographer; died in London, Eng., Sept. 27, 1940; born in Thwaite Swaledale, Yorkshire, July 8, 1871. He made the first aerial photograph of London, in 1905, from a dirigible. His motion pictures of African wild life were exhibited in New York in 1913, with Ex-President Theodore Roosevelt (who had met Kearton in Africa) sharing the stage with the photographer.

**Keith, Dora Wheeler (Mrs. Boudinot Keith).** American portrait painter; died in New York City on Dec. 27, 1940; born in Jamaica, N.Y., Mar. 12, 1857. She studied at the Art Students League in New York and the Julian Academy in Paris. Her portrait of Samuel L. Clemens hangs in the Mark Twain Memorial Home in Hartford, Conn., and her work is also represented in the Brooklyn Institute of Arts and Sciences and the Boston Public Library.

**Kellogg, Frederick William.** American newspaper publisher; died at sea en route from Hawaii to Japan, Sept. 5, 1940; born in Norwalk, O., Dec. 7, 1866. He was advertising manager of the *Detroit News* (1887-94) and of the Scripps-McKee League (1895-1899); and publisher of the *Omaha Daily News* (1899). In association with L. V. Ashbaugh and B. D. Butler, he established the *St. Paul Daily News* in 1900, the *Minneapolis Daily News* in 1902 and the *San Francisco Call* in 1913. He sold the *Call* in 1919 to become part owner and general manager of the *Los Angeles Evening Express*. He was also president of Kellogg Newspapers, Inc., which operated 15 West Coast newspapers.

**Kelly, Michael.** Roman Catholic Archbishop of Sydney, N.S.W., from 1911; died in Sydney, Mar. 8, 1940; born in Waterford, Ireland, Feb. 13, 1850.

**Kenlon, John.** American fire chief; died in Englewood Cliffs, N.J., May 30, 1940; born in County Louth, Ireland in 1860. A member of the New York City Fire Department from 1887, he was chief of the department from 1911 to 1931, when he retired. During his tenure he established the Fire College and became its first president and made

many improvements in the Department. He attended 40,000 fires. He published *Fires and Fire Fighters* (1913) and *Fourteen Years a Sailor* (1923).

**Keppeler, Frederick L.** American architect and industrialist; died in White Plains, N.Y., July 30, 1940; born in Stuttgart, Germany, Sept. 14, 1862. A descendant of Johannes Keppeler, noted German astronomer, he came to the United States as a boy; practiced architecture in Chicago for several years and in 1912 founded the Keppeler Glass Construction Co. in New York City. His firm was the first in this country to employ glass in the construction of building walls and floors.

**Kerr, Duncan J(ohn).** American railway executive; died in Spokane, Wash., Oct. 8, 1940; born in Glasgow, Scot., Dec. 3, 1883. A graduate of Glasgow University, he came to the United States in 1904 and got a job as a rodman with the Pennsylvania Railroad. He stayed in the business 36 years, held technical and executive positions with several companies and was president of the Lehigh Valley Railroad from 1937 to 1939, retiring because of ill health.

**Kerzhentsev, Platon.** Soviet politician; died in Moscow, June 3, 1940; born in 1881. A member of the Bolshevik party from 1904, he was ambassador to Sweden (1921-23), and to Italy (1925-26), and after 1928 an official of the Central Committee of the Communist Party. After 1933 he was president of the All-Union Broadcasting Committee, and during 1936-38 was chairman of the All-Union Committee for Arts. He wrote several books on Lenin.

**Kilner, Walter Glenn.** American general; died in Washington, D.C., Aug. 30, 1940; born in Shelby, N.Y., July 8, 1888. He was graduated from West Point in 1912 and was a lieutenant in the army's 1st Aero Squadron, attached to Gen. John J. Pershing's punitive expedition into Mexico in 1916. He served in France in the World War as an army flying instructor. He was assistant chief of the Air Corps when he retired on Nov. 30, 1939. President Roosevelt appointed him the following day to succeed Colonel Lindbergh on the National Advisory Committee for Aeronautics.

**Kimball, Wilbur R.** American inventor; died in New York City, July 29, 1940; born in Lynn, Mass., 1863. He invented and built an eight-propeller helicopter that astonished the world in May and June, 1909, by rising up in the air like a mythological chariot and bouncing along the earth two or three times before cracking up at Morris Park in New York City. In the course of his life, Mr. Kimball obtained many important electrical and aeronautical patents.

**Kirby, Fred Morgan.** American merchant; died in Glen Summit near Wilkes-Barre, Pa., Oct. 16, 1940; born in Brownville, N.Y., Oct. 30, 1861. At the age of 15 he clerked alongside of Frank W. and Charles S. Woolworth in the general store of Moore and Smith at Watertown, N.Y. In 1884 he started a string of five-and-ten cent stores in partnership with Charles S. Woolworth. He bought out his partner in 1887; and eventually (in 1912) merged the company—consisting of 96 stores—with similar chains to form the F. W. Woolworth Co., of which he became vice-president.

**Klauber, Rosina.** American pianist, died on May 11, 1940; born in Budapest, Nov. 1, 1861. A pupil of Liszt, she played in concert from 1900 to 1910 when she became head of the piano department of the Institute of Musical Art, New York, later taken over by the Juilliard School of Music. She retired in 1930.

**Kloekner, Peter.** German industrialist; died in Essen, Germany, Oct. 5, 1940; born in 1864. Founder of the Kloekner Iron Trading Co., he was virtually stripped of his possessions—including 81,000,000 tons of ore, ten blast furnaces, a steel plant, and two rolling mills in Lorraine—by the terms of the Versailles treaty. After the World War, he formed the Kloekner Werke, a combination of coal and steel companies. Little had been heard of him, however, since the Nazification of Germany.

**Knopf, Sigard Adolphus.** American physician; died in New York City, N.Y., July 15, 1940; born in Halle-on-the-Salle, Germany, Nov. 27, 1857. He was graduated from Bellevue Medical College (1888) and settled permanently in New York City in 1896. He was professor of phthisiotherapy at the New York Post-Graduate Medical School and Hospital (1908-20); was the founder of the New York and the National Tuberculosis Associations; and was the recipient of several awards for his work in combating tuberculosis.

**Kohler, Walter J.** American manufacturer, president of Kohler Co., from 1905 to 1937, and thereafter chairman of the board; died in Kohler, Wis., Apr. 21, 1940; born in Sheboygan, Wis., Mar. 3, 1875. He was elected governor of Wisconsin on the Republican ticket for the term 1929-30.

**Koroshets, Anton.** Yugoslavian Roman Catholic clergyman and statesman; died in Belgrade, Yugoslavia, Dec. 14, 1940; born in 1872. He headed the Slovene Catholic party; was at one time Minister to the Vatican; held several cabinet posts; and was Premier of Yugoslavia from July 27 to Dec. 30, 1928.

**Kotze, Sir John G.** South African jurist; died in Leeuwenhof, Cape Town, Apr. 1, 1940; born there, Nov. 5, 1849. He was chief justice of the South African Republic (1881-98), and subsequently a judge of the South African Supreme Court from 1904, becoming in 1922 judge of the Appellate Division of the Union of South Africa. He retired in 1927.

**Kress, Claude Washington.** American merchant; died in New York City, N.Y., Nov. 18, 1940; born in Slatington, Pa., Apr. 4, 1876. With his brother, Samuel H. Kress, he was co-founder of a mercantile business in 1893 at Nanticoke, Pa., which developed into S. H. Kress and Co., operators of some 240 five-and-twenty-five cent stores in the United States and Hawaii. He was vice-president of the company (1916-25) and president (1925-39). He was trustee of the Harvard Graduate School of Business Administration, to which he donated the Kress Library of Business and Economics. With his brothers, Samuel H. and Rush H. Kress, he contributed toward the erection of Kress Hall on the grounds of the Warm Springs Foundation at Warm Springs, Ga.

**Kubelik, Jan.** Czech violinist; died in Prague, Bohemia, Dec. 5, 1940; born in Michle, near Prague, July 5, 1880. He began the study of music at the age of six; attended the Prague Conservatoire; made his first concert tour in 1898; played in the United States many times, the first in 1901, the last in 1935. He was said to have made and spent \$3,000,000. Each of his fingers was insured for \$23,500; his Stradivarius violin for \$125,000. In 1921 he was shipwrecked traveling from Ostend, Belgium, to London, and before getting into a lifeboat he put a life preserver around his violin. He was married in 1903 to Countess Marianne Czaky, daughter of the ex-president of the Hungarian Senate. Their daughter, Anita, is a well-known violinist and their son Rafael is a noted composer and orchestra conductor.

**Kyte, George William.** Canadian legislator and government official; died in St. Peters, N.S., Can., Nov. 16, 1940; born in St. Peters, July 10, 1864. He served as a Liberal member of the House of Commons for many years, and was a member of the International Joint Commission since 1928.

**Ladeuze, Paulin.** Belgian ecclesiastic, Titular bishop of Tiberius from 1926 and professor of Scripture and Early Christian Literature (1898-1940) and Rector (1909-40) of Louvain University; died in Brussels, Feb. 10, 1940; born in 1870. He was successful in preventing the inscription "Destroyed by German Fury; restored by American Generosity" being placed on the restored Library.

**Lagerlöf, Selma.** Swedish novelist, died in Märbacka, Mar. 16, 1940; born there, Nov. 20, 1858. Her first novel, *Gosta Berling's Saga*, long considered one of her best works, appeared in 1891. Her best known works compose the trilogy *The Ring of the Downsholds—The General's Ring* (1925), *Charlotte Lovensköld* (1925) and *Anna Svärd* (1928). In 1909, after publishing *From a Swedish Homestead* (1899), *Queens of Kungahalla and Other Sketches* (1899), *Jerusalem* (1901-03), *Legends of Christ* (1904), *The Girl from the Marsh Croft* (1908), she was awarded the Nobel Prize for literature. Her later works included *From My Childhood* (1930-32), *Harvest* (1933), and *The Diary of Selma Lagerlöf* (1937). She visited the United States in 1924 as a delegate to the Women's Congress in Washington.

**Laidlaw, Sir Patrick P.** British scientist; died in London, Mar. 20, 1940; born Sept. 26, 1881. He discovered the virus-cause of distemper in dogs and identified for the first time the virus-cause of influenza. He received the Royal Medal in 1933, was knighted in 1935, and made director of the department of experimental pathology and deputy director of the National Institute for Medical Research in 1936.

**Laines, Juan J.** See SPANISH-AMERICAN LITERATURE under *El Salvador*.

**Lake, Sir Percy Henry Noel.** British general; died on Nov. 16, 1940; born in Tenby, Wales, June 29, 1855. Joining the British army as a subaltern at the age of 18, he rose through the ranks; was Quartermaster-General in Canada (1893-98); chief of the Canadian General Staff (1905-08); Inspector-General (1908-10); and Commander-in-Chief of the Mesopotamian Expeditionary Force in the World War.

**Lamington, 2d Baron, Charles Wallace Alexander Napier Oochrane Baillie.** British politician; died in England, September, 1940; born on July 29, 1860. He served as Governor of Queensland, Australia (1895-1901); and Governor of Bombay (1903-07); and at the time of his death was President of the East India Association. He was wounded in the hand on Mar. 13, 1940, at Caxton Hall, London, when an Indian assassin killed Sir Michael O'Dwyer, a former lieutenant-governor in India.

**Lamport, Arthur Mathew.** American investment banker, philanthropist, and economist; died in New York City, N.Y., Nov. 8, 1940; born in Franklin Falls, N.Y., Nov. 21, 1883. A graduate of the College of the City of New York, he entered the banking business; was president of A. M. Lamport and Co. (1923-36); and senior partner

since that time. He was national treasurer of the United Palestine Appeal.

**Langdale, John William.** American clergyman; died in Brooklyn, N.Y., Dec. 10, 1940; born in Newcastle, Eng., Aug. 14, 1874. A graduate of Wesleyan University, Middletown, Conn., he held several pastorates in the east including the New York Avenue M. E. Church, Brooklyn, from which he resigned in 1925 to become book editor of the Methodist Episcopal Church and editor in chief of *Religion in Life*, a Methodist quarterly. He was the author of *Citizenship and Moral Reform*, published in 1918.

**Lansbury, George.** British labor leader, died in London, May 7, 1940; born in Suffolk, Feb. 21, 1859. A printer by trade, and later in the lumber business, he was elected to Parliament as a Labor candidate from the East End of London in 1910, but resigned in 1912 to work for woman suffrage. He was re-elected in 1922 and served as First Commissioner of Works in the cabinet of Ramsay MacDonald during 1929-31. He aided in founding the national Labor paper, *The Daily Herald* in 1912 and for many years was its editor. He wrote *What I saw in Russia* (1920), *My Life; My England* (1934); *Looking Backwards—and Forwards* (1935), and *My Quest for Peace* (1938) as well as many pamphlets on social questions.

**Latham, Orval B.** American educator; died in Iowa City, Ia., July 9, 1940; born in Boone, Ia., Apr. 13, 1890. A teacher from 1911, he was professor of education (1924-26) and director of teacher training (1926-27) at Ohio University, and president of the Iowa State Teachers College after 1928.

**Lavedan, Henri Leon Emile.** French author; died in France, August, 1940; born in Orleans, April 9, 1859. His first long play was *Une Famille*, produced at the Comédie Française in 1891. Five of his later plays were produced here by Otis Skinner—*Le Duel*, *Le Bon Temps*, *Sve*, *Le Gout du Vice*, and *Service*. Lavedan was a regular contributor of Parisian periodicals.

**Lawford, Ernest.** English character actor; died in New York City on Dec. 27, 1940; born in England, 1870. He made his first London appearance at St. James's Theater on Feb. 24, 1890, as Le Beau with Lily Langtry in *As You Like It*; played many notable roles since that time; and was identified almost continuously with the New York stage since 1903. His last appearance was in *The Brown Danube* in the spring of 1939.

**Lee, John Clarence.** American Universalist clergyman and educator; died in Cambridge, Mass., Sept. 16, 1940; born in Woodstock, Vt., Oct. 15, 1856. He was graduated in 1876 from St. Lawrence University, of which his father was the first president; became professor of homiletics (1884) and later president of Lombard College, Galesburg, Ill. He was president of St. Lawrence University from 1896 to 1900, and pastor of Philadelphia Church from 1900 to 1920, when he was called to the mother church of the Universalists in Gloucester, Mass.

**Lessing, Bruno.** See **BLOCK, RUDOLPH.**

**Levene, Phoebus Aaron (Theodore).** American biochemist; died in New York City, N.Y., Sept. 6, 1940; born in Sagor, Russia, Feb. 25, 1869. Educated at the Imperial Military Medical Academy, St. Petersburg and at Columbia University, he was chemist at the Saranac Laboratory for the Study of Tuberculosis (1900-02); Herter lecturer in pathological chemistry at New York University (1905-06) and member of the Rockefeller Institute for Medical Research from 1907 to 1939. He won wide recognition in the field of biochemistry and was the recipient of the William Gibbs Medal (1931) and the William H. Nichols Medal (1938) for his chemical discoveries.

**Lever, Asbury F.** American politician; died near Columbia, S.C., Apr. 28, 1940; born in Spring Hill, S.C., Jan. 5, 1875. Elected to the 57th Congress from South Carolina in 1901, he was re-elected to the 58th to 66th Congresses (1903-21), resigning on Aug. 1, 1919 to join the Federal Farm Loan Board. He was co-author of the Smith-Lever Farm Act.

**Levin, Abraham Louis.** American physician and inventor; died in Louisiana, Sept. 15, 1940; born in Poland, 1881. A professor at the Louisiana State University Medical Center, Dr. Levin was noted for his invention of the Levin stomach tube, used in the treatment of gastro-enterological diseases.

**Lewis, Albert Buell.** American anthropologist; died in Chicago, Ill., Oct. 10, 1940; born in Clifton, O., June 21, 1867. Educated at the University of Wooster, Ohio, he taught anthropology at the Universities of Chicago and Nebraska (1894-1908); was assistant curator of Melanesian ethnology for the Field Museum (1908-37); and curator since 1937. He was head of the Joseph N. Field South Pacific Expedition of 1909-13.

**Lewis, Francis Park.** American oculist; died in Brookhaven, L.I., Sept. 10, 1940; born in Hamilton, Ont., Can., May 19, 1855. Educated in London, Berlin, and Vienna, he practiced medicine in Buffalo, N.Y., from 1876 until his death. He was a founder and vice-president of the National Society for the Prevention of Blindness and the International Association for Prevention of Blindness; editor of *The American Journal of Ophthalmology*

and the author of several books on the protection of eyesight.

**Lide, Jonas.** American painter, died in New York, Jan. 10, 1940; born in Moss, Norway, Apr. 29, 1880. Known for his sea- and landscapes, his work is found in museums throughout the United States and he was awarded many prizes, including the Saltus medal (1936) and the Orbig prize (1937) of the National Academy of Design. He served as president of the latter institution during 1934-39.

**Lillard, George W.** American educator; died in Hartford, Conn., Oct. 24, 1940; born in Washington, Va., 1884. A graduate of Georgetown Law School and a former investigator for the U.S. Department of Justice, he founded the Hartford College of Law in 1916. During the World War he headed a staff of 13 FBI men assigned to investigate anti-war activities in Connecticut.

**Lindley, Ernest Hiram.** American educator; died while en route from Shanghai, China, to San Francisco, Calif., Aug. 21, 1940; born in Paoli, Ind., Oct. 2, 1869. Educated at Indiana University, he was a teacher (1893-1902) and Professor of Philosophy there (1902-17); president of the University of Idaho (1917-20); and chancellor of Kansas University from 1920 to 1939, except for an exciting three weeks beginning Dec. 26, 1924, when he was removed by Gov. Jonathan M. Davis and reinstated by Gov. Ben. S. Paulen. He was chancellor emeritus at the time of his death.

**Lippincott, Joshua Bertram.** American publisher, president (1911-26), and chairman of the board after 1926 of J. B. Lippincott Co.; died in Philadelphia, Jan. 19, 1940; born in Huntingdon Valley, Pa., Aug. 24, 1857.

**Lisman, Frederick J.** American investment banker, president (1895-1930), and chairman of the board of directors thereafter of F. J. Lisman & Co.; died in Manhasset, L.I., N.Y., Feb. 14, 1940; born in Budingem, Germany, July 21, 1865. He was an expert on railroad finance.

**Livermore, Jesse Lauristan.** American stock market operator; died by suicide in New York City, N.Y., Nov. 28, 1940; born in West Acton, Mass., 1877. He began his financial career in 1894 as a board boy, at \$6 a week, for the brokerage house of Paine, Weber and Co., in Boston; took to speculating on his own account, and went to New York with \$25,000 in 1902, where he established himself in Wall Street. He made and lost four fortunes. In 1934 he went into his last bankruptcy, listing \$2,259,212 in liabilities. He was married three times.

**Llewellyn, Sir David Richard.** Welsh coal operator and sportsman; died in Aberdare, Glamorganshire, Wales, Dec. 15, 1940; born in Aberdare, Mar. 9, 1879. He was chairman of the Welsh Associated Collieries from 1930 until his death.

**Lodge, Sir Oliver (Joseph).** British physicist, inventor, and spiritualist; died in Amesbury, Wiltshire, Eng., Aug. 22, 1940, born in Penkhill, Staffordshire, June 12, 1851. He attended Newport (Salop) Grammar School, and his father intended him to enter the family pottery business, a vocation for which the son showed no affection. While on a visit to London, he heard a series of lectures by Tyndall, became interested in elementary chemistry, matriculated at Wedgwood Institute and then took a winter's course (1872) at the South Kensington Chemical Laboratory. By working at odd jobs, he was able to continue his studies through the University of London and the University College, London. In 1875, in collaboration with his teacher, Prof. Carey Foster, he published several papers on the flow of electricity in plane conductors, which attracted wide scientific notice. In June, 1877, he published a paper on electrical measurements and subsequently brought out a research on the standard of electro-motive force, taking for this purpose the Daniell cell. Later he produced a mathematical theory of intermittent currents in the induction balance. He conducted a series of experiments that did much to confirm Maxwell's electromagnetic theory of light. He became professor of physics and mathematics in the University College, Liverpool, in 1881; Romanes lecturer at Oxford in 1903; and principal of Birmingham University from 1900 to 1919.

After about 1910 Sir Oliver publicly embraced spiritualism, although his interest in the subject first manifested itself seriously in 1889. He wrote and lectured at great length on the topic, attended seances, and claimed to have been in communication with the dead. After his son's death in the World War he wrote *Raymond, or Life and Death*, a memoir with an account of supernatural communications believed to have been received from his son. When Sir Oliver was 80, he announced that he would communicate with the world after his death and prepared for that important eventuality by placing a sealed document in the custody of the English Society of Psychical Research, saying that his message from the beyond would correspond with what he had recorded in the document. Among the better known published works of Sir Oliver were:

*Lightning Conductors and Lightning Guards; Life and Matter; Modern Views of Matter; The Substance of Faith; Man and the Universe; The Ether of Space; Atoms and Rays*, 1924; *Why I Believe in Personal Immortality*, 1928; *Phantom Walls*, 1928; *The Reality of a Spiritual World*,

1930; *Beyond Physics*, 1930; and *Past Years*, an autobiography, 1931.

**Loeb, Fritz.** German soldier; death "in the air" announced on June 25, 1940; born in 1895. He served as chief of raw materials and foreign exchange for the execution of the German four-year plan from 1934-38 and was instrumental in building up Germany's air forces. He was made a major general in the Air Force in 1938.

**Loefgren, Eliel.** Swedish lawyer, Minister of Foreign Affairs (1926-28) and Swedish representative on the League of Nations (1922-30); died in Stockholm, Apr. 8, 1940; born in Pitea in 1862.

**Lolay, Alfred.** French orientalist and historian; died in Ceffond, Haute-Marne, France, June, 1940; born in Ambrières, Marne, Feb. 28, 1857. He was a leader of the modernist movement in the Roman Catholic Church. Educated at the Seminary of Châlons-sur-Marne, he was ordained a priest and taught at the Catholic Institute from 1881 to 1893. His unorthodox views led to his excommunication in 1908. He was professor of religious history at the College of France from 1909 to 1932, and professor emeritus since that time. He wrote numerous books including *Les origines du Nouveau Testament*, 1936.

**Longman, Sir Hubert H.** British publisher, a partner in the firm of Longmans, Green & Co., from 1880 to 1933; died in London, Mar. 18, 1940; born Nov. 29, 1856.

**Loram, Charles T.** South African educator; died in Ithaca, N.Y., July 8, 1940; born in Pietermaritzburg, South Africa, May 10, 1879. Active in South African educational fields from 1896, he came to the United States in 1931 as Sterling professor of education at Yale University and after 1933 he served also as director of studies, department of culture contacts and race relations at the Graduate School. He wrote *Education of the South African Native* (1919).

**Loree, Leonor Fresnel.** American railroad executive; died in Bowood, N.J., Sept. 6, 1940; born in Fulton City, Ill., Apr. 23, 1858. He was graduated from Rutgers College in 1877, went to work as a survey engineer for the Pennsylvania Railroad and rose to a vice-presidency of the road's Western lines in 1901. In June, 1901, he resigned from the Pennsylvania system to become president of the Baltimore and Ohio Railroad, where he remained until Jan. 1, 1904. He then became president of the Rock Island Co. of New Jersey at a salary of \$75,000 a year, but resigned within nine months following a clash with controlling financial interests, although he compelled the company to pay him his full salary for five years, under contract. In 1907 when Edward H. Harriman bought the Delaware and Hudson Railroad, he made Loree president, a position he held for 31 years until his retirement at the age of 80 on Mar. 30, 1938. He was president of the New York State Chamber of Commerce from 1928 to 1930.

**Lorillard, Pierre.** American tobacco capitalist; died in Tuxedo Park, N.Y., Aug. 6, 1940; born in New York City, N.Y., Jan. 28, 1860. He did not attend college, but entered the P. Lorillard Co. as a young man and eventually succeeded his father as president of the company and as treasurer of the Continental Tobacco Co., an affiliate. When the American Tobacco Co., which had no connection with the present company of the same name, was formed out of the Lorillard properties, he became treasurer. He remained in that capacity until the company was dissolved by the government under the anti-trust laws. The company was then reorganized and passed out of the ownership of the Lorillard family. Mr. Lorillard, like his father, was a sports enthusiast and worked tirelessly to keep Tuxedo Park, N.Y., the exclusive society colony his father founded it to be.

**Lothian, 11th Marquess of, Philip Henry Kerr.** British statesman; died in Washington, D.C., Dec. 12, 1940; born on Apr. 18, 1882. Through his mother, Lady Anne Fitzalan Howard, daughter of the fourteenth Duke of Norfolk, he was a member of one of England's most prominent Roman Catholic families; was educated at Oratory School, Birmingham, and at New College, Oxford. He was the son of Maj. Gen. Lord Ralph Kerr, third son of the seventh Lord Lothian, and received his title on the death of his cousin, the tenth Marquess of Lothian on Mar. 16, 1930. In later life, Lord Lothian gave up the religious faith of his childhood and became a Christian Scientist, a subject on which he wrote many articles.

From 1905 to 1908 young Kerr worked in the administration of Lord Milner, governor of the Transvaal; later he was editor of *The State*, a South African political newspaper, and of *The Round Table*, a scholarly London journal that spoke frequently for the liberal imperialists. He was private secretary to Lloyd George (1916-21) and as such was the World War Premier's principal adviser on foreign affairs; was director of United Newspapers, Ltd., (1921); secretary of the Rhodes Trust (1925-39), a post that brought him to the United States 14 times and into 44 of the States of the Union. He became Parliamentary Under-Secretary of the India Office in 1931 and chairman of the Indian Franchise Committee two years later. His service in the House of Lords was marked by a tendency to believe that Adolf Hitler was fundamentally a man of peace

and good will who was merely trying to rectify the errors of the Versailles Treaty.

He became Ambassador to the United States on Aug. 30, 1939, succeeding Sir Ronald Lindsay. Four days later his country was at war, and his post thereafter was one of the most difficult diplomatic assignments in the world, requiring sharp thinking and acting and tact of the smoothest quality. The evening before he died an associate of his at the embassy read to a Baltimore audience a dramatic appeal for greater material aid to Great Britain, written by Lord Lothian some days before. American response to the plea was instantaneous and the tempo of American aid was in consequence accelerated.

**Louis-Dreyfus, Louis.** French Senator and financier, died in Cannes, France, Nov. 10, 1940. He headed the Dreyfus family bank in Paris, one of the wealthiest private banks in the world.

**Lowman, Seymour.** American lawyer and banker; died in Elmira, N.Y., Mar. 13, 1940; born near Chemung, N.Y., Oct. 7, 1868. Active in Republican politics he served in the New York State Legislature and during 1925-26 he was lieutenant governor. From Aug. 1, 1927 to Mar. 15, 1933, he was assistant secretary of the U.S. Treasury in charge of prohibition enforcement, customs, and Coast Guard.

**Luisi, Luisa.** See SPANISH-AMERICAN LITERATURES under *Uruguay*.

**Luland, John C.** American inventor; died in Newark, N.J., on Dec. 23, 1940; born in London, Eng., 1853. From 1872 to 1939 he was employed in a steel plant at Harrison, N.J. originally owned by Benjamin Atha but now a part of the Crucible Steel Co. of America. An inventor of processes in the heat treatment of steel, he developed a shell that was capable of penetrating "Krupp" armor plate.

**Lundeen, Ernest.** American senator; died in an airplane accident near Lovettsville, Va., Aug. 31, 1940; born in Beresford, S.D., Aug. 4, 1878. A graduate of Carlton College and the University of Minnesota, he practiced law in Minneapolis, joined the La Follette wing of the Republican party, and was a member of the U.S. House of Representatives from 1917 to 1919. He distinguished himself in Washington by opposing America's entry into the World War, by voting against the 1917 conscription act, and by fighting against American entry into the League of Nations. As a Congressman, he went to France in an official capacity during the World War, but was refused permission to tour the front. In 1919 he was run out of Ortonville, Minn., in a locked refrigerator car after he had attempted to make a speech. He reappeared in Congress as a Farmer-Laborite (1933-37) and in 1936 was elected to the U.S. Senate. He was an isolationist all his life and opposed the selective service act of 1940.

**Lyon, George F.** American jurist; died in Binghamton, N.Y., May 21, 1940; born in Barker, N.Y., July 13, 1849. He served on the New York Supreme Court bench from Jan. 1, 1896, until his retirement upon reaching the age limit in 1920. Thereafter he was an official referee of the Third Judicial Department.

**McCarl, John Raymond.** American ex-comptroller general; died in Washington, D.C., Aug. 2, 1940; born near Des Moines, Ia., Nov. 27, 1879. A graduate of the University of Nebraska (1903), he practiced law for some years; was private secretary to Sen. George W. Norris (1914-18) and executive secretary of the National Republican Congressional Campaign Committee (1918-21). He served as Comptroller General by appointment of President Harding from 1921, when the office was created by Congress, until his term expired in 1936. Popularly known as the "watchdog of the Treasury," he effected huge savings in governmental expenditures, and applied his blue-pencil to big and small items alike, with an impartiality that brought him many enemies and many friends. On one occasion he refused to let the government pay \$150 for a lunch bought by a Federal employee because, he said: "There is nowhere in Virginia where one can buy a lunch worth \$1.50."

**McClellan, George Brinton.** American educator; died in Washington, D.C., Nov. 30, 1940; born in Dresden, Germany, Nov. 23, 1865, the son of Gen. George B. McClellan of Civil War fame. He was graduated from Princeton University in 1886, worked as a reporter on several New York newspapers, in which capacity he became a friend of Richard Croker, leader of Tammany Hall; was treasurer of the Brooklyn Bridge when it was operated under a toll system (1889-92); president of the Board of Aldermen of New York City (1893-94); Democratic member of the U.S. House of Representatives (1895-1903); Democratic Mayor of New York (1903-09); lecturer at Princeton (1908-12) and professor of economic history there from 1912 to 1931.

McClellan's relations with Tammany Hall were cordial until he began to clean the municipal government of graft and the city itself of gambling. Under his administration the Catskill water supply was made available to the city, at a cost of \$120,000,000; the Williamsburgh, Manhattan, and Queensborough bridges were added to the Brooklyn Bridge to link Manhattan with Long Island; two subway

tunnels to Brooklyn and three to New Jersey were built by private companies; and municipal ferries were put in operation.

**MacDonald, Edward Mortimer.** Canadian lawyer; died in Pictou, N.S., May 25, 1940; born there, Aug. 16, 1865. A Liberal Member of Parliament from Pictou Co., Nova Scotia from 1904 to 1925, he became minister of National Defense of Canada (1923-26) and minister without portfolio in 1923. In 1924 he represented Canada at the League of Nations. He retired in 1926 and in 1938 published *Reminiscences Political and Personal*.

**McGarrah, Gates W.** American banker; died in New York City, N.Y., Nov. 5, 1940; born in Monroe, N.Y., 1863. After finishing high school he got his first job sweeping the sidewalk in front of the Goshen (N.Y.) National Bank (1881); held minor positions with the New York Produce Exchange Bank (1883-98); became cashier of the Manufacturers National Bank (1898) and president (1902) and remained at the head of the company after it was merged into the Mechanics National Bank. When the Chase National Bank absorbed the Mechanics in 1926 he was made chairman of the executive committee. From 1923 to 1926 he was a director of the New York Federal Reserve Bank, and in 1927 became chairman of the Federal Reserve Board in New York City. In 1930 he was appointed president and chairman of the board of the Bank for International Settlements at Basle, Switzerland, a position he held for three years, in a period marked by frequent international financial crises.

**McGuire, William Anthony.** American writer; died in Calif., Sept. 16, 1940; born in Chicago, Ill., July 9, 1887. He was the author of many successful plays produced in New York City, including: *The Walls of Wall Street* (1908); *The Heights* (with Frank Keenan) in 1910; *The Divorce Question* (1912); *Everyman's Castle* and *The Man Without a Country* (1916); *A Good Bad Woman*, *In and Out of Bed*, and *Mary Be Careful* (1919); *Frivolities of 1920*, *Six Cylinder Love* (1921). During the next few years he was associated with Ziegfeld in writing and producing the *Follies*; but he also composed *It's a Boy*; *Ten Gods*; *Twelve Miles Out*; *If I Were Rich*; *Tral Divorce*; and (with Guy Bolton) *Rosalie*, 1927. Since 1930 he was engaged in scenario writing for the motion pictures and in this connection penned some of the greatest screen hits of recent years, including *The Great Ziegfeld*.

**MacLachlan, Alexander.** Canadian educator; died in Kingston, Ont., Can., Sept. 8, 1940; born in Erin, Peel Co., Ont., 1859. A graduate of Union Theological Seminary, New York, he went to Smyrna, Turkey, in 1897 for the American Board of Commissioners for Foreign Missions and there founded a school which in 1903 was chartered as the International College. He was a technical military prisoner during the World War, was wounded by brigands in 1922, and was said to have installed the first electric lighting plant in Turkey.

**McRae, James H.** American soldier; died in Berkeley, Calif., May 1, 1940; born in Lumber City, Ga., Dec. 24, 1863. In the army from 1886 he was promoted through the ranks to major general in the regular army in 1922 and served in the Indian campaigns, the Spanish-American War, the Philippine Insurrection, and in the World War, during which he commanded the 78th Division and took part in the St. Mihiel and the Meuse-Argonne offensives. He retired in 1927.

**Maher, Peter.** Irish pugilist; died in Baltimore, Md., July 22, 1940; born in Galway, Ireland, Mar. 16, 1869. Beginning as a prize-fighter about 1882, he won the welter, middle, and heavy weight championship of England and Ireland; boxed an exhibition bout with John L. Sullivan in Dublin; came to the United States in 1891 and was knocked unconscious by such dilettantes as Bob Fitzsimmons, Joe Choynski, Tom Sharkey, and Al (The Real) McCoy.

**Mamluk, Hans J.** German dental leader; died in New York City, N.Y., Nov. 11, 1940; born in Silesia, Germany, 1875. Formerly head of the dental school of the University of Berlin and for 20 years editor of one of Germany's leading dental publications, his researches resulted in many improvements in technique, notably the so-called "Mamluk fixation" for tightening loose teeth. Following the production in Switzerland in 1937 of Friedrich Wolf's play, *Professor Mamluk*, depicting the persecution of a Jewish surgeon in Germany, Dr. Mamluk fell from Nazi grace, although he disclaimed any responsibility, directly or indirectly, for the drama. He arrived in the United States on Apr. 16, 1937, when Wolf's play was being produced in New York City.

**Mansell-Moullin, Charles William.** British surgeon; died in London, Eng., Nov. 10, 1940; born in October, 1851. He was Hunterian Professor and Vice-President of the Royal College of Surgeons of England, and Examiner in Surgery at the Universities of Oxford, Cambridge, and Glasgow. An acknowledged authority on cancer, he wrote many treatises and books, including *The Biology of Tumours*.

**Mao Tse Tung.** Chinese Communist, reported died on May 4, 1940. The leader of the Chinese Communist party

he was active in that organization from 1920 and in 1924 became the first president of the All Peasants' Union. He commanded a Red army in the uprising at Nanchang on Aug. 1, 1927, and thereafter fought with the Kuomintang. However, he joined the Kuomintang in 1937 to fight the Japanese invasion and was political head of the border regional government at Yen-an, Shensi.

**March, Harry A.** American physician; died in Canton, O., June 10, 1940; born in New Franklin, O., in 1876. The "father of professional football," in 1924 he organized the New York Football Giants and served as the club's president during 1928-33. He was the first president of the American Professional Football League (1935-36).

**Marchesi, Blanche** (Blanche Baronne Anson Oacamist). French opera and concert singer; died in London, Eng., Dec. 15, 1940; born in Paris, France, Apr. 4, 1863. The daughter of Salvatore Castrone Marchesi of Palermo and the former Matilde Graumann, both noted singers, she made her operatic debut as Bruennhilde in *Die Walkure* at the Prague Opera House in 1900. She toured the United States in 1899 and 1909, and was a special favorite of Queen Victoria, by whom she was twice decorated. In 1927 she gave a hint to the British royal family that "if they took more interest in music, things in the musical world in England would be better," adding: "Society people are like monkeys, and if the King showed a greater desire for music everyone would follow suit." Her reminiscences, *A Singer's Pilgrimage*, was published in 1923.

**Maria, Princess.** Greek noblewoman, sister of the late King Constantine, aunt of King George II and aunt of Marina, Duchess of Kent, died on Dec. 13, 1940; born in Athens, Greece, Feb. 20, 1876. She was the daughter of Prince William of Denmark who as George I was King of Greece from 1863 until his assassination in 1913. Her first husband, Georges Michailovitch, Grand Duke of Imperial Russia, whom she married in 1900, was killed by Bolsheviks in 1919. Her brother, King Constantine, ruled Greece from 1913 to 1917 and from 1920 to 1922. In 1922, Princess Maria married a retired Greek admiral, Pericles Ioannides. Princess Xenia, a daughter of Princess Maria by her first marriage, was married in 1921 to William B. Leeds, Jr., of New York. They were divorced in 1930.

**Markham, Edwin.** American poet; died in Westerleigh, S.I., N.Y., Mar. 7, 1940; born in Oregon City, Ore., Apr. 23, 1852. His parents settled in California in 1857 and his young manhood was spent in farming. He attended San Jose Normal School and became a school teacher. In 1899 his poem, *The Man with the Hoe*, won world-wide attention and he devoted the remainder of his life to literature. His other works include *Lincoln*, and *Other Poems* (1901), *The Children in Bondage* (1909), *The Shoes of Happiness and Other Poems* (1915), *California the Wonderful* (1915), *Gates of Paradise* (1920), *The Ballad of the Galloway Bird* (1926), *New Poems—Eighty Songs as Eighty* (1932), *The Star of Araby* (1937). In addition he edited *Foundation Stones of Success* (4th ed., 1925), *The Book of Poetry* (2 vol., 1927), covering 1000 years of European and American poetry; *California in Song and Story* (1930), and *Poetry of Youth* (1935), an anthology. He was awarded the prize of the *Poetry Review* of London for the best poem on Edgar Allen Poe in 1928 for his poem *Israfel*, and in 1929 he was co-winner with nine others of a prize for a new competition for a national anthem, his contribution being *New America*. In 1938 he had recordings made of his interpretations of his principal poems entitled *Edwin Markham, Himself*.

**Marler, Sir Herbert.** Canadian diplomat, died in Montreal, Jan. 31, 1940; born there, Mar. 7, 1876. Privy Councillor and a member of the Cabinet in 1925, in 1929 he was named envoy extraordinary and minister plenipotentiary in respect to the Dominion of Canada in Japan. He was appointed minister to the United States in 1936 but resigned in 1939 because of ill health.

**Martel, Damien de.** French diplomatist; died in Paris Jan. 21, 1940; born in 1878. In the diplomatic service from 1901, he was ambassador to Tokyo during 1929-33 and High Commissioner for Lebanon and Syria during 1933-38.

**Martin, Edgar Stanley.** American editor, educator, and Boy Scout official; died in East Orange, N.J., Aug. 9, 1940; born in Gorham, N.Y., Mar. 8, 1873. A school teacher by profession, he joined the Boy Scout movement in 1910; was a paid organizer for many years; editor of the official magazine *Scouting* since 1927; and national director of publications since 1931.

**Marvin, Harry N.** American inventor; died near Sarasota, Fla., Jan. 12, 1940; born in Jordan, N.Y., in 1863. An associate of Thomas Edison, he was a founder of the Biograph Co., and the Motion Picture Patents Co., retiring in 1912. His inventions dealt with motion pictures and radio, the latest one being an automatic radio-tuning system.

**Masferrer, Alberto.** See SPANISH-AMERICAN LITERATURES under *El Salvador*.

**Mason, William Harris.** American legal editor; died on Sept. 11, 1940; born in Kansas City, Mo., 1872. As president since 1925 of the Mason Publishing Co., St. Paul,

Minn., he edited numerous law books including *Mason on Negligence*, a recognized authority on the subject.

**Matthews, Harold H.** Canadian soldier; died in Ottawa, May 12, 1940; born in Lower Harford, England, in 1877. In the Canadian army from 1910 he saw service during the World War, and in 1938 was appointed adjutant general of the Canadian Defense Forces with the rank of major general.

**Mayo, Katherine.** American author and reformer; died in Bedford Hills, N.Y., Oct. 9, 1940; born in Ridgeway, Pa., 1867. She was educated in private schools in Cambridge and Boston, Mass., and then lived in Dutch Guiana for eight years with her father, a mining engineer. In 1910 she assisted Oswald Garrison Villard in the preparation of his book *John Brown* and she also helped Horace White of the *New York Evening Post* on his *Life of Lyman Trumbull*. In 1927 she published *Mother India*, a book dealing with social and economic conditions in that country, in which she reported that girls were sold in marriage at the age of 3, became wives at 12, and mothers at 13 or sooner. Sales of the book reached fantastic proportions; and the allegations were followed by reforms in India, although the author was burned in effigy in various parts of that country.

**Michelin, Edouard.** French inventor and tire manufacturer; died in Orcines, France, Aug. 25, 1940; born in 1856. With his brother, André, he established the Michelin Tire Co. in 1888, which was the first company to apply pneumatic tires to motor-driven vehicles. In 1931 their only American factory, at New Brunswick, N.J., closed after operating 23 years.

**Miller, Alexander Oppeland.** American Methodist clergyman and editor; died in Little Rock, Ark., Nov. 9, 1940; born in McKeesport, Pa., May 17, 1861. He studied at Central College in Missouri and was president and professor of Latin and philosophy (1888-1902) at the Neosho (Mo.) Collegiate Institute (which later, as Hendrix College, was moved to Conway, Ark.); professor of history and economics, Central College (1902-04); president of Hendrix College for the second time (1910-13); president of Oklahoma Methodist College (1913-14); and editor of the *Arkansas Methodist* since that time.

**Miller, Webb.** American journalist; killed in a fall from a railroad train in London, May 7, 1940; born near Pokagon, Mich., in 1892. A newspaper reporter from 1912, he joined the United Press in 1916 and covered the World War, the Peace conferences, the Riff revolt (1925), the Ethiopian campaign (1935), the Spanish War, the Finnish War (1939), and was preparing to go to Norway. In 1936 he published *I Found No Peace*, a book of reminiscences.

**Miro, Ricardo.** See SPANISH-AMERICAN LITERATURES under *Panamá*.

**Mix, Tom.** American cowboy-actor; died in an auto accident near Florence, Ariz., Oct. 12, 1940; born in Mix Run, near Dubois, Clearfield Co., Pa., Jan. 6, 1880. He had an exciting career both in and out of the movies: was a cowboy in Texas, Arizona, Wyoming, and Montana; served in the U.S. Army in the Philippines, the Spanish-American War and in the Boxer trouble in China; fought with the British in the Boer War; did patrol and police duty with the Texas Rangers; was foreman of the Miller Brothers' 101 Ranch, Bixas, Okla. (1906-09); won several national riding and roping contests; was a star circus performer; and since 1910 was one of the most spectacular cowboy-heroes of the screen.

**Modjeski, Ralph.** American engineer; died in Los Angeles, June 26, 1940; born in Cracow, Poland, Jan. 27, 1861, the son of Helen Modjeska, the famous actress. He came to the United States with his mother in 1876; was educated in France, and by 1892 was established as a consulting engineer on bridge design. Among the many bridges with which his name is associated are the McKinley Bridge, St. Louis; Broadway Bridge, Portland, Ore.; the Quebec Bridge over the St. Lawrence River at Quebec, the longest truss-span bridge in the world; Delaware River Bridge, Philadelphia; Huey P. Long Bridge over the Mississippi at New Orleans; the Iowa-Illinois Memorial Bridge, and the Calvert St. Bridge, Washington. He also was chairman of the board of consulting engineers on the Trans-Bay Bridge, San Francisco. His work brought him the John Scott medal (1924); the John Fritz medal (1930) for "notable achievements as an engineer of great bridges, combining the principles of strength and beauty," and the Washington Award (1931). He retired in 1935.

**Moore, Thomas Albert.** Canadian clergyman; died in Toronto, Mar. 31, 1940; born in Acton, Ont., June 29, 1860. Ordained a Methodist in 1880, he played a leading part in the union of the Methodist, Presbyterian, and Congregational churches in Canada in 1925 and was named secretary of the General Council of the United Church. He retired in 1934.

**Mora, F(rancis) Luis.** American artist; died in New York, June 5, 1940; born in Montevideo, Uruguay, July 27, 1874. Good examples of his work are "The Letter," "The American Gladiators," "After the Bull Fight," "The Cruise of the Ellira." His later works include the portrait of President Harding in the White House (1930), post

office murals in Clarksville, Tenn., and Catasauqua, Pa., and the painting "Our Christian Era" for the Dun & Bradstreet office at the New York World's Fair (1939). He was awarded the 1st Hallgarten prize, National Academy of Design (1905) and the Carnegie prize of the National Academy (1930).

**Morgan, Truman Spencer.** American publisher; died in New York City, Dec. 21, 1940; born in Rockton, Ill., in 1868. From 1902 to 1920 he was treasurer, and from 1920 until his death he was president, of the F. W. Dodge Corp., publishers of trade journals.

**Morris, Lewis.** American ex-naval captain and surgeon; died in New York City, N.Y., Nov. 15, 1940; born in Caen, France, Jan. 26, 1867. A great-great grandson of Lewis Morris, a signer of the Declaration of Independence, he lived in Europe until he was 12; studied medicine at the University of Maryland; and was a U.S. naval surgeon for 28 years. His ancestors founded Morrisania, now a part of The Bronx, N.Y.

**Mosiman, Samuel K.** American educator, president of Bluffton College, Ohio, from 1909 to 1935 when he was retired as emeritus; died in Bluffton, O., Jan. 24, 1940; born in Middletown, O., Dec. 17, 1867.

**Moton, Robert R.** American Negro educator; died in Capahosic, Va., May 31, 1940; born in Amelia Co., Va., Aug. 26, 1867. He was commandant at Hampton Institute from 1890 to 1916 when he was elected to succeed Booker T. Washington as its president. He retired in 1935. Active in Negro affairs, he was awarded the Harmon Award in Race Relations (1930) and the Spingarn Medal (1932). His autobiography, *Finding a Way Out*, appeared in 1920 and in 1929 he published *What the Negro Thinks*.

**Motta, Giuseppe.** Swiss politician; died in Berne, Jan. 22, 1940; born in Airolo, Dec. 29, 1871. A member of the Federal Council from 1912, he was elected president of the republic in 1915, 1920, 1927, 1932, and 1937. At his death he was chief of the Swiss Political Department.

**Mountain, Arthur Reginald.** British insurance executive; died on Aug. 20, 1940; born on July 22, 1877. He became chairman of Lloyd's, London, in 1929, having been associated with the famous firm of underwriters since 1903.

**Mundy, Talbot Odetwynd.** Anglo-American author; died in Bradenton Beach, Fla., Aug. 5, 1940; born in London, Eng., Apr. 23, 1879. He was educated at Rugby; worked his way on ships to far-away places, lived in India, Africa, and Australia; and came to the United States in 1911. Among his many novels of adventure was *King of the Khyber Rifles*, published in 1916, and more recently converted into a motion picture called *The Black Watch*, with Victor MacLagen.

**Murphy, Frederick E.** American newspaper publisher, president of the Minnesota Tribune Co., publishers of *The Minneapolis Tribune* and the *Minneapolis Times-Tribune*, after 1921; died in New York, Feb. 14, 1940; born in Troy, Wis., Dec. 5, 1872. He was an advocate of crop rotation, diversified agriculture, and the importance of dairying and served as a delegate to the World Wheat Conference (1933) and the International Wheat Advisory Committee of the International Monetary and Economic Conference, Rome (1934).

**Murray, J. Harold.** American actor, vocalist, and business executive; died in Killingworth, Conn., Dec. 11, 1940; born in South Berwick, Me., Feb. 17, 1891. He appeared in vaudeville (1918-20), and then from 1921 to 1935 played as a baritone in an almost unbroken series of New York City musical comedies, including *Caroline* (1923); *China Rose* (1925); and *Rio Rita* (1927-29). He retired in 1936 to become president of the New England Brewing Co.

**Murray, Sir (John) Hubert (Plunkett).** Australian politician; died in Samarai, February, 1940; born in Sydney, Dec. 29, 1861. He was lieutenant governor and chief judicial officer of Papua from 1906, and was the first governor of the first Australian dependency.

**Myers, Jerome.** American artist; died in New York, June 19, 1940; born in Petersburg, Va., Mar. 20, 1867. Known for his scenes of New York City, his work is found in the Metropolitan Museum of Art, the Brooklyn Museum, the Chicago Art Museum, and the Whitney Museum of American Art. He received the Carnegie prize (1936) and the Altman prize (1937) as well as the Isador gold medal (1938) of the National Academy of Design. An exhibition of his drawings was held in New York, Mar. 20, 1940. His autobiography, *Artist in Manhattan*, also was published on that date.

**Mysoore, Maharaja of, Sir Shri Krishnaraja Wadiyar Bahadur.** Indian ruler; died on Aug. 3, 1940; born on June 4, 1884. His personal fortune was estimated at \$400,000,000. He ascended the throne in 1895; was a polo and tennis player and a good violinist. A devout Hindu, he refused for years to visit Europe because to cross water would lower his caste; in 1936, however, his curiosity overcame his scruples and he undertook a trip to Europe, taking with him special food, special water, and a special chef.

**Nagel, Charles.** American lawyer, Secretary of Commerce and Labor in the cabinet of President Taft (1909-

13); died in St. Louis, Mo., Jan. 5, 1940; born in Colorado Co., Tex., Aug. 9, 1849.

**Navarro, Mary Anderson de (Mrs. Antonio).** American actress; died in Broadway, Wore., England, May 29, 1940; born in Sacramento, Calif., July 28, 1859. On the stage from 1875, she appeared as Juliet in *Romeo and Juliet*; Lady Macbeth in *Macbeth*; Julia in *The Hunchback*; Galatea in *Pygmalion and Galatea*; Desdemona in *Othello*; Rosalind in *As You Like It*; and in *The Winter's Tale*. She retired because of ill health in 1889 and in the following year was married to Mr. de Navarro who died in 1932. She did not appear on the stage again until 1916 when in aid of war charities she was seen in *Comedy and Tragedy*; *Pygmalion and Galatea*; and in the balcony scene from *Romeo and Juliet*. With Robert Hichins she dramatized his *The Garden of Allah* (1911) and she was the author of *A Few Memories* (1896) and *A Few More Memories* (1936). She was considered one of the foremost actresses of the American stage.

**Neal, Thomas.** American manufacturer; died in Detroit, Mich., Oct. 6, 1940; born in Corunna, Ont., Can., Sept. 27, 1858. At the age of 15 he went to work as an oiler in a Detroit pin factory; was a founder (1884) and official of the Acme White Lead and Color Works, retiring in 1921; was connected with the General Motors Corp. (1910-15), serving as president and chairman of the board.

**Neill, Paul.** American newspaperman; died on Mar. 9, 1940; born in Joplin, Mo., Apr. 16, 1892. Beginning as a reporter in 1917, he edited the *Yakima Morning Herald* from 1921 to 1938, and the *Yakima Daily Republican* thereafter.

**Newton, Alfred Edward.** American bibliophile and essayist; died in Philadelphia, Pa., Sept. 29, 1940; born in Philadelphia, Aug. 26, 1863. A recognized authority on Dr. Samuel Johnson he was elected president of the Johnson Society of Great Britain in 1930, the first American to be so honored. In 1935-36 he was Rosenbach lecture fellow in bibliography at the University of Pennsylvania. His library of 10,000 books contained many rare volumes, including the Earl of Carvost's copy of the first folio of Shakespeare, for which Newton paid \$62,000 in 1927. He was the author of several books including *The Amenities of Book-Collecting and Kindred Affinities* (1918); *A Magnificent Farce* (1931); *Dr. Johnson*, a play (1933); and *End Paper* (1935). In the electrical business since 1895, he was president of the Cutter Electrical and Manufacturing Co. and chairman of its successor, the I-T-E Circuit Breaker Co.

**Nichols, John W.** American Protestant Episcopal bishop; died in Palo Alto, Calif., Sept. 10, 1940; born in Hartford, Conn., 1878. A graduate of Trinity College and the Divinity School of the Pacific, he served as a missionary in China and was consecrated suffragan bishop of Shanghai on Nov. 1, 1934. His father, William F. Nichols, was Episcopal bishop of California from 1890 to 1924.

**Nipkow, Paul Gottlieb.** German inventor, died in Berlin, Germany, Aug. 24, 1940; born in Lauenburg, Aug. 22, 1860. His invention in 1884 of the "Nipkow disk," or electrical telescope, played an indispensable part in the early development of television.

**Nixon, Lewis.** American naval architect and former leader of Tammany Hall; died in Long Branch, N.J., on Sept. 23, 1940; born in Leesburg, Va., Apr. 7, 1861. A graduate of the U.S. Naval Academy (1882), he studied also at the Royal Naval College, England, where he was a classmate of King Edward VII.; designed the American battleships Oregon, Indiana, and Massachusetts in 1890; organized and headed the Crescent Shipyard, Elizabeth, N.J., where he built 100 vessels including submarines; was president of Lewis Nixon's Shipyards (1895-1904); and leader of Tammany Hall, New York City, from November, 1901, to May, 1902. Later he worked for Czar Nicholas II of Russia as designer of ships for the Russian Navy. At the time of his death he was head of the Nixon Nitration Co. and the Raritan Sand Co. of Nixon, N.J.

**Noble, Gladwyn Kingsley.** American curator, biologist, and explorer; died in Englewood, N.J., Dec. 9, 1940; born in Yonkers, N.Y., Sept. 30, 1894. He was graduated from Harvard University (1917) and was a member of scientific expeditions to Guadeloupe, Newfoundland, Peru, and Santo Domingo. In 1924 he became curator of herpetology and in 1928 curator of experimental biology at the American Museum of Natural History. His zoological findings, as published in the newspapers from time to time, made interesting reading. He contradicted Charles Darwin to the extent of maintaining that color, in the animal kingdom, is used to terrorize other males rather than lure the opposite sex. At other times he spoke of Santo Domingo frogs that bark like dogs and squeal like pigs; of snakes with thermometers who locate their prey by temperature; of fish that spawn on dry land and of certain glandular aberrations which produce dinosaurs. He presented a noteworthy exhibit at the museum of scenes from life as they appear through the eyes of some of our common animals.

**Noonan, Thomas F.** American jurist; died in New York City, Dec. 6, 1940; born there on June 16, 1877. A holder

of minor judicial assignments since 1910, he was appointed New York State Supreme Court Justice in 1936 and elected for the full 14-year term in 1937.

**Norris, James Flack.** American chemist; died in Boston, Mass., Aug. 3, 1940; born in Baltimore, Md., Jan. 20, 1871. He was graduated from Johns Hopkins University in 1892; was professor of chemistry at Simmons College (1904-15); and professor of organic chemistry at Massachusetts Institute of Technology since 1916. In 1925-26 he was president of the American Chemical Society. During the World War he was a lieutenant colonel in the U.S. Army in charge of the Chemical Warfare Service, with headquarters in England.

**Northrup, Edwin Fitch.** American electrothermic engineer; died in Princeton, N.J., Apr. 29, 1940; born in Syracuse, N.Y., Feb. 23, 1866. He received his Ph.D. from Johns Hopkins in 1895 and in the following year was professor of physics at the University of Texas when he became associated with Prof. H. A. Rowland. Subsequently he became chief engineer with the Rowland Printing Telegraph Co., and in 1903 became a member of the firm of Leeds & Northrup Co., manufacturers of electrical instruments. From 1910 to 1920 he was a member of the physics faculty at Princeton University, and thereafter was vice-president and technical adviser to the Ajax Electrothermic Corporation, Trenton, N.J. His work in electrical research brought him the Edward Longstreth medal in 1912, the Elliott Cresson medal in 1916, and the Edward Goodrich Acheson gold medal and \$1000 in 1931. He invented the Ajax-Northrup high frequency induction furnace and held over 100 patents on high-temperature measurement instruments. He wrote *Methods of Measuring Electrical Resistance* (1912), *Laws of Physical Science* (1917), and *Zero to Eighty* (1937).

**Northumberland, 9th Duke of, Henry George Alan Percy.** British peer, killed in action in France, June, 1940; born July 15, 1912. He had served as parliamentary secretary to Lord Privy Seal (1935) and to the Secretary of State for Air (1936).

**O'Connor, Sir Terence.** British lawyer and politician; died in London, May 7, 1940; born in Bridgnorth in 1891. After service in the World War he was called to the bar in 1919, and in 1924 was elected a Unionist Member of Parliament from Luton, and in 1930 from Central Nottingham. After 1936 he was Solicitor General.

**Onetti, Carlos Maria.** See SPANISH-AMERICAN LITERATURES under *Argentina*.

**Osborn, Henry L.** American zoologist; died in St. Paul, Minn., Jan. 2, 1940; born in Newark, N.J., July 5, 1857. Associated with Hamline University, St. Paul, Minn., from 1887, he was professor of biology, dean of the faculty (1918-31), acting president (1923; 1932-35). He was retired as emeritus in 1935.

**Osborne, Oliver Thomas.** American physician; died in New Haven, Conn., Nov. 11, 1940; born in New Haven, Nov. 14, 1862. He was graduated from the Yale Medical School in 1884; returned to teach there in 1891; was professor of therapeutics from 1911 to 1925, and emeritus thereafter. An arduous worker in the fight against tuberculosis, he was chairman of the New Haven County Anti-Tuberculosis Association—now the Gaylor Farm Association of Wallingford, Conn.—from its creation in 1902 until his death; was a founder of the American Tuberculosis Association in 1904; and was instrumental in bringing about legislation for the care of tubercular persons.

**Owens, Robert Bowle.** American electrical engineer; died in Sykesville, Md., Nov. 1, 1940, born in Anne Arundel Co., Md., Oct. 29, 1870. He was graduated from Columbia University in 1891; was professor of electrical and steam engineering at Nebraska University (1891-98) and of electrical engineering at McGill University (1898-1909). From 1910 to 1924, with the exception of the war years, when he was a major in the signal corps, he was secretary of the Franklin Institute, Philadelphia. He is known especially for his discovery of the Alpha ray and for his invention of an electromagnetic system for guiding ships and airplanes, a differentiating machine, and an electric accelerometer.

**Pace, Charles A.** American educator, lawyer, and banker; died in New York City, N.Y., Dec. 12, 1940; born in Ohio, 1869. In 1906, with his brother, Homer S. Pace, he founded the firm of Pace and Pace, organizers and managers of a chain of business schools. The New York branch was incorporated in 1933 under the name of the Pace Institute.

**Paget, Sir Ralph S.** British diplomat; died at St. Raphael, France, May 11, 1940; born Nov. 26, 1864. In the diplomatic service from 1888, he was British minister to Denmark (1916-18) and first Ambassador to Brazil (1918-20), when he retired.

**Paine, Robert F.** American newspaper editor; died on Aug. 29, 1940; born in Cleveland, O., Mar. 8, 1856. He was reporter (1879-82) and editor (1882-1902) on the *Cleveland Penny Press*; general manager of the Scripps-McRae Press Association (1897-1905), which afterward became the United Press Association; and was later editorial secretary of the Scripps papers, chief editorial writer

for the Newspaper Enterprise Association, and manager of the *Paine Service*.

**Palmblad, Harry Victor Emmanuel**. American educator; died in Siloam Springs, Ark., Mar. 17, 1940; born in Skövde, Sweden, Apr. 27, 1882. He came to the United States at the age of 16; was graduated from Columbia University (1907); held various teaching positions; was professor of modern languages, Carthage College (1917-20); professor of French and German, Phillips University (1920-37), and professor of French and German and head of the modern language department of John Brown University from 1938 until his death. He was the author of many learned works including the volume *Strindberg's Conception of History* (1927) and contributed the annual review of Scandinavian literature to *THE NEW INTERNATIONAL YEAR BOOK* since 1913.

**Parker, Henry Wise**. British admiral; died in Devon, Eng., Aug. 1, 1940; born on June 15, 1875. He entered the navy in 1889; became rear admiral (1925), and admiral (1933). He commanded the warship *Benbow* at the battle of Jutland.

**Pastermack, Josef A.** American musician; died in Chicago, Apr. 29, 1940; born in Czenstochowa, Poland, in 1881. He was solo viola player in the Metropolitan Opera orchestra for a time and subsequently conductor of that orchestra, the Philadelphia Philharmonic, and the Boston "Pops" Orchestra. From 1916 to 1928 he was chief musical director of the Victor Talking Machine Co., and thereafter was engaged in radio work.

**Patrick, Mary M.** American educator; president of the American College for Girls in Constantinople from 1890 until her retirement as emerita in 1924; died in Palo Alto, Calif. Feb. 25, 1940; born in Canterbury, N.H., Mar. 10, 1850. Her latest book was *A Bosphorus Adventure* (1934).

**Pearl, Raymond**. American biologist; died in Hershey, Pa., Nov. 17, 1940; born in Farmington, N.H., June 3, 1879. A graduate of Dartmouth College (1899), he headed the department of biology at the Maine Agricultural Experiment Station from 1907 to 1918; was director of the Institute for Biological Research at Johns Hopkins University (1925-30); and professor of biology at the medical school since 1923. He wrote many treatises and books on scientific subjects, including the one-volume *Natural History of Population* (1939). In his book *Alcohol and Longevity* (1926), Dr. Pearl provoked a lively controversy by indicating that moderation in some cases was more effective than total abstinence in prolonging life.

**Pedro Alcantara Luis Felipe**, pretender to the throne of Brazil; died in Petropolis, Brazil, Jan. 29, 1940; born there, Oct. 15, 1875.

**Peirse, Sir Richard Henry**. British admiral; died near Bath, Eng., July 10, 1940; born in York, Sept. 4, 1860. He joined the navy in 1873, rose through the ranks, and commanded the Allied naval forces on the Suez Canal in the first two years of the World War.

**Peixotto, Ernest Clifford**. American artist and writer; died in New York City, N.Y., Dec. 6, 1940; born in San Francisco, Calif., Oct. 15, 1869. He studied art at the Academie Julian in Paris; was for awhile a magazine and book illustrator and did the pictures for Theodore Roosevelt's *Life of Cromwell*; and attracted wide attention with his *La Mort d'Arthur*, a mural painting executed for the Public Library of Cleveland in 1911. He served as art instructor in the A.E.F. in France in a headquarters which later (1923) developed into the Fontainebleau School of Fine Arts. He was the creator of many noteworthy murals; the author of several books on travel; and a member of the New York City Art Commission from 1935 until Jan. 18, 1940.

**Perkins, James Handasyd**. American banker; died in Mount Kisco, N.Y., July 12, 1940; born in Milton, Mass., Jan. 11, 1876. He was graduated from Harvard University in 1898 and worked for five years with Walter Baker and Co., chocolate manufacturers; was vice-president of the American Trust Co. of Boston (1905-08); vice-president of the National Commercial Bank of Albany (1908) and president (1912-14), resigning to serve as vice-president of the National City Bank (1914-19). In the World War he had charge of all American Red Cross organizations in France. He was president of the Farmers' Loan and Trust Co. from 1921 until its affiliation with the National City Bank, and thereafter a director of the latter bank and chairman of its board of directors since 1933.

**Perla, David**. American pathologist; died in New York, June 14, 1940; born there July 13, 1900. One of the leading investigators and writers on the mechanism of immunity to infection in the human body, he had worked at Montefiore Hospital, New York, from 1927 as associate pathologist and immunologist. In March, 1940, he announced a method for the prevention and treatment of surgical shock which had been developed at the Hospital. The experimentation on, development, and results of the new technique were published in the *Proceedings of the Society of Experimental Biology and Medicine*. He published, with his wife, *The Spleen and Its Relation to Resistance* (1935).

**Peynado, Jacinto B.** Dominican politician, president of the Dominican Republic after 1938; died in Ciudad Trujillo, Mar. 7, 1940; born Feb. 15, 1878.

**Phillips, Sir Ivor**. British general; died on Aug. 15, 1940; born on Sept. 9, 1861. He was the son of Canon Sir J. Erasmus Phillips, 12th baronet of Picton, and direct descendant of Sir Aaron ap Rhys, who accompanied Richard I to the Holy Land in 1190 and fought with conspicuous gallantry against the Saracens. He was educated at Felsted School and Staff College; entered the army in 1883 and was decorated for bravery in China, India, and Europe during his long military career. As major general, he commanded the 38th Welsh Division in France in 1915-16. He was a Liberal member of Parliament from Southampton (1906-22) and Parliamentary Secretary to the Ministry of Munitions of War (1915).

**Phillimore, Sir Richard Fortescue**. British admiral; died in November, 1940; born on Dec. 23, 1864. He was commander of the cruiser *Inflexible* in the battle of the Falkland Islands, Dec. 8, 1914, and in the bombardment of the Dardanelles in 1915. During 1916-18 he was commander of Britain's First Battle Cruiser Squadron.

**Phillips, Charles J.** American philatelist; died in New York, June 2, 1940, born in Birmingham, Eng., May 16, 1863. Owner of Stanley Gibbons & Co., from 1890 to 1922, when he settled in New York, he was one of the foremost stamp dealers in the world. He was the author of *Stamp Collecting* (1936).

**Pierce, Henry H.** American lawyer; died in New York, Mar. 18, 1940; born in Portland, Me., Nov. 7, 1875. A trustee of Bowdoin College, in 1929 he gave \$181,500 to the college to endow a chair in English known as the Pierce Professorship.

**Pierce, Lyman L.** American institutional financier; died on July 20, 1940; born in Stockton, N.Y., May 14, 1868. A Y.M.C.A. worker since his graduation from the University of Minnesota in 1892, he became national director of the war campaigns of the Red Cross in 1916, a position he held until the end of the World War. Since that time he has been identified with fund-raising campaigns for numerous colleges, institutions, and charities.

**Pierce, Wallace E.** American Republican Congressman, elected to the 76th Congress from the 31st New York Congressional District in 1938; died in Washington, D.C., Jan. 3, 1940, born in Black Brook, N.Y., Dec. 9, 1881.

**Pinto, Miguel**. See SPANISH-AMERICAN LITERATURES under *El Salvador*.

**Pintor, Pietro**. Italian general; died in an airplane accident en route from Turin, Italy, to Rome, Dec. 7, 1940; born in 1880. He was a veteran of the World War, the Libyan War, 1926-28, and the Ethiopian War, 1935-36, and at the time of his death was head of the Italian section of the Armistice Commission growing out of France's military capitulation in June, 1940.

**Pittman, Key**. American senator; died in Reno, Nev., Nov. 10, 1940; born in Vicksburg, Miss., Sept. 19, 1872. He was the son of William Buckner Pittman, an attorney, and Catherine Key Pittman, a descendant of Francis Scott Key. After taking a law degree at the Southwestern Presbyterian University in Clarksville, Tenn., he settled in Seattle, Wash., in 1892; but went to Alaska in search of gold in 1898; returning to the United States in 1901 and taking up residence at Tonopah, Nev., where he later became president of the First National Bank. In 1900 he was married to Miss Mimosa June Gates of Eureka, Calif. He was elected United States Senator on the Democratic ticket in 1916, 1922, 1928, and 1934; was secretary of the platform committee of the Democratic National Convention in 1924 and chairman of the same committee in 1928. In 1933, on the death of Sen. Thomas Walsh of Montana, he became chairman of the powerful Foreign Affairs Committee, a post he held until his death. In this last position he was frequently a mouthpiece for President Roosevelt. He was an outspoken foe of Hitler, Mussolini, and the military clique in Japan and toward the end of his career was an ardent interventionist.

**Pizzi, Emilio**. Italian composer; died in Milan, Italy, Nov. 27, 1940. He was the composer of several operas, one of which, *Gabriella*, written for Adelina Patti, was staged in Boston in 1893.

**Poblete Escudero, Egidio**. See SPANISH-AMERICAN LITERATURES under *Chile*.

**Folschek, Victor H.** American newspaperman; died in Great Neck, L.I., June 11, 1940; born in Chicago, Aug. 24, 1876. Associated with the Hearst publications from 1899 to 1919, he was publisher of *The Sun* and *The Evening Sun*, New York (1919-20). He rejoined the Hearst interests in 1922 as editor and member of the executive council, and thereafter was manager of the Hearst Sunday newspapers (1928-30), member of the general management of the Hearst Newspapers after 1931, and business manager of *The American Weekly* (1937-38). He retired in 1939.

**Pollak, Walter Hellprin**. American lawyer; died in New York City, N.Y., Oct. 2, 1940; born in Summit, N.J., June 4, 1887. He was graduated from Harvard University in 1907; was special assistant to the U.S. Attorney Gen-

eral in the prosecution of Nicky Arnstein, leader of a bond-theft ring, in 1923-24; was special master in the Interborough Rapid Transit Co. receivership in 1936; attorney to Robert Moses, Moreland Act Commissioner, in his investigation of the defunct City Trust Co., which failed on Feb. 11, 1929, with liabilities of \$7,000,000. He played a prominent role in many important legal matters and twice obtained review of the Scottsboro trials by the United States Supreme Court, in 1932 and 1935.

Poore, Benjamin Andrew. American general; died on Aug. 27, 1940; born in Centre, Ala., June 22, 1863. He was graduated from West Point in 1886; was appointed a brigadier general in 1917 and assigned to the Seventh Brigade of the Fourth Division which saw action at Chateau-Thierry, the Aisne-Marne offensive, St. Mihiel, and the Meuse-Argonne. He became a major general in 1925, and retired in 1927.

Poore, Henry Rankin. American artist and author; died in Orange, N.J., Aug. 15, 1940; born in Newark, N.J., Mar. 21, 1859. He studied under Peter Moran at the Pennsylvania Academy of Fine Arts, under Luminais and Bougereau in Paris, and at the National Academy of Design in New York. Best known for his animal and hunting scenes, he was awarded prizes by the National Academy of Design, the American Art Association and many other art groups, and his work has been shown at expositions in Buffalo, St. Louis, Buenos Aires, Panama, and New Zealand.

Post, William S. American architect; died in Bernardsville, N.J., July 8, 1940; born in New York, May 10, 1866. A partner in George B. Post & Sons until 1930 when he retired, his best-known works are the New York Stock Exchange, with which he collaborated with his father; several buildings of the College of the City of New York; the Wisconsin State Capitol, and many hotels.

Potter, William W. American jurist; died in Lansing, Mich., July 21, 1940; born in Maple Grove Township, Barry Co., Mich., Aug. 1, 1869. Admitted to the bar in 1894, he was active in Republican politics, was appointed Michigan Supreme Court Justice in 1928, and was thrice elected since that time.

Fritchard, Stuart. American tuberculosis expert; died in Battle Creek, Mich., Aug. 4, 1940; born in Auburn, Ont., Can., Mar. 31, 1882. He received his medical degree from the University of Toronto in 1905; was in charge of the chest department of the Battle Creek Sanitarium (1913-30) and president and general director of the W. K. Kellogg Foundation at Battle Creek since that time. He was a delegate to The Hague (1932) and Rome (1928) conventions on pulmonary diseases and tuberculosis; and president of the National Tuberculosis Association during 1933-34.

Pugsley, Charles W. American agriculturist and educator; died in Omaha, Neb., on Dec. 17, 1940; born in Woodbine, Ia., 1878. A graduate of the University of Nebraska, he was editor of *The Nebraska Farmer* (1918-22); Assistant Secretary of Agriculture (1921-23); and president of South Dakota State College of Agriculture from 1923 until his death.

Pusey, William Allen. American dermatologist; died in Chicago, Ill., Aug. 29, 1940; born in Elizabethtown, Ky., Dec. 1, 1865. He was graduated from the medical college of New York University in 1888; was professor of dermatology at the University of Illinois from 1894 to 1915; president of the American Medical Association (1924); and the author of numerous scientific books including a *History of Syphilis*, published in 1933.

Putnam, James W. American educator, died in Indianapolis, Ind., Jan. 23, 1940; born in Hersman, Ill., Jan. 18, 1865. Associated with Butler University from 1909 as professor of economics, he served as president during 1934-39, when he retired.

Putti, Vittorio. Italian orthopedist; died on Nov. 1, 1940; born in Bologna, Italy, 1880. He was the inventor of a combination X-ray machine and motion picture camera used to photograph the human heart and the digestive system at work, the originator of a technique of improving crippled legs by lengthening them, and the inventor of a device to prevent hip dislocation among infants. He was dean of the medical school of the University of Bologna.

Quinn, Daniel Joseph, S.J. American Roman Catholic clergyman; died in New York, Mar. 9, 1940; born there, May 12, 1864. He entered the Society of Jesus in 1888, was ordained in 1899, and during 1906-11 was president of Fordham University in New York City. Thereafter he was engaged in mission and parish work.

Ragon, Heartall. American jurist; died in Fort Smith, Ark., Sept. 15, 1940; born in Dublin, Ark., Mar. 20, 1885. A lawyer by profession, he served in the Arkansas House of Representatives (1911-13) and as district prosecuting attorney (1916-20). He was a Democratic member of the U.S. House of Representatives from 1923 to 1933, resigning to accept appointment by President Roosevelt as Federal Judge of the Western District of Arkansas. In Congress he was regarded as an expert on tax matters.

Rajawongse, Admiral Phya. Thailand (Siam) diplomat, minister to France (1934-35) and to Great Britain

thereafter; died in London, Feb. 22, 1940; born in 1886. Reese, Charles Lee. American chemist; died in Ponte Verde, Fla., Apr. 12, 1940; born in Baltimore, Md., Nov. 4, 1862. After teaching from 1886 to 1900, he entered the field of industrial chemistry and in 1902 joined the E. I. du Pont de Nemours Powder Co. He retired in 1931. A leader in his field he was president of the American Chemical Society in 1934.

Reisner, Christian Fiehlthorne. American Methodist clergyman, died in New York City, N.Y., July 17, 1940; born in Atchison, Kan., June 3, 1872. He worked on the *Atchison Daily Champion* as a reporter in 1893; was graduated from Boston University Theology School in 1896; became pastor of Grace M. E. Church, New York City, in 1910 and of Chelsea Church, also in New York, in 1920. It was this latter church that Dr. Reisner developed into Broadway Temple, his last charge. It had been his intention to build a skyscraper church, with apartments, community center, swimming pool, basketball courts, and other recreational facilities built around the church, all at a cost of \$6,000,000. Some \$3,000,000 was raised and used to erect a tower and two 12-story apartment houses and a partially completed social center, but the 44-story building remained a dream. A master of showmanship, Dr. Reisner publicized and advertised his religious waves in many novel ways. He dramatized the Gospel in motion pictures projected from the pulpit; in sermons preached in costume, including the regalia of Washington and Jeremiah the Prophet; in sermons preached from a pulpit of snow; in services in which the congregation whistled from their hymnbooks.

Revel, Bernard. American educator; died in New York City, N.Y., Dec. 12, 1940; born in Kovno, Lithuania, Sept. 17, 1885. He was graduated from New York University in 1909; and was president of Rabbi Isaac Elchanan Theological Seminary, New York City (1915-28) and of Yeshiva College from that time on. He founded the Talmudic Academy in New York in 1916 and was associate editor of *Osar Israel*, the Hebrew Encyclopedia.

Revueltas, Silvestre. Mexican composer; died in Mexico City, Mex., Oct. 4, 1940; born in 1900. He toured the United States as a concert violinist before he was 20 and in 1919 played first violin with the Chicago Symphony Orchestra. He wrote several musical compositions including the songs for the Mexican film, *The Wave*.

Reynolds, George McClelland. American banker; died in Pasadena, Calif., Feb. 26, 1940; born in Panama, Ia., Jan. 15, 1865. In the banking business from 1888, he became president and director of the Continental National Bank of Chicago in 1906. He continued in these offices after the consolidation of this bank with the Commercial National Bank of Chicago in 1910. In 1921 he became president of the board of directors and continued as such after the consolidation of this and other banks into the Continental National Bank and Trust Co., in 1927. Two years later a merger of this bank and the Illinois Merchants Trust Co. led to the formation of the Continental Illinois Bank and Trust Co., of which he was chairman of the executive committee. He retired Jan. 13, 1933.

Rhoads, Thomas L. American colonel and surgeon, died in Boyertown, Pa., Aug. 20, 1940; born in Philadelphia, Pa., Apr. 10, 1870. A graduate of Jefferson Medical College (1893), he entered the army as a contract surgeon in 1898; and served as military aide to Presidents Taft and Wilson and personal physician to the former. During the World War he was chief surgeon of the 1st Army, American Expeditionary Forces.

Rice, John Hodgen. American army officer; died in Pelham Manor, N.Y., Jan. 7, 1940; born in St. Louis, Mo., Jan. 6, 1870. In the Army from 1893, he was appointed chief of the ordnance office of the American Expeditionary Forces in 1918. After the War he continued in the Ordnance Department and retired July 1, 1921, with the rank of brigadier general.

Richman, Charles J. American actor; died in Bronx, N.Y., Dec. 1, 1940; born in Chicago, Ill., Jan. 12, 1870. After a brief experience in a semi-amateur stock company, he made his first important stage appearance in New York in the play *Margaret Fleming* (1894) and thereafter for 42 years he was one of America's leading actors, at one time playing opposite Lily Langtry in *Coisip*. He was with Augustin Daly's company from 1896 until 1899; acted under the management of Charles Frohman during 1901-05 and with William A. Brady sometime afterward; played in the silent motion picture *The Battle Cry of Peace* opposite Hudson Maximi; returned to the New York stage in many subsequent leading roles until 1936 when he left the stage for Hollywood. Since then he has appeared in several well-known films, notably *In Old Kentucky* and *The Life of Emile Zola*.

Richmond, Charles Alexander. American educator; died in Washington, D.C., July 12, 1940; born in New York City, N.Y., Jan. 7, 1862. He was a graduate of Princeton University (1883) and Princeton Theological Seminary (1885); pastor of the Madison Avenue Presbyterian Church, Albany, N.Y. (1894-1909); and president of Union College, Schenectady, and chancellor of Union

University from 1909 until his retirement in 1929. He inclined toward moderate progressivism in education; and was a perennial defender of the volatile young. A sportsman himself, he had this to utter about football: "The contribution of a college to the nation is not measured by its football record; nevertheless it is a good thing to know how to play the game well. Every man should have at least one drop of sporting blood in his veins." In 1891 he married Miss Sarah Cooper Locke of Buffalo, granddaughter of the philosopher, John Locke.

**Ridgely, Henry.** American lawyer and banker; died in Dover, Del., July 13, 1940; born in Dover, Jan. 19, 1869. He was educated at Wesley Collegiate Institute and the University of Pennsylvania law school; lost his eyesight in his late twenties; was president of the Delaware State Board of Education (1914-16, 1935-36, and 1939-40); president of the Farmers Bank of Delaware from 1917 until his death; and president of the Delaware State Bar Association (1938-40). He wrote the Delaware legislative statutes relating to public libraries, agriculture, estate tax, registration, and elections.

**Riggs, Austen Fox.** American neuropsychiatrist; died in Stockbridge, Mass., Mar. 5, 1940; born in Germany, Dec. 12, 1876. He served on the faculties of Columbia University and Vassar and Williams Colleges, and in 1919 founded the Austen Riggs Foundation, Inc., for the free treatment of psychoneurotic patients without means.

**Riggs, Lawrason.** American general; died in Baltimore, Md., Nov. 21, 1940; born in New York City, 1861. He was graduated from Princeton University (1883) and the University of Maryland law school (1886); commanded the State militia at the time of the 1904 fire and was president of Peabody Institute from 1917 to 1937.

**Rihani, Amoun.** Arab lecturer, poet, and publicist; died in Freike, Lebanese Republic, Sept. 16, 1940; born in Freike, 1877. He came to New York City in 1889, clerked in his father's store in Washington Street; became a naturalized citizen in 1903; and translated into English *The Quatrains* and *The Luzzumiyat* of the Arab poet-philosopher, Abu'l-Ala. He wrote several descriptive books about Arabia, lived most of his life after 1900 in Lebanon and, as spokesman for the Arabs, urged limitation of Jewish immigration to Palestine and advocated a national government, instead of a mandate, in the Holy Land.

**Robinson, Walter.** American soldier, Adjutant General of the New York National Guard with the rank of Major-General after 1934; died in New York, Jan. 25, 1940; born in Auburn, N.Y., Apr. 11, 1879.

**Rodman, Hugh.** American naval officer; died in Washington, June 7, 1940; born in Frankfort, Ky., Jan. 6, 1859. In the navy from 1880, he was promoted through the ranks to rear admiral on May 23, 1917, to admiral on July 1, 1919, and was retired on Jan. 6, 1923. He saw service in the Spanish-American War (1898), was superintendent of transportation at the Panama Canal and director of the Panama Railroad Co. (1914-15), commanded the *New York* (1915-16); was a member of the General Board of the Navy Department (1916-17), and in September, 1917 was given command of Division Three of the Atlantic Fleet. In November he was appointed commander of the 9th Division of the battleship force and with it served in the British Grand Fleet. For a year, he was commander of the 6th Battle Squadron of the British Grand Fleet in the North Sea. On July 1, 1919 he was named commander-in-chief of the Pacific Fleet, and at the time of his retirement was commandant of the Fifth Naval District at Hampton Roads, Va. He was a delegate from the United States at the coronation of King George VI in May, 1938. He wrote *Yarns of a Kentucky Admiral* (1929).

**Rodriguez, Nicolas.** Mexican general and Fascist leader; died in Juarez, Mexico, Aug. 10, 1940, born in 1897. In March, 1934, he organized the Gold Shirts, Mexican fascist organization; was exiled by President Cardenas on Aug. 11, 1936, but permitted to return to his mother's home, Aug. 4, 1940, where he died of aplastic anemia. In 1937 he was sentenced to 16 months in prison and fined \$5000 in Federal Court in Los Angeles for violation of the neutrality laws of the United States by fostering a revolution in Mexico.

**Roemer, John Lincoln.** American educator; died in St. Louis, Mo., Aug. 9, 1940; born in Wheeling, W. Va., May 2, 1865. Graduated from West Virginia University (1889) and Western Theological Seminary, Pittsburgh, Pa. (1892), he was ordained a Presbyterian minister (1892), served several pastorates, and was president of Lindenwood College for Women, St. Charles, Mo., from 1914 until his death.

**Rogers, Brskine Clark.** American jurist; died in Glens Falls, N.Y., Nov. 3, 1940; born in Sandy Hill (now Hudson Falls), N.Y., Sept. 17, 1878. A graduate of Union College and Albany Law School, he was a New York State Supreme Court Justice from 1928 to 1940.

**Rogers, Norman McLeod.** Canadian politician; died in an airplane crash near Newtonville, Ont., June 10, 1940; born in Amherst, N.S., July 25, 1894. After service during the World War, he was called to the bar in 1924,

served as professor of history at Acadia University (1922-27), and entered politics as secretary to Prime Minister Mackenzie King (1927-29). Thereafter he was professor of political science at Queen's University (1929-35) when he was elected to Parliament. He served as minister of Labor for Canada after 1935 and in September, 1939 was appointed minister of National Defense.

**Roper, J. Charles.** Canadian Anglican clergyman; died in Toronto, Jan. 26, 1940; born in Frant, Sussex, Nov. 8, 1858. Ordained in 1882, he was Bishop of Columbia (1912-15), Bishop of Ottawa (1915-33), and thereafter Archbishop of Ottawa and Metropolitan of Ontario.

**Rosewater, Victor.** American publisher, politician, and journalist; died in Philadelphia, Pa., July 12, 1940; born in Omaha, Nebr., Feb. 13, 1871. He was graduated from Columbia University in 1891. Beginning as a reporter on the *Omaha Bee* in 1893, he became editor in 1906 and publisher in 1917, retiring in 1920. In 1912 he was chairman of the Republican National Committee. He wrote several books including *History of Co-operative News Gathering in the United States* (1930).

**Rosny, J. H. (Joseph Henri Honoré Boët).** French author; died in Paris, Feb. 14, 1940; born in Brussels in 1856. His early work was not written in collaboration, but from 1891 until 1910 he and his brother collaborated under the same name. Thereafter he wrote under the name of *J. H. Rosny, dit. Le bilatéral* (1886) is considered his masterpiece. President of the Académie Goncourt from 1926, his later works included *La Sauvage Aventure* (1935), *Dans le Calme et dans la Tempête* (1936), and *Un banquier* (1937).

**Ross, Sir Edward Denison.** British orientalist; died in Istanbul, Turkey, Sept. 20, 1940; born in Stepney, Eng., June 6, 1871. A master of 30 languages, he was principal of the Madrasah, the Mohammedan college at Calcutta, India, from 1901 to 1911, and director of the School of Oriental Studies and Professor of Persian at the University of London from 1911 to 1937. He wrote a score or more of books, principally on Indo-Iranian culture and lectured in the United States at Princeton and Northwestern Universities during 1931.

**Rostrom, Sir Arthur Henry.** British maritime captain; died in Chippenham, Eng., Nov. 4, 1940; born in Bolton, Lancashire, May 14, 1869. He followed the sea since the age of 16 and was in command of the Cunard liner *Carpathia* in April, 1912, when it rescued 700 survivors from the *S. S. Titanic*, one hour and a half after the stricken vessel had gone under. He commanded the *Mauritania* from 1915 to 1926 and the *Berengaria* from 1928 to 1931, and in the latter assignment he was also Commodore of the Cunard Fleet.

**Rothermere, Lord, Harold Sidney Harnsworth.** British newspaper proprietor; died in Hamilton, Bermuda, Nov. 26, 1940; born in London, Eng., Apr. 26, 1868, the second son of Alfred Harnsworth, barrister and member of the Middle Temple. With his older brother, Alfred Jr., he founded a newspaper called *Antvors* which soon commanded a circulation of 80,000; and with the profits thus derived they acquired the *London Evening News* (Aug. 31, 1894). Under their direction, the *News* skyrocketed to prosperity, more than 600,000 copies a day were sold and the two brothers founded or acquired a string of newspapers, including *The Daily Mirror*, which they created in 1905. In this vast newspaper empire, Harold Harnsworth concentrated on the financial, while his brother devoted himself to the journalistic, side of the business. Harold became Lord Rothermere in 1914 and served as British Air Minister in the World War. In his latter years he was a strong believer in friendship with Germany, albeit Hitler, and Mussolini. He sought to improve the political and economic position of Hungary through revision of the Treaty of Trianon, which, he contended, subjugated several million Hungarians to nations of inferior culture. A book published in 1933 by Dr. Josef Schiller indicated that Lord Rothermere had been suggested as a king for Hungary and that Lord Rothermere had expressed a willingness to wear the crown. Lord Rothermere published his version of the episode in a book called *My Campaign for Hungary* (1939). He was reputed to be the second richest man in England, the Duke of Westminster alone exceeding him in wealth.

**Rowan, Charles A.** American industrialist; died on Sept. 13, 1940; born in Pittsburgh, Pa., Sept. 27, 1874. He went to the Westinghouse Air Brake Co. in 1903 as assistant auditor; was named controller in 1919 and chairman in 1936.

**Ruiz y Rodriguez, Manuel Damata.** Cuban Roman Catholic clergyman, Archbishop of Havana from 1925; died in Havana, Jan. 3, 1940; born in Corralillo, Cuba, in 1875.

**Rumpler, Edmund.** German airplane and automobile construction engineer; died in a Mecklenburg summer resort, Germany, Sept. 9, 1940; born in Vienna, Austria, Jan. 4, 1872. An engineer by profession, he built the first German motorcar for the Brand and Lhullier Machine Factories in 1897; later headed the Rumpler Works of Johannisthal, Augsburg, and Berlin, manufacturers of air-

planes. In 1911 he produced the "Taube" plane that made the first flight from Munich to Berlin. During the World War he constructed hundreds of high-speed "Taube" planes, often referred to as "Doves," for the German armies and at the end of the war was manufacturing them at the rate of 1400 per year.

**Rusby, Henry Hurd.** American botanist and explorer; died in Sarasota, Fla., Nov. 18, 1940; born in Franklin, N.J., Apr. 26, 1855. An avid botanist from early childhood, he sold his private herbarium to Parke, Davis and Co., Detroit drug manufacturers, as a means of financing his matriculation at the New York University medical school, from which he was graduated in 1884. Previously and subsequently he headed plant-collecting expeditions to various western States and to South America. He was professor of botany, physiology, and materia medica at Columbia University's department of pharmacy (1888-1930) and dean of the faculty (1905-30).

**Russell, William.** British physician and author; died on Aug. 12, 1940; born on the Isle of Man, 1852. He was at one time president of the Royal College of Physicians, and first editor of *The Scottish Medical and Surgical Journal*; and at the time of his death, emeritus professor of clinical medicine at Edinburgh University. He was awarded the Cartwright Prize of Columbia University in 1885 and was the author of noted medical books including *Investigations Into Some Morbid Cardiac Conditions* (1886); *Arterial Hypertonus, Sclerosis and Blood Pressure* (1907); *The Sphygmometer* (1921); *The Stomach and the Abdomen* (1921); *Old Beliefs and New Knowledge* (1932).

**Rutland, 9th Duke of, John Henry Montague.** *Manners.* British medieval art expert; died in Grantham, Linc., Apr. 21, 1940; born Sept. 21, 1886. Owner of historic Haddon Hall, he was an honorary member of the Royal Institute of British Architects and a member of the Royal Commission on Historical Manuscripts.

**Ryan, Allan A.** American financier; died in San Francisco, Calif., Nov. 26, 1940, born on May 5, 1880. A son of Thomas Fortune Ryan, he became a member of the New York Stock Exchange; and in March, 1920, when Stutz was selling around \$113 per share, he cornered the stock and resold it to brokers, who were caught short, at \$550 a share, netting a profit to himself of \$1,650,000. He went bankrupt in 1922 listing liabilities of \$18,000,000 and assets of \$16. In October, 1917, he opposed his father's haste in re-marrying 13 days after the younger Ryan's mother died; the breach widened with the years; and in 1928, when his father's will was filed, the younger Ryan found his inheritance to consist of one pair of pearl shirt studs.

**Ryan, Paul A.** American statistician, chief analyst of the American Gas Association since 1927; died in New York City on Dec. 25, 1940; born on Feb. 21, 1900. A graduate of the Massachusetts Institute of Technology (1923) and the Harvard School of Business Administration (1926) he became a member of the economics research staff of the latter institution; and was for awhile chief statistician of the American Telephone and Telegraph Co., preparing forecasts of general business and economic conditions. He was a contributing editor to *THE NEW INTERNATIONAL YEAR BOOK*.

**Sabin, Alvah Horton.** American chemist and engineer; died in Flushing, Queens, N.Y., July 10, 1940, born in Norfolk, N.Y., Apr. 9, 1851. He was graduated from Bowdoin College in 1876; was professor of chemistry at the University of Vermont (1880-86); Vermont State Chemist (1882-86); president of the American Milk Sugar Co. (1885-87) and lecturer at New York University (1896-1925). In 1883 he invented a process for extracting lactose from whey.

**Sabry, Hassan, Pasha.** Egyptian statesman; died in Cairo, Egypt, Nov. 14, 1940; born in 1879. A maternal uncle of King Farouk, he was Egyptian minister to London (1934-35); minister of communications, commerce, and industry (1936); minister of war (1939) and premier of Egypt since June 27, 1940, succeeding Ali Maher Pasha. In his foreign policy, he was pro-British.

**Saionji, Prince Kimmochi.** Japanese statesman, died in Okitsu, Japan, Nov. 24, 1940; born in Kyoto, 1849. A patrician by birth and culture, he lived in Paris from 1869 to 1890; studied the parliamentary system of government in Europe and America; became vice-president of the House of Peers (1893); minister of education (1894-96 and again in 1898); president of the privy council (1903) and leader of the Seiyukai party; premier from 1905 to 1907 and from 1910 to 1912. As premier he effected the nationalization of Japanese railroads and in other ways modernized the economy of the country. The Emperor Meiji made him one of the Genro, or Elder Statesmen, who, without any constitutional powers, exercised a somewhat hidden power behind the various governments. As the last of the Elder Statesmen, he was a chief adviser to the Japanese Emperor until old age curtailed his activities in 1936. He was generally regarded as responsible for Japan's withdrawal from the League of Nations.

**Sandefur, Jefferson Davis.** American educator, president of Simmons College (now Hardin-Simmons Univer-

sity), Abilene, Tex., from July, 1909; died in Abilene, Tex., Mar. 22, 1940; born in Sharp Co., Ark., Mar. 13, 1868.

**San Miguel, Antonio.** Cuban railway executive; died near Havana, Cuba, Aug. 9, 1940; born in Spain, 1852. He was for many years editor and publisher of *La Lucha*, a vigorous newspaper under the Gomez regime; president of the Guantanamo and Western Railroad and director of the Havana Electric Co. He was kidnapped June 5, 1935, by men disguised as soldiers, who demanded \$286,000 in ransom money, but released him on his promise to pay.

**Sargent, Fred Wesley.** American lawyer, president of the Chicago & North Western Railway Co. and of the Chicago, St. Paul, Minneapolis & Omaha Railway Co. from 1925 to 1939; died in Evanston, Ill., Feb. 4, 1940; born in Akron, O., May 26, 1876. In 1933 he was awarded the Rosenthal Foundation medal.

**Savage, Michael Joseph.** New Zealand politician, died in Wellington, Mar. 26, 1940; born in Victoria, Australia, Mar. 7, 1872. Leader of the New Zealand Labor Party from 1923, when that Party came into power in 1935 he became Prime Minister. In addition he held the posts of minister of external affairs, native minister, minister for Cook Islands, minister in charge of the native trust, legislative, electoral, audit, and high commissioner's departments. Because his ministry established the 40-hour week, initiated fixed prices for the farmer, and launched an enormous public works drive and national housing plan it became known as the New Zealand "New Deal." See *NEW ZEALAND UNDER HISTORY*.

**Schereschewsky, Joseph Williams.** American physician; died in West Harwich, Mass., July 9, 1940; born in Peiping, China, Mar. 6, 1873. He was graduated from Dartmouth Medical School in 1899 and served in the U.S. Public Health Service from that time until his death, becoming chief medical director in 1930. A noted authority on cancer, he founded the Cancer Research Center at Harvard University and conducted a series of experiments which he said tended to show that transplanted cancer had been cured in some mice by the use of short radio waves.

**Schilder, Paul Ferdinand.** Austrian psychiatrist; died in New York City, N.Y., Dec. 8, 1940; born in Vienna, Austria, Feb. 15, 1886. He was educated at the Universities of Vienna and Halle, came to the United States in 1929, and since that time was clinical director of the psychiatric division of Bellevue Hospital and research professor of psychiatry at New York University. He provoked a mild controversy in 1936 by declaring that Lewis Carroll's *Alice in Wonderland* was "full of oral sadistic trends of cannibalism" and that its suitability as child literature was "extremely questionable." He also deplored the "unwholesome instability of space" manifested in "the stretching and shrinkage of Alice." He was the author of several books on psychiatry including *Psychotherapy*, published in 1938.

**Schoff, Hannah Kent (Mrs. Frederic Schoff).** American social worker, died in Philadelphia, Pa., Dec. 10, 1940; born in Upper Darby, Pa., 1853. She was founder of the Pennsylvania Congress of Mothers and its president from 1899 to 1902; vice-president (1897-1902) and president (1902-20) of the National Congress of Mothers, now known as the National Congress of Parents and Teachers.

**Schroder, Baron Bruno.** British international banker; died in Englefield Green, Surrey, Eng. Dec. 10, 1940; born in Hamburg, Germany, Mar. 14, 1867. In 1895 he joined the London banking firm of J. Henry Schroder and Co., founded by his grandfather in 1804. He organized the J. Henry Schroder Banking Corp. of New York in 1923 and served as chairman of the board of that company until his death.

**Scott, Arthur Carroll.** American surgeon; died on Oct. 27, 1940; born in Gainesville, Tex., July 12, 1865. He was a founder of the Scott and White Hospital, Temple, Tex., in 1904, and president of the institution since that time. He was especially known for his use of the hot (cautery) knife in the removal of cancer and developed the "shadow" test in diagnosis of cancer of the breast.

**Scriven, George P.** American army officer; died in Southern Pines, S.C., Mar. 7, 1940; born in Philadelphia, Feb. 21, 1854. In the army from 1878, he retired as chief signal officer of the army with the rank of brigadier general on Feb. 3, 1917. He was recalled to service during the World War and again retired in 1918.

**Scudder, Janet.** American sculptor; died in Rockport, Mass., June 9, 1940; born in Terre Haute, Ind., Oct. 27, 1873. Known for her medallions and relief portraits and especially for her fountains, notable examples of her work are the "Frog Fountain" in the Metropolitan Museum, New York, and the "Fighting Boy Fountain" in the Chicago Art Institute. Her paintings were exhibited in New York in 1933. She wrote *Modeling My Life* (1925).

**Seaman, Henry Bowman.** American engineer; died in Brooklyn, N.Y., Oct. 24, 1940; born in New York City, N.Y., Jan. 20, 1861. A graduate of Swarthmore College (1881), he was engaged for many years in bridge construction and grade crossing elimination for railroads, and was chief engineer for the New York Public Service Commis-

sion from 1907 to 1910. In the building of the Fourth Avenue subway, Brooklyn, N.Y., he applied the pneumatic riveting hammer, the first time it had been so used in field work.

**Seger, Charles Bronson.** American railway executive; died near Lynchburg, Va., Nov. 11, 1940; born in New Orleans, La., Aug. 29, 1867. He began as an office boy in the Louisiana and Texas Railway and Steamship Co.; was vice-president and controller of the Union Pacific Railroad (1913-18); president (1918-19) and thereafter a director until 1929. He was president of the U.S. Rubber Co. (1918-21) and chairman of the board (1921-29).

**Seger, George N.** American congressman; died in Washington, D.C., Aug. 26, 1940; born in New York City, Jan. 4, 1866. A Republican, he served as Mayor of Passaic, N.J., from 1911 to 1919 and thereafter was a member of the U.S. House of Representatives.

**Sellman, Charles Gabriel.** British anthropologist; died in Oxford, Eng., Sept. 19, 1940; born in 1873. He was Hunterian Professor and Arris and Gale lecturer at the Royal College of Surgeons; Lloyd-Roberts lecturer at the Royal College of Physicians; professor emeritus of ethnology at the University of London; and the author of noted scientific works including *The Races of Africa* (1930).

**Seligberg, Alice L.** American welfare worker and Zionist leader; died in New York City, N.Y., Aug. 27, 1940; born in New York City, Aug. 8, 1873. She was graduated from Barnard College in 1895; was one of the founders in 1912, with Henrietta Szold, of Hadassah, the Women's Zionist Organization of America; was founder and president from 1913 to 1918 of Fellowship House in New York City; organizer and executive in 1917 of the American Zionist Medical Unit which sent a hospital ship in Miss Seligberg's charge to Palestine in 1918 equipped with a medical corps and 400 tons of medical supplies, and established hospitals at Jerusalem, Jaffa, Tiberias, Safed, and Haifa.

**Seymour, Jr., James M.** American consulting engineer and inventor; died in Newark, N.J., Sept. 2, 1940; born in Newark, 1860. A graduate of Newark High School and tutored in engineering by private teachers, he was associated with Thomas A. Edison in the development of the incandescent lamp, phonograph, and carbon telephone transmitter; supervised the installation of telephone systems in four European countries; and in 1884, at the request of the Russian Czar, he strung wires from the St. Petersburg Opera House to the palace 21 miles away so that the royal family could listen to the opera over the telephone. After 1900 he maintained an office in Newark and specialized in ventilation problems.

**Shanks, David Carey.** American soldier; died in Washington, Apr. 10, 1940; born in Salem, Va., Apr. 6, 1861. In the army from 1884, he was promoted to major general on May 7, 1921, and retired Jan. 17, 1925. During the World War he was commander of the Port of Embarkation, Hoboken, N.J. (1917-18). In 1927 he published *As They Passed Through the Port*.

**Sharp, Harry C.** American public health official; died in Lyons, N.J., Oct. 31, 1940; born in Charleston, Ind., 1871. He was graduated from the University of Louisville, Ky., in 1893; and in 1899 devised a method of sterilization of defectives which subsequently was adopted in several States. Since 1931 he was chief medical officer of the U.S. Veterans' Administration Hospital at Lyons, N.J.

**Shaw, Louis Agassiz.** American inventor and respirator expert; died in Boston, Mass., Aug. 27, 1940; born in Chestnut Hill, Mass., 1886. A graduate of Harvard University in 1909 and afterward a member of the faculty there, he collaborated with Professor Philip Drinker, also of Harvard, in the development of the Drinker respirator, described as the nearest approach to the natural method of human breathing yet devised. In 1931 he received the John Scott medal awarded annually for the invention "most conducive to the comfort, welfare, and happiness of mankind."

**Sherman, Frederic Fairchild.** American art collector, writer, and publisher; died in Westport, Conn., Oct. 23, 1940; born in Peekskill, N.Y., 1874. He was publisher of the magazine *Art in America*, a quarterly, since 1913, and the author of several books on the subject.

**Shinn, Millicent Washburn.** American psychologist and author; died in Niles, Calif., Aug. 14, 1940; born in Niles, Apr. 15, 1888. She was graduated from the University of California (1880); was editor of *The Overland Monthly* (1883-94), in which position she was said to be the first to recognize the talent of Jack London basing her studies on the behavior of her brother's child, she published *The Biography of a Baby* in 1907, a book which received lavish praise from many educators and philosophers, including Herbert Spencer, and eventually became a standard college textbook. She was also the author of *Development of the Senses in the First Three Years of Childhood* (1907) and *Notes on the Development of a Child* (1894-99).

**Shoup, Oliver Henry.** American industrialist and ex-governor; died in Santa Monica, Calif., Sept. 30, 1940; born in Champaign Co., Ill., Dec. 13, 1869. He was edu-

cated at Colorado College; became first president of the Midwest Oil Co. and associated with other industrial concerns; and served as Republican governor of Colorado from 1919 to 1923.

**Sidebotham, Herbert.** British journalist; died in London, Mar. 19, 1940; born in Manchester, Dec. 21, 1872. He was on the staff of the *Manchester Guardian* (1895-1918), the *London Times* (1918-21), the *London Daily Chronicle* (1922-23), and thereafter he wrote for the *Sunday Times* and the *Daily Sketch*. His latest work was *Great Britain and Palestine* (1937).

**Silva Villdöola, Carlos.** See SPANISH-AMERICAN LITERATURES under *Chile*.

**Silzer, George Sebastian.** American ex-governor; died in Newark, N.J., Oct. 16, 1940; born in New Brunswick, N.J., Apr. 14, 1870. A lawyer by profession, he was judge of the N.J. Circuit Court (1914-22); Democratic governor of the State (1923-26); and chairman of the Port of New York Authority (1926-27). He was a constant friend of national prohibition, a banker of distinction, and a prop in the campaign to link New Jersey and New York with the George Washington Bridge.

**Simmons, Furnifold McLendel.** American lawyer; died in New Bern, S.C., Apr. 30, 1940; born in Jones Co., N.C., Jan. 20, 1854. Admitted to the bar in 1875 he entered politics and in 1887 was elected to Congress as a Democratic Representative from North Carolina. He served until 1889 and during 1893-97 was collector of internal revenue for N.C. In 1901 he was elected to the Senate, serving five terms until 1931. He served as chairman of the Senate Finance Committee (1913-19) and was co-author of the Underwood-Simmons Tariff Act (1913-21).

**Simpson, Helen de Guerry.** British writer; died in October, 1940, born in Sydney, Australia, Dec. 1, 1897. She went to England in the World War as an interpreter in the Women's Royal Naval Service; studied music at Oxford University; acted in amateur theatricals at the home of John Masefield, the poet; and wrote novels with astonishing rapidity, completing *Acquittal* (1925) in three weeks. Among her other novels were *Saraband for Drad Lovers* (1935); *Boomerang* (1932) which won the James Tait Black Memorial Prize; *The Woman and the Beast* (1933); *Under Capricorn* (1937) and *Maid No More* (1940).

**Slater, Sir (Alexander) Ransford.** British colonial administrator, Governor of Jamaica (1932-34); died in Cookham Dean, Eng., Apr. 23, 1940; born Nov. 28, 1874.

**Sloane, (Thomas) O'Gonor.** American scientific expert; died in South Orange, N.J., Aug. 7, 1940; born in New York City, N.Y., Nov. 24, 1851. A graduate of St. Francis College, New York City (1869), he was professor of natural sciences at Seton Hall College, N.J. (1888-89); a prolific writer on scientific subjects; and inventor of the self-recording photometer, first device to record mechanically on an index card the illuminating power of gas. He was for some years editor of *Amazing Stories* and other scientific journals.

**Smilie, Robert.** British labor leader, president of the Scottish Miners' Federation (1894-1918; 1921-40), of the Miners' Federation of Great Britain (1912-21), and a Labor member of Parliament from 1923 to 1929; died in London, Feb. 16, 1940; born in Belfast in 1857.

**Smith, Clyde H.** American Republican Congressman, elected to the 75th Congress from the 2d Maine District in 1936; died in Washington, Apr. 8, 1940, born in Harmony, Me., June 9, 1876. He was a member of the House Labor Committee.

**Smith, Mrs. Harry B.** See BENTLEY, IRENE

**Smith, Wilbur Flak.** American educator; died in Baltimore, Md., Aug. 9, 1940; born in Lovettsville, Loudoun Co., Va., May 21, 1856. A graduate of Richmond College, he was principal of Baltimore City College (1911-26) and president of the University of Baltimore thereafter until 1935, when he became emeritus.

**Sonneborn, Siegmund B.** American clothing manufacturer; died in Baltimore, Md., Sept. 19, 1940; born in Germany, 1872. He came to America as a boy; was graduated from Johns Hopkins University in 1893; entered the clothing business; and eventually became president of Henry Sonneborn and Co., at one time the largest clothing manufacturing business in the world. He retired in 1930 to study the philosophy of the Book of Psalms, publishing privately his interpretation of the subject in 1931, 1933, and again shortly before his death.

**Spaulding, Edward Gleason.** American philosopher; died at Princeton, N.J., Jan. 31, 1940; born in Burlington, Vt., Aug. 6, 1873. Professor of philosophy at Princeton University from 1914, in 1936 he was appointed McCosh professor. He was president of the American Philosophical Association in 1932. His latest work was *A World of Chance* (1936).

**Spear, Walter Evans.** American engineer; died in New York, Mar. 29, 1940; born in Lawrence, Mass., Nov. 24, 1874. With the New York City Board of Water Supply from 1906, he was appointed chief engineer on Aug. 1, 1936, and as such directed the work of constructing the city's new \$300,000,000 Delaware water-supply system.

**Squires, Ernest Ker.** A British soldier; died in Mel-

bourne, Mar. 3, 1940; born in Poona, India, Dec. 18, 1882. In the Army from 1903 he saw service during the World War. He was on the General Staff of the Southern Command (1932-36) and director of staff duties at the War Office (1936-38) when he was made a lieutenant general. Thereafter he was inspector general of the Australian Military Forces.

**Squires, Sir Richard Anderson.** Newfoundland politician; died in St. John's, Mar. 26, 1940; born in Harbour Grace, Jan. 18, 1880. Leader of the Liberal Party, he served as prime minister from 1919 to 1923 and again from 1928 to 1932.

**Stanislau, Mother Mary (Kostka Schilling).** American educator; founder of Mount Mary College, Milwaukee, Wis., and Commissary General of the Catholic School Sisters of Notre Dame (1917-35); died in Elm Grove, Wis., Mar. 11, 1940; born in St. Louis, Mo., in 1856.

**Stanley, Freeman O.** American inventor; died in Newton, Mass., Oct. 2, 1840; born in Kingfield, Me., June 1, 1849. He and his twin brother, the late Francis Stanley, invented the Stanley Steamer motorcar in 1896; sold their business in 1898 to a New York group for \$250,000; bought it back in 1899 for \$20,000; and made some 10,000 cars before finally selling out again in 1918. He was educated at Bowdoin College.

**Staples, Arthur Gray.** American journalist; died in Lewiston, Me., Apr. 2, 1940; born in Bowdoinham, Me., July 4, 1861. With the *Lewiston Journal* from 1883, he was its editor-in-chief after 1919.

**Starr, Ellen G.** American sociologist, founder with Jane Addams of Hull House, Chicago, in 1889, died in Suffern, N.Y., Feb. 10, 1940; born in Laona, Ill., Mar. 19, 1859.

**Stekel, Wilhelm.** Austrian psychoanalyst; died in London, June 27, 1940; born in Bojan, Mar. 18, 1868. One of the earliest disciples of Freud, he was one of the editors of *Zentralblatt*, the first psychoanalytical periodical, but in the 1920's he broke with the master over a difference in methods of treatment. In 1938 after the *Anschluss* he fled to England. A prolific writer, his later works were *Psychosexuelle Infantismus* (1922), *Peculiarities of Behaviour* (1924), and *Technique of Analytical Psychotherapy* (1940).

**Steuer, Max D.** American lawyer; died in Jackson, N.H., Aug. 21, 1940, born in Austria, Sept. 6, 1871. He came to New York City as a boy with his parents, sold newspapers and worked in a tailoring shop; was graduated from Columbia University Law School in 1893; and rose rapidly in the practice of law. He became known as one of the leading criminal lawyers in the United States. Long a member of Tammany Hall, he was frequently called upon to pilot that organization through turbulent legal waters; and he was an important figure in some of the most famous court-room dramas of his time. Among his many noted clients were—Charles E. Mitchell, former president of the National City Bank, acquitted of income tax evasion (1933); Harry M. Daugherty, former U.S. Attorney General, acquitted of defrauding the government in the sale of German property seized during the World War by the Alien Property Custodian (1926); Maurice E. Connolly, former Borough President of Queens County, N.Y., convicted on conspiracy charges growing out of the Queens Sewer Scandal (1928).

**Stevens, Rebecca Louisa.** Mrs. American centenarian, died in San Diego, Calif., on Dec. 29, 1940, at the mature age of 107, having been born on June 12, 1833. As a young woman, she wrote a column for the *New York Evening Post*.

**Stewart, Athole Chalmers.** British actor and producer; died in Buckinghamshire, Eng., Oct. 22, 1940; born in Ealing, June 25, 1879. He began his stage career in London in 1901; and had important roles in many plays including *Hedda Gabler* (1922) and *What Every Woman Knows* (1923). In 1926 he directed the New York production of *On Approval* and he returned to America in 1930 to make his first appearance on the New York stage in *Canaries Sometimes Sing*.

**Stewart, George Craig.** American Protestant Episcopal clergyman; died in Chicago, May 2, 1940; born in Saginaw, Mich., Aug. 18, 1879. Ordained in the Methodist ministry in 1900, three years later he was ordained a priest of the Protestant Episcopal Church, and in 1904 he was appointed rector of St. Luke's Church in Evanston, Ill., which post he held until 1930 when he was consecrated bishop of Chicago. During his ministry he was a delegate to the General Convention of the Protestant Episcopal Church six times, served in France as a chaplain during the World War, lectured at Western Theological Seminary, and was associate editor of the *Anglican Theological Review*. A prolific writer, his latest works included *Six Altars* (1929), *The Call of Christ* (1931), *The Face of Christ* (1932), and *The Victory of Faith* (1935).

**Stockbridge, Frank Parker.** American author and journalist; died Dec. 7, 1940; born in Gardiner, Me., June 11, 1870. After attending National University, now George Washington University (1888-91), he became a reporter for the *Buffalo Express* (1894); worked in a simi-

lar capacity on other newspapers including the *New York Globe* and the *New York Herald*; founded the *American Home Magazine* in 1901; edited *Popular Mechanics* magazine (1913-15); and was president and managing editor of the *New York Evening Mail* from 1915 to 1917. In March, 1911, with the late Walter Hines Page, he inaugurated the campaign which ended in the nomination of Woodrow Wilson for the Presidency. He was the author of several books including *Hedging Against Inflation* (1939).

**Stockton, Phillip.** American banker, president of the Old Colony Trust Co., (1910-34) and of the First National Bank of Boston from 1929 to 1938; died in Boston, Feb. 11, 1940; born in Brookline, Mass., Mar. 20, 1874. He was director of more than 30 corporations.

**Stone, John O.** American educator; died in St. Petersburg, Fla., May 21, 1940; born in Albion, Ill., Jan. 11, 1867. A teacher of mathematics from 1885, in 1909 he was appointed professor of mathematics at State Teachers College, Montclair, N.J. He was retired as emeritus in 1935. His many textbooks on all branches of mathematics were used by schools throughout the United States.

**Storey, William Benson.** American railway official; died in Chicago, Ill., Oct. 24, 1940; born in San Francisco, Calif., Nov. 17, 1857. An engineer by profession, he became manager of the Atchison, Topeka and Santa Fe Railroad when it was taken over by the government in the World War, and served as president of the same system from 1920 to 1933.

**Street, Geoffrey Austin.** Australian brigadier; died in an airplane accident 8 miles from Canberra, Australia, Aug. 13, 1940; born in Sydney, Jan. 21, 1894. A member of the Australian House of Commons since 1934, he was minister of state for defense from 1938 until Nov. 12, 1939, when he was appointed minister for the army. He served in the World War in France, Belgium, and Gallipoli.

**Strickland, 1st Baron, Gerald Strickland.** British administrator and constitutional lawyer; died in Malta, Aug. 22, 1940; born in Malta, May 24, 1861, the son of Capt. Walter Strickland and Louisa Bonici. He was elected to the Maltese Council of Government (1886); was graduated from Trinity College, Cambridge (1887); served as Governor of the Leeward Islands (1902-04), of Tasmania (1904-09), of Western Australia (1909-13), and of New South Wales from 1912 to 1917. Elected to the Malta Legislative Assembly in 1921, he assumed leadership of the Constitutional Party and was Prime Minister of Malta from 1927 to 1932. A Roman Catholic himself, he was engaged in a bitter jurisdictional dispute with the Vatican from 1928 to 1932. An official inquiry in London found that Lord Strickland's "aggressive manner" had aroused "animosity" and he apologized to the Pope on June 3, 1932.

**Stupart, Sir Robert Frederic.** Canadian meteorologist; died on Sept. 27, 1940, born near Toronto, Ont., Can., Oct. 24, 1857. He was director of the Dominion Meteorological Service from 1894 to 1929.

**Sung Choh-yuan.** Chinese soldier; died in Mienyang, Szechwan, Apr. 4, 1940; born in 1885. In 1927 he was made chairman of the Shensi Provincial Government, and in 1931 was given command of the 29th Army and named chairman of the Chahar Provincial Government. In 1935 he was transferred to the Peiping-Tientsin Area as garrison commander, and subsequently became chairman of the Hopei-Chahar Political council and the Hopei Provincial government. In 1937 upon the outbreak of war with Japan he was forced to relinquish his chairmanship.

**Suydam, Edward Howard.** American illustrator; died in Charlottesville, Va., on Dec. 24, 1940; born in Vineyard, N.J., in 1885. His sketches of New York City for *The Designer*, a magazine, in 1921, were widely praised; and since then his pencil drawings, etchings, and block prints have found relative permanence in museums, libraries, and private collections.

**Suzuki, Kikaburo.** Japanese politician; died in Tokio, June 25, 1940; born in 1867. A member of the House of Peers and president of Seiyukai political party (1932-39), he was Minister of Justice (1924-28; 1931-32) and Home Minister (1928-29, 1932).

**Sweeney, James Fielding.** Canadian Anglican archbishop; died in Toronto, Ont., Can., Sept. 18, 1940; born in London, Eng., Nov. 15, 1857. He was educated in Canada, ordained a priest in 1881, and served as Anglican Archbishop of Toronto from 1909 to 1932.

**Tainter, Charles Sumner.** American physicist; died in San Diego, Calif., Apr. 20, 1940; born in Watertown, Mass., Apr. 25, 1854. An associate of Alexander Graham Bell, by his invention of the graphophone he was credited with having made the phonograph commercially possible. Also, he invented the dictograph and was associate inventor of the radiophone. He received the John Scott medal in 1900 and a gold medal at the Panama Pacific Exposition in 1915.

**Tait, Sir Thomas.** Canadian railway executive; died in St. Andrews, N.B., Can., July 25, 1940; born in Melbourne, Que., July 24, 1864. Employed for many years by

the Canadian Pacific Railway, he became transportation manager in 1901; and was chairman of the Victorian State Railways of Australia from 1902 to 1911.

**Tallmadge, Thomas B.** American architect; killed in a train wreck near Arcola, Ill., Jan. 1, 1940; born in Washington, D.C., Apr. 24, 1876. Known for his many ecclesiastical buildings, he had lectured on architectural history at the Art Institute of Chicago, and at Armour Institute of Technology. He was a member of the architectural commission for the restoration of Williamsburg, Va., and was associate architect for the Julia Lathrop Homes, a Federal Housing Project in Chicago. He wrote *The Story of Architecture in America* (1927) and *The Story of England's Architecture* (1934).

**Tanomogi, Kekiichi.** Japanese politician; died in Tokyo, Feb. 19, 1940; born in 1867. Head of the newspaper *Hochi*, he served nine terms in Parliament, was minister of communications in the Hirota Cabinet (1936-37), and Mayor of Tokyo after 1939.

**Tarbox, John W.** American Methodist clergyman; died in Miami, Fla., May 2, 1940; born in 1859. A Methodist missionary in South America for fifty years, in 1930 he was consecrated the first bishop of the independent Methodist Church of Brazil at Rio de Janeiro. He retired in 1935.

**Tate, Harry (Ronald Macdonald Hutchison).** British actor, died in Sutton, Surrey, Feb. 14, 1940; born in Scotland, July 4, 1872. He made his debut as a mimic at a music hall in 1895 and subsequently introduced his famous sporting sketches, the first being the popular "Motoring." He appeared in several revues and motion pictures and until recently was still playing in variety theaters.

**Tausig, Frank William.** American economist; died in Cambridge, Mass., Nov. 11, 1940; born in St. Louis, Mo., Dec. 28, 1859. After graduation from Harvard University (1879), he served there as secretary to President Charles W. Eliot (1880-82) and professor of economics from 1892 to 1935, retiring with the title of emeritus. He was one of the founders of the Harvard Graduate School of Business Administration (1906-07) and personally obtained pledges of \$25,000 a year for five years toward its launching. He headed the United States Tariff Commission as chairman from 1917 to 1919; was author of many books on economics and international trade; and went to Paris in 1919 as a member of President Wilson's advisory committee on peace. He was editor of *The Quarterly Journal of Economics* from 1896 to 1937; and the author of *Principles of Economics* (1911, revised in 1939), *Tariff History of the United States* (1888), *Silver Situation in the United States* (1892), and *Wages and Capital* (1896).

**Taylor, David Watson.** American admiral and naval constructor; died in Washington, D.C., July 28, 1940; born in Louisiana Co., Va., Mar. 4, 1864. He was graduated from the U.S. Naval Academy in 1885 at the head of his class and in June, 1888, he won the same honors at the Royal Naval College at Greenwich, Eng., his record there being the highest ever attained by an English or foreign student. As chief of the naval bureau of construction and repair from 1914 to 1922, which included the feverish activity of the wartime naval program, he was responsible for construction or repair of 1005 vessels totaling 1,183,000 tons displacement. He retired on Jan. 15, 1923. He initiated many improvements in the designs of ships, was an expert on marine resistance and propulsion, ship ventilation and water-tight doors, and provided the first and most complete mathematical analysis of the Sperry gyroscope when it was offered to the Navy. He was the author of *Resistance of Ships and Screw Propulsion* (1893) and *Speed and Power of Ships* (1910).

**Temperley, Arthur C.** British general; died in London, Apr. 7, 1940; born in Cambridge, Aug. 31, 1877. In the army from 1900 to 1935, he saw service during the World War and was deputy director of military operations and intelligence at the War Office (1928-33) and a member of the British delegation to the Disarmament Conference (1932-35). During 1935-39 he was military correspondent of the *London Daily Telegraph*. He published *The Whispering Gallery of Europe* (1928).

**Tetrassini, Luisa.** Italian singer; died in Milan, Italy, Apr. 28, 1940; born in Florence, June 29, 1871. She made her debut in *L'Africaine* at Florence in 1895 and subsequently sang in Rome, South America, Portugal, Russia, and San Francisco, where in 1904 she made her American debut. Her first international success was made at Covent Garden, London, in 1907, and in 1908 she came to New York, making her debut as Violetta in *Traviata*. During the season of 1910-11 she sang with the Metropolitan Opera Co., notably in *Rigoletto* and in *Lucia di Lammermoor*. During 1913-14 she sang with the Chicago Opera Association. Thereafter she engaged in concert work, making a successful tour of the United States and Canada in 1921. Her last public appearance was in 1938 when she made a recording which was broadcast to the United States. A coloratura soprano, her voice, though not powerful, was in the higher registers clear and sweet. Her favorite operas were *Lucia di Lammermoor* and *La Son-*

*nambula*. She published her reminiscences, *My Life of Song*, in 1921.

**Thakore Sahab Shri Dharmendrasinhji.** Ruler of Rajkot, died in the Gir Forest, June 12, 1940; born Mar. 4, 1910. Ruler of Rajkot State from 1931, his administration was opposed by Mohandas Gandhi on Mar. 3, in 1939.

**Thayer, Ernest Lawrence.** American writer; died in Santa Barbara, Calif., Aug. 21, 1940; born in Lawrence, Mass., Aug. 14, 1863. He was the author of an indomitable masterpiece of poetic and dramatic fancy entitled *Cassey at the Bat*, first published in the San Francisco *Esaminer* in 1888.

**Thomas, James Augustus.** American tobacco merchant; died in White Plains, N.Y., Sept. 10, 1940; born in Lawtonville, N.C., Mar. 6, 1862. He spent most of his time from 1888 to 1923 in China and other parts of the Far East establishing factories and warehouses and otherwise facilitating the sale and cultivation of cigarettes. After 1914 he was managing director in China of the British-American Tobacco Co. Ltd., which he joined in 1902. He was the founder of the Chinese-American Bank of Commerce and two schools for Chinese; and the author of *Trailing Trade a Million Miles* (1931).

**Thompson, Holland.** American educator and author; died in New York City, N.Y., Oct. 21, 1940; born in Randolph Co., N.C., July 30, 1873. He was graduated from the University of North Carolina (1895) and held several minor teaching posts before serving as professor of history at the College of the City of New York (1920-40). He was widely known for his writings on the economics of the South; was editor-in-chief of *The Book of Knowledge*, a children's encyclopedia first published in 1910-11 and revised frequently since that time; and author of *Prisons of the Civil War* (1911), *The People and the Trusts* (1912), *The New South* (1919) and *The Age of Invention* (1921). He was a contributor to the *New International*, the *Britannica*, and *Nelson's* encyclopedias.

**Thompson, John T.** American mechanical engineer; died in Great Neck, L.I., June 21, 1940; born in Newport, Ky., Dec. 31, 1860. In the U.S. Army from 1882, he was promoted through the ranks to colonel in 1913, but in 1914 resigned to become chief engineer of the Remington Arms Corporation. He returned to the Army upon the entry of the United States into the War and he was appointed Director of Arsenals in charge of all small arms production and for his services he received the Distinguished Service Medal in 1919. He retired in 1920 with the rank of brigadier general and served in the Officers Reserve Corps until 1930. With Capt. John N. Blish, U.S.N., he developed in 1920 the Thompson .45 caliber submachine gun, light, portable, and automatic, and capable of being fired from the shoulder. After 1920, he was president of John T. Thompson Co. He was the author of *Art of Designing and Constructing Small Arms, Modern Weapons of War, and American Small Arms*.

**Thomson, Sir Joseph (John).** British physicist; died in Cambridge, Eng., Aug. 30, 1940, born near Manchester, Dec. 18, 1856. Educated at Owens College, Manchester, and Trinity College, Cambridge, he was appointed fellow (1880) and lecturer (1883) at Trinity; and served as Cavendish professor of experimental physics at Cambridge University from 1884 to 1918. Since 1918 he was master of Trinity College and honorary professor of physics at Cambridge. He was awarded the Nobel Prize in physics in 1906, exactly 31 years before his son, Prof. Paget Thomson, received the same distinction. He became a fellow (1884) and president of the Royal Society (1916-20).

Frequently called the "discoverer of the electron," he was at least one of the very small group of scientists whose experiments in electrical charges in rarefied gases and cathode rays brought the theory of the electrical constitution of matter into general acceptance. In this respect he was a contemporary of the German scientist Lennard. Although his investigations concerned chiefly the conduction of electricity through gases, the determination of the charge and mass of the electron and analysis by means of positive rays, he was identified with many other important discoveries in ballistics, X-rays, and other fields of physics.

His numerous books included: *A Treatise on the Motion of Vortex Rings* (1884); *Application of Dynamics to Physics and Chemistry* (1886); *Recent Researches in Electricity and Magnetism* (1892); *Elements of the Mathematical Theory of Electricity and Magnetism* (1895); *Discharge of Electricity Through Gases* (1897); *Conduction of Electricity Through Gases* (1903); *The Structure of Light: The Corpuscular Theory of Matter* (1907); *Rays of Positive Electricity and Their Application to Chemical Analysis* (1913) and *The Electron in Chemistry* (1923). Professor Thomson was the recipient of numerous honorary degrees and medals.

**Thorndike, Augustus.** American orthopedic surgeon; died in Bar Harbor, Me., Aug. 23, 1940; born in Paris, France, Apr. 27, 1863. A graduate of Harvard (1884), he helped found the Industrial School for Crippled and Deformed Children and aided in the establishment of the

State Hospital School for Cripples at Canton, Mass. He was the author of *A Manual of Orthopaedic Surgery* (1907), a textbook used by many medical schools.

**Thurlow, Louis K.** American steamship owner; died in Brookline, Mass., on Dec. 31, 1940; born in Cutler, Me., in 1888. He founded the Crowell and Thurlow Steamship Co., with shipyards in Boothbay and Bar Harbor, Me., in 1896 and was elected president of the Cape Cod Steamship Co. in 1932.

**Tighe, Michael F.** American labor leader; died in Pittsburgh, Pa., Aug. 5, 1940; born in Boonton, N.J., 1858. An employee for 29 years of the Wheeling (W. Va.) Iron and Nail Co., he was president of the Amalgamated Association of Iron, Steel and Tin Workers from 1920 to 1937. He retired to make way for the Steel Workers Organizing Committee of the C.I.O.

**Thien, John Henry.** American Roman Catholic clergyman; died in Wichita, Kans., Jan. 14, 1940; born in Oldenburg, Ind., July 14, 1861. Ordained in 1886, he was named bishop of Lincoln, Neb., in 1911, and bishop of Denver in 1917. He retired in 1931.

**Timken, Henry H.** American industrialist; died in Canton, O., Oct. 14, 1940; born in St. Louis, Mo., Apr. 19, 1868. A graduate of the University of California Law School, he entered the carriage trade with his father, with whom he later founded (1901) the Canton Roller Bearing Axle Co., which eventually became the Detroit-Timken Axle Co. of Detroit. He played a major role in the development of the automobile.

**Tinney, Frank.** American actor; died in Northport, L.I., Nov. 28, 1940; born in Philadelphia, Pa., Mar. 29, 1878. He first appeared in New York in the *Follies* of 1910, in the role of a black-face comedian; played variously in vaudeville and on the musical comedy stage; and fell from popularity in 1924 following a highly-publicized quarrel between himself and Imogene Wilson, the actress, who later starred in motion pictures under the name of Mary Nolan.

**Todd, Earle M.** American clergyman; died in Harlingen, Tex., Jan. 13, 1940, born in Vernon, Ind., Oct. 17, 1863. Ordained in the ministry of the Disciples of Christ in 1888, he served in many pastorates and during 1914-17 was president of Christian University, now Culver-Stockton College, in Missouri.

**Toral, Remigio Crespo.** See SPANISH-AMERICAN LITERATURES under Ecuador.

**Tovey, Sir Donald Francis.** British composer and musician, died in Edinburgh, Scot., July 19, 1940; born in Eton, Eng., July 17, 1875. Educated privately and at Balliol College, Oxford, his first series of concerts of chamber music in London were given in 1900 and followed by similar appearances in Berlin and Vienna. Since 1914 he was Reid professor of music at Edinburgh University, where he organized and led the Reid Orchestra. He visited the United States in a series of concerts in 1928; was the author of the opera *The Bride of Dionysus* as well as many concertos; and wrote prodigiously on musical analysis.

**Trancu-Jasi, Grigore.** Rumanian economist, died in Bucharest, Jan. 8, 1940; born in Jassy, in 1873. The author of the Social Law of 1920, he was Rumania's first minister of labor and founder of the department of labor.

**Trotha, Adolf von.** German admiral and author; died in Berlin, Germany, Oct. 11, 1940; born in Coblenz, 1868. A graduate of the German Naval Academy (1900), he became chief of staff to Admiral Scheer in 1916, commanded the battleship *Kaiser* at the Battle of Jutland, and was Chief of the German Admiralty from March, 1919, to September, 1920.

**Trotsky, Leon (Lev Davidovich Bronstein).** Russian revolutionist and leader; died in Mexico City, Aug. 21, 1940, from wounds inflicted by an assassin on the preceding day; born in Kherson, Russian Ukraine, 1879. After attending local schools in Russia, he embraced Marxism and was exiled (1901) to Siberia for four years for participating in a workmen's revolutionary movement; escaped to France (1904); returned to Russia (1905) to engage in another revolt, and was promptly banished to Siberia for life. This time he escaped in three months, on a false passport made out in the name of one Trotsky, and took asylum successively in France, Switzerland, Austria, and Germany, earning sustenance by the strength of his pen.

He was editing a newspaper in Berlin when the World War broke out; and was thereupon viewed with immediate suspicion and finally exiled as a "dangerous anarchist." After hesitant stops in Austria and Switzerland, he took refuge in Paris; but here he was suspected of pro-German activities, and found it advisable to seek a haven in the New World, arriving (with his wife and two sons) in New York City on Jan. 14, 1917. He rented a three-room flat on Vyse Avenue, the Bronx; wrote editorials for radical publications; and delivered lectures in which he predicted that the war would be followed by proletarian revolutions in the countries involved. Following the dethronement of the Czar, he left New York on the *S.S. Kristianafjord* (Mar. 27, 1917) and arrived in

Russia the next month; allied himself with the provisional Kerenky government; but played a leading role in the October Revolution that brought the Bolsheviks and Lenin into power.

Lenin rewarded him with the post of Foreign Minister, in which capacity he negotiated the Brest-Litovsk treaty, thus taking Russia out of the World War. Later he was made Minister of War and distinguished himself by reorganizing and revitalizing the shattered army and defeating the anti-Bolshevik Russian forces under the commands of Yudenitch, Kolchak, Denikin, and Wrangel. He reinstituted compulsory military training, was a severe disciplinarian, and made his headquarters in a special armored railway train. His passion for all-out efficiency caused discontent in the ranks of workers as well as the soldiers; he had several collisions with Lenin; his popularity and power began to wane; and when Lenin became ill in 1923, the All-Russian Congress named a triumvirate of Kameneff, Zinovieff, and Stalin, the General Secretary of the Communist Party, to assume the leadership of the State.

Lenin died in 1924 and Trotsky steadily slipped from power. He was removed as chairman of the Revolutionary War Council (1925); and was ousted from the Political Bureau (October, 1926), from the Supreme Economic Council (November, 1926), and from the Central Committee of the Communist party in October, 1927. In January, 1928, it became known that Trotsky had been exiled to Siberia; in February, 1929, he was expelled from the country.

He lived in Turkey from 1929 to 1933, seeking the while to obtain asylum in surroundings more conducive to his health, already undermined by asthma and threatened with tuberculosis. France granted him a home in 1933 but pushed him out in 1935 for not "observing the duties of neutrality." He stayed in Norway from June, 1935, to January, 1937, when the mass treason trials in Russia, coupled as they were with Trotsky's name, impelled the Norwegian government to ease him out of their domain. Thereafter he lived in Mexico until his death.

The Trotsky-Stalin feud was more than a clash of personalities struggling for personal power. It represented a fundamental difference of opinion concerning Communist doctrine and method. Trotsky was the arch-extremist, the believer in communism pure and simple without compromise; the enemy of the capitalist governments; the constant instigator of the world revolution. He urged an aggressive policy toward Great Britain and the United States and a friendly hand to China. He wrote for many periodicals and pamphlets and was the author of the following books: *Literature and Revolution* (1925); *My Life* (1930); *History of the Russian Revolution* (1932-34); and *The Revolution Betrayed*. See the article on COMMUNISM; also Mexico under History.

**Trotter, Frank Butler.** American educator; died in Morgantown, W. Va., Mar. 7, 1940; born in Washington Co., Ohio, Feb. 27, 1863. Associated with West Virginia University as professor of Latin from 1907, he was dean of the College of Arts and Sciences (1911-16), acting president (1914-16), and president (1916-28).

**Trotter, Melvin E. (Mel Trotter).** American evangelist, died in Macatawa Park near Holland, Mich., Sept. 11, 1940; born in Orangeville, Ill., May 16, 1870. Ordained a Presbyterian minister in 1905, he founded more than 67 city missions in the United States.

**Trunk, Joseph V.** American educator, president of Trinity College, Sioux City, Ia., since 1938; died on July 9, 1940; born in 1899.

**Tryon, Baron, George Clement Tryon.** British officer and politician; died in Sunningdale, Berkshire, Eng., Nov. 24, 1940; born on May 15, 1871. A member of Parliament from Brighton since 1910, he was Postmaster General of England from 1935 until April, 1940.

**Tsai Yuan-pai.** Chinese educator; died in Hongkong, Mar. 5, 1940; born in 1867. A member of Sun Yat-sen's revolutionary party from 1905, he was minister of education in the first republican government in 1912 and again in General Chiang Kai-shek's first nationalist government in 1926. During 1917-23 he was chancellor of Peking National University and after 1928 was president of Academia Sinica.

**Turpin, Ben.** American motion picture actor; died in Hollywood, Calif., July 1, 1940, born in New Orleans, La., in 1869. He was one of the first slapstick comedians in motion pictures and built his comedy act around his crossed eyes. He was one of the mainstays of the Mack Sennett comedies but had not appeared in recent years except in "bit" parts.

**Tweed, Thomas F.** British politician; died in London, Apr. 30, 1940; born in Liverpool in 1890. A Liberal in politics, he served as secretary of the Manchester Liberal Federation (1918-26), was chief organizer of the Liberal Party (1927-31), and secretary of the Liberal Organisation Committee (1930-31). He was a political advisor to Lloyd George after 1926. He wrote *Gabriel Over the White House*, published anonymously in 1933.

**Tweedie, Mrs. Alec.** British author; died in London,

Apr. 15, 1940. Active on philanthropic and charitable committees, she wrote many books, including *Porfirio Dias* (1906), *America as I saw it* (1913), *Tight Corners of My Adventurous Life* (1933), etc. Several exhibitions of her water colors have been held.

**Tweedsmuir, 1st Baron, of Ellsfield, Sir John Buchan.** British writer and politician, died in Montreal, Feb. 11, 1940; born in Perth, Scotland, Aug. 26, 1875. Educated at Oxford where he won many honors, he was called to the bar in 1901 and then became secretary to the High Commissioner for South Africa (1901-03). Upon his return he became a partner in the publishing firm of Thomas Nelson & Sons, and upon the outbreak of the World War in 1914 he went to France as a correspondent for the *London Times* and subsequently became attached to the headquarters staff of the British Army in France. In 1917 he was recalled to act as Director of Information. Elected to Parliament as a Conservative from the Scottish Universities in 1927, he held this post until 1935 when he was appointed Governor General of Canada and was raised to the peerage. During 1933-34 he was Lord High Commissioner to the Church of Scotland, and in 1937 he was named Chancellor of Edinburgh University. A noted man of letters, Lord Tweedsmuir was the author of many popular novels, a biographer, and a historian. Chief among his works, which number over fifty and were begun in 1896 are: *A History of Brasenose College* (1898), *The Thirty-Nine Steps* (1915), *Greenmantle* (1916), *Mr. Standfast* (1919), *A History of the Great War* (1921-22), *Sir Walter Scott* (1932), *Gordon at Khartoum* (1934), *Oliver Cromwell* (1934), *The King's Grace* (1935), *Augustus* (1937), *Pilgrim's Way*, an autobiography (1940), and *Mountain Meadow* (published, 1941).

**Ulmans, Karl.** Latvian statesman; died of injuries inflicted by political enemies on July 22, 1940; born on Sept. 4, 1877. He came to the United States in 1907, studied agriculture at the University of Nebraska, and was afterward an instructor there; returned to Latvia (then a part of Russia) at the outbreak of the World War; was one of the authors of the Latvian Declaration of Independence in 1918 and first Prime Minister of the new republic. He was Prime Minister again from March, 1931, to December, 1932. In 1934 he dissolved Parliament and founded a totalitarian regime with himself as President and Prime Minister, positions he held until July 20, 1940, when he was ejected from office as a prelude to Soviet Russia's absorption of the country.

**Untermeyer, Samuel.** American lawyer; died in Palm Springs, Calif., Mar. 16, 1940; born in Lynchburg, Va., June 6, 1858. Admitted to the bar in 1879, he went into partnership with his half-brother in the firm of Guggenheimer & Untermeyer, which in 1895 became known as Guggenheimer, Untermeyer & Marshall. During his long career he became known as the "money trust" inquisitor, the counsel for the Lockwood legislative investigating committee, the critic of Wall Street, the defender of the rights of minority stockholders, the transit investigator, and the supporter of the five-cent fare. One of the most sought after lawyers in the country, he devoted a good deal of his time to non-profitable civic service and was counsel for the Committee on Banking and Currency of the House of Representatives in the "Pujo Money Trust Investigation" (1912); counsel for the Joint Legislative (N.Y.) Committee on Housing, the "Lockwood Committee," in its investigation of the building trades and also as special attorney general in the prosecution disclosed by the Committee (1919-20); and from 1927 to 1931 he was special counsel for the New York Transit Commission in formulating unification plans for the rapid transit lines and as counsel for the Commission and the City in suits by and against the Interborough Rapid Transit Co. for the maintenance of the five-cent fare. Subsequently (1935-38), he was counsel for the Interborough and Manhattan Railroads in the negotiations and proceedings for the unification of the New York City subway lines. A Democrat, he took an active part in politics and was a delegate to the national conventions of 1904, 1908, 1916, 1932, and 1936, and was a delegate-at-large to the New York State Constitutional Convention in 1938. After 1933 he was actively interested in anti-Nazi organizations and was president of the Non-Sectarian Anti-Nazi Council, the World Jewish Economic Federation, and the International Non-Sectarian Anti-Nazi League for Human Rights. Deeply interested in horticulture, the gardens at his estate "Greystone," Yonkers, N.Y., were famous.

**Unwin, Sir Raymond.** British architect; died in Lyme, Conn., June 28, 1940; born in Rotherham, Yorks., Nov. 2, 1863. Known as a town planner and housing expert, he laid out the First Garden City, Letchworth and the Hampstead Garden Suburb, and from 1915 to 1929 was the chief technical officer for Building and Town Planning in the Ministry of Health. He served as chief adviser to the Greater London Regional Town Planning Committee (1929-33) and after 1936 was visiting professor at the Columbia University School of Architecture. He was president of the Royal Institute of British Architects (1931-33), the recipient of the gold medal of the

Royal Society (1937), and author of *Town Planning in Practice* (1932). In March, 1940, he was appointed a member of a committee of the Twentieth Century Fund to conduct a survey of housing needs in the United States.

**Upson, Morton L.** American oil financier; died in Buffalo, N.Y., on Dec. 29, 1940; born in Greenwich, O., in 1847. He formerly headed the Commercial Oil Co. and the Upson Oil and Soap Co. of Parkersburg, W.Va., and the Pease Oil Co. of Buffalo, N.Y. His son, Henry, succeeded him as president of the Pease Oil Co. in 1903. In the 1870's the elder Upson refused an offer of the late John D. Rockefeller to merge their oil companies.

**Vance, William Reynolds.** American insurance law authority; died in New Haven, Conn., Oct. 23, 1940; born in Middletown, Ky., May 9, 1870. He was graduated from Washington and Lee University (1892), receiving his law degree in 1897 and serving as professor of law there until 1903. He was thereafter professor of law at George Washington University (1903-10) and dean of the law school (1905-10); dean of the law school of the University of Minnesota (1910-20); and Sterling, Foster, and Garver professor of law at Yale University from 1920 until he retired as emeritus in 1938. He was the author of *Slavery in Kentucky* (1895), *Vance on Insurance* (1904), *Early History of Insurance Law* (1909), and *Cases on Insurance* (1914), a widely used college textbook.

**Vanderbilt, Anne Harriman (Mrs. William K., Sr.).** American social leader; died in New York, Apr. 20, 1940. She was married to Mr. Vanderbilt in 1903, and was known for her work in the Protestant Big Sisters, the American Red Cross, the American Woman's Association, and other charitable organizations. During the World War she was a founder of the American Ambulance at Neuilly, France, which subsequently became Military Hospital No. 1.

**Vann, Robert L.** American Negro editor and publisher; died in Pittsburgh, Pa., Oct. 24, 1940; born near Ahsokie, N.C., Aug. 23, 1879. A graduate of the University of Pittsburgh (1906), he practiced law since 1910, founded the *Pittsburgh Courier*, a weekly newspaper devoted to the interests of the Negro race, and was editor from 1912 until his death. He was Special Assistant Attorney General of the United States during 1933-36 and was Republican national director of Negro publicity in the campaigns of Warren G. Harding, Calvin Coolidge, and the first campaign of Herbert Hoover, thereafter throwing his support to Franklin D. Roosevelt and latterly to Wendell Willkie.

**Vauclain, Samuel Matthews.** American industrialist; died in Rosemont, Pa., Feb. 4, 1940; born in Philadelphia, May 18, 1856. With the Baldwin Locomotive Works from 1883, he was elected its president in 1919 and chairman of the board of directors in 1929. In 1889 he designed the first compound locomotive for the Baltimore & Ohio R.R. During the World War his organization manufactured ordnance and munitions to the amount of \$250,000,000 and he served as a member of the Council of National Defense and of the War Industries Board. He received honors from Italy, Poland, France, and the United States and was awarded the John Scott Medal in 1891 and in 1931.

**Valado, Calixto.** See SPANISH-AMERICAN LITERATURES under *Puerto Rico*.

**Verdier, Jean, Cardinal.** French Roman Catholic prelate; died in Paris, Apr. 9, 1940; born in 1864. Ordained in 1887, in 1929 he was named superior general of the Saint-Sulpice Congregation and Archbishop of Paris. Shortly after he was made a Cardinal. He was a foe of dictatorships and a champion of the oppressed.

**Vernon, Frank.** British actor and producer; died somewhere in France, Mar. 18, 1940; born in Bombay, Mar. 6, 1875. He made his first appearance as an actor in 1894 and was seen in *Trelawney of the Wells* (1898); *Romeo and Juliet* (1904); *The Pigeon* (1912). His first productions were *The Winter's Tale* (1905), *Cymbeline* (1908), and *King Lear* (1909). After the World War he continued producing plays, one of the latest being *Red Rust* (1929). During the World War, he saw service in the Army Ordnance Department being promoted to major. With the outbreak of the European War in September, 1939, he rejoined the Army and at his death was serving with the British Expeditionary Forces in France.

**Vestey, of Kingswood, 1st Baron, William Vestey.** British meat company executive and shipowner; died at Gerrard's Cross, Buckinghamshire, Eng., Dec. 11, 1940; born in Liverpool, Jan. 21, 1859. With his brother Sir Edmund Vestey, he founded and headed the Union Cold Storage Co. and operated the Blue Star steamship line. He was created a baronet in 1913 with a coat of arms that included an iceberg, a bull, a sheep, and a row of three eggs to represent his interests in cold storage, shipping, and meat packing.

**Voss, Josef.** Hungarian journalist, editor-in-chief of *Pester Lloyd* (1913-37); died in Budapest, Jan. 29, 1940; born in Arad, 1858.

**Volkman, Helmuth.** German general, head of the German Air Academy and commander of the Condor Legion, the German expeditionary force which fought with Gen-

**crasissimo Francisco Franco** in the Spanish Civil War; died in August, 1940, of injuries received in an automobile accident, according to a German radio broadcast heard in New York City in August, 1940.

**Volpe, Arnold.** American orchestral conductor; died in Miami, Fla., Feb. 2, 1940; born in Kovno, Russia, July 9, 1869. In 1918 he originated the New York Stadium Concerts which he conducted for the first two years and of which he was guest conductor in 1924, 1927, and 1936. In 1926 he became conductor of the Miami Symphony Orchestra, in 1931 he organized an orchestra in Kansas City, and in 1934 he founded the University of Miami Symphony Orchestra.

**Volterra, Vito.** Italian senator, mathematician, and biologist; died on Oct. 11, 1940; born in Ancona, Italy, 1860. Professor of mathematics at the University of Rome since 1900, he was dismissed in 1931 because he refused to take the oath of allegiance to Fascism. Since then he was invited by Pope Pius XI to join the Papal Academy and was one of the few Jews to be thus honored.

**Vuillard, Edouard.** French painter; died in La Baule, France, June 21, 1940; born in Cousseaux, 1868. Although best known for his still life and interiors, he did recent portraits of Camille Chautemps and Yvon Delbos and was regarded as a link between the impressionist and post-impressionist schools. Some of his paintings hang in the Metropolitan Museum of Art, the Cleveland Museum, the Buffalo Museum, and in noted private collections.

**Wagner-Jauregg, Julius.** Austrian pathologist; died in Vienna, Oct. 1, 1940; born in Wels, Upper Austria, Mar. 7, 1857. He was a member of the faculty of the University of Vienna, his alma mater, from 1881 to 1928, except for a brief interlude as professor of psychiatry and neurology at the Graz University (1883-89). In 1887 he discovered, purely by accident, that a victim of paresis showed a marked mental improvement following an attack of fever. He experimented for many years and announced in 1917 that he had found a safe arresting agent for syphilitic paralysis, namely the fever induced by tertiana malaria. He received the Nobel Prize in Medicine in 1927.

**Wald, Lillian D.** American social worker and publicist; died in Westport, Conn., Sept. 1, 1940; born in Cincinnati, O., Mar. 10, 1867. The daughter of a well-to-do optician, she was educated at private schools; was graduated from the New York Hospital Training School for Nurses and, with Miss Mary Brewster, founded a visiting nurse association with headquarters in a tenement on Jefferson Street, New York City (1893). With money donated by Jacob Schiff she purchased in 1895 a building at 265 Henry Street which became known as the Henry Street Settlement, a free nursing association which tends to an average of 100,000 persons in New York City annually. Miss Wald retired from active direction in 1933 and resigned as president in 1937.

**Walsh, Mainwaring R.** British brigadier; killed in action in France, May, 1940; born in 1876. In the army from 1899, he saw service in the South African War (1899-1902), the European War (1914-19), in India (1924-27), with the Territorial Army (1928-30), and with the Scottish Command (1930-33) when he retired.

**Wambaugh, Eugene.** American lawyer and educator; died in Dublin, N.H., Aug. 6, 1940, born near Brookville, O., Feb. 29, 1856. He was professor at the Harvard Law School, his alma mater, from 1892 to 1925, when he retired with the title emeritus. He wrote many articles and books on legal matters.

**Ward, George S.** American bakery executive; died in Havana, Cuba, Sept. 3, 1940; born in Pittsburgh, Pa., 1867. One of the founders of the Ward Baking Co. in 1911, he was its president from 1915 to 1926.

**Waring, 1st Baron, Samuel James Waring.** British decorative authority; died in London, Jan. 9, 1940; born in Liverpool, Apr. 19, 1860. In 1893 he founded Waring & Sons and subsequently was chairman of Waring-Gillow, Ltd., specialists in furnishing luxury liners, hotels, etc. He retired in 1930.

**Warren, Harry M.** American Baptist clergyman and crusader; died in Chappaqua, N.Y., on Dec. 21, 1940; born in Hudson, N.Y., Apr. 19, 1867. After attending Colgate University and Union Theological Seminary, he was ordained in 1891; held several pastorates; and was the founder in 1906, and president thereafter, of the National Save-a-Life League, an organization devoted to the rescue of persons contemplating suicide.

**Waste, William H.** American jurist; died in Berkeley, Calif., June 6, 1940; born in Chico, Calif., Oct. 31, 1868. A member of the bar from 1894, he was associate justice of the Supreme Court of California during 1921-26, and chief justice thereafter.

**Watrous, Henry Willson.** American artist; died in New York, May 9, 1940; born in San Francisco, Sept. 17, 1857. Well known as a genre painter, his works received the Clark prize (1894), the Altman \$1000 prize (1929), the Carnegie prize (1931), and the Saltus medal (1934), of the National Academy of Design; and the Lippincott prize of the Pennsylvania Academy (1935).

He was secretary of the National Academy of Design during 1898 to 1920, and its president in 1933. He held his first one-man showing in 1937.

**Watson, Clarence W.** American industrialist and politician; died in Cincinnati, May 24, 1940; born in Fairmont, W.Va., May 8, 1864. A former coal miner, he was president of the Consolidation Coal Co., until 1911 and again during 1919-28, and was chairman of the board during 1911-18. He served in the U.S. Senate as Democratic Senator from West Virginia from 1911 to 1913 to fill an unexpired term.

**Waugh, Frederick Judd.** American artist; died in Provincetown, Mass., Sept. 10, 1940; born in Bordentown, N.J., Sept. 13, 1861. He studied at the Pennsylvania Academy of Fine Arts and the Julian Academy, Paris; lived abroad from 1892 to 1907, exhibiting his work at the Salon, Paris, and the Royal Academy in London. He returned to this country in 1908 to become one of the most successful marine painters of his generation. He produced an average of 50 seascapes a year for an annual income of approximately \$30,000. Some of his works hang in the Metropolitan Museum of Art, the Art Institute of Chicago, the National Gallery in Washington, and the Brooklyn Institute of Arts and Sciences.

**Webb, Robert Thomas.** American clergyman; died in Petersburg, Va., Mar. 19, 1940; born near Louisburg, N.C., Aug. 30, 1866. Ordained a Methodist Episcopal minister in 1895, he served in various pastorates, his last one being at Pikeville, Ky. (1931-37). Associated with Morris Harvey College from 1912, he served as its president and secretary of education (1920-22), as professor of theology (1923) and as financial secretary (1929-31).

**Weicker, Theodore.** American manufacturer; died in Greenwich, Conn., Aug. 7, 1940; born in Darmstadt, Germany, June 6, 1861. He came to New York in 1885 to become a partner in the American branch of the German firm of Merck and Co. In 1905, with Lowell M. Palmer, he purchased the pharmaceutical business of E. R. Squibb and Sons, of which he was a director for many years before becoming chairman of the board in 1936.

**Weil, Arthur W.** American lawyer, an authority on copyright law and author of *Weil on Copyright*, a standard work, died in New York, Apr. 29, 1940, born in St. Louis, Mo., in 1881.

**Wenckebach, Karel Frederik.** Austrian physician and noted heart specialist; died in Vienna, Austria, Nov. 11, 1940; born in the Netherlands, 1864.

**Wheeler, Alvin S.** American chemist, Kenan professor of organic chemistry at the University of North Carolina from 1912 until 1936, when he was retired as emeritus; died in Chapel Hill, N.C., May 12, 1940; born in Holyoke, Mass., Nov. 2, 1866. He was an international authority on dyes.

**White, Sir (Orrill) Brudenell (Bingham).** Australian general; died in an airplane accident 8 miles from Canberra, Australia, Aug. 13, 1940; born in St. Arnaud, Victoria, Sept. 23, 1876. He served with distinction in the Boer and World Wars; was chief of the General Staff of the Australian military forces from 1920 to 1923 when he retired to enter private business, and was recalled as chief of staff following the death of Lieut. Gen. E. K. Squires in March, 1940.

**White, Frank.** American politician; died in Washington, Mar. 23, 1940; born in Stillman Valley, Ill., Dec. 12, 1856. He was Republican governor of North Dakota (1901-05) and Treasurer of the United States (1921-28). Thereafter he was in the banking business.

**Wild, Horace B.** American pioneer aeronaut; died in New York City, N.Y., July 23, 1940; born in Chicago, Ill., 1879. He made his first aerial trip on July 4, 1892, clinging to a man-carrying kite that pulled him 150 ft. into the air and dumped him into a tree top; as a professional balloonist and parachute plunger in the 1890's he earned \$50,000 annually; he ascended 4000 ft. in an airship of his own making on Dec. 28, 1905; set a world's record in 1906 by staying aloft in his dirigible for six hours; became an airplane pilot in 1910, and sometime afterward founded a flying school at Lincoln, Neb. where a lad by the name of Lindbergh learned to fly in 1922.

**Wilgus, Sidney D.** American psychiatrist; died in Rockford, Ill., Feb. 22, 1940, born in Buffalo, N.Y., Feb. 16, 1872. Psychiatrist with New York and Illinois Hospitals until 1913 when he founded the Wilgus Sanitarium, he was also an alienist for the Illinois State Board of Public Welfare (1929-33) and head of the Department of Psychiatry at the University of Chicago Medical School from 1936.

**Wilhelm, Prince of Prussia;** died from wounds in Flanders, May 26, 1940, born in Marmor-palace, Germany, July 4, 1906. The eldest son of the former Crown Prince of Germany, he served with the German Army in the Polish Campaign (1939) and was a first lieutenant and a commander of an infantry company in the German Army.

**Wilkins, Thomas Russell.** American physicist; died in Rochester, N.Y., on Dec. 10, 1940; born in Toronto, Ont., June 6, 1891. A graduate of McMaster University, Hamil-

ton, Ont. (1912), he was professor of physics at Brandon College, Canada (1918-25) and at the University of Rochester since that time. Dr. Wilkins was the originator of a highly-successful process for photographing the changes resulting from the smashing of the atom; and in October, 1940, he announced the development of a camera that made possible the determination of energy levels inside the nuclei of stable chemical elements. In penetrating the mysteries of the cosmic rays, he sent balloons into the stratosphere with photographic plates arranged to capture pictures of the paths of 100,000-volt alpha particles. He was the recipient of numerous awards and commendations for his contributions to the science of physics.

**Wilkinson, Sir Neville Rodwell.** British soldier and architect; died in Dublin, Ireland, on Dec. 22, 1940; born Oct. 26, 1869. He was designer and builder of Titania's Palace, a miniature which was exhibited all over the world in the interest of charity, and featured at the New York World's Fair in the Children's World. A master of what he called "tinycraft," Sir Neville took 16 years in building the miniature palace, which stood 7 inches high, 9 ft. long, and 7 ft. wide and was so faithful to detail that its infinitesimal piano could be played with the average new toothpick. He put 4000 pieces of furniture and decorative objects into the palace, none more than 4 inches high, including a copy of Murillo's masterpiece, *The Assumption*.

**Willcox, William E.** American lawyer; died in Bay Shore, L.I., N.Y., Apr. 9, 1940; born in Smyrna, N.Y., Apr. 11, 1863. Active in Republican politics, he served as postmaster of New York City (1905-07), as chairman of the Public Service Commission of New York City (1907-13), and as Chairman of the Republican National Committee (1916-18) and as such managed the presidential campaign of Charles Evans Hughes.

**Williams, Thomas S.** American jurist; died in Washington, Apr. 5, 1940; born in Louisville, Ill., Feb. 14, 1872. Republican member from Illinois of the 64th to 71st Congresses (1915-31), he was appointed judge of the U.S. Court of Claims in October, 1929.

**Wills, O. Harold.** American automobile manufacturer; died in Detroit, Mich., on Dec. 30, 1940; born in Fort Wayne, Ind., 1878. He was chief engineer and manufacturing manager of the Ford Motor Co. from 1903 to 1919; and founder and head of the Wills-St. Clair Co. from 1920 to 1926. Since 1933 he was consulting metallurgist for the Chrysler Corp.

**Wilson, Albert F.** American editor; died at Lake George, N.Y., June 25, 1940; born in Greenfield Hill, Conn., Aug. 28, 1883. He was on the editorial staff of *The Literary Digest* (1908-11), *Leshie's Weekly* (1912-14), and numerous publishing firms and was professor of journalism at New York University from 1914 to 1926.

**Wilson, J. (James) Edgar.** American clergyman; died in Lakeland, Fla., Jan. 29, 1940; born near Martinsburg, W.Va., Oct. 19, 1860. Ordained in the Methodist Episcopal Church in 1881, he served in various pastorates until 1913 when he became editor of the *Florida Christian Advocate*. Thereafter he was editor of *The Florida Watchman* (1926-32), publicity agent, new *Florida Christian Advocate* (1929-34), and after 1938, president emeritus of the Florida Methodist Publishing Co., Inc.

**Winter, George B.** American dentist, developer of a new technique for extraction of impacted third molars in 1918 and president of the American Dental Association in 1934; died in St. Louis, Mo., Mar. 28, 1940; born in Brooklyn, N.Y., Apr. 19, 1878.

**Winterfeld, Hans K. A. von.** German general; died in Berlin, July 3, 1940. In the Army from 1884 to 1919, he was a military representative of the German government at the first Compiegne Forest armistice conference in 1918.

**Winthrop, Beekman.** American banker and public official; died in New York City, N.Y., Nov. 10, 1940; born in Orange, N.J., Sept. 18, 1874. He was graduated from Harvard University in 1897 and became private secretary to William Howard Taft at that time governor of the Philippines; was governor of Puerto Rico (1904-07); assistant secretary of the U.S. Treasury (1907-09); assistant secretary of the Navy (1909-13), and since 1914 senior partner of the banking firm of Winthrop and Co., New York. He was a direct descendant of John Winthrop, first governor of the Massachusetts Bay Colony.

**Wise, Frederic May.** American general; died in Washington, D.C., July 24, 1940; born in New York, Oct. 6, 1877. He was commissioned a lieutenant in the Marine Corps in 1899, saw action in the Philippines, China, Mexico, and the World War during 27 crowded years and published an account of his adventures under the title *A Marine Tells It to You*.

**Wolfe, Humbert.** British poet; died in London, Jan. 5, 1940; born in Italy, Jan. 5, 1886. He served in the British Ministry of Labor; his published works included *Stings and Wings*, *The Fourth of August*, *The Silent Knights*, and *Out of Great Tribulation*.

**Wood, Edwin E.** American educator, president of Williamsburg Institute (Cumberland College after 1914) from 1898 to 1922 when he was retired as emeritus; died in

Williamsburg, Ky., Jan. 23, 1940; born in Adams Co., Ind., Sept. 8, 1863.

**Woodbridge, Frederick J. B.** American educator; died in New York, June 1, 1940; born in Windsor, Ont., Canada, Mar. 26, 1867. After teaching at the University of Minnesota during 1894-1902, he joined the faculty of Columbia University as professor of philosophy. Thereafter he was Johnsonian professor (1904-39), when he was retired as professor emeritus in residence. During 1912-29 he was dean of the faculties of political science, philosophy, and pure science and during 1931-32 was Roosevelt professor in Berlin. A co-founder and the editor of *The Journal of Philosophy* (from 1923), he wrote *Contrasts in Education* (1929); *Hobbes Selections* (1930), and *Nature and Mind* (1937). He was one of the leaders in the neorealistic movement in philosophy.

**Woodbury, Charles H.** American marine painter and etcher; died in Boston, Jan. 21, 1940; born in Lynn, Mass., July 14, 1864. Known for his vivid representations of the Atlantic seaboard, his later work received the Palmer prize of the National Academy of Design (1932) and the Noyes prize of the Society of American Etchers (1933).

**Worcester, Elwood.** American Episcopal clergyman, author, and philosopher; died on July 19, 1940; born in Massillon, O., 1862. A graduate of Columbia University, Union Theological Seminary, and the University of Leipzig, he was professor of psychology and philosophy at Lehigh University (1890-96); and pastor of Emmanuel Church, Boston from 1904 to 1929, where he founded the "Emmanuel movement" of religious psycho-therapy, which he carried on with the co-operation of eminent physicians. He believed that religion and medicine together could cure physical ailments that neither could conquer alone; and his clinic in Emmanuel Church was crowded with persons seeking relief from real or imaginary illnesses. He wrote many books including *Life's Adventure*, an autobiography published in 1932.

**Worden, Edward Chauncey, I.** American chemist, died in Millburn, N.J., Sept. 22, 1940, born in Ypsilanti, Mich., Apr. 17, 1875. A graduate of the Ann Arbor School of Pharmacy and New York University he established in 1914 the Worden Laboratory and Library, Millburn, N.J., which was consulted by private industries, governmental agencies, and chemists the world over on matters pertaining to cellulose. As an expert on airplane wing-coating, he made 14 trips to Europe for the United States in the World War.

**Wright, Sir Charles Theodore Hagberg.** British librarian; secretary and librarian of the London Library from 1893; died in London, Mar. 7, 1940; born in Yorkshire, Nov. 17, 1862.

**Wright, James Franklin.** American humanitarian; died in Detroit, Mich., Sept. 8, 1940; born in Muscatine, Ia., 1862. A former railroad worker and life insurance salesman, he founded in 1914 the Pathfinders of America, Inc., a social service organization devoted to the reformation of criminals and the protection of children from criminal environment. In 1927 the prisoners in the penitentiary at Walla Walla, Wash., bestowed on their benefactor the degree of Doctor of Common Sense, which explains the letters D.S.C. after his name in many publications, including the *Who's Who in America*.

**Wylie, Dwight Witherpoon.** American clergyman, pastor of the Central Presbyterian Church, New York City, from 1920 to 1935; died in New York on Dec. 30, 1940; born in Condit, O., July 16, 1876, and ordained in 1899.

**Yamanuro, Gunpei.** Japanese Salvation Army leader; died in Tokio, Mar. 13, 1940; born in 1872. He joined the Salvation Army in 1895 and after holding various posts was appointed Territorial Commander of the Army in Japan in 1926. He retired in 1938.

**Yamaya, Tanin.** Japanese admiral; died on Sept. 10, 1940; born in 1866. He was commander of the Japanese fleet that seized Germany's possessions in the Equatorial Pacific during the World War.

**Yancey, Lewis Alonso.** American aviator; died in Yonkers, N.Y., Mar. 2, 1940; born in Chicago, Sept. 16, 1895. After serving in the U.S. Navy (1911-21) and in the Coast Guard (1925-26), he became interested in aviation, becoming a noted navigator. In 1929, with Roger O. Williams, in the *Pathfinder*, he made a transatlantic flight to Rome. He was navigator for the American Museum of Natural History's air expedition to New Guinea in 1938.

**Yellin, Samuel.** American metal artist; died in New York City, N.Y., Oct. 3, 1940; born in Poland, Mar. 2, 1885. He began studying art when he was 11 years old, came to the United States in 1906, was instructor in metal art work at the Pennsylvania School of Industrial Art, and then went into business as one of the leading designers and executors of decorative metal work in the world. He won the \$10,000 Bok Civic Award as "outstanding citizen" of Philadelphia in 1925 and was the recipient of numerous medals and other decorations. He did the hand-wrought grilles and other decorative ironwork of the Federal Reserve Bank, New York, and examples of his work adorn the Cathedral of St. John the Divine, the Cloisters

THE GERMAN ARMY TAKES OVER THE NETHERLANDS

A German officer, assisted by a Dutch policeman, hands out instructions to the civilian population

branch of the Metropolitan Museum of Art, the New York University Hall of Fame, Columbia University, and the J. P. Morgan Library. The volume of his work required 45 forges and an average of 200 employees.

**Younes Pasha, Saleh.** Egyptian statesman, minister of war in the cabinet of Premier Hassan Sabry Pasha; died in a train in Cairo, Egypt, Nov. 27, 1940, as he was about to embark on an official tour with King Farouk.

**Young, O(charles) Jac.** American etcher; died in Weehawken, N.J., Mar. 4, 1940; born in Bavaria, Dec. 21, 1880. Known for his etchings of snow scenes, his work is in many museums and was awarded the Kate W. Arms prize of the Brooklyn Society of Etchers in 1928 and the Shaw prize of the Salmagundi Club in 1929.

**Zimmerman, Alfred.** German politician; died in Berlin, June 6, 1940; born in Frankenstein, May 8, 1859. A member of the Foreign Office from 1902, he became Foreign Secretary in 1916, and as such attempted to incite Mexico to an attack on the United States and suggested that Mexico should be rewarded by the gift of New Mexico, Texas, and Arizona. Disclosures concerning his activities through the "Zimmerman note" caused his downfall and he was forced to retire on Aug. 5, 1917. It was erroneously reported that he had died in 1925.

**Zinsser, Hans.** American bacteriologist and author; died in New York City, Sept. 4, 1940; born in New York City, November, 1878. He was graduated from Columbia University medical school in 1903 and was professor of bacteriology there from 1913 to 1923, was sanitary commissioner for the League of Nations in Russia (1923), exchange professor in Paris (1935), and on the faculty of the Peiping Union Medical College (1938). Considered by many to be the world's leading authority on typhus, his greatest scientific achievement was the preparation of a vaccine and a serum to combat the organisms that cause the disease and the development of a method that made possible mass production of a vaccine against the European type of typhus. In recent years he was the author of two best-selling books, *Rats, Lice and History* (1935) and *As I Remember Him* (1940), the latter a unique autobiography in which the author's impending death from leukemia was described in the past tense.

**NEGRI SEMBILAN.** See **BRITISH MALAYA.**

**NEGROES.** The chief issue facing twelve million American Negroes during 1940 was that of participation in the enormous national defense program which the United States undertook to ward off attack from the warring nations of Europe. Negroes were not permitted to enlist in the Army. Extensive efforts by Negro organizations and some white ones resulted in the inclusion of an amendment to the Burke-Wadsworth conscription bill which forbade discrimination on account of race, creed, or color. But another provision of the Act, which said that no person should be admitted into the Army or Navy unless he were acceptable to the Army and Navy heads, negated the non-discrimination clause. Yancey Williams, a young Negro college student, brought suit against the War Department when he was denied the right to enlist in the Air Corps. Another Negro, Walter L. Robinson, who finished thirteenth in a class of 50 in a CAA course at the University of Minnesota, enlisted in the Royal Canadian Air Force when the color of his skin barred him from enlisting in the U.S. Air Corps. In the U.S. Navy Negroes could enlist or serve only as members of the Messman or servant division.

Affecting even more Negroes was the widespread discrimination by employers and by some of the A.F.L. unions against Negroes in industrial plants, Navy yards, and Army arsenals filling the contracts for the seventeen-billion-dollar national defense program voted by Congress.

A storm of protests, in which many white Americans joined, mounted as the facts became known. Magazines with large circulations, like the *Saturday Evening Post*, opened their columns to the presentation of the facts. The protests, coinciding with a growing concern for the preservation of democracy and with a presidential election in which the Negro holding the potential balance of power in seventeen pivotal States was a considerable fac-

tor, led to a conference at the White House late in September to discuss the issue of Negro participation in national defense. Shortly afterwards, William H. Hastie, Dean of the Howard University Law School, was appointed Civilian Aide to the Secretary of War; Col. Benjamin O. Davis was promoted to Brigadier General, the first time in the history of the United States that a Negro has attained that high rank in the Army; and other appointments were made to assist in the integration of the Negro in the national defense program. The end of 1940 left much to be done towards the attainment of actual democracy in the national defense program.

Similar difficulties were encountered by Negroes in private industry but persistent effort caused some lessening of the discrimination in a few isolated places. But these instances were not significant enough and a Senate investigation of the national defense aspects of service by Negroes both in the armed forces and in the industrial phases of the defense program was sought.

The House of Representatives passed by a vote of 252-131 the Gavagan-Fish anti-lynching bill on Jan. 10, 1940, but the U.S. Senate failed to act on the measure. See **LYNCHING.**

In the field of the arts, Marian Anderson, Dorothy Maynor, Paul Robeson, and other Negro singers continued their brilliant careers before large and appreciative audiences. One of the outstanding books of the year was Richard Wright's grim and provocative story of the effect of injustice and segregation on the Negro. His *Native Son* was a best-seller and evoked vigorous controversy. The distinguished Negro scholar, Dr. W. E. B. Du Bois, published his interesting biography, *Dusk of Dawn*; while a younger talented Negro, Langston Hughes, published also a fascinating story of his life, *The Big Sea*. Other contributions in book form were made by numerous writers, including Dr. Charles Wesley (*The Negro in the Americas*); Prof. Ira DeA. Reid of Atlanta University (*In a Minor Key*, a study for the American Youth Commission); Claude McKay (*Harlem: Negro Metropolis*); and others, such as *The Negro in Virginia*, written by Negro writers on the Virginia WPA Writers' Project.

In the field of sports Joe Louis continued to meet all comers and remained undefeated as heavyweight champion. Henry Armstrong, whirling dervish of the prize ring and former holder of three championships, neared the end of his pugilistic career. Kenney Washington, the U.C.L.A. football star, and other Negro football players gained nation-wide publicity although the number of outstanding Negro stars in both football and track declined in number somewhat during 1940.

**NEJD.** See **ARABIA** under *Saudi Arabia*.

**NEPAL.** An independent kingdom in the Himalayas, between Tibet and India. Area, 54,000 square miles; population, 5,600,000. Capital, Katmandu, 80,000 inhabitants. Chief exports: jute, rice, hides, oilseeds, ghee, cattle, and lumber. Chief imports: cotton goods, yarn, sugar, salt, spices, and metals. Revenue (1940): estimated to total 12,500,000 rupees (British Indian rupee = 1.24 Nepalese rupees). Nepal's government is a military aris-

ocracy based on birth. The prime minister, a member of the ruling family, is the de facto ruler of the State. Ruler, King Tribhubana Bir Bikram (accessed Dec. 11, 1911); Prime Minister, Gen. Joodha Shum Shere Jung Bahadur Rana (installed Sept. 1, 1932).

**NETHERLANDS, THE.** A constitutional monarchy of northwestern Europe. Capital, Amsterdam. Seat of the government, The Hague ('s Gravenhage). Sovereign in 1940, Queen Wilhelmina, who succeeded to the throne on Nov. 23, 1890.

**Area and Population.** The area, including water belonging to municipal territories, is 13,515 square miles. The population on Feb. 28, 1940, was estimated at 8,833,000 (7,935,565 at the 1930 census). About 94 per cent of the people dwell in communities of 2000 or more. Living births in 1939 numbered 180,913 (20.7 per 1000); deaths, 75,863 (8.7 per 1000); marriages (1938), 67,040. Estimated populations of the chief cities on Jan. 1, 1939, were: Amsterdam, 793,222; Rotterdam, 612,375; The Hague ('s Gravenhage), 494,773; Utrecht, 163,589; Haarlem, 137,507; Groningen, 120,010; Eindhoven, 111,188; Tilburg, 95,142; Nijmegen, 94,102; Enschede, 90,291; Arnhem, 88,996; Leiden, 77,009.

**Colonial Empire.** The colonial possessions of the Netherlands are situated in Asia, South America, and the Caribbean Sea; and are treated elsewhere in the YEAR BOOK under the headings of NETHERLANDS INDIES, CURAÇAO, and SURINAM. The total area is 793,354 square miles; total population was estimated at 70,000,000 in 1939.

**Education and Religion.** There is practically no illiteracy. The school enrollment in 1938-39 was: Infant schools, 213,338; elementary, 1,242,778; secondary, technical, and vocational, 271,298; high schools, 3199; universities, 9395. According to the 1930 census, there were 2,890,022 Roman Catholics, 2,732,333 members of the Dutch Reformed Church, 876,958 other Protestants, 111,917 Jews, 10,182 Jansenists, 169,575 belonging to other creeds, and 1,144,393 professing no religion.

**Production.** Agriculture, manufacturing, commerce, and mining are the principal industries. Yields of the chief crops in 1939 (in metric tons) were: Wheat, 416,500; barley, 146,000; rye, 603,500; oats, 449,200; potatoes, 3,000,000; beet sugar (1939-40), 217,600; linseed, 22,500; flax, 21,300. Livestock (1939): 2,817,314 cattle, 1,553,413 swine, 322,152 horses, and 689,500 sheep. Mineral production in 1939 was (in metric tons): Coal, 12,861,000; pig iron, 276,000 (1938); zinc (smelter), 20,500. The 1939 output of rayon and staple fiber was about 11,000 metric tons; wood and straw pulp, 108,000; margarine, 71,000; shipping tonnage launched, 117,000. Bricks, clothing, boots and shoes, engines, boilers, machinery, cotton and linen fabrics, alcoholic beverages, tobacco products, are other leading manufactures.

**Foreign Trade.** Merchandise imports in 1939 were valued at 1,516,651,000 florins (1,414,768,000 in 1938); exports, 966,215,000 florins (1,039,156,000). Textiles, iron and steel, cereals and flour, and wood were the chief 1939 imports, while textiles, coal, coke and briquets, butter, and tin were the main export items. The principal sources of 1939 imports were (in 1000 florins): Germany including Austria, 357,793; Belgium and Luxembourg, 219,913; United States, 146,127; Great Britain, 117,864; Netherlands Indies, 91,350. The distribution of exports was (in 1000 florins): Great

Britain, 226,482; Germany, 136,138; Netherlands Indies, 100,701; Belgium and Luxembourg, 90,489; France, 50,559. For U.S. trade in 1940, see TRADE, FOREIGN.

**Finance.** The 1940 budget estimates placed total receipts exclusive of loans at 770,005,000 florins (742,069,000 in 1939) and expenditures at 1,015,599,000 (1,008,790,000 in 1939). Direct tax receipts in 1939 were 135,182,000 florins; indirect tax receipts, 475,482,000 florins. The public debt on June 30, 1939, was 3,911,900,000 florins, all internal. The average exchange rate of the florin was \$0.5501 in 1938, \$0.5334 in 1939. With the German occupation in May, 1940, the official exchange rate of the German and Dutch currencies was fixed at 1 florin (guilder) equals 1.33 reichsmarks. Also see *History* below.

**Transportation.** At the beginning of 1940, there were about 2278 miles of railway line, 16,031 miles of highways, 4817 miles of navigable rivers and canals, and air lines connecting Amsterdam with the principal European capitals and with the Netherlands Indies. The Royal Dutch Air Line (K.L.M.), operating in Europe, and the West and East Indies, in 1939 carried 136,588 passengers, 1,927,606 lb. of mail, and 4,586,138 lb. of express. With the German occupation of the Netherlands, headquarters of the line were transferred to Batavia and air services from Batavia were maintained only as far as Lydda, Palestine. A total of 12,026 ships of 19,392,128 net tons entered the port of Rotterdam in 1939 (15,366 of 24,744,472 net tons in 1938). The shipping trade came to an almost complete stoppage in 1940.

**Government.** The Constitution of 1814, with its various amendments, vests executive power exclusively in the sovereign while legislative authority rests conjointly in the sovereign and the States-General (parliament). The States-General consisted of an upper chamber of 50 members, chosen by elected representative bodies in the several provinces for terms of six years; and of a lower chamber of 100 members elected for four years by general adult suffrage. In practice the cabinet was responsible to the States-General and the Premier was normally chosen by the sovereign from a political group commanding a parliamentary majority. The Premier proposed the members of his ministry to the sovereign. Premier at the beginning of 1940, Jonkheer Dr. D. J. de Geer (Christian Historical party), heading a coalition government formed by the Roman Catholic, Christian Historical, Social Democratic, and Liberal Democratic parties on Aug. 9, 1939.

## HISTORY

Adolf Hitler's great German war machine fell like an avalanche upon the Netherlands before dawn of May 10, 1940. In five terrible days, the Dutch defenses were shattered, the army decimated, the transportation and communications system wrecked, many cities and towns laid in ruins, and another brave and independent people added to the rapidly growing list of the subjugated nations of Europe. See EUROPEAN WAR under *The Western Front* for an account of the military struggle.

**The Prelude to War.** When war engulfed the Netherlands for the first time since French revolutionary armies swept through the country nearly a century and a half before, it was not unexpected. Fear of a German invasion had mounted steadily since the outbreak of the European conflict the

preceding September (see *YEAR BOOK*, 1939, pp. 550-551). The crisis of November, 1939, was followed on January 14 by another alarm caused by reports of German troop movements near the Netherland frontier. Military furloughs were cancelled, fortifications strengthened, and other preparations made to back the Netherland Government's warning of January 6 that "each violator of Dutch territory will be met with the most severe power of our weapons, from whatever side attack may come." At the same time there were further indications that the Dutch and Belgian Governments had concluded an agreement for mutual support in case of a German attack upon either country.

Nor was the danger of a Japanese attack upon the Netherlands East Indies (q.v.) lost sight of. On February 10 the Netherland Government announced plans for immediate construction of three battle-cruisers to reinforce the fleet guarding the East Indies.

**Neutrality.** Meanwhile the problem of maintaining Dutch neutrality became increasing difficult, but neither the government nor majority public opinion wavered from this course. It was reaffirmed by Foreign Minister van Kleffens before the Upper Chamber of the States-General on January 25. He added that membership in the League of Nations might become impossible for the Netherlands if it remained "a body with a political tendency." The Foreign Minister urged an early end of the war in order that Western and Central Europe might not "perish in pauperism and bolshevism."

In furtherance of its neutrality policy, the government on February 5 forced the resignation of Gen. F. E. Reynders, commander-in-chief of the Dutch armed forces, who was reportedly sympathetic toward the Nazi movement. Lt. Gen. Henri Gerard Winkelman succeeded him. On April 19 Premier de Geer again affirmed the government's determination to maintain strict neutrality. Recalling that Germany and the Allies had all promised to respect Holland's neutrality, he declared the government would not consider suggestions for secret discussions with any of the belligerents. There had been some agitation, notably in former Premier Hendryk Colijn's newspaper, for an arrangement with the Allies to insure their prompt aid to Dutch forces in the event of a German attack. To finance defense preparations and check the adverse effects of the European conflict upon Holland's economy, additional economic controls were placed in effect.

**Friction with Belligerents.** Meanwhile friction between the Netherlands Government and the belligerents, particularly Germany, was steadily increasing. The *Orange Book* issued by the Netherlands authorities on April 12 listed numerous instances of alleged violation of the country's neutral rights. German submarines torpedoed the Dutch steamship *Arendskerke* on January 15 and the *Burgerdijk* in February under circumstances provoking strong Netherland protests. During March there were 13 successive cases of attacks on Netherland fishing boats by airplanes believed to be German.

The holding up of Netherland ships by the British blockade officials caused a number of formal protests. The Dutch alleged that the British on several occasions confiscated goods not included in the Allied contraband list. They protested the removal of a number of persons from Netherland

ships and the confiscation of mail carried by Netherland ships and aircraft. In some cases, the *Orange Book* showed, the Dutch protests brought the release of prisoners and goods taken by the British. Partly in response to British pressure, the Netherland Government on Mar. 1, 1940, placed severe restrictions on shipments of food parcels into the Reich from the Netherlands. This action curtailed an organized traffic that had grown to large proportions. In response to these and other neutrality measures, the German attitude toward the Netherlands became more threatening.

**Internal Security Measures.** The defense measures of the government and its efforts to maintain strict neutrality were hampered by German and Allied espionage and by the openly pro-German activities of Netherland Nazi groups. Martial law had been established in all strategic military and naval areas on Nov. 1, 1939, without suspending the civil authority. On Mar. 8, 1940, extension of martial law to the greater part of the Netherlands was announced. On the same day the Dutch Nazi youth organization, *Nationale Jeugdstorm*, was dissolved to forestall repressive action by the government.

The success of the German "fifth column" and "Trojan horse" tactics during the invasion of Denmark and Norway commencing April 9 aroused further alarm in the Netherlands. During April there were numerous arrests of Germans and Netherlanders accused of espionage for Berlin. Among them were some of the Dutch Nazi leaders. A series of decrees curbed most of the activities of the Dutch Nazi party and the movement, with its 50,000 members, went underground. On April 20 Premier de Geer extended the state of siege to the entire country, permitting further restrictions on foreigners and Dutch sympathizers with the belligerents. Effective April 27, freedom of the press was suspended by a decree prohibiting publication of any printed matter without a license. On May 4 the government announced the arrest of 21 Netherlanders, including Nazis and Communists, accused of "fifth column" activities. Among them was Rost van Tonningen, chief editor of the Dutch Nazi newspaper.

**The German Invasion.** Although Chancellor Hitler's attack of May 10 came without a declaration of war or other formal warning, it was not unexpected. The Netherland army was ordered on the alert as early as April 9 due to the presence of large forces of crack German troops along the border. The steady increase in the number of official German representatives in Holland, their activities among some 100,000 German citizens residing there, and the discovery of several pro-German espionage rings and conspiracies in which prominent Dutch business men and even government officials were implicated gave the Netherland Government sufficient warning. On May 8 the Netherland Minister in Washington announced that he had been instructed to act as paymaster abroad for his government in case of an emergency. The previous day all army leaves were cancelled, guards augmented at all public buildings, and other extensive precautions taken against an invasion and a simultaneous rising of subversive elements.

Immediately after the German attack began on May 10 the defense forces and police placed in effect comprehensive security measures planned long in advance. Nearly a thousand German agents and Netherlanders suspected of treasonable designs were immediately arrested. Other German

citizens and foreigners of German origin were ordered to remain indoors. But these measures failed to prevent "fifth column" activities on a scale that materially aided the quick success of the German onslaught. Neutral correspondents reported numerous cases of defection within the home front. Some Dutch officers betrayed their trust. There was extensive sabotage, even within the fortified defense lines. In Rotterdam, Amsterdam, and The Hague armed civilian terrorists sniped at loyal Dutch police and troops from rooftops and windows, thus aiding the work of German parachute troops dropped behind the front lines. Spies and saboteurs spread wild rumors and demoralization among the Dutch civilian population and the army alike, disrupted communications, and guided the invading air and land forces in their work of destruction. In Rotterdam, German parachutists and "fifth column" elements were aided by German troops who had arrived in the city several days before, concealed in Rhine river barges.

**Dutch Resistance.** At 6 a.m. on the morning of May 10, about three hours after the German attack began, the German Minister at The Hague called on the Netherlands Foreign Minister, E. N. van Kleffens, and presented a memorandum and note. The memorandum, identical with that submitted to the Belgian Government at about the same time (see *BELGIUM under History*), elaborated the German contention that the invasion was intended to forestall an Allied attack upon the Ruhr region.

The accompanying note called upon the Netherlands Government to surrender and permit German military occupation of the country. Stating that resistance against the "enormous German army" was "absolutely useless," the note continued:

Germany guarantees the present status of possessions [of the Netherlands] in Europe as well as overseas, as well as the dynasty, if every resistance is dropped. If not, then there is danger of complete annihilation of the country and of the State's government.

The Netherlands Foreign Minister firmly rejected the German demand for capitulation. Denying "the supposition that any hostile agreement has been brought about with any foreign power against Germany," he said that "on account of this unexampled assault, undertaken without warning on Germany's part against the Netherlands, the Netherlands Government considers itself to be at war with the German Reich."

But the valiant resistance offered by Dutch defense forces was soon shattered. At 8 p.m. on May 14 General Winkelman, the Commander-in-Chief, ordered his troops in the key defense belt around Rotterdam and Utrecht to lay down their arms "to prevent further bloodshed and annihilation." His order did not prevent the devastation by the German air force on the same day of a large section in the heart of Rotterdam, with extremely heavy loss of life.

German troops peacefully occupied The Hague and the other Netherlands cities the following day. They were reported to have seized great spoils of war, including much gold bullion; over 35 shipyards with 3 cruisers, 4 destroyers, 7 submarines, and 10 minesweepers under construction; several thousand tons of tin and other vital war minerals, and large supplies of foodstuffs. On the other hand the Allies gained the support of the bulk of the Netherlands war and merchant fleet and the major part of the Netherlands gold reserves, valued at about \$690,000,000. Large quantities of diamonds

and valuable securities were saved. On May 15 the Dutch merchant marine of some 1500 ships totaling about 3,000,000 gross tons was placed under the control of two shipping committees formed in New York and London. They co-operated with the British Ministry of Shipping in placing their ships in the joint service of the Allies.

**The Government in Exile.** Narrowly escaping capture by the invaders, Queen Wilhelmina crossed to England on board a British warship and arrived in London on May 13. She was preceded by Crown Princess Juliana, the latter's German-born husband, Prince Bernhard zu Lippe-Beisterfeld, and their two children. On May 14 the members of the Netherlands Cabinet reached London along with numerous other refugees. That afternoon the Queen issued a proclamation declaring London the seat of the Netherlands Government pending re-establishment of the regime in the Netherlands. Wilhelmina delegated authority in the Netherlands to the military command but retained direct control of the overseas colonies.

On May 15 the Queen made two broadcasts, in Dutch to her overseas empire and in English to the British Empire, stating that the conscience of the Netherlands was clear and its spirit unbroken. She urged support of the Allied cause to speed "the day when freedom will be restored to the Netherlands and to other victims of German aggression." The same day Foreign Minister van Kleffens announced in Paris that the Netherlands was still at war with the Reich, that the struggle would be continued, and that the resources of the rich Dutch overseas possessions "have been placed at the disposition of the Allies."

On May 24 Wilhelmina told newspaper correspondents in London that she had taken refuge there to frustrate German attempts to capture her and to lead the struggle for freedom of the Netherlands. The Germans, she pointed out, "apparently considered my person as a promising hostage with which to paralyze every resistance of my people in the Netherlands and overseas territories." She continued:

I have deemed it my duty to choose the active leadership of a continued struggle at the head of my government. This struggle is being waged by Dutchmen who have escaped from the now-occupied territory and recruited abroad at the side of the Allies; also by the Dutch fleet with its proud traditions which has been able to join Allied fleets almost unscathed.

It is my task to give leadership and confidence to these forces and Hollanders in overseas territories who are willing and keen to make any sacrifices for the liberation of the motherland.

It is my task also freely to carry on the constitutional leadership of those 65,000,000 native inhabitants of our empire whose allegiance to the crown has been so forcefully demonstrated in these fateful days. . . .

The Queen and government remained in London during the remainder of the year, working in close collaboration with Britain. By a financial accord signed June 14, the government in exile entered the Franco-Belgian-British currency union. With the aid of a voluntary income tax adopted in the Netherlands colonies, the government continued to meet its financial obligations. Premier de Geer resigned because of ill health on September 3 and was replaced by Dr. P. S. Gerbrandy. Princess Juliana and her two children arrived in Canada on June 11 for the duration of the war. Prince Bernhard remained in Britain with the Dutch military force.

**The German Occupation.** On May 20 Gen. Baron Alexander von Falkenhausen was appointed to organize a military administration in the Neth-

erlands and Belgium. At Hitler's orders, he transferred his powers on May 30 to Dr. Arthur Seyss-Inquart, Reich Cabinet Minister and former governor of conquered Austria, who assumed control of the Dutch civil administration, and to Maj. Gen. Friedrich Christiansen, the new German military commander. The transfer was made ceremoniously in the Ridderzaal in Amsterdam where Queen Wilhelmina customarily opened the annual sessions of the States-General. Dr. Seyss-Inquart proclaimed that existing Dutch laws would remain in force "as far as possible," that Dutch officials would be "the instruments of power in the new administration," that the independence of the Dutch legal jurisdiction was to be preserved, and that the country would not be subjected "to further living discomforts other than those rendered necessary by the enforced communal relations with the Reich and the destructive will of Germany's enemies." He said that reconstruction of all war damage would commence immediately from a reconstruction fund created through savings on State expenses and voluntary contributions.

The Dutch Nazis at first played no part in the new administration, and the German officials made an effort to win the good will of the Dutch people. However, the Germans took over all agencies of public information, established censorship of the newspapers, forbade the Dutch to listen to foreign radio stations, forced the dismissal of Jewish journalists, and pegged the florin to the German mark at a rate that gave the occupationary forces and Germany a great trading advantage over the Netherlands. The blackout was rigidly enforced. All Dutch military forces were ordered demobilized in July and the country was reorganized politically and economically as a part of the German living space.

The German rulers encountered an unyielding spirit of passive resistance that broadened and deepened as the months passed, according to reports from both German and Dutch sources. Dr. Seyss-Inquart and his advisory staff of German experts undertook to rule through a Dutch administrative committee composed of the general secretaries of the cabinet ministries and through the existing Dutch provincial authorities. Before long they found it necessary to replace many of these officials by members of the Dutch Nazi movement, the only element ready to collaborate with the invaders.

On September 13 Anton Mussert, leader of the Netherlands Nazi party, established a militia organization patterned on the German Elite Guard. Receiving increasingly open German support, Mussert launched a campaign of violence and propaganda to Nazify the country. This campaign, and the prospect that Mussert and his followers would soon be entrusted with the government, led to the formation of a Netherlands Union party, which offered economic collaboration to Germany but demanded spiritual independence and the end of anti-Jewish and similar measures and decrees. A series of violent clashes between Nazis and Unionists followed.

Meanwhile the German authorities increased their efforts to curb all anti-Nazi groups and force the country into peaceful acceptance of its new role. Freemasonry was outlawed on September 5. The Marxist parties were placed under German supervision and forced to drop political activities, while other anti-Nazi parties were pressed to conform to German wishes. Jews were progressively

barred from government services and other occupations, despite wide protests. The Dutch people were forbidden publicly to display loyalty to the Queen and government in exile.

By the end of November some 2000 civilians were reported in concentration camps and prisons on charges ranging from sabotage and espionage to insulting Hitler or showing disrespect for occupationary officials. There were a number of executions. General Winkelman was sent to Germany as a military prisoner early in July. Student anti-German demonstrations caused the closing of some schools and universities and the arrest of students and professors. Fines were levied on towns where sabotage or other anti-German acts occurred. The unemployed, who numbered 420,000 on July 31 according to one of Dr. Seyss-Inquart's German experts, were given the choice of accepting work in Germany or being removed from the dole.

Beginning in July, hundreds of prominent Netherlandsers were arrested and interned in reprisal for the alleged mistreatment of German subjects in the Netherlands Indies (q.v.). Many of them were supporters of former Premier Hendrik Colijn, who was one of the most influential leaders of the anti-German groups. These measures failed to break the independent spirit of the Netherlandsers. By the end of 1940, relations between the Dutch people and their conquerors had become extremely strained.

**German Economic Measures.** Economic exploitation was another principal reason for the rising hostility of the Dutch people. Large quantities of foodstuff, livestock, and other supplies were shipped to the Reich. This, together with the British blockade, forced the extension of the rationing system and by mid-winter considerable suffering from the shortage of food and fuel was reported. Under German guidance, the Netherlands administration concluded a trade accord with Sweden and undertook barter negotiations with other German vassal States. Dutch labor was organized along the lines of the German Labor Front to maintain production of war materials and other needed supplies. The Netherlands was also saddled with the cost of the German army of occupation, amounting to more than 100,000,000 florins during June-September inclusive. Heavy new taxes were introduced. The net floating debt was increased from 492,947,000 to 1,112,128,000 florins during the first five months of the occupation, mostly through the issuance of Treasury notes. Free trade between the Reich and the Netherlands was introduced in December. Indemnification of all war damage at 90 to 100 per cent as soon as the owner started rebuilding was announced December 4.

Foreign diplomats and their staffs, including the Papal Nuncio, were required to leave the Netherlands before July 15. Consult E. N. van Kleffens, *The Rape of the Netherlands* (New York, 1940).

rural. Living births among the natives of Java and Madoera in 1938 numbered 1,263,404; deaths, 846,331; among the European population, births numbered 6492, deaths 2433. The 1930 census populations of the chief cities, all of which were in Java except as noted, were: Batavia, including Meester Cornelis, 533,015; Soerabaja (Surabaya), 341,675; Semarang, 217,796; Bandoeng, 166,815; Soerakarta, 165,484; Djokjakarta (Jogjakarta), 136,649; Palembang, in Sumatra, 109,069.

**Education and Religion.** According to the 1930 census, there were 4,296,579 literate persons, of whom 400,877 were able to write Dutch. School attendance in 1938 was: Primary vernacular, 1,996,443; elementary (in Dutch language), 146,826; advanced elementary and secondary, 18,571. Higher education is given in the Technical College, Bandoeng, and in colleges of law, medicine, and public service at Batavia.

The natives are predominantly Moslem, but there are several million converted Christians and Animists and about a million Buddhists.

**Defense.** See below under *History*.

**Production.** Agriculture and mining are the chief occupations. In 1938 the area cultivated by natives was 21,687,584 acres; by European estate owners, about 2,893,232 acres. Estimated production of the chief crops (in metric tons): Cane sugar, 1,550,000 in 1939-40 (Java only); rubber, 378,000 in 1939 (net exports, 371,849 long tons); rice, 6,136,800 in 1938-39 (Java and Madoera only); coffee, 107,100 in 1939-40; cacao, 1300 in 1938-39; tobacco, 51,900 in 1938-39 (excluding that produced and consumed by natives); tea, 83,800 in 1939; copra, 537,100 in 1939; ground nuts, 270,800 in 1939-40 (Java and Madoera); palm kernels, 19,700 in 1939 (net exports). Livestock (1938): 4,463,439 cattle, 3,199,944 buffaloes, 693,594 horses. Mineral production in 1939 was (in metric tons): Crude petroleum, 7,943,000; coal and lignite, 1,666,000 (about 1,200,000 in 1940); manganese, 5000; tin ore (metal content), 28,200; bauxite (crude ore), 245,400 in 1938. Gold output was 2373 kilograms in 1938. There are more than 6000 workshops and factories, mostly engaged in processing agricultural and mineral products for export.

**Foreign Trade.** Imports in 1939 totaled 469,400,000 florins (485,520,000 in 1938); exports, 739,600,000 florins (652,660,000). For distribution of trade by countries in 1938, see *YEAR BOOK*, 1939, p. 549. For commerce with United States, see *TRADE, FOREIGN*.

**Finance.** Actual governmental receipts in 1939 totaled 413,537,000 florins (379,374,000 in 1938);

expenditures, 479,800,000 (431,759,000). For 1940, final budget estimates were: Receipts, 607,489,359 florins; expenditures, 675,815,398. The public debt on Dec. 31, 1939, was 1,373,703,000 florins (funded, 1,249,929,000; floating, 123,744,000). The florin averaged \$0.5501 in 1938, \$0.5334 in 1939. On June 14, 1940, the Netherlands Indies entered the "sterling bloc" and an exchange rate of 7.60 florins for one £ sterling was fixed for commercial transactions within the bloc. At the same time the rate for United States dollar exchange was pegged at 1.8925 florins for \$1.

**Communications.** Steam railways in 1940 extended 4070 miles (2701 miles State-owned), the greater part in Java; highways (1939), 42,506 miles; inter-island airways (K.N.I.L.M.), 8065 miles of route (1939) covered by nine services. In 1939 these airlines carried 22,337 passengers, 131,863 lb. of mail, and 251,757 lb. of freight. The Amsterdam-Batavia service of K.L.M. (Royal Aviation Co.) was ended with the German invasion of the Netherlands May 10, 1940. The following July 22, the company started a new weekly service between Batavia and Lydda, Palestine. Work on a new 375-mile highway in South and East Borneo costing about 5,340,000 United States dollars was begun in 1940.

**Government.** The Governor General and his advisory council are appointed by the Queen of the Netherlands. The Volksraad (assembly of elected and appointed delegates) has limited legislative powers. Governor General in 1940, Jhr. Dr. A. W. L. Tjarda van Starkenborgh Stachouwer (appointed June 8, 1936).

## HISTORY

**War Measures.** Germany's *blitzkrieg* against the Netherlands commencing May 10, 1940, and the flight of the Dutch Queen and her government to London inaugurated a critical period in the history of the Netherlands Indies. Chancellor Hitler's action had been anticipated in the Netherlands Indies as well as in the mother country, and protective measures were promptly taken.

On May 10, immediately following news of the German attack upon Holland, the government proclaimed martial law over all the islands, confiscated some 300 German enterprises, and arrested and interned about 3000 German residents including the crews of 19 German cargo ships that had taken refuge in Netherlands Indies ports. The German ships were seized before the crews could carry out orders to scuttle them. About 100 Dutch Nazis were also arrested.

In a broadcast to the colony on the same day, the Governor General said that while the Netherlands Indies, as part of the Kingdom of the Netherlands, were at war with the Reich, their status was otherwise unchanged. He declared his government was able to guard the colony and that no aid from other nations was wanted. Following the surrender of the Netherlands Army to the Germans, the native rulers and representatives of the Chinese, Arabs, and other nationalities in the Netherlands Indies declared their loyalty to Queen Wilhelmina. The Volksraad on June 15 empowered the colonial government to take all necessary measures to maintain the existing status of the empire. In a broadcast to the islands on May 24 Queen Wilhelmina asked her subjects there to "set all differences aside" and rally around the Governor General.

**Politico-Economic Consequences.** Although

remaining in close touch with the exiled Netherlands Government in London, the colonial government was to all practical purposes placed upon its own resources. It was obliged to conduct important and delicate negotiations with Japan, the United States, and the Allied governments; to strengthen the islands' defenses with the greatest possible speed; and to adjust their economic life to the cutting of all commercial relations with the mother country and with most of the European continent. The colony also undertook to lend all possible economic aid to the Allied cause.

These circumstances produced a rapid extension of government control over industry, commerce, finance, and other aspects of the colonial economy. A wide range of civil powers were placed in the hands of the military command. Censorship of all branches of communication was established. The supply of foodstuffs was conserved and their prices controlled. Exports and export prices were regulated. Foreign exchange control was established and the Netherlands Indies entered the sterling bloc (see *Finance*). Effective May 25 the government assumed authority to regulate or control private undertakings. Heavy new taxes were imposed to meet defense and other emergency costs.

A considerable cargo tonnage was placed at the disposal of the Allies and the British Government was extended credits for the purchase of Netherlands Indies products. The British Empire in turn took many of the islands' commodities excluded from European markets and helped to maintain prices. Other surpluses found an outlet in the United States and Japan. The industrialization program, recorded in previous YEAR BOOKS, was speeded up to supply commodities that were formerly imported. As a result, the year end found most industrial enterprises and the export of tin, oil, and other vital war materials booming, while those parts of the islands producing other materials experienced severe depression.

Another notable consequence of the war was the transfer to the Netherlands Indies of the headquarters of many Dutch firms. The result was that much of the islands' wealth that formerly flowed to the Netherlands in the form of dividends and profits was retained in the colony. These developments were accompanied by the rapid growth of a demand for wider autonomy among natives and colonial officials alike. It was indicated that they would insist upon a semi-independent dominion status for the Netherlands Indies if the war ended with the Dutch still in control.

**Japan Stakes Her Claim.** When the outbreak of the European War raised the possibility that Germany would invade the Netherlands, Japan displayed a growing interest in the future of the Netherlands Indies (see YEAR BOOK, 1939, p. 394). On Feb. 12, 1940, the Japanese Government denounced the Netherlands-Japanese arbitration treaty. On April 16 the Japanese Foreign Minister issued a formal statement which the Netherlands' Ambassador was requested to transmit to The Hague. Apparently intended as a warning to the Western powers, it asserted that Japan and "other countries of East Asia" maintained "close economic relations" with the Netherlands Indies. Should extension of European hostilities to the Netherlands "produce repercussions" in the islands, the statement continued, it would not only interfere with these relations but would also "give rise to an undesirable situation from the standpoint of peace and stability in East Asia. In view of these con-

siderations, the Japanese Government cannot but be deeply concerned over any development accompanying the aggravation of the war in Europe that may affect the status quo of the Netherlands East Indies."

The Netherlands Government replied that in case it became involved in the European War, it would neither ask nor accept aid from any power in defending the East Indies. Moreover Secretary of State Hull warned the Japanese Government on April 17 that the United States as well as other countries were to a considerable degree dependent upon some of the islands' products and that "intervention in the domestic affairs of the Netherlands Indies or any alteration of their status quo by other than peaceful processes" would jeopardize peace "in the entire Pacific area." On April 19 the Japanese Ambassador to Washington disclaimed any "special" interest of Japan in the East Indies and said that Japan was satisfied with the Dutch statement.

The day following the German attack upon the Netherlands, the Japanese Foreign Minister informed the Dutch, German, British, French, American, and Italian diplomatic representatives in Tokyo that Japan would not permit the Netherlands Indies to change hands, or sanction any interference with Japan's supplies of rubber, ore, and oil from those islands. On the same day (May 11) Secretary of State Hull reiterated the American Government's opposition to any alteration of the status of the Netherlands Indies. The British Government stated that it had no intention of "intervening" and Dutch authorities assured Japan that Allied military support similar to that extended in the Dutch West Indies was "not required or intended" in the East Indies. The German Government also declared it had no interest in the islands.

Setting forth a thinly veiled claim to future control of the colony, Japanese officials in June began to press for larger supplies of essential commodities from the Netherlands Indies, tariff concessions, and other increased opportunities for Japanese economic penetration. A Japanese economic mission, headed by Minister of Commerce Ichizo Kobayashi, arrived in Batavia September 12. The members demanded an increase in shipments of oil and oil products to Japan from the existing level of 495,000 tons annually to 4,000,000 tons, including a large proportion of high-octane aviation gasoline. Similar demands were made regarding rubber, tin, and other strategic minerals and raw materials.

Although the negotiations were conducted under the threat of Japanese invasion, the Batavia authorities proved both obdurate and evasive. The demands regarding oil were referred to the British and American companies operating the Netherlands Indies oil concessions. An agreement reached between the oil companies and Japanese oil importers, announced November 13, was later termed entirely unsatisfactory by Japanese officials. It provided for the shipment to Japan of about 1,800,000 tons of oil and oil products annually for five years, including the normal quota of 494,000 tons. The additional shipments were to include no high-octane aviation gasoline and only 120,000 tons of aviation crude.

No agreement was reached on the other Japanese economic demands, and their efforts to introduce political issues were firmly rebuffed. Toward the end of the year the Tokyo government adopted a more threatening tone, while making military

and naval preparations for a further advance into southeastern Asia and Malaya. The Tokyo press complained of alleged insults and outrages to Japanese subjects in the Netherlands Indies. (As early as August the United States consulate in Batavia had reported a steady increase in Japanese immigrants into the colony.) Then on December 26 Kenkichi Yoshizawa, who had replaced Minister Kobayashi as head of the Japanese economic mission, arrived in Batavia to press for further and prompt concessions.

**Defense Preparations.** Japan's threatening attitude led the colonial government to rush defense preparations throughout 1940. An extra session of the Volksraad, convened April 9, voted funds for enlargement of the naval base at Soerabaja, fortification of strategic points, and other defense measures. Oil wells, refineries, pipelines, and offices were mined to permit their prompt destruction in the event of an attack. The oil refining base was removed in part from vulnerable Balikpapan in Borneo to Palembang in Sumatra. Harbors and territorial waters were mined. Defense units were organized and air raid trenches constructed in the principal cities and towns. Air fields and other possible landing grounds were guarded against sudden attack. The regular army, navy, and air force were strengthened as rapidly as possible. In December, 1940, they were believed to comprise over 100,000 well-equipped troops, about 500 first-line military aircraft, a large force of naval planes, and a fleet of at least 3 cruisers, 9 destroyers, 14 large submarines, and many small coast defense vessels.

In October the Netherlands Government in London asked Dutch subjects in all parts of the world to pay a voluntary income-tax, 96 per cent of which would go to strengthening Netherlands Indies defenses. The shortage of materials forced the colonial government on November 14 to abandon plans for the construction of three battle-cruisers but the program for enlarging the Soerabaja naval base to accommodate battleships was continued, apparently with a view to its possible future use by British or American war vessels.

In addition, the 200,000 Netherlands residents in the colony made a substantial contribution to the British war effort. Many of them enlisted in the Netherlands or Allied forces. By Nov. 15, 1940, a fund of £650,000 had been raised as a gift to Britain for fighting planes, in addition to other voluntary contributions totaling more than £1,000,000.

See AUSTRALIA, BRITISH MALAYA, CHINA, FRENCH INDO-CHINA, JAPAN, and NETHERLANDS, under *History*; CHEMISTRY, INDUSTRIAL.

**NETHERLANDS WEST INDIES.** The colonial possessions of the Netherlands in the West Indies, consisting of (1) CURAÇAO and (2) SURINAM, or Dutch Guiana. See separate article on each colony.

**NEUTRALITY.** The neutral countries of the Western Hemisphere became in an increased degree in 1940 the main group maintaining and at liberty to maintain the observance of the requirements of neutrality as understood by the law of nations and to assure its observance, toward them, by belligerents. The advance of the German forces removed from the European Continent most of the lesser, isolated neutrals of the northern coasts. Sweden, though not conquered like Norway, Denmark, Holland, and Belgium, survived through Germany's tolerance and economic domination.

Russia made war during part of the year but later took a neutral position.

Of 64 countries generally held at the end of 1938 to be governed by their own authorities, 13 at the close of 1940 were at war formally or in fact; 17 had been suppressed, had fallen under military domination, or had become dependent on others' active military protection; and 34 were at peace and neutral. Of these 34 neutrals, 21 were countries in the Western Hemisphere; and in that hemisphere only one country, Canada, was at war. Of the nine European neutrals, Russia and Finland were contiguous but mistrusted each other; Spain and Portugal were contiguous and capable of taking a common neutral course; the other five were scattered and little able to do so. A general neutral policy was possible only in the Americas. The influence of the United States in these lands rendered U.S. neutrality important beyond that of any other single country, with Russia possibly excepted.

**Statutory Neutrality.** The neutrality of the United States had special features that governed its course: it must accord with the function of excluding other governments from acquiring further dominion in the Americas, an obligation assumed under the terms of the Monroe Doctrine; it must accord its own neutrality with a policy of favoring the liberally governed belligerents as against the authoritarian powers; and it must effect certain formal safeguards of its own neutral status, required by the Neutrality Act of 1939.

This statutory neutrality required a specific declaration of U.S. neutral status in every case of an outbreak of war; a determination of "combat areas," in which commerce of the United States might by its presence generate incidents liable to give occasion for the United States' becoming a belligerent itself; and the exclusion of the country's shipping from such areas. The President, on whom these duties were imposed, issued the required proclamations as further warfare developed in 1940. On April 10 he extended the previously defined combat area of the European coast to include the waters from the Russian coast east of the White Sea to the Spanish coast at Bilbao. On April 25 he proclaimed U.S. neutrality as to war between Germany and Norway; on May 11, he proclaimed it as to German warfare on Belgium, the Netherlands, and Luxemburg. Upon Italy's taking the field against France and Britain, a proclamation of June 11 declared neutrality in this case as well; and another, June 11, extended the combat area to seas off Morocco and part of Portugal and virtually to the whole Mediterranean Sea. On November 15, a further proclamation of neutrality dealt with Italy's war upon Greece. Thus a uniform and rigid code of neutral conduct was imposed on U.S. citizens and interests, regardless of cases.

The statutory neutrality had the effect of stopping much of the activity of U.S. merchant shipping. As early as March it appeared that about one-fourth of the fleet active in foreign trade had been tied up by the proclamations of 1939. Idle ships in this group numbered 80; their gross tonnage aggregated 516,317; six principal lines were affected. The statute of 1939 provided no compensation for the loss of the business needful to the continuance of affected shipping enterprises. But the companies resorted to selling or leasing idle vessels, often to foreign ownership.

**Neutrality and Monroeism.** For the origin

of the Pan-American neutral block, see 1939 YEAR BOOK, p. 555, under *Neutrality*.

The Foreign Ministers of the American republics held at Havana in July their second meeting on subjects concerning their countries' concerted neutrality. They drew up a convention to permit safeguarding any territory in the Americas that should lose (as through consequences of the war abroad) its governing authority. Belligerents had not accepted the earlier-proclaimed neutral belt of sea about the Americas, as an area closed to hostilities; the Havana conference did not set up the sanctions, desired in some quarters, against hostilities in such waters. By negotiation with some of the other American republics the United States obtained privileges to use a number of places on their coasts for the service of its Navy and aircraft in the cause of the common protection. For details, see PAN AMERICANISM.

**Neutrality vs. Non-Interference.** While observing in many respects the letter of the accepted code of neutrality, the United States drew away, during 1940, from its original attitude of impartiality as between contending belligerents. The downfall of all effective resistance to Germany on land, the crucial event of the European warfare in 1940, forced upon the United States the choice between letting Great Britain have more material of war and inviting German domination of the whole of Europe. By a series of steps the Government advanced along the road that it had taken in letting down the bars to the British and French importation of such material in 1939 (see UNITED STATES, under *The President*).

**Theory of Neutrality.** The question as to the validity of the neutral status, with one belligerent, of a neutral power failing to vindicate its neutrality when constrained by another belligerent came to the fore in Europe. On the eve of the German spring campaign certain of the small Scandinavian and North-Sea countries were in this plight. A reported statement from the French Foreign Office, March 26, took the following position: "If a neutral state shows conclusively that it is not capable of enforcing respect for its neutrality by one belligerent, then it had no right to protest if another belligerent takes measures to force observance of that neutral's rights."

See INTERNATIONAL LAW; PAN AMERICANISM; SHIPPING; DENMARK, IRELAND, NORWAY, SWEDEN, etc., under *History*. For United States neutrality enforcement, see CUSTOMS, BUREAU OF.

**NEUTRALITY PATROL.** See COAST GUARD, U.S.

**NEVADA.** Area, 110,690 square miles; includes water, 869 square miles. Population (U.S. Census), April, 1940, 110,247; 1930, 91,058. Reno (1940), 21,317; Carson City (the capital), 2478.

**Agriculture.** Nevada's harvest of 1940 covered 372,000 acres of the principal crops. Hay predominated. On 187,000 acres were gathered 382,000 tons of tame hay—over two tons to the acre—estimated as worth about \$2,292,000 to the growers. Wild hay, on 138,000 acres, made 152,000 tons (value, about \$851,000); wheat, on 19,000 acres, 483,000 bu. (\$377,000); barley, 15,000 acres, 540,000 bu. (\$275,000); potatoes, 2300 acres, 391,000 bu. (\$250,000). Farms numbered 3573 in 1940 and averaged 1059.4 acres.

**Mineral Production.** The yearly value of Nevada's production of native minerals, as stated in 1940 by the U.S. Bureau of Mines, totaled \$27,031,281 for 1938. Of each year's total much the chief

part came from copper, gold, silver, zinc, and lead. One other mineral, the ore of tungsten, is produced commonly in excess of \$1,000,000; concentrates of such ore, mined in 1939, came to 2091 short tons averaging 60 per cent of tungsten trioxide, in content; their value approximated \$2,100,000; they formed nearly half of the year's production of tungsten in the United States.

Nevada, in 1940, mined ores of gold, silver, copper, lead, and zinc to the combined metallic value (preliminary estimate) of \$35,876,782, as against \$30,480,870 for 1939. Copper, the leading metal, contributed most of this rise. Copper content, estimated, in the yearly totals of ore rose to 151,820,000 lb. (1940), from 133,194,000 (1939); by value, to an approximate \$17,155,660, from \$13,852,176. The mined gold increased to some 367,400 Troy oz. for 1940, from 361,518 for 1939, or to about \$12,859,000, from \$12,653,130. Silver similarly, to approximately 5,105,000 oz., from 4,316,029; by value, to the neighborhood of \$3,630,222, from \$2,929,668. Zinc and lead, while in smaller total values, increased sharply in yearly production: zinc, to \$1,485,900 for 1940.

**Education.** For the academic year 1939-40, Nevada's public schools reported 20,746 enrollments of pupils; 14,914 of these were in the kindergarten and elementary groups and 5832 in high school. Expenditure of the year, for public-school education, amounted to \$3,128,746. The 914 teachers' yearly salaries averaged \$1433 for elementary and \$1866 for high-school positions.

**History.** While Nevada's population had increased, between 1930 and 1940, at thrice the rate for the Union as a whole, it still averaged hardly one inhabitant to the square mile. Its agriculture was fairly prosperous but limited by the scarcity of water; its manufacturing industry occupied only about one in a hundred of the population. The people keenly felt the desirability of introducing some industry that would augment population and wealth. Mayor Frohlich of Reno, who shared with others the hope of solving the problem by attracting the producers of moving pictures, made a statement in February advertising the State's advantages for their industry. He pointed out, among other matters, that Nevada had "no income tax, no inheritance tax, no death-transfer tax, no sales tax, no gift tax, nor tax on intangibles." See RECLAMATION, BUREAU OF.

In the elections of November 5 the popular vote for President gave Roosevelt (Dem.) 31,945, or a superiority of 3 to 2 over Willkie (Rep.), who got 21,229. Key Pittman (Dem.) was re-elected U.S. Senator, defeating Samuel Platt (Rep.). Pittman died (November 10) a few days after his reelection.

**Officers.** Nevada's chief officers, serving in 1940, were: Governor, E. P. Carville (Dem.); Lieutenant Governor, Maurice J. Sullivan; Secretary of State, Malcolm McEachin; Treasurer, Dan W. Franks; Comptroller, Henry C. Schmidt; Attorney General, Gray Mashburn; Superintendent of Public Instruction, Mildred Bray.

**NEVIS.** See LEEWARD ISLANDS.

**NEW BRUNSWICK.** A Canadian maritime province. Area, 27,985 square miles; population (1939 estimate), 451,000, compared with (1931 census), 408,219. Vital statistics (1939): 11,259 living births, 5075 deaths, 3726 marriages. Chief towns (with 1931 populations): Fredericton, the capital (8830), Saint John (47,514), Moncton (20,689), Campbellton (6505), Edmundston (6430).

Education (1938): 98,808 students in schools and colleges of all kinds.

**Production.** The gross value of the 1939 agricultural output was \$32,076,000. Field crops, which covered 901,600 acres in 1939, were valued at \$19,961,000. Chief field crops (1939): oats 6,671,000 bu., potatoes 251,950 tons, roots 138,600 tons, hay and clover 844,000 tons. Livestock (1939): 220,900 cattle, 107,600 sheep, 87,200 swine, 53,220 horses. Fisheries (1939): 76,822 tons (including shell fish) with a marketed value of \$5,082,393 (sardines \$2,299,017; lobsters \$1,003,070). Fur production (1938-39) was valued at \$1,361,200 (\$1,252,465 for 1937-38). The 1939 output of the forests were equal to 190,511 M cu. ft. of standing timber and was valued at \$12,670,798.

Mineral production (1939) was valued at \$3,949,433 of which coal (468,421 tons) accounted for \$1,566,359, natural gas (606,382 M cu ft.) \$292,403, gypsum (29,765 tons) \$134,286. Manufacturing (1939): 826 factories, 13,967 employees, \$23,865,877 net value of products.

**Government.** Finance (year ended Oct. 31, 1939): revenue, \$8,475,068; expenditure, \$9,350,154. Estimates (1939-40): revenue, \$9,996,600; expenditure, \$9,982,900. The King is represented by a lieutenant governor, advised by a ministry whose members belong to the legislative assembly of 48 members elected for a five-year term by popular vote. At the provincial general election of Nov. 20, 1939, 29 Liberals and 19 Conservatives were elected. Ten senators (appointed for life) and 10 elected commoners represent New Brunswick in the Dominion parliament at Ottawa. Lieutenant Governor, William G. Clark (appointed Mar. 5, 1940); Premier, A. A. Dysart (Liberal). See CANADA

**NEW CALEDONIA.** A French insular colony in the western Pacific. Its dependencies include Bélep Archipelago, Chesterfield Islands, Futuna and Alofi, Huon Islands, Isle of Pines, Loyalty Islands, Wallis Archipelago, and Walpole Island. Total area, 7336 square miles; population (Jan. 1, 1938), 55,000. Capital, Nouméa. Chief agricultural products: coffee, copra, cotton, manioc, maize, tobacco, bananas, pineapples. Nickel is the main export. There are large deposits of chrome, cobalt, iron, and manganese. Trade (1938): imports, 158,571,000 francs; exports, 146,453,000 francs (franc averaged \$0.0288 for 1938; \$0.0251 for 1939). Budget (1939): balanced at 44,100,000 francs. The colony was administered by a governor assisted by a privy council and an elected general council.

**History.** From the collapse of France until Sept. 23, 1940, New Caledonia was the scene of a lively struggle between officials who sought to keep the colony loyal to the Vichy regime and the inhabitants who overwhelmingly favored adherence to Gen. Charles de Gaulle's "Free French" movement. The General Council on June 26 adopted a resolution urging continuance of the struggle against Germany in co-operation with the British, and this was ratified by a mass meeting in Nouméa. Governor Pelicier, however, remained loyal to the Vichy regime and called two French naval vessels to Nouméa to curb the anti-Vichy movement.

The British Governor of Fiji arrived in Nouméa on August 29 and the General Council took advantage of his presence to demand Governor Pelicier's resignation. The Vichy Government then replaced Pelicier by Colonel Denis, who rejected the Council's demand for a referendum on the de Gaulle-

Pétain issue and sought to win the people over to Marshal Pétain. He failed to do this, and a battle between the pro-de Gaulle populace and the pro-Vichy Governor, supported by a destroyer, appeared imminent in September. At this crucial time the Australian cruiser *Adelaide* entered the harbor and the commander apparently lent his moral support to the de Gaulle faction. On September 23 Colonel Denis was forced to resign. He and 100 other Pétain supporters were interned and later placed on board a ship bound for French Indo-China.

Henri Sautot, French Resident Commissioner in the New Hebrides, assumed the governorship of New Caledonia on behalf of the de Gaulle movement. With Japan expressing an interest in the colony's future, Governor Sautot sought to develop closer political and economic relations with Australia and the United States.

See FRANCE under History.

**NEWFOUNDLAND.** An island lying between the Gulf of St. Lawrence and the Atlantic Ocean. Its dependency, Labrador, lies north of the Gulf of St. Lawrence, between Quebec and the Atlantic. Newfoundland, with Labrador, forms a part of the British Empire. Capital, St. John's Area (exclusive of Labrador), 42,734 square miles. Population, 291,000, as estimated for Dec 31, 1938. Chief towns and their populations at the census of 1935: St. John's, 54,886; Bonavista, 4022; Harbour Grace, 2215; Grand Falls, 4244; Corner Brook, 6374; Carbonear, 3367; Twillingate, 3203; Burin, 2277; Grand Bank, 2209. Area of Labrador, 118,400 square miles; population (1935), 4716; chief settlement, Battle Harbor.

**Education.** Among adults, between 7 and 10 per cent are illiterate. Schools (mainly denominational, with public support) numbered 1166 in 1938; pupils, 64,272; there were more Anglican schools, and more Roman Catholic pupils, than of any other single denomination. In 1935, 93,925 of the population were reported to be Roman Catholic; 92,709, Anglican; 76,134, of the United Church; 18,054, in the Salvation Army; 1460, Presbyterian; and 7306, of other denominations.

**Production.** Of some 55,000 whose occupations were reported for 1935, those engaged in the cod fishery numbered 35,018. The taking and preparation of cod is the leading occupation. In 1939 the maritime fisheries yielded 50,700 metric tons, in value about \$4,400,000. In point of value of products exported, manufactures, chiefly paper and woodpulp, and mineral products, largely iron ore, lead, copper, and zinc, outrank products of the fisheries, indicating the extent of industry in the exploitation of forests and mines. Only 4226 were reported in 1935 as farmers. The crops of 1937 were valued at \$3,444,000; livestock was valued at \$2,928,000.

**Foreign Trade.** Imports in the calendar year 1939 were valued at \$25,370,000 (\$25,571,000 in 1938); exports, \$31,384,000 (\$31,128,000). Of the 1939 imports Canada supplied \$9,857,000; United States, \$8,770,000; United Kingdom, \$5,162,000. The United Kingdom took exports valued at \$13,560,000; United States, \$8,599,000; Canada, \$4,027,000. Estimated imports of the calendar year 1940 exceeded by \$4,000,000 those of 1939; exports' corresponding rise was estimated at \$1,500,000.

**Finance.** The unit of money is the Newfoundland dollar; \$1, U.S., was (1940) worth \$1.10, Newf., at the official rate; the Newfoundland

dollar was kept at par with the Canadian dollar. In Newfoundland money, and for years ended with June 30, public revenue and expenditure, respectively, were: 1941, as budgeted, \$13,500,000 and \$15,400,000; 1940, \$12,551,000 and \$16,512,000. Public debt, June 30, 1938, totaled \$99,868,700; it came to some \$340 a head. Great Britain provided means to meet deficiency in revenue available for payment of the yearly debt-service of about \$4,000,000. In June, 1940, however, a popular loan raised in Newfoundland brought \$1,500,000 to help relieve Great Britain of this burden, as an act of loyalty in time of war.

**Transportation.** The railroads aggregated (1938) 838 miles of line. Of this, the Newfoundland Railway, owned by the government, comprised about 750 miles. The Railway also operated steamships and dockyards. Highways (1939) totaled 3692 miles. Airfields for seaplanes and landplanes respectively are situated at Cobb's Arm, near Botwood, and at Hattie's Camp, 30 miles farther east; they render service for transatlantic flights. Entries at the ports of Newfoundland totaled 1729 vessels in the year 1937-38; these entries net registered tonnage was 1,945,039.

**Government.** Newfoundland held until the end of 1933 the status of a self-governing dominion of the British Crown. By arrangement made in 1933 with Great Britain this status and, with it, parliamentary separate government were suspended. The British government undertook to deal with Newfoundland's financial difficulties—the immediate cause of the change; it appointed a governor, responsible to the British Secretary of Dominion Affairs, and under the governor, an advisory council of six. Half of these were selected from Great Britain, half from Newfoundland; each of them had particular charge of a governmental department. Governor, Vice Admiral Sir Humphrey Thomas Walwyn.

**History.** Governor Walwyn obtained in September, 1940, special power for the war's emergency, to make regulations necessary to public safety, military needs, the maintenance of necessary supplies, and the requisition of needed services and property. Walwyn's term as governor was extended through 1941. Under the influence of war some of the leading industries of the island thrived, despite a dearth of shipping; particularly, the production of paper for the British market and the mining of iron ore; in less degree, the fisheries. Heavy additional taxation was imposed during 1940; notably, a duty of 7½ per cent on imports from outside of the sterling area and an increase in corporate surtax to the rate, in some cases, of 50 per cent of the regular income tax.

In connection with a bargain giving Great Britain destroyers from the U.S. Navy and granting the United States certain leases of bases for its armed services in British territory near the American Atlantic coast, three leases of areas in Newfoundland, also, were designated as a gift (without specific consideration) for U.S. use: on the Argentinia Peninsula, two square miles, south of Little Placentia harbor, for an aerial base and military training ground; on the southern side of St. John's harbor, 22 acres, with wharfage, for handling naval material; and north of Quidi Vidi Lake, 160 acres, as a post for a defensive force. The first unit of the U.S. garrison arrived on Jan. 29, 1941.

The island made substantial contributions of men during 1940 for armed service in Great Brit-

ain's war with Germany. Many of the seafaring Newfoundlanders entered British naval service; the twelfth contingent of such men reached England on November 5. Another group, numbering 1300, volunteered for service in the British artillery; others entered the Royal Air Force. Some 2000 Newfoundland lumbermen were put to work cutting English timber for shoring mines. In Newfoundland were kept German and Italian prisoners of war, but ill feeling between them made it necessary to send the Italians to Canada.

In Labrador, according to a report published in July, were found indications of a great quantity of iron ore carrying in some instances, a substantial content of manganese. The deposit was in the upper basin of the Grand River, on lands prospected under concession from the Newfoundland Government.

See also CANADA, under *History*.

**NEW GUINEA, Territory of.** See AUSTRALIA under *Area and Population*.

**NEW HAMPSHIRE.** Area, 9341 square miles; includes water, 310 square miles. Population (U.S. Census), April, 1940, 491,524; 1930, 465,293. Manchester (1940), 77,685; Concord (the capital), 27,171. The State's whole population increased (1930-40) by 26,231; the urban population (those in places of 2500 or more), by 10,146, to 283,225; the rural population, by 16,085, to 208,299.

**Agriculture.** New Hampshire harvested about 428,000 acres in 1940. Hay predominated in extent and in apparent return to the cultivator. On 388,000 acres, tame hay made 427,000 tons, estimated as worth \$4,953,000 to the farmers. Potatoes, 9900 acres, gave 1,634,000 bu. (value, about \$1,242,000). Apples for market made 925,000 bu. (\$925,000). Farms numbered 16,554 in 1940 and averaged 109.3 acres.

**Education.** For the academic year 1939-40 New Hampshire's inhabitants of school age (from 5 years to 16) were reckoned at 86,362. The year's enrollments of pupils in all public schools numbered 75,697; this comprised 53,051 in elementary study, 21,517 in high school, and 1129 in evening classes. The year's expenditure for public-school education totaled \$8,472,833. The teachers numbered 2945. Their salaries for the year averaged, for men and for women respectively, \$1902 and \$1421 in the secondary group; in the elementary, \$1402 and \$1114.

**History.** While the year's economic course favored manufacturing industry in New Hampshire, as a whole, the Pacific Mills, Inc., producers of rayon on a considerable scale, announced the permanent closing of operations in Dover, N.H., as well as in Lawrence, Mass. Their employees in Dover numbered about 1200. The establishment there, formerly a maker of cotton goods, had been in business for nearly a century. Closing, announced November 5, was to take effect in about two months, after orders in hand had been filled.

A bridge over the Piscataqua River, connecting Portsmouth, N.H., and Kittery, Me., was opened on November 2; its construction began in December, 1938; a bypass of 4.4 miles around Portsmouth was built to give it access; the bridge was provided with two decks, the upper for automobiles and the lower for railroad trains, and a 224-foot lift; it cost \$3,155,000. The collapse of the old bridge in September, 1939, had stopped the direct operation of trains between Portsmouth and Maine; the completion of the new bridge restored it.

In the general election (November 5) Roosevelt

(Dem.) received 125,292 of the State's popular vote for President, thus gaining a margin of 15,165 votes over Willkie (Rep.), who received 110,127. Robert O. Blood (Rep.), 112,186 votes, was elected Governor, defeating F. Clyde Keefe (Dem.), 109,093 votes. Both the Republican U.S. Representatives were re-elected.

**NEW HEBRIDES.** A British-French condominium comprising a group of islands in the South Pacific. *Espiritu Santo*, *Malekula*, *Efate*, *Ambrym*, *Erromanga*, *Epi*, *Aoba*, *Pentecost*, *Maeovo*, *Gaua*, and *Vanua Lava* are the main islands. Total area, 5700 square miles; population (1938), 43,119, including 3119 non-natives. Chief towns: *Vila*, the capital (1200 inhabitants), *Malekula* (9000 natives). Chief products: copra, cacao, coffee, vanilla. Trade (1938): imports \$111,867, exports \$120,211. Finance (1938): revenue £27,614, expenditure £23,917. British Resident Commissioner, R. D. Blandy (appointed Mar. 12, 1940); French Resident Commissioner, Henri Sautot.

Led by Resident Commissioner Sautot, the French citizens in the New Hebrides repudiated the Pétain Government following the collapse of French resistance and threw in their lot with Gen. Charles de Gaulle's "Free French" movement. M. Sautot in September assumed the governorship of the near-by French colony of New Caledonia (q.v.). See FRANCE under *History*.

**NEW JERSEY.** Area, 8160 square miles; includes (since the adjustment, in Delaware's favor, of the States' boundary in the Delaware River estuary) 646 square miles of water. Population (U.S. Census), April, 1940, 4,160,165; 1930, 4,041,334. Newark (1940), 429,760; Jersey City, 301,173; Paterson, 139,656; Trenton (the capital), 124,697. The State's whole population gained (1930-40) 118,831; the urban population (those in places of 2500 or more) rose by 55,529, to 3,394,773; the smaller rural population increased faster, by 63,302, to 765,392.

**Agriculture.** New Jersey harvested, in 1940, about 734,000 acres of the principal crops. The truck crops were valued around \$18,078,000. Tame hay, the most extensive of the ordinary field crops, covered 219,000 acres and gave 367,000 tons, having an estimated value of \$4,991,000 to the farmer. Corn, 189,000 acres, produced 7,371,000 bu. (estimated value, \$5,749,000); potatoes, 58,000 acres, 10,150,000 bu. (\$5,176,000); apples for market, 3,354,000 bu. (\$3,186,000); peaches, 1,494,000 bu. (\$1,270,000); sweet potatoes, 15,000 acres, 1,800,000 bu. (\$1,890,000). Farms numbered 25,835 in 1940 and averaged 72.6 acres.

**Mineral Production.** New Jersey's yearly production of its native minerals, as determined in 1940 by the U.S. Bureau of Mines, attained \$24,408,545 for 1938, a year of depressed activity. The output of the zinc mines furnished somewhat less than half of this. Clay products (exclusive of a great production of pottery) supplied much of the remainder. Apart from stone, sand, and gravel for concrete and roadbeds, iron ore and Portland cement were the only other substantial items. The output of zinc rose to 88,716 short tons for 1939, and to 90,880 tons (approximately) for 1940, from 85,839 tons for 1938; in value of the metal obtainable from the mined ore, to \$11,507,318 for 1939, from \$10,891,683 for 1938. Clay products (exclusive of pottery and refractories) attained \$5,210,105 for 1938. The production of iron ore recovered sharply to 399,289 long tons (1939), from 139,890 tons, in value \$760,929 (1938).

**Manufactures.** The total of the value of goods manufactured yearly in New Jersey rose to \$3,428,947,188 for 1939, from \$3,253,246,218 for 1937. In either year the total was the sixth highest in the Union. The State's other main manufacturing totals for 1939 follow (each with that for 1937 subjoined): establishments numbered 7984 (7064); they employed 433,523 (436,745) wage-earners, who received \$521,568,632 (\$523,504,132); materials, etc., and contract work cost \$1,901,925,965 (\$1,890,538,525); to which the process of manufacture added a value of \$1,527,021,223 (\$1,362,707,693).

**History.** The economic condition of New Jersey improved enough during the year to ease the pressure that the State's finances had undergone on account of the widespread need of poor-aid. The efforts that the State government had made to avoid new taxation in connection with this need seemed warranted, for the State's Department of Labor reported having registered 5582 new firms, employing 84,909 people, during approximately four years from 1936 to 1939. In divers areas of activity—as in shipyards at Camden and around New York Harbor, in manufactories of explosives in the northern interior, and in works making airplanes in some of the larger centers—the Federal moves to increase armament and the foreign orders for war material augmented employment. See DAMS; PORTS AND HARBORS.

**Legislation.** The Legislature met in annual session on January 9 and continued, with the usual temporary adjournments, beyond election day. It passed a measure divorcing leaders in politics from public employment under authority of the State, in the manner in which the Hatch Act of 1939 had divorced the two with regard to Federal employment; the law made itself particularly felt among political employees of the local Welfare Departments. The Financial Assistance Commission, which had administered the State's contributions to poor-aid, was replaced by a Director of Municipal Aid. Stricter regulation of the labor of minors was enacted; none were to work until twelve years old; at that age only those helping on farms or selling papers in residential areas after school hours; at fourteen, boys might do such tasks as bootblackening and selling papers generally; at sixteen, boys might work in industries that were not hazardous; attendance at public school until sixteen was required, whereas the older law had permitted attendance at continuation schools after fourteen, instead.

Horse races became legal, under the regulation of a bipartisan Racing Commission of four appointees of the Governor, and the pari-mutuel system of wagers at such races was established; the State was to get revenue in the form of a portion of the money wagered; but little was effected toward starting race tracks in 1940, and this anticipated revenue was delayed. Nothing decisive was done about Governor Moore's recommendation that the system of taxation be modified, to lighten the excessive burden actually borne by real estate. Local taxing bodies were allowed to deed tax-delinquent land to the State, thus meeting its claim as to the delinquency.

Republicans had the controlling vote in both houses. In an effort to cut down the remarkably high Democratic vote of Jersey City and the surrounding area under the political domination of Frank Hague, they spent much of the session's time in devising and passing, over the Governor's

veto, a set of restrictive measures (see below, under *Jersey City*).

**Administrative Matters.** The State government continued to find difficulty in obtaining from its share of the localities' ad-valorem taxes the sums on which it had calculated. Some localities, where values had declined, cut down assessments: they could thus automatically lower their payments to the State, while by raising the rates of their local taxes they could keep up their own revenues; the Legislature tried to prevent the process by means of a bill to require payments to the State still to be calculated at the older and higher assessments. Litigation over the long-contested payments of about \$11,270,000 in taxes by eight railroad companies progressed: a Federal District Court's injunction against collection of the payments, obtained by the railroads in January, was upset (November 27) by the Third Circuit Court, which ordered the railroads to pay, but there remained possibility of further litigation.

New Jersey's system of building-and-loan associations, formerly prosperous for many years, still included in 1940 many members that had not recovered from the reverses of the early '30's. At the outset of 1940, 309 had gone out of business in seven years: of these, 104 in 1939 alone; there remained 1223. On May 1, 1940, the Department of Banking and Insurance took control of the affairs of 46 of the remaining associations. The 46 were embarrassed with realty obtained by foreclosure and with holdings of mortgages far in arrears.

Indigence among the people remained high early in the year. The State government took care of much of it by an arrangement under which it "sponsored" many local projects for highways, and the WPA did the work and paid the wages; the needy workmen thus supported exceeded 20,000 in February. The State put pressure repeatedly on localities where the administration of poor-relief did not satisfy requirements; it suspended payments temporarily, in March, to Camden. After the reorganization of the State's own administration of poor-relief (see *Legislation*, above), the new Director of Municipal Aid (Charles R. Erdman, Jr., of Princeton) warned municipalities that any failing to eliminate politicians from the local relief organization by July 1 would forfeit the State's contributions thereto. With regard to New Jersey's anticipated needs for additional water for the population and industries, Governor Moore had preliminary discussions with the heads of the WPA and the RFC; he sought from them a Federal grant of part and a loan of the rest of \$45,000,000 for works to bring 150,000,000 gal. a day, via the old Delaware and Raritan Canal, from the Delaware River at Ravens' Rock and impound them in Dock Watch Hollow.

Farmers in the State of New Jersey had been troubled by a scarcity of migrant helpers for harvest and other busy moments; the State's Department of Labor agreed with representatives of other Eastern States in a conference at Baltimore, on the need of treating migrant farm labor in a co-operative spirit as a regional concern. The Department of Conservation and Development stated (May 18) that New Jersey had succeeded with blight-resisting chestnut trees; it had now, in the Jenny Jump State Forest, 215 seedlings from 7-year-old trees grown from seeds of Asiatic chestnut, unaffected by the blight.

New Jersey opened in December, 1939, its third Federal proceeding to make railroads cease pro-

viding lighterage free between their terminals on the New Jersey shore and the rest of New York Harbor. The Interstate Commerce Commission chose an examiner (Burton Fuller), who took testimony for several months and adjourned (June 26) for some months more, to permit of the preparation of briefs and a report. New York and the railroads supplying the free lighterage, having the most to lose by the proposed change, were the chief opponents of New Jersey's demand.

**Jersey City.** Mayor Hague's often proved faculty of eliciting from Hudson County—chiefly, Jersey City—a Democratic plurality of not far from 130,000 and thus putting Democrats into high offices bestowed by the whole State's vote had long galled the Republicans who commonly controlled the Legislature. In 1940 it appeared that Hague had lost some of his influence by his still-recent unsuccessful fight against labor unions, and that he must have been further weakened by the operation of the new laws against undue use of political influence; the time seemed ripe for a purge of the voting lists in Hague's troublesome domain. Republicans in both houses at Trenton united on a program to this purpose. Over the veto of the Democratic Governor they put through a series of acts designed to hinder the tactics to which Hague's results were attributed. The use of voting machines was prescribed, for Hudson County in particular; special courts were created to handle cases concerning voting in that county, and the judges in these courts were appointed by the Legislature; a Republican Superintendent of Elections was set up in the county; city clerks (in any county) were required to make the poll books available to the Superintendent of Elections; a small force of State troopers was put at the latter's disposal.

The county sought to kill some of these measures by resort to the State courts. The efforts of Superintendent of Elections Sewell to delve into the poll books of several years back met with an assertion of the Clerk of Jersey City that he had burned the poll books up to and including those of 1937; the same official refused to permit the inspection of the poll books still in existence. Nevertheless Sewell, with the aid of investigators, prepared a "black list" of some 40,000 names of persons whose right to vote was dubious; this list contained more than one in ten of all those registered in the county (381,000). Listed persons were apprised by published advertisement and by letter and were allowed to appear and establish their right to vote; comparatively few were reported to have done so. The U.S. Senate's committee on campaign costs sent Senator Tobey (Rep., New Hampshire) to conduct a separate investigation of the voting conditions in the county, but his operations were postponed (September 25) by further order of the committee, until after the election.

The result of the effort to reduce the Democratic vote of Hudson County was a drop of about 30,000 votes below the usual Democratic plurality. The difference might have sufficed to defeat Democratic candidates in a close election, but it had small effect on the main issues in November.

**Newark.** Mayor Ellenstein and six co-defendants, whose trial for conspiracy to defraud the city of Newark in certain purchases of meadow land for resale to the city had started in 1939, were acquitted (January 6). Soon afterward, in a referendum held on February 20, the voters rejected a proposal to put the city under a council and city

manager in place of the existing commission; 53,322 voted against and only 32,596 in favor. The outcome brought victory to the existing political control, by Ellenstein and others, over the Newark Citizens' Union and the Clean-Government Republicans. The Newark airport, having lost much of its business to the recently opened LaGuardia air field in New York City, closed on May 31. A bridge with ampler clearance was built over the Passaic River between Newark and Kearny, to replace a bridge that, from lack of headroom for vessels, was obliged to lift about 900 times a month. The birthplace of Stephen Crane, donated to the city by the Stephen Crane Association, was razed; the site was adorned with commemorative bas-reliefs and made a playground.

**Elections.** The State's popular vote for President gave Roosevelt (Dem.) 1,016,404, constituting a moderate plurality over Willkie (Rep.), who received 944,876 votes. Charles Edison (Dem.) ex-Secretary of the Navy, was elected Governor, defeating R. C. Hendrickson (Rep.). U.S. Senator W. Warren Barbour (Rep.) with 1,029,331 votes, was re-elected, by a big plurality of 205,438 votes over J. H. R. Cromwell (Dem.), who got 823,893. Ten Republicans and four Democrats were elected U.S. Representatives.

**Officers.** New Jersey's chief officers, serving in 1940, were: Governor, A. Harry Moore (Dem.); Secretary of State, Thomas A. Mathis; Treasurer, William H. Albright; Comptroller, Frank J. Murray; Attorney General, David T. Wilentz; Commissioner of Education, Charles H. Elliott.

**NEW MEXICO.** Area, 122,634 square miles; includes water, 131 square miles. Population (U.S. Census), April, 1940, 531,818; 1930, 423,317. Santa Fe, the capital, had (1940) 20,325 inhabitants. The State's population increased (1930-40) by 108,501, or 25.6 per cent; the rural population increased by 38,916, to 355,417; while the urban population (those dwelling in places of 2500 or more) increased by 69,585, to 176,401.

**Agriculture.** New Mexico harvested, in 1940, 1,372,000 acres of the principal crops. Cotton, on 105,000 acres, grew 123,000 bales—an exceptional yield, over 560 lb. to the acre—estimated as worth \$5,966,000 to the growers. Tame hay, 146,000 acres, gave 303,000 tons (about \$2,848,000); grain sorghums, 350,000 acres, 3,150,000 bu. (\$1,544,000); dry beans, 193,000 acres, 656,000 100-lb. bags (\$1,589,000); corn, 176,000 acres, 2,376,000 bu. (\$1,473,000); wheat, 211,000 acres, 1,720,000 bu. (\$1,118,000).

**Mineral Production.** New Mexico's production of its native minerals, as stated in 1940 by the Bureau of Mines, totaled \$63,568,953 for 1938, an off year. Petroleum furnished more than half of the amount; natural gas, nearly one-eighth; copper, gold, and zinc, much of the remainder; and coal a considerable sum.

Prospects of an important supply of potash from the State drew attention in 1940, when the United States could not count on getting normal imports of this necessary chemical. New Mexico, the Union's principal producer of potash in 1938, maintained its output around the same level in 1939, from mines near Carlsbad. The development of the International Agricultural Corporation's deep deposit and refinery continued in 1939 and 1940 according to the plan to begin commercial production from this deposit around the end of 1940.

The yield of petroleum increased to 37,323,000 bbl. for 1939, from 35,759,000 (value, \$33,250,000)

for 1938, but did not reach the total of 1937. For 12 months of 1940 the output was estimated at 39,001,000 bbl. A number of new fields were discovered in 1939. The yearly total of natural gas delivered to consumers attained 21,216 million cu. ft. for 1938; in value at points of consumption, \$6,132,000. The production of gasoline from natural gas rose to some 54,555,000 gal. (1939), from 49,596,000 gal., value \$1,415,000 (1938). The mining of coal fell off somewhat, to 1,206,000 net tons (1939), from 1,239,037 tons, \$3,406,000 in value (1938); in 1940 the output was 1,081,000 tons.

Of copper, the mines yielded ore containing about 143,728,000 lb. (1940), as against 92,284,000 lb. (1939); by value of metal, \$16,241,264 (approximated for 1940) and \$9,597,536 (1939). Mines' production of zinc, similarly calculated, rose to 59,388,000 lb. (1940), from 58,712,000 (1939) and to \$3,860,220, from \$3,053,024. The yield of gold rose to 39,374 fine oz. (\$1,378,090) for 1940, from 36,979 (\$1,294,265) for 1939; the minor production of silver attained \$975,739 (1940); that of lead, \$404,400 (1940). The value of all five metals approximated \$22,859,713 for 1940.

**Education.** New Mexico's inhabitants of school age were reckoned, for the academic year 1938-39, at 173,799. Enrolled pupils numbered 115,832; in elementary study 97,121, and in high schools 18,711. The year's operating expense of the public schools was \$7,444,648. Teachers' yearly salaries averaged \$871.60 in common schools; in high schools, \$1292.11. An act of 1939 required that all intended public-school structures be approved by the State Board of Education before erection.

**History.** Economic needs caused by the interruption of trade with most of Europe heightened producers' activity. In one rising industry, the mining of potash, tapping new sources of wealth, about 450 employees in the United States Potash Company's works at Carlsbad threatened to strike and gained an increase (April 7) of 7½ per cent in their pay. The State shared with Arizona and Texas in a series of celebrations, extending from July into the autumn, of the 400th anniversary of Coronado's exploration of the area (See FAIRS.) Mrs. Oliver Harriman of New York, an agitator for the repeal of the Federal ban on lotteries, was tried in the Federal District Court at Santa Fe for conspiracy to run a lottery. She was acquitted (April 17), but four persons who had worked with her were found guilty on the testimony of a fifth. Mrs. Harriman was represented by the defense as having helped promote a lottery without profit to her, to raise money for the State hospital for crippled children.

In the general election (November 5) New Mexico's popular vote for President gave Roosevelt (Dem.) 103,699 votes, making a plurality of 24,084 over Willkie (Rep.), who got 79,615 votes. U.S. Senator Dennis Chavez (Dem.) was re-elected, defeating Albert K. Mitchell (Rep.). Gov. John E. Miles (Dem.) won re-election, against Maurice Miers (Rep.).

**Officers.** New Mexico's chief officers, serving in 1940, were: Governor, John E. Miles (Dem.); Lieutenant Governor, James M. Murray; Secretary of State, Jessie M. Gonzales; Auditor, E. D. Trujillo; Treasurer, Rex French; Attorney General, Filo Sedillo; Superintendent of Public Instruction, Mrs. Grace J. Corrigan.

**NEW SOUTH WALES.** A State of Australia. Area, 309,433 square miles; population (Mar. 31, 1940), 2,775,871, exclusive of full-blood aborig-

inals. Vital statistics (1939): 48,003 births, 26,815 deaths, 25,471 marriages. Chief cities: Sydney, the capital (1,302,890 inhabitants in 1939), Newcastle and suburbs (115,660), Broken Hill (28,100), Wollongong (16,800), Goulburn (15,360).

**Production.** Chief agricultural products: wheat (76,551,000 bu. in 1939-40), barley, oats, maize, rice, sugar, tobacco, bananas, oranges, grapes, and apples. Chief dairy products (1938-39): butter (118,820,717 lb.), cheese (7,485,907 lb.), bacon and ham (26,418,687 lb.). Livestock: 52,500,000 sheep, 2,811,884 cattle, 548,355 horses, 377,344 swine. Wool production (as in the grease) for 1940 totaled 534,000,000 lb. Chief minerals (1939 values are given where available): gold £848,985, silver and lead, copper, tin, and coal (£6,768,659). Manufacturing (1938-39): 9464 factories, 228,781 employees, £90,265,891 net value of production. The Australian £ averaged \$3.5338 for 1939. On June 30, 1939, there were 6114 miles of railway.

**Government.** Finance (1939-40): revenue £63,261,000, expenditure £65,506,000. The public debt on June 30, 1940, had a "book" value of £363,326,000. A governor, aided by an executive council, is the executive head of the State. There are two legislative houses: (1) the legislative council of 60 members (elected jointly by both houses) and (2) the legislative assembly of 90 members elected by universal adult suffrage. Governor, Lord Wakehurst (assumed office April, 1937); Premier, Alexander Mair (United Australia Party). See AUSTRALIA under *History*.

#### NEWSPAPERS AND MAGAZINES.

Newspapers in the United States in 1940 faced rising circulations, a small increase in advertising lineage, greatly increased news costs owing to the war and the national election in the United States, and difficulties with censorship in many countries. The nations in which newspapers enjoyed freedom of the press became fewer as Germany overwhelmed Denmark, Norway, Belgium, Holland, and France and Japan moved to control its press. In the United States a lively debate on the relation of newspapers and the popular will was aroused after the defeat of Wendell L. Willkie, Republican candidate, who had been supported by the majority of newspapers.

Although newsprint prices remained unchanged in the year, other expenses (payrolls, news coverage, and taxes) rose substantially. This condition led some authorities to look for a trend in the direction of fewer daily newspapers, to consolidations which would leave a number of smaller cities with only one newspaper. In Richmond, Va., the two newspapers followed the earlier example of Nashville, Tenn., and merged their publishing plants and certain business operations in the interests of economy.

However, the number of daily newspapers in the United States showed a smaller decline than in the previous year. The total at the beginning of 1941, according to *N. W. Ayer's Directory*, was 1998, or 17 fewer than in 1940. Of these 1559 were evening newspapers, 427 morning, and 12 "all day." Sunday editions totaled 568. Foreign language daily newspapers (included in the grand total above) numbered 119, a decrease of 4 in the year. *Editor and Publisher*, the newspaper trade publication, listed 1878 English language daily newspapers, as compared with 1888 the year before. Eighty-three of the daily newspapers were tabloid in size. Aggregate circulations were said to be as follows:

Daily newspaper	N. W. Ayer	Editor & Publisher
Evening . . . . .	24,505,551	24,017,593
Morning . . . . .	15,368,124	16,114,018
All Day . . . . .	899,262	.....
<b>Totals</b>	<b>40,772,937</b>	<b>41,131,611</b>

One result of the Wage Hour Bill was declared by the Inland Press Association to be a growing tendency of six-day evening newspapers to drop their Saturday editions and become five-day publications. The number of such five-day newspapers was estimated to be nearly 100.

Weekly newspapers in the United States totaled 10,796, a decline of 64 in the year. Probably owing to the interest in the war news, daily newspapers in Canada and Newfoundland increased from 106 to 108, and weekly newspapers from 769 to 780.

In ten cities newspapers were merged, the most important ones being Reading, Pa., and Montgomery, Ala. Twenty-three suspensions took place, including three newspapers founded only a few months before; the Hartford, Conn., *Newsdaily*, the Chattanooga *Tribune*, and the Nashville *Times*. Other suspensions were in smaller cities.

The Chattanooga *Evening Times* began publication on October 14, the most important new daily journal of the year except for *PM* in New York. For the first time the Ochs interests, controlling *The New York Times* and the Chattanooga *Times*, entered the evening newspaper field.

The effects of the Wages and Hours Act led to the argument in court by counsel for the American Newspaper Publishers Association, in the case of the Easton, Pa., newspapers, that application of this law to newspapers might abridge the freedom of the press by making it impossible for many newspapers to continue their existence. The case involved the right of the Wage and Hour Division of the Department of Labor to inspect the books of the newspapers to determine their compliance with the law. Dean Ackerman, of the Columbia School of Journalism, echoed the same views, seeing in the Wages and Hours Act the culmination of "a long series of moves by the Federal government to control the press of this country"; but it is worth noting that *The New York Times*, in commenting on argument in the Easton case, stated editorially that newspapers should properly be subject to all social legislation generally applied to employers.

Charges concerning alleged control of the press, by Government or by certain class interests, provoked widespread argument. Arthur Krock told the New York Society of Newspaper Editors that he saw evidences of efforts of the Administration to restrict the freedom of the press, by extolling the radio and news reels, encouraging a class war against the press and "official favors surreptitiously extended to syndicated columnists who are 'sympathetic.'" On the Administration side Harold L. Ickes, Secretary of the Interior, said that the fact that only 23 per cent of the daily newspapers had supported Roosevelt in the campaign showed that the United States press was not "truly free," and that the nation needed newspapers that represented "no class or economic group." During the campaign, Edward Flynn, Democratic National Chairman, had charged that "financial interests" dictated the views and news of the press.

Analysis of the political views of the press had been an important issue in the national campaign. Largely on the third term issue a number of news-

papers had abandoned Democratic party allegiances of long standing; only one of the eight leading newspapers in Tennessee supported Mr. Roosevelt, and the New Orleans *Item*, after 63 years of Democratic support, turned to the Republican candidate. In Chattanooga *The Times*, declaring for Mr. Willkie, granted its two editors leaves of absence from their customary duties because they were not in accord with the paper's political policy. Charges that even newspapers known for strict nonpartisanship had favored Mr. Willkie in the amount of space given him in their news columns were fairly met by the answer that Mr. Willkie had been an active, dynamic campaigner while Mr. Roosevelt was silent, and that in 1932 the space given Mr. Roosevelt as against Mr. Hoover, in similar circumstances, had shown the same preponderance.

Advertising rates generally remained unchanged throughout the year despite the increase in circulation. Subscription rates and single copy sales prices tended to rise in keeping with a long time trend toward newspapers obtaining a greater share of their revenue from this source.

Advertising in newspapers in the United States gained approximately 2 per cent over 1939, which had shown an increase of 1.5 per cent over 1938. The upturn of the automotive industry led to a gain of 17.7 per cent in this classification in fifty-two leading cities. Classified and retail advertising also gained in the year, but financial reflected the lack of activity in Wall Street, and national advertisers were hesitant because of uncertain conditions to plan and release large schedules. National and automotive advertising combined, in 1350 newspapers in 754 cities, showed a dollar total of \$151,861,463, an increase of 2 per cent over 1939.

The most notable innovation in the newspaper field was the inauguration of *PM*, an afternoon and Sunday publication, in New York on June 18, 1940. This journal announced that it would accept no advertising, and hoped to become a financial success through circulation revenue at 5 cents a copy weekdays, 10 cents Sundays. Tabloid in size, *PM* also embodied a mechanical innovation in the use of solidified ink. *PM* sought to present the news in briefer form, to intensify news coverage in labor and in departments devoted to home economics, and to allow its staff more freedom in reporting. Starting with capital said to total \$1,500,000, the newspaper reorganized on Oct. 17, 1940, one of the owners, Marshall Field, buying out all other stockholders. The success of the venture was yet to be determined as the year ended.

For correspondents covering a war fought so largely in the air and numbering so many civilian casualties it was a time of personal danger exceeding any before experienced. Ralph Barnes, of the *New York Herald Tribune* was killed in an airplane wreck in Yugoslavia on Nov. 18, 1940, and Guy Murchie, *Chicago Tribune*, was hurt when a bomb struck his hotel in Dover P. J. Philip, of *The New York Times*, narrowly escaped being killed by a French mob which mistook him for a German parachute trooper.

Stringent censorship in the dictator controlled countries led to the expulsion of many correspondents. Otto D. Tolischus, of *The New York Times*, winner of the Pulitzer Prize for foreign correspondence, was expelled from Germany; Herbert Matthews, of the same paper, was compelled to leave Rome because of a dispatch saying that the Axis powers wanted President Roosevelt defeated,

but was later allowed to return. Walter Duranty, also of *The Times* was ordered to leave Rumania; the regular correspondent, Jerzy Szapiro, already had been ousted by reason of a new law forbidding any one with Jewish blood to send news abroad. Other correspondents expelled, or suffering revocation of their news licenses, were Maurycy Orzech, *Jewish Daily Forward*, from Poland; Seymour Beach Conger, Ralph Barnes, and Russell Hill, *New York Herald Tribune*, from Germany; Frank Smothers, *Chicago Daily News*, from Italy.

New regulations of the Soviet government controlling correspondents led to the withdrawal of every foreign newspaper man except those of the news agencies. Correspondents were allowed to send only approved excerpts of official statements, without comment or interpretation; under such conditions it was useless for newspapers to maintain bureaus in Moscow.

In countries other than the United States newspapers faced difficulties surpassing those of any other period. Many newspaper plants in London were damaged by bombs, and distribution was constantly a problem. English newspapers were reduced in size to conserve paper, but continued to furnish all essential services. In the dictator controlled countries the newspapers remained the willing or unwilling mouthpieces of the governments. In the conquered nations (Norway, Denmark, Belgium, Holland, and France) the press was immediately put under strictest control, and temporary or permanent suspensions of publication were ordered. Daily newspapers in Paris dropped in number from 25 morning and 6 evening to 6 morning and 2 evening; and all were subject to German censorship, favored Franco-German collaboration, and were hostile to England. They published only German and Italian war communiqués. Newspapers were not permitted to be circulated between the occupied and unoccupied portions of France. In the unoccupied portion the press had an extremely limited liberty, and existed in fear of offending the Germans. Some Paris newspapers transferred their places of publication to other towns in France. Germany also sought, by representations to the Swedish Government, to control to some extent the newspapers of that country. In Japan the one remaining newspaper under American ownership, the 50-year old *Japan Advertiser* was sold, under pressure, to native interests, and merged with another journal said to speak for the Foreign office. Correspondents in Japan were subjected to great annoyances and strict censorship, and James Young, of the International News Service, was imprisoned for several weeks on charges of violating military secrets.

Advertising in England was drastically reduced, dropping 30.89 per cent in the first six-months of 1940 as compared with the corresponding period in 1939, before the war began. Automotive declined 80 per cent, tobacco 42 per cent, and radio merchandise 41 per cent.

An estimate, made by Arthur Robb, leading authority on newspapers, of the investment in daily newspapers in the United States revealed some interesting figures. Mr. Robb calculated the mechanical total to be \$160,000,000 (composing rooms \$70,000,000, press rooms \$70,000,000, and stereotype \$20,000,000); the value of land and buildings to be \$327,500,000; delivery equipment \$10,000,000. Editorial salaries were estimated to be \$65,000,000 annually, with \$7,500,000 more for syndicated writers and artists, and \$12,000,000 for the

wire press services. Mechanical departments payrolls were set at \$127,000,000, circulation at \$100,000,000, advertising at \$50,000,000, and administration at \$40,000,000, a total of more than \$400,000,000 annually. Paper used annually was said to be of the value of \$140,000,000, ink \$6,000,000, and other raw materials \$10,000,000, bringing the total up to \$156,000,000.

In typography there was a tendency toward the use of larger body type and "streamlined" heads. Increased use of color in advertising was noted. A survey showed 511 newspapers offering run of paper color advertising, compared with 300 in 1935. Printing effects of such advertising were still crude, however, and only moderate progress had been made in improving its use.

The first daily newspaper in an important city to be printed by offset photo-lithography was the *Hartford Newsdaily*, begun March 4. According to the publisher the savings in cost by this method approximated 25 per cent. Offset printing had been used by a number of weekday newspapers and for occasional special supplements. The *Newsdaily* suspended, however, in June, 1940.

Among deaths of newspaper men in 1940 were those of Frank Parker Stockbridge of New York, Viscount Rothermere, of the *Daily Mail*, of London, and a chain of other newspapers in Great Britain, Sir Hugh Denison, Chairman of the Board of Associated Newspapers, of Australia, Alison Stone, Publisher of the *Providence Journal*, and F. W. Kellogg, who had published many newspapers on the Pacific Coast.

According to statements of representatives of the American Newspaper Guild, that organization had at the end of the year 119 contracts with the publishers of 140 publications, newspapers, magazines, wire services, and radio stations. The newspapers covered by contracts had a total circulation of 14,888,861. The policies of the national organization and of certain local chapters had come in for news attention because of charges that radical elements were dominant. The announcement of Mrs. Franklin D. Roosevelt that she would vote against the administration slate in New York on the issue of radicalism was an incident in the debate. The administration tickets in both the national and New York chapter elections were elected.

At the annual meeting of the Associated Press in New York on April 23 Robert McLean of the *Philadelphia Bulletin* was re-elected president. The American Newspaper Publishers Association re-elected John S. McCarrens, of the *Cleveland Plain Dealer* as president.

Magazines, like newspapers, generally reported increasing circulations. Editorially more and more attention was paid to subjects in the news of the day. The *Readers Digest* announced a total of 4,100,000 copies for the last issue of the year, said to be a new high record for any magazine at any time. The same magazine inaugurated a Spanish edition. The *Saturday Evening Post* and *Ladies Home Journal* also reached new peaks in circulation. Many magazines felt the effect of restriction put upon imports of periodicals by nations at war. Canada and Australia forbade the importation of certain lists of periodicals, and Canada laid a tax of 10 per cent upon others. The total number of periodicals in the United States, other than newspapers, increased from 6432 to 6468 in the year 1940. Weekly publications showed a loss, from 1399 to 1366, but monthly magazines increased from 3466 to 3501.

Some distinguished names disappeared from the magazine world. The *Cornhill Magazine*, founded in 1859 by Thackeray, and famous for the literary quality of its contents, suspended in January. The *Colophon*, a quarterly for book lovers issued by Elmer Adler and the Pynson Printers, discontinued publication in March. The *Forum and Century* was merged with *Current History*. *Friday*, a new weekly, was launched, and other newcomers were *Jewish Digest*, and *New Horizons*, an air travel magazine. *St. Nicholas*, long published as a children's magazine, was purchased by Mrs. Juliet lit Stern.

Determined efforts were made in some cities to eliminate the distribution of obscene magazines. In New York, Mayor La Guardia led the effort to clean up the news stands and caused legal action to be taken against important news companies.

In advertising the several groups of magazines fared unevenly. The total of space in all magazines in which advertising is measured, was 26,391,588 lines, a gain of 2.5 per cent over 1939. The weekly and semi-monthly magazines, however, gained 12 per cent, while the standard lost 13.2 per cent, general magazines lost 3.7 per cent and women's magazines lost 3.6 per cent.

**NEW YORK.** Area, 49,204 square miles; includes water (excepting the State's part of the Great Lakes), 1550 square miles. Population (U.S. Census), April, 1940, 13,479,142; 1930, 12,588,066. New York City (1940), 7,454,995; Buffalo, 575,901; Rochester, 324,975; Syracuse, 205,967; Albany (the capital), 130,577. The State's urban population (dwellers in places of 2500 or more) numbered (1940) 11,165,893, or 82.8 per cent of the whole; it had gained (1930-40) 643,941, of which New York City furnished 524,549. The State's rural population rose (1930-40) by 247,135, to 2,313,247.

**Agriculture.** New York's farms harvested, in 1940, 6,691,000 acres of the principal crops. Tame hay, covering 4,000,000 acres, gave 5,554,000 tons, estimated as returning the cultivators \$46,654,000. Potatoes, 213,000 acres, made 26,939,000 bu. (about \$16,371,000); corn, 692,000 acres, 21,452,000 bu. (\$15,874,000); oats, 821,000 acres, 29,966,000 bu. (\$11,687,000); apples, 12,936,000 bu. (\$10,996,000); wheat, 309,000 acres, 7,996,000 bu. (\$6,157,000); dry beans, 129,000 acres, 903,000 100-lb. bags (\$2,902,000); barley, 131,000 acres, 3,799,000 bu. (\$1,937,000). The combined value of the year's truck crops approximated \$19,717,000.

**Mineral Production.** New York State's production of its native minerals, as reported in 1940 by the U.S. Bureau of Mines, totaled \$73,217,430 for 1938. Natural gas provided over one-fourth of this, petroleum over one-eighth, and cement, salt, and clay products substantial parts. The extensive processing of minerals from elsewhere did not enter the total. The production and delivery, to consumers, of natural gas attained 39,402 million cu. ft. for 1938; value at points of consumption, \$19,419,000; but drilling for natural gas in 1939 was not so successful as to assure the means of keeping up production at the usual rate for very long, and some industrial consumers began to curtail the use of gas. New York continued to produce nearly one-fifth of the Union's Pennsylvania-grade petroleum; its yearly total of this special product ad-

vanced a little, to some 5,098,000 bbl. (1939) from 5,045,000 bbl. (value, \$9,550,000) for 1938; and the production during 12 months of 1940 approximated 4,999,000 bbl. The makers' shipments of Portland cement increased to 6,853,796 bbl. (1939) from 5,720,922 (1938); in value, to \$9,866,102 from \$7,893,270. The output of salt rose to 2,041,492 short tons (1939) from 1,717,064 (1938); in value, to \$5,855,422 from \$5,467,077. Clay products (exclusive of pottery and refractories) attained \$3,324,461 for 1938. Mines yielded 36,014 tons of zinc in 1939 (value, \$3,745,456), and about 35,700 tons (value, \$4,641,000) in 1940.

Production from minerals originating outside included 4,468,437 net tons of coke, value \$25,526,646 (1939); furnaces' shipments of 2,210,223 gross tons of pig iron, value \$45,275,716 (1939); and 72,174 long tons of ferro-alloys, value \$7,699,520 (1938).

**Education.** For the academic year 1938-39 (latest covered by data below) New York's inhabitants of age up to 18 years were stated at 3,852,695. Enrollments of pupils in public schools, 2,244,134; of these, 1,513,303 in elementary study and 730,831 in high school. Outside these totals, 203,958 in evening and special courses. The year's expenditure for public schools totaled \$347,775,704, plus bond moneys amounting to \$46,065,085. The teachers numbered 82,392; their pay averaged \$2455.29 for all; for, solely, those outside New York City, \$1855.88.

**Manufacturing.** New York's manufactured products, as usual much the highest in the United States, totaled \$7,134,400,147 (1939); \$7,314,446,524 (1937). Other totals for 1939 follow (with 1937 in parenthesis): 34,514 (29,749) establishments employed 957,853 (995,658) people for \$1,163,806,520 (\$1,236,048,186) wages, paid \$3,783,904,755 (\$3,998,266,070) for material and contract work, and added to material by manufacture \$3,350,495,392 (\$3,316,180,454).

**History.** New York State, economically the part of the Union closest to Europe, felt keenly but not uniformly, in its manufactures and its foreign trade the effects of the European war; its industries gained, in many instances, from the foreign orders that resulted; some lines of production were helped by the suspension of foreign competition, as in the case of luxurious clothing (see **GARMENT INDUSTRY**). The launching of the Federal program of armament further augmented employment to such a degree that the cost of public support for the indigent, which had burdened the State with taxation, dropped out of the foreground of public worries.

**Legislation.** The Legislature met twice: it held a regular annual session (January 3 to March 31); a brief special session of four hours (October 22), on account of the unprecedentedly heavy registration for the election of November 5, required the polls on that day to stay open until 9 p.m., instead of 6 p.m.

The regular session adopted a budget authorizing the expenditure, in the ensuing fiscal year, of \$391,760,000, reduced by about \$5,000,000 below the total that the Governor had asked. In accord with the purpose of the Republican majority to meet demands for economy, no new taxes were imposed. About \$122,000,000, in yearly yield, of taxes until then imposed temporarily under plea of emergency were prolonged. Shifts such as appropriating more of the unclaimed money in the hands of banks and public-utility companies helped to put the budget

in apparent balance for the year; numerous small fees charged by the State were increased. New York City's tax on sales of cigarettes was killed; it had seemingly reduced sales of cigarettes and thus hurt revenue from the State's own tax on them. The city was allowed, as an offset, to divert about \$7,000,000 from its funds for poor-relief, which a reduced demand made excessive.

A system for regulating race tracks and pari-mutuel betting, as allowed by recently adopted amendment to the State's constitution, was created; it provided various payments from race tracks to the State, expected to bring, in the next year, \$1,000,000. A set of acts promoted investment in limited-dividend companies, through which the State encouraged the private construction of superior housing for the poor. A "little Hatch Act" (extending into the State's jurisdiction some of the Federal measures against abuses of political partisan activity) prohibited intimidation of workers and dependents on public relief, to affect their vote in State elections, and forbade the solicitation of their contributions to partisan funds; a more thoroughgoing "little Hatch" bill, to exclude most of the State's employees from activity in partisan politics, failed of passage. Enactments affecting organized labor made provisions for arbitration of disputes, in contracts between employer and union, enforceable by the courts; authorized the State Labor Relations Board to seek voluntary settlement of employer-and-union disputes, leaving, however, the power to mediate solely with the Board of Mediation; and required the State Labor Relations Board to give consideration to employers' (as well as unions') petitions for elections to fix employees' choice of the labor organizations to represent them. As to public education, the Legislature effected a reduction of two per cent in State aid to the public schools, sought by advocates of economy as consonant with the decline in the number of pupils, but failed to pass a measure to cut teachers' pay, strongly opposed by the teachers; it authorized public schools to permit pupils' absence, for religious observance and for instruction in religion, under regulations of the Commissioner of Education; it required public schools to observe a yearly Bill-of-Rights Week, to be devoted to teaching the rights of the individual under the Nation's political system; and it commissioned a joint Legislative committee to investigate the workings of State aid in the public schools, the reported promotion of subversive ideas in schools and colleges run by New York City, and the alleged "flight" of industries from the State. The matter of the fares to be charged for travel on New York City's municipal transit system was put entirely in the control of the city (required by previous law to make fares carry expenses), and the Transit Commission, a State agency with powers only over transit in the city, was put under the city's budgetary control.

Three proposals for amendments to the State constitution won initial adoption but awaited a second adoption by the next Legislature and ratification thereafter by the popular vote; one (a sequel to the budgetary conflict of 1939) was to permit the Legislature to make appropriations for departments in lump sums instead of specified items; another would allow bonds for \$60,000,000, out of a total previously authorized for the State's contribution to the elimination of grade crossings on railroads, but never allocated to any such undertaking, to be used to pay for building highways; a

third was to give power to the Legislature to revoke the authorization for any unissued remainder of the originally authorized bonds to eliminate grade crossings.

Existing legal requirements that had hindered the alteration of old-time residences in New York City, to accommodate several tenants each, were eased. Sale, distribution, or possession of fireworks was forbidden, except for public displays; the law went into force only after the next Fourth of July. A measure to allow Westchester County to levy tolls on parkways built at its own expense was vetoed. A way of punishing criminals by intermittent imprisonment—locking them up mainly over Saturdays and Sundays—previously tried in Rochester and found to enable the culprit to go on supporting dependents—was made applicable as to sentences up to 60 days, in any part of the State except New York City.

**State Administration.** Governor Lehman, in view of the rapid rise of the Federal preparations for National defense to all-embracing importance, appointed (August 1) a State Council of National Defense, to advise him in matters where the Federal program might concern the State. The Council's ten members were each selected from some economic or social group. Lieutenant Governor Poletti was named by the Governor to be a coordinator of defense activities. Pari-mutuel betting at horse races started, under the act of 1940, on April 15, at the Jamaica track; the day's wagers on seven races totaled \$821,946, a figure that gave anticipation of substantial yearly returns to the State. A commissioner appointed under the Moreland Act investigated practices among those handling the State's printing; he obtained testimony indicating that some printing firms had been in secret understanding as to bids for contracts and that the State had been obliged to pay too much; proposals for a State-owned printing establishment were aired. The State acquired from a private company, for \$2,275,000, the Bear Mountain Bridge, spanning the Hudson River just above Peekskill. It reduced the toll for crossing the bridge to 50 cents a vehicle. Among the State roads completed was a second, more elevated route along the side of Storm King mountain, between West Point and Cornwall;  $5\frac{1}{2}$  miles long, four lanes wide, and laid out to minimize rock-falls, the new road cost \$1,648,000.

The Court of Appeals held in July that the charter making *Peekskill* a city, granted by the Legislature in 1938 but contested by the town of Cortlandt, was valid and operative; Westchester County gave certificates of election (July 26) to the municipal officers elected by Peekskill in the previous November, and a municipal government was at last established.

**Other Occurrences Upstate.** The new bridge connecting *Niagara Falls* with Canada, undertaken in 1939 to replace the Falls View Bridge carried away by ice in 1938, was begun (May 16) by the International Niagara Falls Bridge Commission. At *Hyde Park* in Dutchess County the Roosevelt Library, a \$250,000 building erected by an association of admirers of President Franklin D. Roosevelt, was finished; at a ceremony on July 4 it was presented to him, and by him in turn, to the Federal Government; its function was to preserve as a collection the papers of Mr. Roosevelt subsequent to 1910. A short distance away, the Vanderbilt estate, formerly the residence of Frederick W. Vanderbilt, long one of the most notable of the

great country places along the Hudson River, was presented to the Federal Government, designated as a National historic site, and put in the care of the National Park Service. At *North Tarrytown* the Philipse mansion, said to be the oldest remaining manor house in the country, underwent a restoration at the cost of John D. Rockefeller, Jr. *Middletown* granted what was reported to be the first public aid received, in the State, by a clinic for birth-control.

**New York City.** The population of New York City gained (1930-40) by 524,549, or 7.6 per cent, supplying most of the whole State's gain, while neighboring counties supplied most of the rest.

The rate of the city's gain in population over ten years exceeded those of all but two of the Union's other cities of over 500,000 inhabitants; in spite of this, the valuation of real estate and special franchises, made in 1940—\$16,553,401,478—fell short of that of 1939 by \$87,431,461; of that of 1930 by about \$2,000,000,000; and was approximately that of 1927. The city had in the intervening years indebted itself heavily for additional subways, some of which it operated at a loss while on others it guaranteed the operators' return; in this course it followed, to disappointment, the belief that new taxable values in areas populated by rapid transit would soon swell its tax collections sufficiently to support the lines' cost of populating them. Housing and parks created at public expense had removed many slums but had also removed a substantial part of the residential realty from the taxpaying list. Shifts in residence and in business had left some areas partly bereft of their former values for taxation. According to a widely-held view in course of investigation, an "exodus of industries" seeking more profitable locations had helped to depress valuations.

In some other respects the city's condition improved in 1940: its dependents on poor-relief and Federal support through the WPA diminished rapidly as the openings for employment improved; by August their number was reported the lowest in six years; the benefit to the city's as well as State and Federal finances appears from an official estimate that over 36 per cent of the city's population had got public assistance for more or less of the time in the period 1934-39. The city was enabled to apply to other uses about \$4,500,000 not needed by its funds for poor-relief. The lessened need for this service also took some of the sting out of the State's abolition of the city's tax on cigarettes.

Economy, especially in some directions, ruled the city's plans of 1940 for expenditure. The budget for the year starting with July 1 was set at \$581,114,245. The decline in the number of pupils helped persuade the city to cut the appropriation for the public schools by about \$3,000,000, on top of a cut in the rate of State aid. After abolishing many positions and services the Board of Education had to order the termination of the jobs of 612 elementary teachers. The Mayor cut the separate budget of outlays for capital expenditure prepared by the Planning Commission to one dollar above the cost for work already provided by appropriation, but the City Council allowed a small new-work outlay.

The *City Planning Commission* designated 13 areas in Manhattan, covering about one-seventh of its area, as calling for clearance and replanning; it presented (December 5) its plan, long in hand, to rule the use of ground, over 2 or 3 generations of slow-growing population. See PLANNING.

The *Russell case*, a contest over the appointment of a distinguished scholar, a person of questioned social principles, to teach at the College of the City of New York, roused wide interest (see *EDUCATION*). The issue was settled when the Mayor abolished the teaching position by striking its pay from the budget, and the Board of Estimate passed a resolution to shut Russell off from any payments from educational funds. The State's Court of Appeals denied (October 8) Russell's motion to appeal a decision against a suit to overthrow the City's rejection of his appointment.

*Police and firemen's pension systems* were reorganized by measures of the City Council (adopted January 31): to give the funds better support, the measures required the men to make contributions at rates designed to meet 45 per cent of the cost of their pensions after retirement. The Board of Health set up (March 5) a single grade of standard milk, in place of the previous grade A and grade B; it required most of the specifications of the former grade A.

The main occurrence in *transit affairs* was the city's acquisition of the properties of the Brooklyn-Manhattan and the Interborough systems, to form, with certain municipally operated subways, a single system of transportation under public operation. On June 1, 1940, the Brooklyn-Manhattan system's properties passed to the city for about \$175,000,000; on June 12, those of the Interborough system for about \$151,248,000. The city used its 3 per cent bonds, of a class exempt from its debt limit, in payment. The city had previously acquired, largely for unpaid taxes, the Sixth Avenue line of the Manhattan Elevated system; it obtained the Manhattan's other lines by condemnation on June 9, this company having been separated from the Interborough in the course of the two companies' receivership. The deals with the B.M.T. and the I.R.T., on the other hand were negotiated voluntary sales. The whole sum paid, about \$326,000,000, did not include the value of all the property operated, since, notably, both the subway systems operated lines of subway that the city had paid to construct. The City's "investment," presumably at original cost, after the conclusion of the sales, totaled about \$1½ billion in 790 miles of subway and elevated track, 430 of street railway, and 80 of bus lines; the whole included the city's own Independent Subway system. The merged group took the name of New York City Transit System. The city went on with the removal of elevated lines, that on Sixth Avenue having been carried out. Removal on Ninth Avenue (Manhattan) began on Oct. 6, 1940.

Sixteen members of a group calling itself the *Christian Front*, reputedly in accord with the views of Father Charles E. Coughlin of Royal Oak, Mich., the "radio priest" who had at times condemned acts of the New Deal, were tried in Brooklyn on a Federal charge of seditious conspiracy. Most of the evidence against them came from an agent of the FBI who had gained their confidence. At the trial the defense maintained that its members had banded to protect the United States in case of a Communist rising. Some of the defendants were dismissed during the trial; the jury acquitted nine; as to the alleged leader (Gerald Bishop) and several others it failed to agree; in the cases of disagreement a mistrial was declared (June 14), and the Government nolle-prossed in December.

Further successful prosecutions by the office of

District Attorney Thomas E. Dewey of New York County convicted Louis (or "Lepke") Buchalter, already a Federal convict, of extortion by means of labor unions and sent him to serve from 30 years to life in State prison; also was convicted George Scalise, former president of a building-service employees' union, who was sentenced to serve from ten to twenty years for forgery and larceny from that union. J. H. Amen, a special prosecutor of official corruption in Brooklyn, reported in October that he had completed 76 proceedings, criminal or disciplinary, 69 of them successful, into such matters as irregularities in bail bonds and public contracts, and had recovered some hundreds of thousands of public money. The leaders of a "murder ring," Harry Maione and Frank Abbando were convicted of murder in the first degree, in Brooklyn. James J. Hines, former Tammany district leader, failed in his appeal from conviction in 1939 for connection with a policy racket; he went to State prison (October 15).

Seeking *subversive propaganda among teachers* in the city's pay the Legislature's committee investigating such matters (see *Legislation*, above) met with many refusals, supported by the Teachers' Union, to testify; it authorized its counsel (December 5) to bring action for contempt against 25 teachers, 18 of them in the Brooklyn College.

Developments in *public construction* included the start (October 28) of work on the Battery-Brooklyn Tunnel, a projected under-water passage for vehicles, to cost about \$80,000,000 mainly financed by a loan of \$57,000,000 to the city from the RFC; the opening (June 29) of all but some short incomplete sections of the Belt Parkway, a \$30,000,000 vehicular route rimming Brooklyn and Queens boroughs on south and east from the Upper Bay to Whitestone; the opening (June 18) up to 93rd Street, Manhattan, except for a ¾-mile section in midtown, of the East River Drive, a route to take vehicles through Manhattan lengthwise without intersections; the opening of the \$58,000,000 Queens-Midtown Tunnel (vehicular), November 15; the completion and operating start (December 15) of the \$59,000,000, 2¼-mile municipal Sixth Avenue Subway, in Manhattan; the opening of a \$7,500,000 port for seaplanes (March 31), at LaGuardia Field; the start of constructing a new Criminal Court Building in Manhattan, to replace that condemned as unsound six years before. See *AQUEDUCTS; GARBAGE AND REFUSE DISPOSAL; PORTS AND HARBORS; RAPID TRANSIT; ROADS AND STREETS; TUNNELS; WATER WORKS AND WATER PURIFICATION*.

A number of so-called low-cost housing units, such as Vladeck City Houses and South Jamaica Houses, were opened, supplying to the poor, at low rent, quarters averaging around \$5000 of outlay per flat. Further such building to quarter thousands more of poor families, with the aid of \$40,000,000 to be advanced to the City Housing Authority by the State, was in progress or initiated. The Metropolitan Life Insurance Company completed part of a \$50,000,000 group of apartments to hold 12,200 families, in Bronx Borough, under a recent State law allowing insurance companies to put a tenth of their assets in such enterprises. MacMonnies' ill-liked monument, "Civic Virtue," was ordered removed from City Hall Park. See *FIRE PROTECTION; MUNICIPAL OWNERSHIP*.

The *New York World's Fair* reopened (May 11), for its second season; it closed finally on October 27, and declared a final distribution that

brought payments toward principal and interest up to 38.4 per cent of the face of \$23,333,300 of its bonds held by the public.

**Elections.** The State's popular vote for President (November 5) gave Roosevelt (Dem.) 3,251,918; Willkie (Rep.), 3,027,478; Norman Thomas (Socialist), 18,950. Roosevelt had a plurality, in round numbers of 718,000 in New York City; Willkie had one of 494,000 up-State; and the State as a whole gave Roosevelt a plurality of 224,440. The American Labor Party furnished 417,418 of the Roosevelt vote. U.S. Senator James M. Mead (Dem.) was re-elected by 3,274,766 to 2,868,852, defeating Bruce Barton (Rep.). To the U.S. House of Representatives were elected 25 Democrats, 19 Republicans, and one of the American Labor Party.

**Officers.** New York's chief officers, serving in 1940, were: Governor, Herbert H. Lehman (Dem.); Lieutenant Governor, Charles Poletti; Secretary of State, Michael F. Walsh; Comptroller, Morris S. Tremaine; Attorney General, John J. Bennett, Jr.; Commissioner of Education, Frank P. Graves and (successor, July 1) Ernest C. Cole.

**NEW YORK, College of the City of.** See EDUCATION.

**NEW YORK WORLD'S FAIR.** See FAIRS, EXPOSITIONS, AND CELEBRATIONS.

**NEW ZEALAND.** A British Dominion in the South Pacific Ocean; principally two islands about 1200 miles east of the southeastern coast of Australia. The Dominion has jurisdiction over Western Samoa (see SAMOA), the Union Islands (including Tokelau), and some other islands of Oceania; also over the Ross Dependency, a part of the Antarctic Zone. Capital, Wellington.

**Area and Population.** New Zealand proper has an area of 103,722 square miles; of this, North Island has 44,281 and South Island 58,092. Union Islands: area, 4 square miles; population, 1176. The Ross Dependency has no reported definite area or resident population. New Zealand, by estimate for 1939, had 1,626,486 inhabitants, including 88,997 Maoris (aborigines of Polynesian race). By census of 1936 the population numbered 1,573,810: on the North Island, 1,018,036; South Island, 554,455. Totals of 1936 included 1,484,528 of European origin, 82,326 Maoris and half-castes, and 2899 Chinese. Chief cities' estimated population of 1939: Auckland, 221,500; Wellington, 157,900; Christchurch, 135,400; Dunedin, 82,800. For 1938, births numbered 27,249; deaths, 14,756; immigrants (year ending March 31), 38,738; and emigrants, 36,352.

**National Defense.** See *History* below, and articles EUROPEAN WAR; MILITARY PROGRESS.

**Education and Religion.** Under authority of a Department of Education a system of schools gives free, compulsory education. Secondary or combined schools at the outset of 1939 numbered 46 and had 17,140 pupils; in addition, 88 district high schools had 4905 pupils, and 20 technical high and technical day schools had 8149. Elementary schools numbered 2290 and had 206,002 pupils. Apart from the preceding were 57 registered private or endowed schools and a number of schools for Maoris. The University of New Zealand comprises Otago University at Dunedin, Canterbury University College at Christchurch, Auckland University College at Auckland, and Victoria University College at Wellington. Two agricultural colleges are situated, respectively, at Lincoln and at Palmerston North. The census of 1936 showed the religious affiliation of 40.28 per cent of the popu-

lation to be Anglican, 24.66 Presbyterian, and 13.09 Roman Catholic.

**Production.** Agriculture and animal husbandry are the base of New Zealand's economic production. They normally nourish a heavy exportation, which supplies the means of importing a great variety of goods outside the range of domestic production. The estimated production of wool, for the year ended with June, 1940, was 310,000,000 lb.; that of meat (mainly for shipment to the United Kingdom) was stated as about 13,000,000 freight carcasses. The year's sales of wool brought about £12,633,389 (in New Zealand currency) for greasy wool and £2,868,730 for slipewool. The livestock on farms (1939) included 1,853,713 dairy cows; cows yielded (1937-38) 419,900,000 lb. of butterfat, the source of a great yearly exportation of butter. Important to the support of inhabitants and livestock, rather than for export, the cultivation of cereals gave (1939), on 189,281 acres, 5,564,000 bu. of wheat; on 54,422 acres, 2,605,000 bu. of oats; and on 26,898 acres, 1,077,000 bu. of barley. Sheep in 1939 numbered 31,897,091; cattle, 4,564,948; pigs, 683,463.

Manufacture occupied 102,344 persons in the year 1937-38; its products for that year totaled £113,691,556. Over half of them were closely related to agriculture and dairy farming; they included £27,767,228 of butter, cheese, and condensed milk and £21,227,641 of frozen or otherwise preserved meat.

**Foreign Trade.** For the calendar year 1940, imports into New Zealand were valued (in New Zealand currency) at £48,998,000; exports, at the previously untouched figure of £73,741,000. The United Kingdom sent £23,108,000 of the imports and took £64,146,000 of the exports; Australia sent £8,227,000 and took £2,166,000; the United States sent £5,885,000 and took £2,826,000. The year's exports of wool were valued at £16,871,039; for the year ended with June, 1939, exports of butter were £16,520,226; frozen meat, £15,092,059; cheese, £5,935,061. That year's leading imports were motor vehicles and parts, £5,610,049; electrical machinery, £3,273,002; and petroleum and iron and steel, each somewhat over £3,100,000.

**Finance.** The New Zealand pound averaged \$3.064 in U.S. money, through 1940. The estimated budget for the year 1940-41 called for revenues of £63,000,000 and included in expenditures £33,000,000 for purposes of war. The estimated revenue of the year ended with Mar. 31, 1940, was £38,020,043; expenditure, £38,003,043; both exclusive of certain items connected with prosecution of war. Actual receipts of the year ended Mar. 31, 1939, totaled £36,582,000; expenditures, £35,773,000.

**Transportation.** The railroads are virtually all owned by the government. The total mileage was 3319 in March, 1939. The aggregate length of highways in 1939 was 86,988 miles. (See ROADS AND STREETS.) The government owns the telegraph and telephone systems. In August, 1939, air lines covered 1887 miles of routes and the weekly mileage was 33,349. Air connections with Hawaii and the United States were established in July, 1940 (see under *History*). There was a service to Australia and London. Ships in foreign trade, entering ports of New Zealand, numbered 660, totaling 3,084,705 net tons, in 1938.

**Government.** Executive power is exercised by a Governor General, appointed by the Crown for five years on recommendation of the Dominion Government. Legislative power rests with the Gov-

ernor General and a Parliament of two chambers—the Legislative Council of 36 members appointed by the Governor General for seven years, and the House of Representatives of 80 members, elected by general male and female suffrage for three years. Sir Cyril L. N. Newall, former Chief of Staff of the Royal Air Force, was appointed Governor General of New Zealand Oct. 4, 1940, to succeed Viscount Galway. See *History*.

### HISTORY

New Zealand was drawn more deeply into the vortex of the European War during 1940 with the collapse of France and the Netherlands, the spread of the conflict to the Near East, and Japan's adherence to the Rome-Berlin Axis. As though to emphasize the growing peril, the Canadian-Australian liner *Niagara* was sunk by an enemy mine 20 miles off the New Zealand coast on June 18. The Labor Government, with the almost unanimous support of the nation, threw the full weight of the Dominion's manpower and resources into the struggle. At the same time it sought to carry forward the socialization program for which it received a mandate in the 1938 election. The latter policy encountered opposition from conservative elements. On the other hand there was mounting criticism from extremist Laborites, who favored more radical steps toward socialism at the expense of the country's war effort.

**Political Developments.** Prime Minister Michael J. Savage, leader of the Labor party since 1933 and head of the government since Dec. 5, 1935, died in Wellington Mar. 26, 1940 (see *NECROLOGY*). His death deprived the Dominion of its most trusted political leader and added fuel to the dissensions within the Labor ranks. Mr. Savage's "win the war" and "support Britain" policies were carried on by his Deputy Prime Minister, Peter J. Fraser, who became Acting Prime Minister upon the death of his chief and Prime Minister upon election as leader of the Labor party on April 4.

The Labor Cabinet was reshuffled on May 1 without changing its personnel. The new line-up was: Prime Minister, Minister of Broadcasting and Police, Peter J. Fraser; Finance, Walter Nash; Social Security, W. E. Parry; Attorney General and Minister of Education, H. G. R. Mason; Agriculture, W. Lee Martin; Health, H. T. Armstrong; Marine, Robert Semple; Labor and Postmaster General, P. C. Webb; Defense, W. F. Jones; External Affairs, F. Langstone; Manpower, Immigration, Government, and Insurance, David Wilson. At the same time the Prime Minister established an agency to lay plans for the postwar restoration of the country and rehabilitation of war veterans. D. G. Sullivan later entered the cabinet as Minister of Supply.

In response to Opposition proposals for a coalition war government, Prime Minister Fraser on May 27 announced the formation of a National War Council composed of cabinet members and representatives of the Nationalist party, industrial employers, trade unions, and farmers. The Nationalists declined this offer. But under pressure of the critical situation in Europe a compromise agreement was reached July 16. A War Cabinet composed of three Labor Ministers and two Nationalist leaders was established to supervise all war activities and preparations. It consisted of Prime Minister Fraser, Finance Minister Nash, Defense Minister Jones, Adam Hamilton, leader of the Nationalist party, and former Prime Minister Jo-

seph Coates (Nationalist). All other matters were left under the jurisdiction of the regular Labor Cabinet, with the Prime Minister co-ordinating the activities of both bodies.

This arrangement achieved unity between the Labor and Nationalist parties on prosecution of the war, but it widened the breach within Labor's ranks. Late in October the radical faction seceded from the Labor party. On October 28 it adopted a platform calling for nationalization of credit and currency, state loans to farms and industry, use of "debt free" money for development purposes, reorganization of the economic system especially through industrialization to reduce the country's dependence upon agriculture, and an extension of State aid to individuals in the form of family allowances, professional training, and a basic wage.

The Nationalist party on November 26 elected Sidney G. Holland to succeed Adam Hamilton as its leader and co-representative on the War Cabinet. On December 16 Minister of Agriculture Martin and the new Minister of Marine, Dr. R. D. McMillan, resigned from the government on grounds of ill health. They were replaced by J. G. Barclay and A. H. Nordmeyer, respectively, both nominees of a Labor party caucus.

**War Measures.** On February 24 the National Committee of the Labor party and the National Council of the Federation of Labor issued a statement condemning any form of military conscription. But the successful German offensive on the Western Front caused the abandonment of this long-cherished Labor principle. A special session of Parliament on June 1 gave the government complete authority to mobilize all persons and property for the prosecution of the war.

To conserve manpower for national service, the government on June 17 forbade all married men and all single men of military age to leave the country. Two days later decrees were issued, under the powers granted June 1, instituting compulsory military service both at home and abroad for all men over 16, effective July 23; empowering the Reserve Bank to acquire all gold, foreign securities, and foreign exchange; providing for a compulsory war loan; giving the government wide powers for the mobilization of industry; and establishing an advisory council to draft war production plans.

Strengthened by wide popular support, the government made increasing use of its emergency powers throughout the year. On March 11 it assumed control of all port activity in Auckland after a strike of dock loaders had held up shipping for four days. Gasoline rationing was re-introduced February 1 with the objective of cutting consumption 30 per cent, conserving dollar exchange, and building up a gasoline reserve. The foreign exchange and import control systems were tightened up for the second half of 1940. Virtually all forms of taxation were heavily increased. Communists and other anti-war or subversive elements were dismissed from the public services, beginning in June. A religious sect known as Jehovah's Witnesses was banned as subversive on October 25. Successive drafts of men were called to the colors for both overseas and home service. On October 5 the Finance Minister announced that 15,000 individuals and 3000 corporations would be obliged to subscribe to a non-interest-bearing war loan. The amounts of their subscriptions were fixed on the basis of income tax payments for the year ended Mar. 31, 1939.

The government made new contracts with the British Government for the sale of New Zealand's surpluses of wool, meat, butter, and cheese. Increasing concentration on war projects and industries caused a reduction in employment on normal public works schemes from 25,000 in 1939 to 9000 in November, 1940. At the request of the British Government, some 14,000 acres of linen flax were planted for the fabrication of war equipment. In connection with the planned expansion of industry, the project for training skilled labor and technicians was extended. At the same time the government continued its program of low-cost housing; enacted in December the Small Farms Act providing for settlement of war veterans on the land after the conflict; and prepared to establish in 1941 its program of free national medical care, despite the vigorous opposition of the medical association.

War costs were estimated at £37,500,000 for 1940-41, or 73 per cent of the estimated revenues. The Prime Minister on September 5 estimated that as a result of the war New Zealand's consumption of goods would decline to the equivalent of \$570,000,000 in 1940 from \$655,000,000 in 1939. Some outstanding developments in the economic field were the substantial improvement in foreign exchange reserves, continued business activity particularly in retail buying, and an increase in prices that led the Arbitration Court on August 13 to raise wages 5 per cent. This wage rise led the farmers to demand higher government-guaranteed prices for dairy and other farm products. To prevent the development of a disastrous inflationary movement of wages and prices, the Prime Minister called a conference of business, labor, farm, and government leaders to consider price control, rationing, and family allowance schemes.

A new system of industrial control, announced October 26, was designed to increase production and eliminate unnecessary competition. Prices of bread, milk, and gasoline were regulated and the transportation system was further co-ordinated.

**Military Contribution.** Between the outbreak of war and the termination of the voluntary recruiting system on July 22, 1940, enlistments for overseas service in the army, navy, and air force totaled 80,340 (army, 63,740; navy, 2600; air force, 14,000). The enlistment rate was twice that of 1914-18. The first contingent of troops sent overseas landed in Egypt early in February. Other contingents followed at intervals during the year. Mobilization of the Dominion's Fourth Army for foreign service began on October 2. By the end of 1940, 1465 pilots, observers, and air gunners had been sent overseas, part of them to Canada for advanced training. Flying personnel, exclusive of ground forces, increased from 700 on Sept. 1, 1939, to 5120 a year later and a further increase of 1800 men was provided for when the peak of the training program was reached. In addition, the people of New Zealand subscribed a fund of \$500,000 for the purchase of fighting planes for Britain's Royal Air Force, and another \$5,000,000 fund was raised for the relief of British civilians and for other patriotic purposes.

Large home defense forces were raised in addition to those training for overseas service. The Territorial force was brought to war strength through application of the draft. In mid-September men not serving in regular military units were enrolled in the newly organized Home Guard, designed to serve as a patrol and reserve force. Forty

thousand out of the 200,000 men to be inducted in the Home Guard were enrolled before the end of the year.

**Empire and Foreign Relations.** While extending unreserved support to the mother country, the Dominion also moved during 1940 to strengthen its collaboration with both Australia and the United States. A mission under the Minister of Supply was sent to Australia in June to obtain munitions and other war material and to arrange for closer co-operation of Australian and New Zealand naval forces. The opening late in July of the Pan American Airways clipper service between San Francisco and Auckland, N.Z., via Honolulu, Canton Island, and Noumea in New Caledonia, served no less than Japan's adherence to the Rome-Berlin axis to stimulate the movement for joint action with the United States in Pacific affairs. Supported by the Prime Minister and many leading citizens, the British-American Co-operation Movement for World Peace was launched at Wellington August 16. Its first objective was a Pacific peace pact between the United States and the British Empire, with provision for the admission of other nations. A United States-New Zealand conciliation treaty was signed September 15.

A state of war with Italy was declared in effect immediately after the latter's attack upon France, and many Italians in New Zealand were interned.

**Centenary Celebrations.** A series of ceremonies commemorating the 100th anniversary of the settlement of New Zealand was held during 1940. Lord Willingdon, special representative of the British Government, on January 22 dedicated the Hall of Memories on the foreshore at Wellington where the first settlers landed Jan. 22, 1840. On February 6 was celebrated at Waitangi the 100th anniversary of the signing of Treaty of Waitangi by the British settlers and the Maoris. Up to July 22, when voluntary recruiting ceased, 4103 Maoris, or more than 40 per cent of those of eligible age, had enlisted in the Maori battalion of the New Zealand Expeditionary Force.

See AUSTRALIA and GREAT BRITAIN under *History*; BIRTH CONTROL; FAIRS, EXPOSITIONS, and CELEBRATIONS; LABOR CONDITIONS.

**NIAGARA FALLS BRIDGE.** See BRIDGES.

**NICARAGUA.** The largest in area of the Central American republics. Capital, Managua.

**Area and Population.** Area, 49,500 square miles; estimated population in 1940, 1,133,572. Chief cities (1938 estimates): Managua, 70,000; León, 32,669; Granada, 21,172; Masaya, 15,000; Matagalpa, 5200. The people are mainly of Spanish, Indian, or mixed blood, but there is a considerable infusion of West Indian Negroes on the east coast. U.S. citizens residing in Nicaragua on Jan. 1, 1940, numbered 576.

**Defense.** The American-trained National Guard had an active personnel of 3538 and a trained reserve of 4000 on Nov. 1, 1939. The air force consisted of 44 men and a few planes. The navy comprises a small number of coastal patrol boats. A new military academy was established in 1940 (see *History*).

**Education and Religion.** About 60 per cent of all adults are illiterate. In 1938 there were 630 State primary schools, 2 normal, 13 private secondary, 5 professional, and various other schools, with an enrollment of about 49,000, besides three universities and a new military academy. Roman Catholicism is the dominant religion but other faiths have religious freedom.

**Production.** Agriculture, cattle raising, lumbering, manufacturing for local consumption, and gold and silver mining are the chief occupations. Gold production in 1940 reached about \$5,600,000, the highest value in Nicaraguan history; it exceeded the value of coffee exports by about \$3,500,000. Gold accounted for 42.2 per cent of the 1939 exports; coffee, 31.8 per cent. Coffee exports (1939) were 17,416,000 kilos (kilo equals 2.2 lb.); bananas, 1,713,000 stems; lumber, 17,360,000 sq. ft.; cotton, 1,246,000 kilos; livestock, 13,000 head; hides and skins, 239,000 kilos; sugar, 3,248,000 kilos. Cacao, beans, plantains, rice, tobacco, corn, and yucca are grown for local consumption. There are coffee cleaning and sugar grinding mills.

**Foreign Trade.** Imports in 1939 were \$6,364,891 (\$5,119,579 in 1938); exports, \$8,300,972 (\$5,884,154). The favorable trade balance in 1939 was one of the largest on record. Value of chief 1939 exports: Gold, \$3,503,000; coffee, \$2,640,000; bananas, \$654,000; lumber, \$363,000; cotton, \$253,000. The United States supplied 68.4 per cent of the 1939 imports (Germany, 12.2) and took 77.5 per cent of the exports (Germany, 10.9). See **TRADE, FOREIGN**.

**Finance.** Budget estimates have shown a marked increase from 6,340,000 cordobas in the 1937-38 fiscal year to 20,281,000 for 1939-40. The public debt on Jan. 31, 1940, totaled 7,253,139 gold cordobas (8,177,766 on Jan. 31, 1939), excluding the \$2,000,000 credit obtained from the Export-Import Bank of Washington Nov. 15, 1939. The average exchange rate of the cordoba in 1939 was: Official, \$0.20 (\$0.2193 in 1938); curb, \$0.1869 (\$0.1832 for June 10-Dec. 31, 1938).

**Transportation, etc.** In 1939 Nicaragua had 386 miles of railway line and 25 miles under construction; about 1670 miles of roads, many impassable in wet weather; 5 local and 1 international (Pan American Airways) air services; and shipping services from Corinto and San Juan del Sur on the west coast and from Bluefields, Cabo Gracias, Puerto Cabezas, and San Juan del Norte on the east coast. The Pacific Railway (net income, 1,292,956 cordobas in 1938-39) is the chief line. It was completely nationalized on Nov. 7, 1939.

**Government.** The Constitution of Mar. 22, 1939, vested executive powers in a President elected for eight years and legislative powers in a parliament of two chambers—a Senate of 15 elected members with all ex-Presidents serving *ex officio*, and a Chamber of Deputies of 42 elected members. The terms of Senators and Deputies is six years. President in 1940, Gen. Anastasio Somoza. He assumed office Jan. 1, 1937, for a four-year term, was re-elected by a Constituent Assembly Mar. 23, 1939, and inaugurated for an eight-year term Mar. 30, 1939.

**History.** Having in 1939 obtained a new lease on power until 1947 (see 1939 YEAR BOOK, p. 573), President Somoza during 1940 carried forward his vigorous internal and foreign policies with little opposition. Twelve alleged Communists were arrested February 29 on charges of distributing subversive handbills and in mid-March eight of them were exiled to Little Corn Island off the east coast. A shake-up of key government officials occurred November 12. Gen. Rigoberto Reyes, former Chief of Staff of the National Guard, resigned as Deputy Minister of War. A decree of November 18 called for the immediate return of arms and other government property held by private individuals. A protracted drought added to the high cost of basic

foodstuffs and, together with the exceptionally low prices received for coffee exports, further depressed the low living standard of the working classes. The state of economic emergency was extended for another year when the time limit expired Sept. 28, 1940.

Economic rehabilitation measures carried into effect included the engagement of a Chilean economic expert to recommend steps for improving the country's economic organization; the allotment of 10 per cent of all municipal revenues for public health measures; the financing of farmers in the purchase of agricultural machinery; the announcement that an agricultural school would be established near Managua; a 30 per cent increase in the salaries of government employees (announced April 22) for the purpose of offsetting increases in living costs; and the establishment on January 15 of a Legal Technical Financial Commission to prepare a general plan for reorganization of the financial and tax system, draft bills to put it into effect, etc. Acceptance of the Commission's plan was announced in November. Administrative control of the affairs of the National District of Managua was placed in the hands of a newly created Ministry of the National District early in 1940.

The new military academy planned in 1939 was opened Feb. 2, 1940, with Maj. Charles L. Mullins, Jr., U.S.A., as director. He was commissioned a colonel in the Nicaraguan army. A workmen's clubhouse, one of the finest in Central America, was presented by President Somoza to the Nicaraguan Labor Congress at its organization meeting in Managua on January 1. A Presidential decree of November 30 required all employers to give their employees one day's rest a week.

In January the opposition of Costa Rica (q.v.) to the Nicaraguan-United States project for canalizing the San Juan River was overcome and a treaty authorizing its construction was signed on April 5. Members of the U.S. Army Engineers Corps, at the request of the Nicaraguan Government, completed a survey of the barge canal route (from the Atlantic to Lake Nicaragua) on April 13. The project would provide cheap transportation for large agricultural areas in both Nicaragua and Costa Rica. It could be expanded into a unit of the trans-Nicaraguan ship canal if the United States decided to carry out that project. See **WATERWAYS, INLAND**.

Continuing its close co-operation with Washington on inter-American defense policies, the Managua Government joined with the other Central American republics in rejecting a note from the German Minister warning against unneutral actions at the Havana Conference (see **PAN AMERICANISM**). Many prominent Germans were reported to have taken out Nicaraguan citizenship papers in May. On September 19 President Somoza flatly denied reports that Little Corn Island was a hotbed of Nazi intrigue. The publication or reproduction of anti-democratic news or propaganda was prohibited on October 29. In celebration of the reelection of President Roosevelt, a two-day holiday was decreed by President Somoza on November 6.

For the status of the Honduran-Nicaraguan boundary dispute, see **HONDURAS** under *History*.

**NICKEL.** Increased war demand in 1940 was responsible for the sale of more nickel than in any previous year. The largest factor in the industry, International Nickel Co., Canada, operated its mines and refineries continuously. Exports from Canada were closely controlled, and none permitted

to any destination outside the British Empire without sanction by the Canadian and British Governments.

The steel industry in 1940 accounted for over 50 per cent nickel consumption. The second largest market was in the nickel-copper alloys—nickel silver, Monel, Inconel, and malleable nickel. The customary statistics on production and data on distribution were omitted in 1940. The versatility of nickel as a material of construction is evidenced by its application in the automotive industry, farm implements, aviation, petroleum, chemicals, pulp and paper, food processing, and household equipment.

H. C. PARMELEE.

**NIGER.** See FRENCH WEST AFRICA.

**NIGERIA.** A British West African colony (1381 sq. mi.) and protectorate (includes British Cameroons). Total area, 372,599 square miles; total population (Jan. 1, 1939), 20,582,947. Chief towns (1938 populations): Ibadan (234,691), Lagos, the capital (158,500), Kano (80,944), Abeokuta (69,500), Oyo (64,501).

**Production and Trade.** Chief products (1939 export values in parentheses): tin ore (£2,310,929), palm kernels (£1,872,674), cacao (£1,771,401), groundnuts (£1,066,948), palm oil (£929,451), hides and skins (£711,033). Other products: gold, coal, silver-lead ore, columbite, wolfram, bananas, ghee, ginger, tobacco, maize, rice, mahogany, manganese, and monazite. Livestock (1938): 2,936,000 cattle, 2,188,000 sheep, 5,630,000 goats, 476,000 asses, 173,000 horses, 168,000 swine, and 2000 camels. Trade (1939): imports, £6,492,000; exports, £10,236,000.

**Communications.** Railways (1938-39): 1903 miles of main line, 6,707,417 passengers and 676,855 tons of freight carried. Roads (1939): 21,277 miles, including 7420 miles of dry-season roads. Shipping aggregating 2,272,412 tons entered the ports during 1938. Work was continued on improving the principal airports and construction was under way on various new airports.

**Government.** Finance (1939-40): The deficit for the year was estimated at £550,000. Nigeria, including the British Cameroons attached to the protectorate for administrative purposes, is under the control of a governor assisted by an executive council. There is a legislative council for the colony and the southern provinces of the protectorate. The governor has the power to legislate for the protectorate's northern provinces. Governor and Commander-in-Chief, Sir Bernard Bourdillon.

**History.** Following the collapse of France in June, 1940, military training of all British Europeans in Nigeria up to 40 years of age was made compulsory. Air-raid services were organized and a black-out instituted. A well-trained and equipped force of Nigerian troops was sent to Kenya to serve with South African and other British African units against the Italians in Italian East Africa. See EUROPEAN WAR under *African Campaigns*.

**NIGHTINGALE ISLAND.** See BRITISH EMPIRE under *St. Helena*.

**NITROGEN.** See CHEMISTRY, INDUSTRIAL; FERTILIZERS

**NLRB.** See NATIONAL LABOR RELATIONS BOARD.

**NOBEL PRIZES.** The Swedish *Aftonbladet* stated in October that no Nobel prizes would be awarded by the Committee during 1940 and that the prize money would be reserved for the follow-

ing year. The possibility of awarding the Peace Prize was virtually eliminated also, since the award is made by the Norwegian Parliament and Parliament had been dissolved as a result of the German occupation. The Peace Prize has been withheld eight times since the awards were initiated in 1901.

A *New York Times* dispatch from Stockholm (Oct. 13, 1940) cited Oslo rumors that the Norwegian Nobel Prize Committee's bank account, blocked by the Germans some time previously, would be seized permanently or might be transferred back to the Swedish Nobel Prize Foundation. The same dispatch reported rumors that the German and Norwegian secret police were examining prominent Norwegians responsible for the award of the 1938 Peace Prize to the imprisoned German pacifist, Carl von Ossietzky.

**NON-AGGRESSION PACTS.** See INTERNATIONAL LAW under *treaties* for a list. See also articles on the countries.

**NON-FEDERATED MALAY STATES.** Same as *Unfederated Malay States*. See under BRITISH MALAYA

**NORFOLK ISLAND.** See AUSTRALIA.

**NORTH AMERICA.** Excluding Mexico and Central America, the continent has an area of about 7,591,490 square miles and a population estimated at 142,300,000 on Dec. 31, 1938. See separate articles on ALASKA, CANADA, and its provinces, NEWFOUNDLAND, UNITED STATES, and the 48 States; also ARCHAEOLOGY, EXPLORATION, ETC.

**NORTH CAROLINA.** Area, 52,426 square miles; includes water, 3686 square miles. Population (U.S. Census), April, 1940, 3,571,623; 1930, 3,170,276. Charlotte (1940), 100,899; Raleigh (the capital), 46,897. The State's whole population gained (1930-40) 401,347; the rural population rose by 237,019, to 2,597,448; the urban (dwelling in places of 2500 or more) by 164,328, to 974,175.

**Agriculture.** Farmers harvested, in 1940, 6,462,000 acres of the principal crops. Tobacco, on 511,800 acres, gave 506,820,000 lb.; in value on the farm, about \$86,524,000. Corn, 2,418,000 acres, grew 44,733,000 bu. (\$32,208,000); cotton, 833,000 acres, 740,000 bales (\$35,150,000); tame hay, 1,148,000 acres, 975,000 tons (\$13,942,000); peanuts, 255,000 acres, 325,125,000 lb. (\$11,379,000); potatoes, 80,000 acres, 8,720,000 bu. (\$5,319,000); sweet potatoes, 74,000 acres, 7,104,000 bu. (\$5,328,000); wheat, 438,000 acres, 6,132,000 bu. (\$5,641,000); oats, 248,000 acres, 5,952,000 bu. (\$3,036,000). Farms numbered 278,276 in 1940 and averaged 67.7 acres.

**Manufactures.** North Carolina manufactured products to the yearly value of \$1,420,638,883 (1939); \$1,384,737,686 (1937). Related totals for 1939 follow (each accompanied by that for 1937 in parenthesis): 3223 (2896) establishments, employing 270,042 (258,771) persons for wages of \$199,158,957 (\$189,265,474), paid for material, etc. and contract work \$874,940,925 (\$908,903,243), and added to material by manufacture \$545,697,958 (\$475,834,443).

**Education.** For the academic year 1938-39 (latest for data below), inhabitants of school age (from 6 years to 21) were reckoned at 1,121,912. Pupils' enrollments in all public schools numbered 892,543; in elementary study, 698,520; in high school, 194,023. Year's current expenditure for public schools, \$30,459,626. Teachers and principals numbered 25,776; among these, the teachers received salaries averaging \$860.

**History.** North Carolina's economic situation continued fairly satisfactory despite disturbance to some elements of the industries in tobacco and textiles by reason of interrupted trade with Europe. The State did not welcome the presence of William Dudley Pelley, leader of the reputedly fascistic Silver Shirt movement, who became particularly conspicuous early in the year in connection with maneuvers at Washington having to do with the Dies Committee (q.v.). His extradition was sought in Washington, that he might be brought to North Carolina and punished for breach of parole. He was at the time under a suspended sentence of imprisonment imposed some years before on conviction for stock fraud; the authorities were said to regard his behavior as subversive and therefore not in accord with the terms of his parole.

The U.S. Supreme Court voided (December 23) the State's tax of \$250 on outside merchants' displays of goods for retail custom.

A committee of 34 historians and antiquarians undertook a study of the "Dare stones," a series of inscribed stones and rocks purporting to tell of the wanderings and fate of members of the lost colony of Roanoke, sent to the Carolina coast by Sir Walter Raleigh. Some of the stones had been collected at Brenau College in Gainesville; since the first report of such a stone in 1937 the number of the finds had mounted, according to accounts in the press, to 46. Dr. Thomas English of Emory University issued a statement for the committee, that the preponderance of evidence yet noted pointed to the stones' authenticity but that further study must precede a conclusion. Some of the finds were made by hunters or hikers. Others reportedly turned up in frequented spots, one in the foundation of a barn, having previously been part of a grist mill. Some appeared along the Chattahoochee River; thirteen, near the Saluda River in South Carolina. The series gave details of a romance-like wandering of Virginia Dare and other colonists, in the hands of Indians, of Virginia's becoming the wife of an Indian, and the birth of her Indian child. One purported to mark her grave. Many took the form of messages and clues for hoped-for searchers. Skeptics recalled unconvincingly frequent finds of seeming relics of early white wanderers in various parts of the country.

**Elections.** The popular vote for President (November 5) totaled 609,015 for Roosevelt (Dem.) and 213,633 for Willkie (Rep.). J. M. Broughton (Dem.), 608,744 votes, was elected Governor, defeating Robert H. McNeill (Rep.), 195,402 votes. Eleven Democrats, all incumbents with one exception, were elected U.S. Representatives.

**Officers.** North Carolina's chief officers, serving in 1940, were: Governor, Clyde R. Hoey (Dem.); Lieutenant Governor, Wilkins P. Horton; Secretary of State, Thad Eure; Treasurer, Charles M. Johnson; Auditor, George Ross Pou; Attorney General, Harry McMullan; Superintendent of Public Instruction, Clyde A. Erwin.

**NORTH DAKOTA.** Area, 70,837 square miles; includes water, 654 square miles. Population (U.S. Census), April, 1940, 641,935, 1930, 680,845. Bismarck, the capital, 15,496 (1940). While the State's whole population decreased (1930-40) by 38,910, the urban group (dwellers in places of 2500 or more) increased by 18,617, to 131,923, the rural group diminishing by 57,527, to 510,012.

**Agriculture.** Farmers harvested (1940) 16,917,000 acres of the principal crops. Wheat, the main crop, on 8,293,000 acres, bore 97,054,000 bu., esti-

mated as worth \$64,056,000 to the growers. Corn, 1,020,000 acres, gave 24,480,000 bu. (about \$12,240,000); barley, 1,754,000 acres, 28,064,000 bu. (\$8,139,000); potatoes, 172,000 acres, 18,920,000 bu. (\$7,190,000); oats, 1,592,000 acres, 33,432,000 bu. (\$6,352,000); flaxseed, 648,000 acres, 3,888,000 bu. (\$4,782,000); tame hay, 975,000 acres, 1,109,000 tons (\$4,048,000); rye, 752,000 acres, 9,776,000 bu. (\$2,933,000).

**Education.** For the academic year 1939-40 North Dakota's inhabitants of school age (from 6 years to 21) were reckoned at 195,611. The year's enrollments in all public schools numbered 139,629: in the elementary group, 105,734; and in high school, 33,895. The year's expenditure for public-school education totaled \$9,979,781. The teachers numbered 7361; their salaries averaged \$722 yearly.

**History.** The decline in the number of North Dakota's population between 1930 and 1940, as shown in the Census, revealed that one in ten of the rural population had been driven out by hard times. The figures did not of themselves necessarily point to an adverse future; for the decline, as commonly interpreted, had resulted from a combination of dry seasons and of unremunerative prices for consequent scanty crops in the early and middle thirties; a pair of afflictions not often to be faced together. North Dakota's rate of depopulation ran a little higher than that for the "dust-bowl" States as a whole; but the end of the droughty period had apparently checked emigration. There were even reported evidences of re-immigration of farmers.

A joint commission recommended (November 2) a plan of accord on use of water of the Souris or Mouse River, in Canada and North Dakota.

William Langer, after years of ups and downs in State politics, again became a dominant figure. He had been convicted of unlawful political practices in 1934 and removed from office as Governor; had won a reversal of his conviction; had been re-elected Governor in 1936; and had failed to win the Republican nomination for Senator in 1938, largely through the opposition of U.S. Representative William Lemke. In 1940 he ran again, seeking the seat of U.S. Senator Frazier, won the Republican nomination, and was elected Senator, November 5, by 100,647 votes, defeating William Lemke, who ran as an independent candidate, polling 92,593 votes, and Charles J. Vogel (Dem.), 69,847 votes.

At the general election (November 5), beside electing Langer to the U.S. Senate, the voters gave the State to Willkie (Rep.) for President, by 154,590 as against 124,036 for Roosevelt (Dem.); John Moses (Dem.) was re-elected Governor, defeating Jack A. Patterson (Rep.). Two Republicans were elected U.S. Representatives.

**Officers.** North Dakota's chief officers, serving in 1940, were: Governor, John Moses (Dem.); Lieutenant Governor, Jack A. Patterson; Secretary of State, James D. Gronna; Auditor, Berta E. Baker; Treasurer, John R. Omland; Attorney General, Alvin C. Strutz; Superintendent of Public Instruction, Arthur E. Thompson.

**NORTH EAST NEW GUINEA.** See AUSTRALIA under *Area and Population*.

**NORTHERN RHODESIA.** See RHODESIA, NORTHERN.

**NORTHERN TERRITORY.** See AUSTRALIA under *Area and Population*.

**NORTHWEST TERRITORIES.** The vast area in northern Canada, east of the Yukon, provisionally divided, for administrative purposes, into

the districts of Franklin (554,032 sq. mi.), Keewatin (228,160 sq. mi.), and Mackenzie (527,490 sq. mi.). Total area, 1,309,682 square miles; population (1939 estimate), 10,000, as against (1931 census) 9723 (including 4670 Eskimos and 4046 Indians). Fur trapping and mining are the chief occupations. The Eskimos were being trained to look after the reindeer herd which numbered 5000 head early in 1940. Mineral production (1939) was valued at \$3,248,777, of which radium and uranium products accounted for \$1,121,553, gold (51,914 fine oz.) \$1,876,224, and silver (483,874 fine oz.) \$195,911. Small amounts of copper, natural gas, and petroleum were produced. Fur production (1938-39) was valued at \$1,205,600 (\$1,311,627 in 1937-38). The whole area is governed from Ottawa by a territorial council consisting of a commissioner, deputy commissioner, and five councillors. Commissioner, Charles Camself.

**History.** The radium-bearing pitchblende deposits are at Great Bear Lake while some distance to the south on the shores of Great Slave Lake is the gold-mining district of Yellowknife which had a population of 1000 at the beginning of 1940. Development was continued in the Yellowknife field and many new deposits were reported.

**NORWAY.** A European kingdom occupying the western and northern part of the Scandinavian peninsula; occupied by Germany in 1940. The kingdom's sovereignty included Svalbard (Spitsbergen and adjacent islands) in the Arctic Sea, 240 miles distant from the Norwegian coast; also Norway asserted sovereignty over Jan Mayen Island in the Arctic Sea, uninhabited, and certain uninhabited areas in the Antarctic region. Capital, Oslo.

**Area and Population.** Covering an area of 124,587 square miles (land area, 119,148 square miles), Norway proper had 2,937,000 inhabitants in December, 1939, by official estimate; by latest census, 2,814,194 in 1930. Only 28 per cent of the population of 1930 were classed as urban, and females exceeded males by about 71,000. The birth rate, per 1000, approximated 16 for 1939; the death rate, 10.1. Populations (1930) of chief cities: Oslo, 253,124; Bergen, 98,303; Trondheim (Nidaros), 54,458; Stavanger, 46,780.

Svalbard's area, 24,294 square miles; population, mainly employees of coal mines, varies seasonally, the wintering population numbering 2316 in 1938-39. This area's product, coal, totaled 626,516 tons for 1938.

**Education and Religion.** School is compulsory for the young and literacy is virtually universal. In the academic year 1936-37, public elementary schools numbered 5751; their pupils, 357,793; support for these schools amounted to 64,331,000 kroner, of which the state paid 27,572,000 and local sources the remainder. Secondary schools numbered 149 (including 42 private schools); their pupils, 25,357. The University of Oslo provided higher education; it had 4229 students in 1939.

The Evangelical Lutheran Church, under the monarchy, was politically established. All religions were tolerated (but not the Jesuit order). Apart from Evangelical Lutherans, persons reporting religious affiliation in 1930 numbered 91,459: among them, 12,207 Methodists, 7788 Baptists, 3325 Adventists, and 2827 Roman Catholics.

**Production.** In normal times 29 per cent of the workers followed agriculture or forestry, 27 industry, 10 commerce, 9 transportation, 7 fishing and whaling, 5 professions and public administration. Production of the chief crops in 1939 was

thus estimated, in bu., except for hay: potatoes, 38,143,895; oats, 10,500,000; barley, 5,316,800; wheat, 2,480,000; hay, 2,537,395 tons. The value of all agricultural production of 1938 was estimated to exceed 500,000,000 kroner. The catch of fish, for 1938, attained about 86,101,000 kroner; of whales, 42,900,000 kroner. Manufacturing production attained some 1,890,000,000 kroner for 1938; mines produced, in estimated value, 180,741,000 kroner. An important part of the country's revenue was normally derived from the operation of its merchant fleet, partly in the country's own commerce and partly as a carrier for others' trade. Under the Norwegian flag at the outset of 1940 were 1590 steamships, making 1,758,000 gross tons, and 2737 motorships, 3,083,000 gross tons. The merchant fleet's earnings of 1938 grossed 697,000,000 kroner and 1939's, by estimate, 800,000,000 or more.

**Foreign Trade.** Imports of 1939 were valued at 1,361,835,000 kroner; exports, at 808,172,000. In 1938 Germany sent 219,781,000 kroner of the Norwegian imports and took 121,509,000 of the exports; Great Britain, 193,295,000 and 193,910,000 respectively.

**Finance.** For the fiscal year ended with June 30, 1940, ordinary revenue, as voted, totaled 539,074,000 kroner; expenditure, 511,309,000. Actual ordinary receipts and expenditures of fiscal year 1939, 590,377,000 and 485,788,000. Budget proposals had been drawn for the fiscal year 1941, shortly before the fall of the kingdom: they called for 660,694,000 kroner of current revenue and 674,088,000 of current expenditure, not to count charges of 129,562,000 on State capital and capital expenditure of 116,168,000. Public debt totaled 1,528,400,000 kroner on June 30, 1939; of the amount, foreign debt made 596,400,000. The unit of currency, the krone, made stable on Aug. 29, 1939, in terms of the U.S. dollar, stood thereafter at 4.4 kroner to the dollar. Previously held in stable relation to the pound sterling, its value in U.S. money averaged \$0.2327 for 1939 and \$0.2457 for 1938.

**Transportation.** Norway had about 2500 miles of railway lines in operation prior to German occupation of the country. A line of 122 miles' length, in central Norway, from Grong to Mosjoen, under construction previously, was reported to have been opened after the German conquest. The State had owned and operated most of the railways. They earned gross revenue of 88,096,000 kroner in the fiscal year 1939, against expenditures of 99,686,000. Paved highways (1939) totaled 25,699 miles. Civil aviation performed (1938) 448,629 miles of flight; furnished 1,472,000 passenger-miles of travel; and transported 260 metric tons of material; regular schedules of flight applied only to the months from May to September, inclusive. The Norwegian merchant marine was the fourth largest in the world; see under *Production*, above.

**Government.** The Constitution of May 17, 1814, as amended, vests executive power in the King acting through a cabinet responsible to the Storting (parliament). Legislative powers rest with the Storting of 150 members elected for four years by universal suffrage. The Storting divides itself into two sections of 38 and 114 members, called the Lagting and Odelsting respectively. Bills affecting the legal position of Norwegian subjects are considered first by the Odelsting, then by the Lagting, and if agreement is not reached, by the whole Storting. Constitutional amendments require a two-thirds vote of the whole Storting. All other bills are dealt with by the whole Storting. The compo-

sition of the Storting elected in October, 1936, was: Labor, 70; Conservatives, 36; Liberals, 23; Agrarians, 18; others, 3. Premier in 1940, Johan Nygaardsvold (Labor), heading a Labor Government. King in 1940, Haakon VII, who was elected by the Storting, Nov. 18, 1905.

### HISTORY

Despite Norway's strict adherence to its traditional policy of neutrality (see YEAR BOOK, 1939, p. 578), the kingdom was swept into the vortex of the European War in the spring of 1940, after narrowly escaping involvement in the Russo-Finnish conflict.

**Policy Toward Finland.** The Norwegian Government followed the same policy as Sweden with respect to the Russo-Finnish conflict (see EUROPEAN WAR under *The Finnish Campaign*; FINLAND and SWEDEN under *History*). It permitted contingents of Norwegian volunteers to fight for Finland. It authorized the sale of Norwegian war supplies to the Finnish Government and the transit of foreign volunteers, arms, and supplies across Norwegian territory to Finland. Carloads of clothing and food and additional funds were donated to the Finns by Norwegian relief organizations. These activities provoked a Soviet protest to the Norwegian Government on January 5, but Oslo denied that they violated Norway's obligations as a neutral.

The Oslo Government, however, on February 16 rejected Finland's appeal for aid from the Norwegian army, and early in March it refused repeated Anglo-French requests for permission to send troops to Finland across Norway. This stand was based on the German threat to intervene if Allied troops were permitted to land in Norway. The Norwegians also felt that the Allies were more interested in securing a position in Scandinavia for a flank attack upon Germany than in aiding Finland. Nevertheless the forced capitulation of Finland on March 12 as a result of the Norwegian and Swedish policies provoked strong criticism of the Oslo Government among some Norwegians. Terms of the Russo-Finnish peace treaty aroused fear of future Soviet military and economic penetration into Norway. There was at the same time strong resentment of the pro-Soviet role played by the small Communist movement in Norway. During February the Oslo press launched a campaign for suppression of the Communist party.

**Strains on Neutrality.** In his address to the opening session of the Storting on January 12, King Haakon declared the government would make every effort to defend Norway's neutrality and that military and naval defenses would be strengthened with that end in view. He called for higher taxes and additional loans to finance the defense program. On January 19 the Storting endorsed Premier Nygaardsvold's declaration of "absolute neutrality" and his statement that any attack upon the kingdom would be met by armed resistance.

Nevertheless infringements of Norway's neutrality by Germany and the Allies became more frequent. Systematic attacks upon neutral ships in the North Sea by Germany accounted for the loss of 55 Norwegian ships and 377 seamen from the start of the war to Mar. 21, 1940. During the first months of 1940 repeated protests were made to Berlin against the sinking of Norwegian ships and, in some cases, the machine-gunning of lifeboats from these ships by German planes. On March 11 the German Government gave assurances that every effort would be made to respect Norwegian

ships not sailing in Allied convoys, but additional sinkings occurred.

While no Norwegian ships or sailors were lost through Allied action, the British Government brought increased pressure to bear upon Norway to reduce the supplies reaching Germany through that country and curtail German naval and merchant shipping operations in Norwegian territorial waters. By entering territorial waters in the far north and hugging the Norwegian coast on their voyages southward to Germany, German ships, and especially freighters carrying iron ore from the Norwegian port of Narvik, were in many cases able to slip through the British blockade.

**The Altmark Incident.** On the night of February 16 the British destroyer *Cossack* entered Gjessingfjord (Joelsing Fjord) about 60 miles south of Stavanger on orders of the British Admiralty and boarded the German prison ship *Altmark* that was returning to the Reich through Norwegian territorial waters. Ten members of the *Altmark's* crew were killed or wounded in hand-to-hand fighting and 299 British sailors imprisoned in the hold were released and taken back to a British port. The rescued sailors had been captured from seven British merchant ships sunk by the German pocket battleship *Graf Spee* before its destruction on Dec. 17, 1939 (see YEAR BOOK, 1939, p. 246).

Germany immediately protested to Norway against this alleged violation of Norwegian neutrality, threatened reprisals, and demanded compensation for the German losses. The Oslo Government protested vigorously to Great Britain, asking the return of the *Altmark* prisoners and financial amends. The London Government declined, stating that it had no apologies to make. It charged that the *Altmark* was a war vessel operating illegally in Norwegian waters and asked the Norwegian Government for an explanation of its failure to discover the captives on board the ship when granting the *Altmark* clearance. The British and French governments threatened to police Norwegian waters to prevent their use by German warships, while London rejected a Norwegian proposal for arbitration of the *Altmark* case.

**Defense Measures.** The threatening attitude of both Germany and Great Britain led to the Copenhagen Conference of the Norwegian, Danish, and Swedish Foreign Ministers on February 25. A program for the joint defense of their neutrality was decided upon (see DENMARK under *History*). The Norwegian Labor Government, long one of the most pacifistic in Europe, speeded up military defense measures. The number of conscripts called to the colors was increased and the small navy expanded in an effort to patrol the coastal waters.

These measures were undertaken half-heartedly, however, and proved to be too late. On March 11 Norway concluded a war trade pact with Britain that further plugged the leaks in the Allied blockade of the Reich. Norway was allowed to import her pre-war tonnage on condition that the transshipment of oil, copper, and food to Germany was curtailed. The Allied Supreme Council meeting at the end of March apparently determined to try to prevent iron-ore shipments from Narvik from reaching Germany. German attacks on Norwegian shipping were intensified.

On April 6 Premier Nygaardsvold and Foreign Minister Halvdan Koht again announced their determination to carry on normal trade with all belligerents and to defend Norway's neutrality. Two

days later the British and French Governments stated that in reprisal for Germany's actions "flagrantly violating neutral rights in order to damage Allied countries" they had sown mines at three points within Norway's territorial waters. This barred Norwegian coastal waters to German ore ships and other vessels.

The Oslo Government immediately lodged a vigorous protest in London and Paris. Foreign Minister Koht in a statement to a special session of the Storting declared the Allied action to be an "open breach of international law" and called for the immediate removal of the mines.

**The German Invasion.** Fear of retaliation from the Reich was widespread throughout Scandinavia. Yet the Norwegian Government and people were taken completely by surprise when Hitler launched his sudden blow at their country on the night of April 8-9. Aided by "fifth column" elements in Norway—principally German "tourists," Norwegian Nazis, and some traitorous Norwegian army officers—and taking advantage of the unpreparedness and confusion of the Norwegian Government and people, the Germans conquered all of Norway south of Namsos by the beginning of May. On June 10 the last of the Allied expeditionary forces that had gone to Norway's aid was forced to evacuate Narvik, leaving the Germans in complete control of the kingdom. See *EUROPEAN WAR* under *The Norwegian Campaign* for a full account.

Some hours after the German invasion began, the German Minister in Oslo, Dr. Curt Brauer, called on Foreign Minister Koht at 5 a.m. He presented a memorandum from the German Government and a note setting forth various demands.

The memorandum was identical with that presented to the Danish Government under similar circumstances at about the same time (see *DENMARK* under *History*). It declared that the German invasion was "intended to secure Norway against a planned occupation of Norwegian bases with Anglo-French forces." It warned that all resistance would be crushed and urged that the Norwegian Government avoid resistance and afford all possible facilities to the German advance in order to avoid "completely useless bloodshed."

The accompanying note made 13 demands upon the Norwegian Government. It was requested to: (1) issue a proclamation asking non-resistance to the German occupation, (2) arrange for "loyal co-operation" between the Norwegian army and the German commanders, (3) hand over coastal fortifications and other needed military establishments undamaged to the Germans, (4) reveal the position of Norwegian sea mines, (5) institute "a complete blackout of the Norwegian districts . . . from the evening after the first day of occupation," (6) maintain "all means of occupation and intercourse, all intelligence services" undamaged and transfer them to the occupationary forces "to such an extent as might be necessary," (7) prohibit Norwegian warships, merchant ships, and airplanes to leave their ports and stations, (8) place Norwegian sea pilots and lighthouses at the disposal of the German authorities, (9) maintain the meteorological service for the benefit of occupationary troops and ban "all intelligence and postal service for abroad," (10) submit all intelligence and mail service to all Baltic States to German control and censorship, (11) arrange for German censorship of military news issued by the Norwegian press and radio stations and place radio

stations at the disposal of the German command for broadcasting announcements, (12) forbid the export to foreign countries of all goods required in wartime, and (13) issue all proclamations and orders under the above provisions in a cipher code unknown to Germany's enemies or at the discretion of the German commander-in-chief.

**Government Flees Oslo.** In presenting these demands, the German Minister emphasized the necessity for their immediate acceptance if German military operations were to be stopped. Foreign Minister Koht at once submitted the German terms to the Norwegian Cabinet, which had already assembled in the Foreign Office. In a short time Koht informed the German Minister his government had decided no independent country could accept such demands. Professor Koht reminded the Minister of Hitler's recent statement that a people who submitted to an aggressor without resistance did not deserve to exist. He added: "We will maintain and defend our independence."

This decision was followed during the early hours of April 9 by the flight of King Haakon, the Crown Prince, Crown Princess, government, and Storting from Oslo by special train to avoid capture by the Germans. They took with them all gold reserves and bank notes of the Norges Bank. At the same time a general mobilization order was issued. At 1 p.m. the train arrived at the little interior town of Hamar, which became the temporary provisional capital. At a secret session of the Storting held in the provincial theater at 6 p.m., the Nygaardsvold Government offered its resignation to the Storting and King but it was unanimously rejected. The government asked for and received full powers to negotiate with the German invaders and three additional Ministers were added to the cabinet to conduct peace negotiations.

**Failure of Negotiations.** While King Haakon was presiding over a meeting of the Council of State in Hamar that evening, news came that a German detachment was approaching. The King, Council of State, government, and Storting immediately moved some 20 miles eastward to the town of Elverum. There a telegram was received from the German Minister at Oslo inquiring whether the King would receive the Minister to discuss peace proposals. The Storting agreed to these discussions and appointed Foreign Minister Koht and three of its members to conduct them. Thereupon the Storting disbanded and most of its members crossed the border into Sweden.

During the night of April 9-10, word came that the German detachment that had occupied Hamar was advancing upon Elverum. The King and the members of the government with the exception of Professor Koht left, but the German force of some 200 men was repulsed west of the town by a hastily assembled group of soldiers and peasants. This skirmish fought in the early hours of April 10 forced the Germans pursuing the King and his government to withdraw to Hamar, along with other factors, served to prevent the impending capitulation of the government.

**The Quisling "Government."** Another reason for the failure of the peace discussions was the action of Major Vidkun Quisling, head of the small Norwegian Nazi party, in proclaiming himself head of the Norwegian Government on the night of April 9. Acting in collaboration with the German forces in Oslo, he broadcast a warning to all Norwegians to cease all opposition to the invaders and co-operate with them.

Quisling was head of the "fifth column" conspiracy among Norwegian Nazis and some military and civilian leaders whose treachery had aided the Germans in securing the surrender of key fortifications. In the name of the Norwegian Government, he issued orders for non-resistance to many loyal garrisons and commanders that added to the confusion of the kingdom's armed forces. Minister of Defense during 1931-33 and for many years a member of the Norwegian general staff, Quisling had close contacts in army circles but his political following was so small that he controlled not a single seat in the Storting.

When the German Minister finally made contact with King Haakon and Foreign Minister Koht in Elverum at 3 p.m. on April 10, he added to the 13 demands made on April 9 the requirement that the King should appoint Major Quisling as Premier and approve the men chosen by Quisling as cabinet ministers. The King, supported by Foreign Minister Koht, declared he could not appoint a government that did not enjoy the confidence of his people. The Foreign Minister, stating that the Nygaardsvold Government had expressed its willingness to resign, asked the German Minister if his government would not accept a friendly Norwegian cabinet composed of other persons. The Minister replied that Chancellor Hitler insisted on Quisling as Premier.

**Haakon Defies Invaders.** King Haakon agreed to submit the new German demand to the Nygaardsvold Government. He did so and later that evening the German Minister was informed by telephone that the King could not appoint Quisling Premier and that Norwegian resistance against the invasion would continue as long as possible. That same evening the government drafted a proclamation calling on the Norwegian people to fight and commenced organization of military resistance. It also ordered the arrest of Major Quisling and the members of his puppet government; of Col. Konrad Sundlo, commander of the Norwegian garrison at Narvik, who betrayed that port to the Germans; and various other Norwegian officials and officers guilty of treason.

Abandoning efforts to win the co-operation of the King and his government, the Germans now undertook to destroy them. Their fighting planes harried the fugitive Norwegian leaders from place to place, forcing them to conceal their whereabouts. At Trysil on April 11 the King and his government were subjected to a severe air bombardment. From Eastern Norway they later crossed the Dovre Mountains to join the Norwegian and Allied forces fighting to encircle Trondheim. There again they narrowly escaped capture by German motorized forces advancing on Dombås. British troops held off the Germans long enough to enable Haakon and his entourage to reach the Allied base at Aandalsnes. Upon the withdrawal of the Allied forces at the beginning of May, the King and his associates were transferred in a British destroyer to an unnamed port farther north within territory controlled by his government. From this region he continued to organize and direct Norwegian military operations.

**The German Administration.** Meanwhile the invaders had been consolidating their political as well as military control of the occupied sections of the kingdom. Apparently believing that Major Quisling was more of a liability than an asset, the German military commander replaced him as "Premier" on April 15 by Ingolf Elser Christen-

sen, the governor of Oslo Province. It was announced that the administration of occupied districts would be carried on by a governmental council that had affirmed its loyalty to the German military authorities. Under German direction, the puppet regime carried into effect the control measures listed in the German note of April 9.

Berlin announced on April 18 that King Haakon had recognized the Christensen regime in Oslo. But on April 19 the Norwegian Legation in Stockholm, Sweden, made public a proclamation issued by the Norwegian Government "somewhere in Norway," stating that the Christensen council was "not representing the will of the Norwegian people and has no legal base in any Norwegian law." It called upon all Norwegians to "assist in this struggle for liberty" and "make the Norwegian people masters of their own country."

This proclamation led Berlin on April 19 to sever relations with the Norwegian Government by asking the Norwegian Minister in Berlin to leave. On April 24 the Christensen Council in Oslo was ousted and "unrestricted German control" over the occupied areas of Norway was proclaimed in Berlin. Josef Terboven, Nazi district leader of Essen, Germany, and publisher of Field Marshal Hermann Goering's newspaper, was named Commissioner of the German-occupied districts in Norway. He was responsible solely and directly to Hitler.

This establishment of a "completely German" regime, similar to that imposed on conquered Poland, was said by Berlin authorities to be due to the action of King Haakon and his government in "placing themselves on the side of the Allies." This move followed Haakon's firm rejection of a message from the Christensen Council in Oslo asking him to urge the Norwegians to cease resisting German rule. It was accompanied by increased severity in the application of German political and economic control measures.

**War Declaration.** Throughout this period the German Government had maintained its original contention that it was acting solely to protect Norway against alleged Allied plans for invasion. On April 27, however, it abandoned this course, formally declared war upon Norway, and made public in Berlin through Foreign Minister von Ribbentrop documents said to have been captured in Norway and purporting to prove that Britain and France on April 6 and 7 had sent troops to invade Norway. The Norwegian Government, it was charged, had "aided and abetted" these plans to strike at the Reich through Scandinavia.

C. J. Hambro, president of the Storting, replied to these charges from Stockholm, Sweden, on April 28. He pointed out that most of the documents produced in Berlin were dated early in January when the Allies had publicly announced preparations to send troops and material to the aid of Finland through Norway and Sweden. Both countries refused to permit use of their territories for this purpose. As proof that Britain was unprepared for any landing of troops in Norway at the time of the German attack, he pointed to the absence of British warships when the Germans occupied Norwegian ports and the fact that "the first British landing parties came only nine days after German troops were solidly established on Norwegian soil."

He charged that the German Government had planned the invasion of Norway for months ahead of the attack and that German merchant ships that

had been lying in the principal Norwegian ports for four or five days previous to the invasion disgorged fully armed troops and military equipment on April 9. The Norwegian Government, he said, had gathered evidence proving that these ships had sailed from German ports more than a week before the Nazi blow fell on Norway.

Similar charges were made in a declaration issued by the Norwegian Government from its secret headquarters in Norway on April 29. This document also accused the invaders of violating all rules of international law. It declared German bombers had "devastated defenseless Norwegian villages and towns," that members of the Norwegian Government had personally witnessed German troops firing at civilians who took no part in the fighting, but that nevertheless "the war . . . will last until the usurper has been hurled out of the country and Norway again is free."

**Haakon Continues Resistance.** This determination survived the marked disillusionment and criticism aroused by the withdrawal of Allied troops from the Namsos and Aandalsnes and the accompanying surrender of some Norwegian forces in that region. On May 3 the Norwegian Government issued a communiqué declaring that the war must go on. On May 5 Foreign Minister Koht and the Norwegian Defense Minister arrived in London to consult with Allied representatives and announced that their government was preparing for a long war with the aid of the Allies. Additional Allied forces were sent to the Narvik front and a joint high command was appointed for operations in Norway with the Norwegian, Gen. Otter Ruge, as its temporary chief. The great Norwegian merchant fleet, all but one-sixth of which was said to have escaped German control, was placed at the disposal of the Allies for war purposes. Substantial Norwegian gold reserves, previously removed to London and New York, likewise were added to the Allied war chest.

Although some guerrilla bands continued to harass German occupant forces from mountainous regions and fighting continued at various points in Northern Norway, Chancellor Hitler on May 9 signaled the virtual termination of hostilities in Central and Southern Norway by granting amnesty to all Norwegian prisoners of war except professional soldiers.

Following the evacuation of Narvik, King Haakon and his government established their headquarters in London. On June 10 the government issued a proclamation announcing its withdrawal from Norway and its determination to carry on the struggle for Norwegian liberty. It declared the King, the President of the Storting, the government, and the commanders of the army and navy were united in this aim. The reorganization of the government by the appointment of new Ministers representing all of the established parties was undertaken the same day.

The Norwegian naval, military, and air forces were reorganized and rebuilt in Britain and Canada. The navy and particularly the great Norwegian merchant fleet, manned by 30,000 sailors, proved of vital assistance to the Allied war effort. Payments on American loans were continued by the government in exile.

**German Rule in Norway.** Shortly after Haakon's arrival in London, the German Commissioner for Norway demanded that those members of the Storting remaining in Norway repudiate the King and Premier Nygaardsvold's government. If

this was not done, he threatened to put the Norwegians under full Nazi control and administration. Under this threat, four members of the Presidential Board of the Storting appealed to Haakon to abdicate. The King formally refused in a statement issued in London July 8, declaring that to abdicate would be to "betray" his constitutional duties.

Commissioner Terboven attempted for three months to form a Norwegian Government that would be acceptable to both Berlin and the Norwegian people. Failing to enlist the co-operation of any responsible Norwegian leaders, he turned again to Major Quisling, who on September 25 was permitted to form a so-called National Council composed of 13 Norwegian Nazis and sympathizers. The other political parties, which on September 7 had merged in a united anti-Nazi front, were dissolved. At the same time, Terboven announced the abolition of the monarchy and of Parliament.

Quisling, with full German support, then set out to Nazify Norway by the methods developed in Germany. Secret police, concentration camps, censorship, arrests of all critics of the regime, attempted control of propaganda and of education and religion, and other repressive measures failed to break the mass resistance offered by the great majority of the people. There were riots, demonstrations, and boycotts against Quisling and his adherents. One Quislingist was murdered. The trade unions, teachers, and clergymen defied threats and violence designed to force them to accept the new regime. In December the members of the Supreme Court resigned in a body when Commissioner Terboven issued decrees intended to Nazify the judicial system.

Large-scale sabotage and espionage on behalf of the British became more troublesome to the German authorities, despite the execution of several Norwegians and repeated warnings to the populace. Meanwhile the food and commodity shortage became acute, primarily because reserve stocks of oil, raw materials, and foodstuffs had been shipped to the Reich. At the end of the year, the kingdom seemed on the verge of serious outbreaks.

**NORWEGIAN LITERATURE.** See SCANDINAVIAN LITERATURE.

**NOVA SCOTIA.** An eastern maritime province of Canada. Area, 21,068 square miles; population (1939 estimate), 554,000 compared with (1931 census) 408,219. Vital statistics (1939): 11,800 living births, 6321 deaths, and 4993 marriages. Chief cities (1931 populations): Halifax, the capital (59,275), Sydney (23,089), Glace Bay (20,706), Dartmouth (9100), New Glasgow (8858), Truro (7901), Sidney Mines (7769), New Waterford (7745), Amherst (7450), Yarmouth (7055). Education (1938): 138,746 students enrolled in all schools and colleges.

**Production.** The gross value of agricultural production in 1939 was \$28,803,000. In 1939 the value of all field crops from a total of 551,900 acres was \$12,659,000. Chief field crops (1939): Oats 3,325,000 bu., potatoes 101,650 tons, roots 150,000 tons, hay and clover 605,000 tons. Live-stock (1939): 240,000 cattle (including 118,000 milch cows), 144,000 sheep, 45,000 swine, 44,000

horses, and 1,256,000 poultry. Apple crop (1940): 1,500,000 barrels. Fur production (1938-39) was valued at \$601,800. The 1939 output of the forests (equal to 132,938 M cu. ft.) was worth \$7,475,200. Fisheries catch (1939): 141,050 tons with a marketed value of \$8,754,000, including cod \$2,305,000, lobsters \$2,011,000, haddock \$1,310,000, mackerel \$723,400, halibut \$596,800, herring \$405,000. During 1939 the fisheries employed 17,544 fishermen and 3272 persons in the fish curing and canning establishments.

Mineral production (1939) was valued at \$30,-746,200, including coal (7,051,176 tons) \$25,611,-271, gypsum (1,298,618 tons) \$1,340,830, gold (29,943 fine oz.) \$1,082,170, zinc (9,152,856 lb.) \$280,901, copper (1,269,179 lb.) \$128,086, silver (175,877 fine oz.) \$70,399, salt (47,885 tons) \$213,-029. Manufacturing (1938): 1102 factories, 16,810 employees, \$31,375,251 net value of products. On Nov. 30, 1939, there were 14,983 miles of roads, of which 900 miles were paved.

**Government.** Financial estimates (year ending Nov. 30, 1939): Revenue, \$12,126,105; expenditure, \$11,850,075. The King is represented by a lieutenant governor (appointed by the governor general in council) who is advised by a ministry, which is responsible to the house of assembly and resigns office when it fails to enjoy the confidence of that body. In the house of assembly there are 30 members (including those in the ministry) all elected for a five-year term by popular vote. Ten senators and 12 commoners represent Nova Scotia in the Canadian parliament at Ottawa. Lieutenant Governor, Frederick F. Mathers (appointed May 31, 1940); Premier, A. S. MacMillan (Liberal) who succeeded A. L. MacDonald when the latter became Dominion Minister of National Defense for Naval Affairs on July 8, 1940. See CANADA.

**NURSE-TRAINING.** See SCHOOLS.

**NYA.** See NATIONAL YOUTH ADMINISTRATION.

**NYASALAND.** A British East African protectorate. Land area, 37,374 square miles; population (1938), 1,679,977, including 1,676,382 natives. Chief settlements: Zomba, the seat of the government; Blantyre, the commercial capital; Limbe; Cholo; Lilongwe; Mlanje; Salima; Fort Johnston.

**Production.** Chief products: tobacco, cotton, tea, maize, coffee, rubber, rice, sisal, and tung oil. Livestock (1938): 247,089 goats, 234,708 cattle, 59,544 swine, 51,924 sheep. Trade (1939): total imports, £715,391; total exports, £823,823.

**Government.** Finance (1939): estimated revenue, £832,970; estimated expenditure, £850,940. Nyasaland is under the control of a governor, aided by an executive council. Laws are enacted by the Governor with the advice and consent of the Legislative Council. Governor and Commander-in-Chief, Sir Donald Mackenzie-Kennedy (appointed Feb. 24, 1939).

**History.** Preparing to take part in the defense of the British East African territories against a threatened invasion from Italian East Africa, the Legislative Council in mid-year, 1940, passed an ordinance making male British subjects and British-protected persons of European or Asiatic extraction between the ages of 18 and 55 liable for compulsory service. Compulsion did not apply to military service, for which only volunteers were accepted. Nyasaland volunteers participated in the campaign on the Kenya-Italian East Africa border during the latter half of the year. See EUROPEAN WAR under *Campaigns in Africa*.

The British Government during 1940 accepted recommendations for increasing the membership of

the Legislative Council of Nyasaland and including unofficial members in the Executive Council.

**NYLON.** See CHEMISTRY, INDUSTRIAL; TEXTILES under *Silk*.

**OATS.** The oats crop of 1940 in the United States was estimated by the U.S. Department of Agriculture at 1,235,628,000 bu., about a third more than the 1939 crop of 935,942,000 bu. and one-fifth larger than the 1929-38 average of 1,024,852,000 bu. The relatively high production total was due primarily to record or near record high acre yields over most of the Corn Belt. The acreage not harvested for grain, 3.8 per cent of the acreage planted, was considerably less than in 1939. The harvested acreage of 34,847,000 was about 6 per cent larger than that of 1939 and 6 per cent less than the 1929-38 average of 37,005,000 acres. Yield per acre averaged 35.5 bu. in 1940 and 28.4 bu. in 1939. Leading oats-producing States were: Iowa with 206,640,000 bu., Minnesota 180,795,000, Illinois 152,496,000, Wisconsin 96,793,000, Michigan 60,489,000, South Dakota 53,240,000, and Indiana 49,950,000 bu. The seasonal average price per bu. (preliminary) received by farmers was 29.1 cents and the estimated value of production was \$359,819,000 in 1940 compared to 31.1 cents and \$290,922,000 in 1939. See *Crop Production Table* under AGRICULTURE.

**OBITUARIES.** See NECROLOGY.

**OBSERVATORIES.** See the article on ASTRONOMY.

**OCCUPATIONAL DEATHS AND INJURIES.** See ACCIDENTS; LABOR LEGISLATION.

**OCEANIA, French.** The French possessions in the Pacific, comprising the main groups of islands, as follows: Society, Marquesas, Tuamotu, Leeward (Iles sous le Vent), and the Gambier, Austral, and Rapa. Tahiti (600 sq. mi.; pop., 19,-029 in 1936), of the Society group, is the principal island. Total area 1520 square miles; total population (Jan. 1, 1938), 45,000. Capital, Papeete (on Tahiti), 8456 inhabitants. Chief products (1939 exports in parentheses): copra (23,000 tons), vanilla beans (206 tons), phosphate rock (160,680 tons), and mother-of-pearl. Trade (1939): imports, 80,482,000 francs; exports, 63,536,000 francs (franc averaged \$0.0251 for 1939). Budget (1939): balanced at 27,560,000 francs. Dr. D. E. Curtin replaced Chastenet de Géry as governor Sept. 2, 1940, as the result of a plebiscite in which the supporters of Gen. Charles de Gaulle defeated those of the Vichy Government by 5251 votes to 18. See FRANCE under *History*.

**OCEAN ISLAND.** See BRITISH EMPIRE.

**OFFSET LITHOGRAPHY.** See NEWSPAPERS AND MAGAZINES; PHOTOGRAPHY.

**OHIO.** Area, 41,040 square miles, exclusive of the State's part of Lake Erie, but includes other water, 300 square miles. Population (U.S. Census), April, 1940, 6,907,612; 1930, 6,646,697. Cleveland (1940), 878,336; Cincinnati, 455,610; Columbus (the capital), 306,087; Toledo, 282,349; Akron, 244,791; Dayton, 210,718. The State's entire population gained (1930-40) 260,915, or 3.9 per cent. While the urban group (those in places of 2500 or more) rose by 105,615, or 2.3 per cent, to 4,612,986, the smaller rural population increased more rapidly, by 155,300, or 7.3 per cent, to 2,294,626. Thus 33.2 per cent of the population of 1940 was rural. Three among the six cities of more than 200,000 lost somewhat in population, but hardly more than might be ascribed to movement into suburbs; Columbus and Dayton made moderate gains, and Cincinnati gained just under 1 per cent.

**Agriculture.** Ohio's harvest of 1940, close to 11 years' average in extent, covered 10,191,000 acres. Corn, on 3,220,000 acres, produced 120,750,000 bu., \$79,695,000 in estimated value to the farmer. Wheat, 1,960,000 acres, bore 43,137,000 bu. (\$31,603,000, estimated); tame hay, 2,923,000 acres, gave a big crop of 4,241,000 tons (\$29,263,000); oats, 1,020,000 acres, 44,880,000 bu. (\$14,810,000); potatoes, 118,000 acres, 11,800,000 bu. (\$9,558,000); soy beans, 560,000 acres, 8,400,000 bu. (\$6,720,000); apples, 5,074,000 bu. (\$4,567,000); tobacco, 30,000 acres, 26,430,000 lb. (\$3,096,000). Farms numbered 233,783 in 1940 and averaged 93.7 acres.

**Mineral Production.** Ohio's production of its native minerals as stated in 1940 by the U.S. Bureau of Mines, amounted to \$104,812,531 for 1938. Of the total, coal provided nearly one-third; clay products and natural gas, about one-sixth each. The coal mines' output increased to some 19,632,000 tons for 1939, from 18,590,618 tons (value \$33,073,000) for 1938, and approximately 22,092,000 tons for 1940. The marketed production of natural gas totaled 35,257 millions of cu. ft. (1938); this total had a value of \$17,550,000 at the points of consumption. It came to only one-third of the natural gas consumed in the State, the greater part being imported. After years of gradually dwindling production, natural gas indicated a rising yield in 1939, a change attributed to better-than-average new wells, mainly in the Clinton sand formation. Ohio's clay products (other than pottery and refractories) totaled \$17,679,691 (1938). Producers' shipments of portland cement rose to 6,140,125 bbl (1939), from 5,258,603 (1938); by value, to \$8,233,817, from \$7,094,745. Producers disposed of 1,794,788 tons of salt (1939) as against 1,489,270 (1938); respective values, \$2,647,355 and \$2,562,620. The production of petroleum, 3,298,000 bbl., value \$3,860,000, for 1938, continued with slight diminution through 1939 and 1940; while relatively small, it included over 1,000,000 bbl. yearly of the Pennsylvania grade, higher in price. Ohio, the Union's chief producer of lime, totaled 1,106,250 short tons of lime (sold or used), for 1939; for 1938, 836,589 tons: value \$8,907,195 (1939) and \$6,658,853 (1938).

Apart from the exploitation of its own minerals, Ohio conducted long-established industries in the processing of minerals from elsewhere: particularly, the production of coke, pig iron, and steel. The yearly output of coke recovered to 6,135,949 net tons (1939) from 3,699,995 (1938); by value, to \$28,502,924, from \$18,413,808. In like manner furnaces' shipments of pig iron rallied to a yearly total of 7,249,172 gross tons (1939) from 4,186,217 tons (1938); by value, to \$147,154,864, from \$85,186,824. Likewise the output of open-hearth steel ingots and castings rose to 8,851,298 gross tons (1939) from 5,372,234 (1938).

**Manufactures.** Ohio's manufactured products totaled \$4,584,606,792 for 1939: \$5,099,816,893 for 1937. Other related totals for 1939 follow (each with that for 1937 in parentheses): 10,070 (9138) establishments, employing 598,392 (694,205) people for wages of \$812,676,444 (\$967,650,237), paid \$2,459,191,656 (\$2,793,189,697) for material, contract work, etc., and added by manufacture a value of \$2,125,415,136 (\$2,306,627,196). Ohio stood fourth highest in the Union, for value of manufactured products of 1939.

**Education.** Ohio's public schools reported, for the academic year 1939-40, 1,223,993 enrollments of pupils; this comprised 22,444 in kindergarten, 691,235 in elementary study, 93,727 in junior high

school, 392,308 in high school, 22,931 special students, and 1348 post graduate students. The year's expenditure for public-school education was estimated at \$106,000,000. The teachers numbered 41,378 in 1940; teachers' salaries averaged \$1600.44 for 1939.

**History.** The State's great industries producing or fabricating iron, steel, machinery, tools, and articles of rubber attained a high activity under the impulsion of demand created by the European war and by the Federal program of increasing armament. General business and construction improved conformably. The burden of supporting indigents at public cost diminished well below the levels that had become familiar. Most of the economic improvement came after the midyear: on October 21, for instance, the Wright Aeronautical Corporation started building at Lockland, near Cincinnati, works expected to pay \$20,000,000 in wages yearly.

**Legislation.** A special session of the Legislature met on June 17 and adjourned on the 20th. Being under Republican control, it dealt promptly with the matters put before it by Governor Bricker: further appropriation for poor-relief, increase of the maximum on old-age pensions to \$40 a month, separation of the National from the State ballots in the general election, and alteration of the State law on dependent children in conformity with new features of the Federal law. Old people entitled to the full pension were to get \$40 a month by an act becoming effective Jan. 1, 1941. Additional money was provided for the purpose. The change, encouraged by recent Federal increase to \$40 as the maximum toward which the Government would pay half, was also prompted by the desire to leave as little room as possible for the renewal of the Bigelow higher-pension agitation of 1939. The act segregating the National ticket from the State part of the ballot was advocated as a beneficent plan to discourage those voters who might otherwise vote a straight ticket to the neglect of proper attention to State candidates and issues; the Democratic members, who might be expected to think that the prestige of their party's National ticket would waft a good many votes to Democratic State candidates, opposed the change without avail. Local governments got the authority to fund deficits that they had incurred before 1940 through their appropriations for poor-relief.

**Administration and Courts.** The incoming Republican government of the State, the year before, had done some close figuring to bring down appropriations. There arose question, before the special session, whether it had provided enough to see the State through the biennium. State's Auditor Ferguson, a Democrat, refused late in May to allow certain further current payments of State money; it would take an overdraft of \$4,000,000, he declared, to pay all obligations and vouchers outstanding; Governor Bricker notified Ferguson that unless the required payments were made a mandamus against Ferguson would be sought; payments were thereafter put through. President Roosevelt's unexpected veto of an act of Congress to make good to Ohio the payments for October, 1938, which the Social Security Board had withheld because of doubt of the workings of the State's old-age pensions as then administered, left the State government a loser by the amount that it had met in place of the Federal government. The veto of the Federal Rivers and Harbors bill put into abeyance some of the plans for works to restrain floods in Ohio.

Among decisions of the State Supreme Court, one denied reinstatement to a State employee, on the ground that his original appointment had been irregular, and thus cast doubt on the security of several thousand jobs bestowed without recourse to civil service; another decision, upholding a lower court, required members of the Legislature of 1936 to restore to the State about \$27,000 that they had individually collected in allowances, by mileage, for imaginary travel between their homes and the capital on the occasions of "constructive" meetings, between adjournments, that never actually assembled; a third decision, rendered in September, refused Communists' demand that, though their petition to the Secretary of State had lacked the number of signatures required by statute, the Communist nominees should be designated on the November ballot.

**Municipal Affairs.** The troubles that *Cleveland* had had in 1939 in providing for its numerous dependents on poor-aid did not return on any similar scale in 1940; Cuyahoga County having created (December, 1939) a special tax on property, took up its share of the city's remaining burden. *Cincinnati's* City Council approved a new street-railway and bus franchise running for 25 years, leveling all fares to a uniform rate for travel within the city, and requiring the giving of transfers universally between lines, at points of contact; a decision of the State Supreme Court, denying a plea to the contrary on behalf of City Manager Sherrill, approved an order to compel him to sign and execute contracts for two housing projects, Winton Terrace and English Woods. *Toledo's* supply of gas for fuel was cut short early in February by a strike of a C.I.O. organization among the men operating the gas works. See AQUEDUCTS; FIRE PREVENTION; WATER WORKS AND WATER PURIFICATION.

**Elections.** At the general election (November 5) the popular vote for President gave Roosevelt (Dem.) 1,733,139 and Willkie (Rep.) 1,586,773.

Harold H. Burton (Rep.), the Mayor of Cleveland, was elected U.S. Senator, to succeed Vic Donahey, who had refused to seek a Democratic renomination; the defeated Democratic nominee was John McSweeney. John W. Bricker (Rep.); 1,825,312 votes, was re-elected Governor by a great plurality of more than 350,000 over ex-Governor Martin L. Davey (Dem.), 1,460,653. In spite of Bricker's strength the Democrats re-elected two minor officers of the State (one of them Auditor Joseph T. Ferguson, who had controverted Bricker on State finances); increased the Democratic share of the U.S. Representatives by 4, to 12 or an even half, and reduced the Republican majorities in both houses of the State Legislature.

**Officers.** The chief officers of Ohio, serving in 1940, were: Governor, John W. Bricker (Rep.); Lieutenant Governor, Paul M. Herbert; Secretary of State, Earl Griffith (died) and George M. Neffner (successor); Auditor, Joseph T. Ferguson; Treasurer, Don H. Ebricht; Attorney General, Thomas J. Herbert; Director of Education, E. N. Dietrich.

**OIL.** See PETROLEUM. For cottonseed oil, see COTTON.

**OKLAHOMA.** Area, 70,012 square miles; includes water, 643 square miles. Population (U.S. Census), April, 1940, 2,336,434; 1930, 2,396,040. Oklahoma City, the capital (1940), 204,424; Tulsa, 142,157. The decline (1930-40) of 59,606 in the State's population occurred in the rural group, which diminished by 117,588, to 1,456,771, whereas

the urban population (those in places of 2500 or more) increased by 57,982, to 879,663.

**Agriculture.** Oklahoma's harvest of 1940 covered 13,208,000 acres. Cotton, on 1,846,000 acres, grew 805,000 bales, \$35,822,000 in estimated value to the producers. Wheat, on 3,885,000 acres, 56,332,000 bu. (\$34,926,000) nearly equaled cotton in estimated value. Corn, 1,877,000 acres, made 40,356,000 bu. (\$21,792,000); grain sorghums, 1,560,000 acres, 17,160,000 bu. (\$8,408,000); oats, 1,403,000 acres, 32,269,000 bu. (\$8,390,000); tame hay, 680,000 acres, 983,000 tons (\$6,488,000); barley, 340,000 acres, 5,780,000 bu. (\$2,196,000); potatoes, 34,000 acres, 2,550,000 bu. (\$1,556,000).

**Mineral Production.** Oklahoma's production of its native minerals, as stated in 1940 by the U.S. Bureau of Mines, totaled \$272,860,078 for 1938; this lacked nearly \$95,000,000 of the previous year's aggregate. Petroleum contributed more than three-fourths of the total; natural gas and gasoline derived therefrom, most of the remainder. The production of petroleum, continuing a decrease already evident in 1938, fell to 160,072,000 bbl. for 1939, and to 155,952,000 for 12 months of 1940, from 174,994,000 bbl., in value \$209,500,000, for 1938. The Seminole district, by reason of increasing production, surpassed and largely offset the declining Oklahoma City field (long the State's chief producer of petroleum) in 1940. While the booming production of Illinois, hurting Oklahoma's market, tended to discourage Oklahoman drilling operations, numerous wells, driven nevertheless in 1939, fell short of restoring reserves of petroleum for future production.

Natural gas produced and delivered to consumers totaled 263,164, million cu. ft. for 1938; by value at points of consumption, \$27,391,000; the domestic and commercial use of natural gas was reported to have made a moderate increase in 1939. The production of gasoline from natural gas decreased to 434,800,000 gal., approximately (1939), from 468,499,000 gal., value \$14,373,000 (1938). Zinc in ore mined yearly in the State rose to 158,000 tons, valued at \$20,450,000 (1940), from 140,379 tons (1939), \$14,599,416, and 112,924 tons, \$10,840,704 (1938). Lead, likewise in ore, increased to 27,720 tons (1939), from 21,004 tons, value \$1,932,368 (1938), the coal output was 1,613,000 tons for 1940, 1,178,000 for 1939, and 1,178,000 tons (valued at \$2,947,000 for 1938).

**History.** Governor Phillips waged strenuous opposition to the Federal construction of the Denison Dam, in the Red River, and the Grand River Dam, near Disney in the northeastern part of the State. The Denison Dam, the greater enterprise of the two, was to generate hydroelectric power to the potential gain of Dallas and Fort Worth, Tex.; and it was to flood a great acreage of good farming land in Oklahoma without apparent equal advantage to that State. Oklahoma applied to the U.S. Supreme Court for an injunction to restrain the Secretary of War from proceeding with construction at Denison; the Court refused to entertain the suit (February 12), and this cleared the way for the Army Engineers to let a contract in April for the main earthen embankment. But in October a Federal 3-judge court undertook to hear Oklahoma's suit to stop the Denison undertaking.

Against the Grand River Dam enterprise, a \$20,000,000 project financed by the PWA, under an agency entitled the Grand River Dam Authority and wholly within Oklahoma, the Governor proceeded in March by posting a force of the National Guard at the site and getting a State court's in-

junction against completing the dam. The Authority in turn sued out a Federal injunction against the Governor's keeping the troops posted and against the continuance of the State court's injunction. The dam was then quickly completed and began to flood land before settlement of claims, which the Governor championed, for indemnity to the State on account of its loss of highways to be submerged.

In *Oklahoma City* the activity of Communists moved the authorities to take steps against them. The City Manager and City Council denied them, in March, the use of the Municipal Auditorium for their meetings; the local secretary of the party was found guilty, in October, of criminal syndicalism, a verdict carrying 10 years' prison and a fine. See COMMUNISM.

**Elections.** The popular vote for President (November 5) totaled 474,313 for Roosevelt (Dem.) and 348,872 for Willkie (Rep.). Eight Democrats and one Republican were elected U.S. Representatives. There was no election of Governor or U.S. Senator.

**Officers.** Oklahoma's chief officers, serving in 1940, were. Governor, Leon C. Phillips (Dem.); Lieutenant Governor, James E. Berry; Secretary of State, C. C. Childers; Auditor, Frank C. Carter; Treasurer, Carl B. Sebring; Attorney General, Mac Q. Williamson; Superintendent of Public Instruction, A. L. Crable

**OLD-AGE ASSISTANCE, INSURANCE, AND PENSIONS.** See LABOR LEGISLATION; RAILWAYS under *Railroad Retirement Board*; RELIEF, SOCIAL SECURITY BOARD; also, COLORADO, INDIANA, OHIO under *History*.

**OMAN.** See ARABIA

**ONTARIO.** A Canadian province. Area, 412,582 square miles, including 49,300 square miles of fresh-water area. Population (1939), 3,752,000, as against (1931 census) 3,431,683. Vital statistics (1939): 64,000 living births, 37,502 deaths, and 34,657 marriages. Chief cities (1931 populations): Toronto, the capital (631,207), Hamilton (155,547), Ottawa, the capital of Canada (126,872), London (71,148), Windsor (63,108). Education (1938): 778,364 students enrolled in schools and colleges of all kinds.

**Production.** The gross value of agricultural production in 1939 was \$365,614,000. Field crops covered an area of 9,086,600 acres in 1939 and were valued at \$149,672,000. Chief field crops (1939): Wheat 23,821,000 bu., oats 86,639,000 bu., barley 16,600,000 bu., mixed grains 35,662,000 bu., corn for husking 8,097,000 bu., potatoes 362,350 tons, roots 1,051,800 tons, hay and clover 4,682,000 tons, alfalfa 1,568,000 tons, fodder corn 3,545,000 tons, sugar beets 343,000 tons. Livestock (1939): 2,488,000 cattle (including 1,183,000 milch cows), 1,546,000 swine, 847,000 sheep, 559,500 horses, 22,841,000 poultry. Apple crop (1940): 707,300 barrels. Fur production (1938-39) was worth \$2,527,700. Forestry output (1938) was equivalent to 576,278 M cu. ft. of standing timber and was worth \$34,797,120. Fisheries (1939): 16,871 tons of fish valued at \$3,007,300.

Gold (3,168,623 oz.) and silver (577,864 oz.), valued at \$122,232,970, were produced during 1940 from 11,687,412 tons of ore milled.

Mineral production (1939) was valued at \$232,519,948, including gold (3,086,076 fine oz.) \$111,533,873, nickel (226,105,865 lb.) \$50,920,305, copper (328,429,665 oz.) \$32,637,305, platinum (148,877 fine oz.) \$5,221,712, palladium, rhodium, iridium (135,402 fine oz.) \$4,199,622, silver (4,689,422 fine

oz.) \$1,898,653, cobalt (732,561 lb.) \$1,213,454, natural gas (11,966,581 M cu. ft.) \$7,261,928, salt (370,843 tons) \$2,200,189. Manufacturing (1938): 9883 factories, 311,274 employees, \$757,620,632 net value of products.

**Government.** Finance (1939-40): Revenue and expenditure were expected to show a deficit of \$4,444,929. Budget (1940-41): Ordinary revenue \$99,891,361, ordinary expenditure \$99,535,122. The King is represented by a lieutenant governor (appointed by the governor general in council) who is advised by a ministry, which is responsible to the legislature and resigns office when it fails to have the confidence of that body. There are 90 members (including those in the ministry) in the legislative assembly, all elected for a five-year term by popular vote. At the provincial general election of Oct. 6, 1937, there were elected 64 Liberals, 23 Conservatives, and 3 others. Twenty-four senators (appointed for life) and 82 commoners represent Ontario in the Dominion parliament at Ottawa. Lieutenant Governor, Albert Matthews; Premier, Mitchell F. Hepburn (Liberal). See CANADA under *History*.

**ORCHESTRAS.** See MUSIC; RADIO.

**OREGON.** Area, 96,699 square miles; includes water, 1092 square miles. Population (U.S. Census), April, 1940, 1,089,684; 1930, 953,786. Portland had (1940) 305,394; Salem, the capital, 30,908. The State's population increased (1930-40) by 135,898, or 14.2 per cent. The urban (dwellers in places of 2500 or more) total rose by 41,929, to 531,675; the rural total rose by 93,969 to 558,009.

**Agriculture.** Oregon harvested, in 1940, 2,625,000 acres of the principal crops. Wheat and tame hay each occupied somewhat under one-third of this total. Wheat, on 850,000 acres, made 17,184,000 bu. (estimated value to the growers, \$11,513,000); tame hay, 823,000 acres, came to 1,532,000 tons (\$11,337,000). Among other leading crops: hops, 19,600 acres, produced 19,992,000 lb. (\$5,152,000); potatoes, 46,000 acres, 8,510,000 bu. (\$4,936,000); pears, 4,418,000 bu. (\$3,093,000); apples for market, 3,160,000 bu. (\$2,370,000); oats, 318,000 acres, 7,950,000 bu. (\$2,782,000); corn, 60,000 acres, 1,860,000 bu. (\$1,414,000).

**Mineral Production.** Oregon's yearly production of its own minerals (\$7,536,091 for 1938) consists—except for the stone, sand, and gravel for such uses as ballast and concrete—mainly of gold; with the gold come subordinate totals of silver and other metals. Gold in the material mined yearly rose to 112,700 fine oz., for 1940 (preliminary estimate), from 93,372 oz. for 1939; by value, to \$3,944,500, from \$3,268,020. Silver and a little copper and lead, virtually all from the gold ore, were valued at some \$149,000 for 1940. Oregon's production of mercury, 4592 76-lb. flasks (value, \$477,293) for 1939, came to one-fourth of the Union's output; in 1940 a strong demand for mercury in the war-serving industries and the fruition of additional development at the Bonanza mine in Douglas county worked together to bring about sharp rises in monthly output.

**Education.** For the academic year 1939-40, Or-

egon's inhabitants of school age (from 4 years to 19, inclusive) were reckoned at 264,743. The year's enrollments of pupils in all public schools numbered 205,928; this comprised 142,871 in elementary study and 63,057 in high school. Outside of these totals, 10,967 enrollments of other sorts were reported. The year's expenditure for public-school education, except some of that connected with service of debt, amounted to \$18,581,108. The teachers numbered 8057; their salaries for the year averaged \$1333.73.

**History.** The State Supreme Court, accepting the precedent set by the Federal Supreme Court earlier in the year as to laws restricting picketing, rendered a decision late in October declaring the State's law of 1938 for the regulation of the conduct of labor organizations to be unconstitutional in its vital provisions, the prohibition of unrestrained picketing and of industrial boycotts. Oregon's law had been reputed the most thoroughgoing effort on American statute books to limit violence and similar excesses in connection with the action of labor organizations against employers. The overthrown act had been adopted in a referendum by 197,771 votes to 148,460. The C.I.O., A.F.L., and railroad-employees' brotherhoods had all sought to bring about its termination. Its operation had mitigated violence and economic harm but had by no means done away with strikes themselves. One of the extensive strikes that checkered the career of the shipping business of the Pacific Coast was in progress at the time, interrupting the movement of lumber from the Pacific Northwest, wanted for the Army's cantonments.

The White House announced (August 24) that a single agency, at Portland, would thereafter manage the sale of hydroelectric power from both the great Federal generating works on the Columbia River—at Bonneville and at Grand Coulee.

**Elections.** The popular vote (November 5) for President totaled 258,415 for Roosevelt (Dem.) and 219,555 for Willkie (Rep.). The incumbent U.S. Representatives (2 Rep., 1 Dem.) were re-elected. No election for Governor or for U.S. Senator fell due.

The popular vote rejected 9 submitted proposals, of which 5 would have amended the State's constitution and 4 would have made statutes. One of the defeated proposals would have permitted certain commercialized games of chance. Another would have legalized some sorts of private sale of liquor.

**Officers.** Oregon's chief officers, serving in 1940: Governor, Charles A. Sprague (Rep.); Secretary of State and Auditor, Earl Snell; Treasurer, W. E. Pearson; Attorney General, I. H. Van Winkle; Commissioner of Labor, C. H. Gram; Superintendent of Public Instruction, Rex Putnam.

**PAINTING.** In November the Art Section of the Public Buildings Administration, Federal Works Agency, made it known that \$9000 was available for the purchase of water colors, at \$30 each, for the decoration of Marine Hospitals, especially that for lepers at Carville, La. Ten thousand paintings in this medium were submitted by artists throughout the country at their own expense, many by well-known painters.

Several competitions were held by the Federal Government for mural paintings to be placed in public buildings, and works previously commissioned were completed and placed. Among the former mention should be made of the competition for murals for the new Social Security Building, Washington, D.C.; 375 painters competed for this \$19,980 contract and Ben Shahn of New Jersey was declared the winner. With the latter should be included twenty large murals by Maurice Sterne, depicting "The Struggle for Justice," purposed for the library of the Department of Justice Building, Washington, and shown in the Fine Arts Building, New York, early in the year. Also a series of twelve murals, "Life in Rhinebeck County" (New York) by Olin Dows, for the Rhinebeck Post Office, which likewise had a first showing in New York City.

As a WPA Art Project Edward Laning produced four handsome murals representing important stages in "The Story of the Recorded World" for the main hall on the third floor of the Public Library, New York.

Thornton Oakley completed a very distinguished series of six mural paintings representing the development of science from the days of alchemy to those of Benjamin Franklin, for the auditorium of the Franklin Institute, Philadelphia. For Penn State College, Henry Varnum Poor executed a large mural representing the historic "Land Grant." A number of murals depicting Indian life by Indian artists in traditional Indian style were given permanent placement in the cafeteria and recreation room of the Department of the Interior. Jose Clemente Orozco, of Mexico, executed during the summer of 1940 a huge mural in six panels representing a "Dive-Bomber and Tank," dread instruments of present warfare, in the Museum of Modern Art, New York.

The Edwin A. Abbey Memorial Scholarship for Mural Painting was awarded for the first time on Nov. 15, 1940. Founded in memory of the great American painter and illustrator, this award is open to art students under 25 in this country and Great Britain. Through grants from the Carnegie Corporation of New York an exhibition of studies for mural paintings entered in the 48 States Competition conducted by the Division of Fine Arts, P.B.A., after being shown in the Whitney Museum, New York, was sent during the summer on a circuit of cities in Canada, and later on a two-year circuit of museums in this country.

Death took heavy toll among American painters in 1940. Among those whose notable careers were thus ended were Ernest Lawson, Charles H. Woodbury, Jerome Myers, Harry W. Watrous, F. Luis Mora, Jonas Lie, Frederick J. Waugh, Henry Rankin Poore, Ellen Day Hale, Ernest Peixotto, Giovanni Battista Troccoli, and Fred Wagner. (See also ART.)

LEILA MECHLIN.

**PAINTS.** See CHEMISTRY; CHEMISTRY, INDUSTRIAL. For sales, see BUSINESS REVIEW.

**PALAU.** See JAPANESE PACIFIC ISLANDS.

**PALESTINE.** A territory on the east coast of the Mediterranean, administered by Great Britain under the mandate of the League of Nations since Sept. 29, 1923. Capital, Jerusalem.

**Area and Population.** Area, 10,429 square miles; population (Dec. 31, 1939), 1,435,145 permanent residents, of whom 60 per cent were Moslems, 31 per cent Jews, and 8.2 per cent Christians. The net increase by births and immigration since

the 1931 census was 468,384, divided as follows: Jews, 270,851 or 155.1 per cent; Moslems, 167,433 or 24.2 per cent; Christians, 28,051 or 31.6 per cent. United States citizens in Palestine on Jan. 1, 1940, numbered 8500. About 24,000 Jewish refugees were estimated to have entered Palestine during 1940. Estimated populations of the chief cities in 1939 were: Tel-Aviv, 130,300 (all Jews); Jerusalem, 129,800; Haifa, 104,800; Jaffa, 77,400; Nablus, 19,900; Gaza, 19,900; Hebron, 19,000.

**Education.** In 1937-38 there were 402 public schools for Arabs, with 49,300 pupils (mostly Moslems); 184 private Moslem schools, with 14,052 pupils; 622 Jewish schools, with 71,376 pupils; 193 Christian schools, with 24,046 pupils. The Hebrew University at Jerusalem had 733 students; Hebrew Technical Institute, Haifa, 499.

**Production.** Agriculture is the main occupation, although manufacturing is rapidly growing in importance. The chief crop is citrus fruit (1938-39 exports, 15,310,436 cases valued at £P4,370,078). Because of the war, exports declined to less than 7,000,000 cases in 1939-40. Yields of other leading crops were (1939, in metric tons): Wheat, 89,200; barley, 78,000; corn, 6200; potatoes, 10,400; sesamum, 3800; olive oil, 3000. The output of potash in 1939 was 63,527 tons; refined bromine, 589 tons; cement, 112,350 tons; salt, 9000 metric tons (1938).

There were 5606 Jewish industrial enterprises in 1939 with an annual output valued at just over £9,000,000 (sterling), a capital investment of £11,637,000, and 106,500 horse power. Chief manufactures: Clothing, textiles, leather, timber products, metals and machinery, printing and paper, food, chemicals, cement. Olive oil, soap, and wine are other products. A large oil refinery at Haifa began production early in 1940.

**Foreign Trade.** Excluding military stores, imports in 1939 totaled £P14,632,822 (£P11,356,963 in 1938) and exports £P5,117,769 (£P5,020,368). Re-exports were valued at £P419,347 (£P762,649 in 1938) and transit trade at £P549,872 (£P671,915). Of the 1939 imports, the United Kingdom supplied £P2,391,250; United States, £P1,953,457; Germany, £P1,621,929; Syria, £P1,355,203; Rumania, £P1,200,217. Exports went mainly to the United Kingdom, £P2,440,098; Netherlands, £P452,098; Syria, £P389,223.

**Finance.** Budget results for the fiscal years 1938-39 and 1939-40, respectively (in Palestine pounds): Revenue, 5,940,000 and 6,768,000; expenditure, 5,690,000 and 6,005,000; surplus, 250,000 and 763,000. The figures for revenue include grants-in-aid from the British Government totaling £P1,700,000 in 1938-39 and £P2,132,000 in 1939-40. The budget expenditure authorized for 1940-41 was £P8,858,000, including £P2,000,000 for the construction of police posts throughout the country. Palestine pound (£P) = £1 sterling.

**Transportation, etc.** With about 328 miles of line, the railways in 1939 carried 912,458 tons of freight and 746,162 passengers with gross revenues of £P533,952. The deficit for the fiscal year 1938-39 was £P282,000. Highways (1939), 2201 miles, including the Palestine section of the newly completed road from Haifa to Baghdad. Palestine's position as an important stopping point for British, Dutch, Egyptian, Polish, and Italian air lines was affected during 1939 and 1940 by the extension of the European War. Construction of permanent buildings at the new Lydda airport was completed late in 1939. A total of 1971 steamers of 5,201,473 tons entered Palestine ports during 1938.

**Government.** The government is administered

by a High Commissioner (Sir Harold Alfred MacMichael assumed office Mar. 1, 1938), who is appointed by the British Crown and assisted by executive and advisory councils. Commander-in-Chief of the British forces in Palestine and Trans-Jordan, Lieut. Gen. Philip Neame, who assumed command Aug. 6, 1940. The Jewish, Moslem, and Christian communities have autonomous control of their religious, cultural, and communal affairs. Official languages, English, Arabic, Hebrew.

#### HISTORY

The first weeks of 1940 were marked by the continuance of the peaceful Arab-Jewish relations established late in 1939 as a result of the crushing of the Arab revolt and the rallying of both Arabs and Jews to the British cause in the European War. The severe economic depression brought about by the war led Arab and Jewish citrus fruit growers to unite in seeking assistance from the British authorities. There was similar co-operation between the two races in the organization of air raid precautions in Haifa and in many other directions. However neither Arabs nor Jews withdrew from their opposing positions on the fundamental issues of Jewish immigration, land settlement, etc., which led the British Government to adopt the program set forth in the White Paper issued May 17, 1939 (see YEAR BOOK, 1939, p 591).

**Land Sales Restricted.** This period of calm was broken when the British Government on Feb 28, 1940, promulgated regulations severely restricting Jewish land purchases from Arabs in most of Palestine. Applying one of the cardinal principles of the 1939 White Paper, the regulations divided the mandated territory into three zones. In the first, comprising municipal areas and a strip of coastal plain some 50 miles long, the Jews retained complete freedom to buy land. In the second zone, including the fertile valleys of Esdraelon and Jezreel and other territory, Jews and other non-Arabs were forbidden to acquire land except to improve irrigation facilities; to enable the division into lots of land held jointly by Jews and Arabs; and to encourage plans for special joint Arab-Jewish land development schemes approved by the British High Commissioner. All land sales to Jews were barred throughout the third zone, comprising the hill country and certain parts of the Gaza and Beersheba subdistricts, where according to the British "the land available already is insufficient for the support of the existing population."

**Jews Protest Regulations.** The British regulations were greeted with approval by the Palestine Arabs and their supporters in other Arab and Moslem countries. They provoked violent protests from the Jews in Palestine and elsewhere and from their supporters in the British Parliament. The Jewish Agency declared the regulations made "a mockery of the obligation placed upon His Majesty's Government by the mandate to encourage close settlement by Jews on the land and would discriminate against Jews on the grounds of race and religion." Labor spokesmen in the British Parliament demanded a vote of censure against the government on the ground that its Palestine policy favored the Arabs over the Jews and flouted the authority of the League of Nations. They held the regulations should not have been promulgated except with the prior consent of the League Council. There was also criticism be-

cause the government had acted when political conditions in Palestine appeared relatively quiet and when thousands of persecuted Jews were seeking a refuge in the Holy Land.

Malcolm MacDonald, Secretary of State for Colonies, replied before the House of Commons on March 6. He pointed out that all the commissions that had studied the Palestine land problem had recommended restricting Arab land sales to prevent the development of a large group of landless Arabs. He said that immediate action was necessary to check "a growing unrest in the Arab villages, and a growing suspicion that His Majesty's Government were not sincere in their professions that they would protect the interests of the Arab cultivators, peasants, and laborers . . ." The land regulations were not only morally right, he continued, but were necessary to prevent a revival of Arab outbreaks which would have adverse repercussions throughout the Arab and Moslem world at a time when Britain was engaged in a life and death struggle with Germany. The Labor motion of censure was defeated in the House of Commons on March 6, 292 to 129.

Meanwhile in Palestine the announcement of the land sale regulations had provoked a one-day Zionist general strike and wide-spread Jewish demonstrations marked in Jerusalem, Tel-Aviv and other cities by serious disorders. After 2 persons were killed and some 300 injured in clashes between police and demonstrators, the British authorities imposed a drastic curfew law that brought the riots to an end. Several leaders of the Jewish Labor party were imprisoned for organizing the demonstrations and the permits of some Zionist newspapers were revoked.

**Immigration Issue.** Friction between Arabs and Jews and between the Jews and the British Government also continued over the question of Jewish immigration into Palestine. Mr. MacDonald stated in his Commons speech of March 6 that the immigration quota had been raised to 20,000 for the year as a contribution toward the solution of the Jewish refugee problem. Hundreds of Jews continued to enter Palestine illegally. Those caught by the British authorities were held for proper certification and counted as part of the quota. On November 21 the British authorities decided to send nearly 1800 Jewish immigrants, who had arrived without legal status, to another British colony for detention until the end of the war. While 1771 of these refugees were waiting on the steamer *Patria* in Haifa harbor on November 25, an explosion sank the ship. There were 55 known deaths and 190 persons missing.

**Economic Measures.** The unemployment crisis resulting from the cutting off of European markets for citrus fruits and other exports, the suspension of Jewish capital investments, and continued immigration was particularly severe among the Jews. Remedial measures were taken by both the Jewish community and the government. The Jews levied a voluntary emergency tax upon incomes for unemployment relief. The government on January 3 appropriated £P750,000 for relief grants and loans for public works and other purposes in both Arab and Jewish communities. On April 15 additional governmental aid was extended to the citrus growers.

**Military Preparations.** Palestine during 1940 became one of the main bastions protecting British communications and interests in the Near East. During the first months of the year there were further concentrations of Anglo-French forces in

Palestine and Syria (q.v.). In April the Second Australian Imperial Force arrived in Palestine and occupied barracks prepared in advance by Arab and Jewish laborers. A large number of airplanes and part of the British Mediterranean fleet were stationed at Palestine airports and the Haifa naval base. Air raid shelters were erected and other precautions taken in the cities and additional Arab and Jewish forces were mobilized for defense and related activities. One of the Arab-Jewish volunteer units—a transport section 700 strong—arrived in France on February 28 to join the British Expeditionary Force. It returned to Jerusalem on September 28.

With the entrance of Italy into the war on June 10, Palestine was placed on a war basis. The blackout was made permanent for all cities. On June 21 the British High Commissioner assumed power to draft the services and property of Palestinians for defense purposes, including the maintenance of public order and of essential supplies. Commencing July 16, the Italians began air raids on Haifa and other Palestine centers from their base in the Dodecanese islands. Some of the raids caused heavy casualties. A raid on Tel-Aviv on the night of September 9 cost 150 lives. The new oil refinery at Haifa also was reported bombed.

With the collapse of France, many Polish, Czech, and French troops crossed from Syria into Palestine to join the British forces. Considerable numbers of Arabs and Jews also were recruited into the British forces and on December 21 the formation of a volunteer mixed force was announced. Its function was to assist the regular forces in maintaining internal security and prosecuting the war.

See IRAQ AND SYRIA AND LEBANON under *History*; *Jews*.

**PALMYRA.** A coral atoll consisting of a group of small islets surrounded by a reef 5 miles long and  $1\frac{1}{2}$  miles wide, in the central Pacific ( $6^{\circ}$  N. and  $162^{\circ} 30'$  W.). Area,  $1\frac{1}{2}$  square miles. The U.S. Naval Appropriations Bill of 1939 called for the establishment of a naval base on one of the islets at a cost of \$13,000,000. A suit to acquire title to Palmyra was filed by the U.S. Government in Federal Court, Honolulu (Dec. 12, 1939) after a group of Hawaiians had asserted private ownership of the atoll. On Dec. 23, 1940, Federal Judge Delbert Metzger denied the petition of the government to quiet the title to Palmyra. The government contended that title to the land had remained with the United States since the annexation of Hawaii. Attorneys for the government said that they would appeal the decision.

**PANAMA.** A republic of Central America, bisected by the Panama Canal Zone (q.v.). Capital, Panamá.

**Area and Population.** Area, 34,169 square miles; population (estimated, September, 1940), 650,000 excluding the Canal Zone. Racial division of population (1930 census): 78,813 whites, 69,583 Negroes, 42,897 Indians, 4138 Orientals, 249,583 mestizos.
